The door of the other carriage opened, and there ran across the road a slim young lady who rushed toward Ethel.

"Mary!" exclaimed Ethel.

"Jump in," cried Fitz, hurrying the maid in.

At the same moment some one mounted the box of their carriage, a heavy weight was thrown upon the top and away they started.

"What does it all mean, Fitz?" asked Ethel, looking half frightened. "Where are we going?"

"We are going to Peewhiffen—to that place where there is the pretty church," said Fitz.

"Church!" said Ethel, "and Mary!—and—Oh, Fitz! who is that on the box going with us?"

"That is the luggage," said Fitz, with a twinkle in his eyes. "The luggage and Mr. Bertie Fairfax. The cat's out of the bag, Ethel, my pretty one! We're running away with you! Bertie's got the special license in his pocket, and Mr. Smythe will have his journey to Coombs Lodge for nothing."

Then as Ethel burst into a flood of tears he caught her to him and gave her a hearty pat on the back.

CHAPTER XXVI.

While Bertie—happy, lucky Bertie—was standing at the altar with his darling Ethel's hand in his, Howard Murpoint, Esq., and Mr. Wilhelm Smythe were driving through up the avenue to Coombe Lodge.

Howard Murpoint's luck had never deserted him since he had entered the drawing-room of the Park on that night of the dinner party. Everything had been smooth sailing.

He had conquered, so to speak, the whole world. He was rich, influential; he held the happiness, the fate of many in his hands; his brain was full of plots and schemes for his own advancement and others' ruin and discomfiture. Never, since the world began to wag, had the Evil One found a surer and more sympathetic servant, for Howard Murpoint, the gentleman, the member of parliament, the influential capitalist was merciless, avaricious, cunning, and—superstitious. Yes, clever as he was, strong as he was, this was his weakness. He believed in luck; he was superstitious, and he felt a presentiment that the first stroke of bad luck would be the beginning of something more dreadful.

But to-day, as he dropped from his horse, which a groom had sprung forward to hold, he felt no presentiment, and the calm, cool smile which he threw to the nervous Mr. Wilhelm Smythe was one of supreme confidence.

"Be calm, my dear fellow," he whispered, as they were ushered into the drawing-room by the obsequious servant. "You will be the husband of Lady Ethel, and I shall win that twenty thousand pounds before a month has passed."

As he spoke Lady Lackland entered. Shaking hands with the two, she said, with a troubled look upon her face:

"Did you meet Fitz and Ethel? They have gone for a ride, and should have gone your way."

"No," said the captain, with a smile, "We lost that pleasure."

Mr. Smythe sighed.

"No," he said, "I wish we had, but—but I'm almost glad, for it gives me an opportunity, Lady Lackland, for putting my request. I have come down with my friend—he has indeed been a friend to me—to ask you to persuade Lady Ethel to name an early day for our—our wedding—"

At that moment the door opened, and the earl entered.

His face was dark as night, and his lips working with some emotion; he held a letter in his hand, and when he saw the two men he, by a great effort, set his lips with a rigid smile and tried to conceal the letter with a hasty movement.

"Something has happened!" exclaimed the countess.

"Not to Lady Ethel!" almost shrieked Mr. Smythe.

The earl smiled with despair.

"Read that!" he cried, thrusting the letter into the countess' hands.

She read it aloud, with a puzzled air at first which rapidly gave place to a shriek of despair and rage.

"My Dear Father:—By the time this reaches you Ethel and I shall be at Wirlehurst. Bertie Fairfax goes with us with a special license in his pocket, and he and Ethel will be married, all well, to-day.

"Forgive me my share in the affair, and remember that it is the first time since their birth that your children have dared to show that they have wills and hearts of their own!

Your affectionate son,
"Fitz."

There was a moment's silence, which was broken by a hoarse cry of disappointment and misery.

It came from Smythe.

With an oath he sprang at the captain and seized him by the throat.

"You villian! You've tricked me! You planned all this, you scoundrel! You did! You did! You have sold me, but I'll sell you! I'll have the money, or your infernal life!"

The captain struggled and fought to free himself from his dupe's grasp, but he could not, and Mr. Wilhelm Smythe, nerved and goaded to madness, pushed the earl and his servants aside and dragged Mr. Murpoint into the hall.

"Now," he hissed in his ear, "get out your check-book and write me a check for twenty thousand pounds, or I'll kill you! I'll do worse; I'll publish the story and the bet in every club in London! d'ye hear? you thought to get the better of me, to play the idiot and hold me up to ridicule, but you shan't! you shan't! I'll have the money, the money, or I'll crush you!"

"Silence!" hissed the captain, glancing round at the astonished group of guests and servants. "Come outside," and he in turn half dragged and half led the unfortunate man into the courtyard.

"I'll give you the check to-morrow."

"Now, now! this moment, or I'll split all!" cried Smythe, and with an oath he darted his hand in the captain's face.

Howard Murpoint's eyes grew dark, but he was as pale as death. Fear ran in his heart, for he saw that his first ill-luck had set in.

"Confound you!" he cried, "you shall have it! I'll give you a hundred thousand pounds to be rid of such a madman," and with a shaking hand he took a check from his book and filled it in.

Mr. Smythe snatched it from his hand, glanced at it with blood-shot eyes, and leaped upon his horse, which he had shouted for as he came into the yard.

* * *

That night Murpoint returned to town, and, although clerks and secretaries, detectives and spies, his servants and tools, were waiting to see him, he would see none, but went straight to his own room, which was double-locked and guarded.

After a slight rest, during which he slept the peaceful sleep of an innocent child, he dressed himself with scrupulous care and went down to the Middmays' house.

"Was Miss Middmay up yet?" he asked.

The servant took him to Violet's drawing-room, where Violet sat, a letter in her hand, and a thoughtful and pained, yet glad, expression on her face.

She rose as he entered.

"I am so glad you have come," she said, wearily, but with a smile. "I have just had a letter," and she held up the open envelope.

"And I have some news," he said, "or I would not have intruded so early."

"Perhaps you know it," he added, with grave face. "Lady Ethel Boisdale and Mr. Fairfax have eloped."

"Yes," Violet, with a sigh. "It is so sudden and—and what is strange, Lord Boisdale has accompanied them."

"It is strange and most dishonorable," said Howard Murpoint. "For Mr. Fairfax to forget our ignorance is one thing; but for Lord Fitz Boisdale to lend himself to an underhanded and dishonorable course is quite another. Lackland is in the deepest grief; Lord Lackland is stricken down with affliction, and, of course, my dear Violet, you will show your disapproval of the scandalous affair by withdrawing your friendship from both parties."

Violet, who had listened with shamed and pained attention, flushed deeply.

"Do you know," she said, slowly, "that Lord Fitz asked me to be his wife?"

The captain did know it, but he professed complete ignorance, and grew deadly pale and haggard. Violet rose with alarm, but he stopped her from calling out for assistance by grasping her arm.

"Do not call—give me time. Oh, Violet! Violet!" he groaned, hiding his face in his hands.

Violet gazed at him with her deep, mournful eyes, appalled to their utmost. At present she did not understand his elaborate acting.

"How have I pained you?" she murmured. "Do you not like Lord Boisdale?"

"Do you love him?" he retorted, suddenly, gazing searchingly and with quivering lips into her face. "Answer me, I implore you, dear, dear Violet! Do you love him? If you say yes; if you tell me you have given your heart to him, I will say no more; I will leave you—leave England, and I will pray that you may be happy! Answer me, oh, answer me!"

(To be continued).

PEDLAR'S "GEORGE" SHINGLES

Everywhere facts prove the menace of lightning. Once you realize that the danger of lightning lies in its concentrated action on a single spot in your roof, you will appreciate the safety and protection of a Pedlarized roof. Pedlar's "George" Shingles lock together on all four sides, forming a single sheet of metal from eave to ridge. Lightning cannot concentrate on any single spot, for Pedlar Shingles spread it over the whole surface of your roof. When properly grounded, a Pedlarized roof is practically indestructible. This summer know the security and peace of mind of a safe, sound roof by Pedlarizing now with "George" Shingles. Write for the "Right Roof" booklet W W

The Look that Holds

About the House

Food Value of Legumes.

Legumes, such as peas, beans and lentils, are rich in protein. Peas are commonly called the poor man's beef, one plate of split pea soup being equal in food value to two ounces of beef if a little milk is added. The cost per plate is only 1 2-3 cents.

To serve 8 people generously use 1 cup dried split peas (½ pound), 2½ quarts of cold water, ½ medium sized onion, 2-inch cube of fat salt pork, 3 tablespoons of butter, 2 tablespoons of flour, salt and pepper and 1 pint of milk. Soak the peas overnight to soften and draw out the bitter flavor, drain well, add water, pork and onion. Bring to the boiling point and simmer 3 to 5 hours or until very soft. Add butter and flour cooked together, then seasoning and rub through a sieve. Add the milk and re-heat. Three quarts of soup stock and no milk may be used in place of the water.

The food principle lacking in legumes is fat, so the addition of fat becomes necessary. The long, slow cooking necessary to soften legumes is of paramount importance, and this is the reason that many people do not make the use of legumes that they should.

Some Fish Dishes.

Salmon Loaf.—One (half-pound) can salmon, one egg, two cups bread-crumbs, one cup hot water, one tablespoon melted butter, dash of pepper and salt, minced parsley. Skin and mince fish, reserving liquor for sauce. Rub butter well into fish. Work in crumbs, seasoning and egg. Steam in mold for one hour. Set in cold water one minute and turn out. Good sauce to serve with loaf is made of one tablespoon butter, two tablespoons flour, one cup hot milk, one egg, lemon juice, seasoning and salmon liquor. Boil first three until creamy, add salmon liquor and beat egg, and lastly seasoning and lemon juice to taste.

Fish Balls.—2½ Cupfuls of flaked fish, 1 egg, 1 oz. of butter, 4½ cupfuls of potatoes, seasoning. Wash and peel the potatoes and cut in small cubes. Boil them till soft, with the flaked fish, drain off the water, mash together and add the egg, and seasoning. Beat well with a wooden spoon, shape into balls, sprinkle with flour and fry golden brown in very hot fat. Serve with tomato sauce. This makes twelve balls.

Baked Stuffed Haddock.—Clean four pound haddock, sprinkle with salt, inside and outside, stuff and sew. For stuffing mix one-half cup cracker crumbs, one-half cup stale bread-crumbs from which crusts have been removed, one-fourth cup melted butter, one teaspoon finely chopped onion, one-fourth teaspoon salt, one-eighth teaspoon pepper and one-third cup hot water. Cut five diagonal gashes on each side of backbone and insert strips of fat salt pork. Place on greased sheet in dripping pan, sprinkle with salt and pepper, brush over with melted butter and flour chop and place around fish two 3 by 4 inch slices of fat salt pork. Bake one and one-fourth hours in hot oven, basting every ten minutes.

Fire Recipes for Fritters

Who doesn't like fritters? Never a boy or girl who doesn't welcome the supper or breakfast dish of fritters, and when properly made they are a most wholesome dish, especially for cool days. If there is oatmeal left from the breakfast try this for supper.

Oatmeal Fritters.—Be sure to place the left-over oatmeal when it will harden. When you wish to use it cut in half-inch-thick slices and then into long strips. Dip it in egg, then in bread crumbs and fry in butter. Drain, sprinkle with powdered sugar, and serve hot.

Here is a recipe for a good fritter batter: One egg, one-half cupful of milk, one cupful of flour, one teaspoonful of sugar, one saltspoonful of salt, one tablespoonful of melted butter, one tablespoonful of baking powder. Separate the yolk and beat the white of the egg stiffly. Sift the flour, baking powder, salt and sugar together; add to the liquid mixture, and finally fold in the beaten white of the egg.

Cooked vegetables, like parsnip, salsify—oyster plant—or carrots can be served in fritter batter for a change.

Meat Fritters.—Cold veal is best for this dish, although any other tender meat can be used. Cut the meat into half-inch-thick slices and portions a little smaller than the size of the fritter desired. Season with salt and pepper. Drop two tablespoonfuls of fritter batter into the hot melted lard, on this place one slice of meat, and drop two tablespoonfuls of batter on top of the meat. As soon as the fritter is browned, drain and serve hot.

Vegetable Fritters.—Two cupfuls mashed parsnips, two eggs, salt, pepper, melted butter. Beat the eggs well and add to the parsnips. Add the seasoning, and if the parsnips are especially juicy it is best to add a little flour to make the mixture into a stiff enough batter. Fry in deep fat on a buttered griddle.

Fruit Fritters.—Large fruits like apple, orange, peach, banana or pineapple can be cut in thick slices, then dipped in fritter batter and served hot, sprinkled with powdered sugar. Smaller fruits however, like the various berries, cherries, apricots, etc., must first be stoned and then dropped into the entire dish of batter fritter. A spoonful of batter is then dropped into the boiling fat at a time.

Before you drop a fritter into the hot fat it is best to test the fat to see whether it is properly hot. The fat should be heated slowly until a few minutes before it is needed, then placed over the hotter flame, where it will become extremely hot. To test it, drop a cube of bread into the fat. If it sinks to the bottom, then rises and becomes golden brown in a minute, your fat is ready for fritter making.

Homely Wrinkles.

Silver may be easily cleaned by rubbing it with a potato dipped in common baking-soda.

Make your own dustless dusters by wetting good-sized folds of cheese-cloth with liquid veneer or floor oil and allowing it to dry. These work first-rate.

Pieces of orange peel, if placed on a hot stove and allowed to burn to a crisp, will remove any objectionable smell of cooking in the kitchen, besides cleansing and purifying the air to a remarkable degree.

Save your slices of cold ham. Put them through the food-chopper, add mashed potatoes, minced onion, seasoning, and a pinch of ground sage. Roll this in flour and fry it in melted drippings.

A very acceptable wedding gift, because one so generally useful, is a broad silver-bladed knife. It will not only cut pie or cake, but is wide enough to hold a whole piece and serve it gracefully. Or if may be used just as well for serving fish, griddle cakes, croquettes, fried tomatoes, eggplant, or any food likely to break when picked up with a fork or spoon.

Then shall the King say unto them on his right hand.....

"I was an hungered, and ye gave me meat; I was thirsty, and ye gave me drink..... naked, and ye clothed me....."

Then shall they answer him, saying—"Lord, when saw we thee an hungered, and fed thee? or thirsty, and gave thee drink? ....or naked, and clothed thee?"

And the King shall answer.....
"Inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto me".

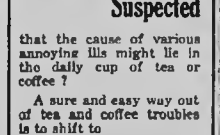
New Spring Models

It has been a matter of conjecture whether coat suits would return to favor with the spring, or whether the long coats by which women have stood firm and steadfast all through the winter would continue to satisfy their needs in spring.

One would naturally conclude that a coat suit in spring would be welcomed by most women after the heavy, long coats of winter. But the question is still to be settled. In all probability there will be as many coat suits as separate coats worn when spring comes. Some very jaunty models are being shown now, and many of them have coats in Norfolk or semi-Norfolk effects with plain or pleated skirts.

The dressier suits are made of silk and satin with touches of embroidery in the same or some contrasting color. The coats are generally midway between the hips and knees in length.

For sports wear there is no doubt that hip-length coats with contrasting skirts will be very smart, and there will be more interest in sports clothes this spring and summer than in any other styles, if one may judge from the present demand for them. Plaid skirts with coats of a solid color hav-



Smart Spring Model Developed in Jersey Cloth

ing the collar and cuffs trimmed with the plaid are considered exceedingly chic. The striped and checked materials are employed in the same way with coats of one color.

Besides the Norfolk coats, the loose, straight-hanging box coat is one of the models that promises to be very much favored. Some of these are quite short. They are very stunning made up in velvet and worn with white serge skirts. Dark blue or old-rose velvet, with large white pearl buttons for contrast, is used for these coats.

Not strictly Norfolk, but resembling this style in many points, is the smart model illustrated in the sketch. It is of orange-colored wool jersey and accompanies a skirt of black-and-orange check, making an exceptionally smart costume. The coat is twice belted, part of the lower belt forming straps at the top of the large patch pockets. The belts extend around the sides only and leave a panel effect at the back, which is pleated like the front.

These patterns may be obtained from your local McCall dealer or from the McCall Company, 70 Bond St., Toronto, Ont. Dept. W.

"There's a Reason"

NERVOUS CHILDREN

The Trouble is Often Really St. Vitus Dance—Do Not Neglect It.

Many a child has been called awkward, has been punished in school for not keeping still or for dropping things when the trouble was really St. Vitus Dance. This disease may appear at any age, but is most common between the ages of six and fourteen years. It is caused by thin blood which fails to carry sufficient nourishment to the nerves, and the child becomes restless and twitching of the muscles and jerking of the limbs and body follow. In severe cases the child is unable to hold any thing or feed itself. St. Vitus Dance is cured by building up the blood. The most successful treatment is to remove the child from all mental excitement, stop school work and give Dr. Williams' Pink Pills. These pills renew the blood supply, strengthen the nerves, and restore the child to perfect health. Here is proof of their power to cure. Mrs. S. Sharpe, Oakville, Ont., says:—"When my daughter was nine years old she was attacked with St. Vitus Dance. She was sent to a sanatorium where she remained for nine weeks, without any benefit. Indeed when we brought her home she was as helpless as a baby. I got a supply of Dr. Williams' Pink Pills and continued giving her half a pill after each meal for several months, when she had fully recovered and has never had a symptom of the trouble since."

You can get Dr. Williams' Pink Pills through any dealer in medicine or by mail at 50 cents a box or six boxes for $2.50 from The Dr. Williams' Medicine Co., Brockville, Ont.

Now And Then.

Great Britain is now turning out more heavy shells every forty-eight hours than she did in the first whole year of the war, and is manufacturing guns at a correspondingly rapid rate. This gives a hint of the power which will be behind the next offensive at all fronts.

Garden Planning.

Planning the garden consists of more than in measuring of the available space and laying it out in rows so many for this that and the other thing, with a path here and there. It is when planning the vegetable garden that the fine art of growing two or three crops in the same place is achieved. This is called intensive cropping, but it is not nearly so great an undertaking as it would appear to be. For instance, the space set apart for the first planting of lettuce may later be given over to tomato plants; where green onions have been grown a crop of late beets may be sown. The radish patch will be used in plenty of time to fill the space with cabbage plants, which may be grown in the meantime from seed in a very small corner of the plot. Cauliflower, too, or celery, may occupy the same space that has grown spinach or the like. If early potatoes are grown they will be dug before it is too late to replant the space in late beans, beets, cabbage, etc.

Including All.

Anne had been frequently reprimanded by the heads of her family for her too great eagerness to begin her dinner before grace had been said. It came, however, as a shock to all present when her eldest brother, on whom devolved the duty of asking a blessing, took upon himself to administer a gentle reproof, as follows:

"For what we are about to receive, and for what Anne has already eaten, make us truly thankful."

With but a slight increase in size, a match has been provided with a dry battery and electric lamp so that it can be read at night.

SHIPS OF STONE.

Ferro-Concrete Extensively Used for Barge-Building.

Concrete holds its own in the construction of our houses, our public buildings, our bridges, our monuments, and now even in our ships.

Harbored safely in Norwegian waters is an enormous thousand-ton barge, built entirely of concrete; a seventy-year-old skiff of stone floats merrily on the waters of the River Seine, while a concrete barge is daily towed up and down a certain portion of our own River Thames, says London Answers.

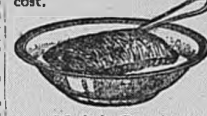
For durability and absolute safety, ferro-concrete—to give it its proper name—is without rival. It is also economical, now that steel is such a vital question to the European Powers. And steel, of course, has hitherto figured largely in shipbuilding of this nature.

A particularly interesting invention recently submitted to the Admiralty suggested a floating ferro-concrete dock for torpedo-destroyers. This same idea has already been taken up by the French, M. Hennebique, of Paris, having designed and completed a similar structure of two storeys, fifty feet in height, seventy-seven feet long, and forty-five wide, the walls being six inches thick.

It was built on a slipway, floated, towed into position in the sea, and sunk to its permanent station. For purposes of instruction, torpedoes are fired from it under water.

In our own colonies, concrete is employed very extensively for barge-building. These barges travel for thousands of miles on the Central African lakes. The expense of steel barges would be very heavy, but concrete barges are quite cheap, and are easily made and moved.

WITH THE FINGERS!



SAYS CORNS LIFT OUT WITHOUT ANY PAIN

Sore corns, hard corns, soft corns or any kind of a corn can shortly be lifted right out with the fingers if you will apply on the corn a few drops of freezone, says a Cincinnati authority.

At little cost one can get a small bottle of freezone at any drug store, which will positively rid one's feet of every corn or callus without pain or soreness or the danger of infection.

This new drug is an ether compound, and dries the moment it is applied and does not inflame or even irritate the surrounding tissue. Just think! You can lift off your corns and calluses now without a bit of pain or soreness. If your druggist hasn't freezone he can easily get a small bottle for you from his wholesale drug house.

The Biggest Problems in most homes are fuel and service. When the servant leaves and the fuel is low, happy is the housewife who knows Shredded Wheat Biscuit, the whole wheat food that is ready-cooked and ready to eat. With these crisp little loaves of baked whole wheat the housewife may prepare in a few moments a delicious, nourishing meal at lowest cost.

St. John's Board of Trade received a communication from the consular agent for Italy, stating that shippers of fish to Italy must include among their shipping documents certificates of health and origin.

IF FOOD DISAGREES DRINK HOT WATER

When food lies like lead in the stomach and you have that uncomfortable, distended feeling, it is because of insufficient blood supply to the stomach, combined with acid and food fermentation. In such cases try the plan now followed in many hospitals and advised by many eminent physicians of taking a teaspoonful of pure bisurated magnesia in half a glass of water, as hot as you can comfortably drink it. The hot water draws the blood to the stomach and the bisurated magnesia, as any physician can tell you, instantly neutralizes the acid and stops the food fermentation. Try this simple plan and you will be astonished at the immediate feeling of relief and comfort that always follows the restoration of the normal process of digestion. People who find it inconvenient at times to secure hot water and travelers who are frequently obliged to take hasty meals poorly prepared, should always take two or three five-grain tablets of Bisurated Magnesia after eating to prevent fermentation and neutralize the acid in their stomach.

An Ear For Music.

A little girl five years old was on her way to the beach for the first time. Her numberless questions as to the ocean, the fish, ships, sailors, etc., had embarrassed her mother and amused the passengers. The train finally neared the wharf where we were to take a steamer, and as we glided along very near the shore for a short distance we could plainly hear the swish of the waves. The little girl turned from the window with a beaming face.

"Listen!" she exclaimed, "I think I hear the fishes!"

Minard's Liniment for sale everywhere.

No Peace for Him.

Willie was out walking with his mother when she thought she saw a boy on the other side of the street making faces at her darling.

"Willie," asked mother, "is that horrid boy making faces at you?"

"He is," replied Willie, giving his coat a tug. "Now, mother, don't start any peace talk—you just hold my coat for about five minutes."

The banyan of India, an ornamental fig, throws out aerial roots from the branches; those reach the soil, take root, and form new trunks, and eventually become almost a forest of sometimes thousands of trunks, covering many acres of ground and some of them 15 feet in diameter.

Minard's Liniment Relieves Neuralgia.

The Wonder Boy.

He wonders that the little birds
Know how to build a nest;
And why the sun always goes from
The East unto the West.
And wonders why it never shines
At night when indeed so,
And why we have to wait till spring
To see the blossoms grow.

He often wonders why his name
Is Harold and not Ned;
Or any other one, and why
He has a curly head.
And why his freckles are so thick,
And why his eyes are blue;
And why the toes of all his shoes
So soon are stubbing through.

He wonders where the nice moon goes
When missing from the sky;
And every hour of every day
He asks us, Why and why?
But, when inventions are in point,
His elders join him there
In wondering at many things
Of sea and earth and air.

He wonders how 'twill seem to be
A man s...ng as dad,
And why it's hard work to be good,
And easy to be bad.
The world is very full to-day
Of little Wonderboys,
And grown-ups marvel how they can
Make such a lot of noise.

Teacher Has Not Lost One Day In A Year

Mrs. Roger Gives Credit to Dodd's Kidney Pills.

Before that She Suffered from Sciatica, Neuralgia, Nervousness and Other Troubles Coming from Sick Kidneys, Which Dodd's Kidney Pills Cured.

Elm Tree, Gloucester Co., N. B., Mar. 19th (Special).—Mrs. Jos. Roger, the popular teacher here, is fully recovered from a long siege of sciatica, neuralgia, and other troubles resulting from diseased kidneys and has made a statement in which she gives Dodd's Kidney Pills all the credit for her cure.

"My trouble came from a strain," Mrs. Roger states, "and I suffered for thirteen months. Backache, heart flutterings, sciatica, neuralgia, dizziness and failing memory were among my symptoms. When the doctor I consulted failed to do me any lasting good I decided that my kidneys were the root of my troubles and decided to try Dodd's Kidney Pills. I took twelve boxes in all and you may judge of the results when I tell you that I have not lost a day's work as teacher in the last year.

"I can say that Dodd's Kidney Pills have done all for me that was claimed for them."

Others of Mrs. Roger's symptoms were nervousness, that tired feeling, irritability and a dry harsh skin that itched and burned at night. They all came from diseased kidneys and all vanished when she used Dodd's Kidney Pills.

Music in Siam.

Musical instruments of western types have not yet become popular in Siam. The piano and the small portable organ may be seen occasionally in the homes of the Siamese and Chinese, but they are kept for ornamental rather than musical use.

Sloan's Liniment KILLS PAIN

The Paisley Advocate

PAISLEY, MAR. 28th, 1917

—The Teachers' Superannuation Bill now passing through the Legislature has been amended considerably since being introduced, and is now considered to be a very reasonable measure. There are in Ontario over 13,500 teachers of all ranks with an annual pay roll of $9,500,000. Under the proposed system of superannuation an annual fund of $315 000 will be established. Teachers are to pay 2½ per cent of their salaries, and the province contributes another 2½ per cent. The maximum pension will be $1200 a year. Those who withdraw from the teaching profession after six years of service can recover all the money they have paid in. Now that the government has provided for men and women of the educational class, the question arises, why all other classes should not be assisted to the same extent. Teachers enjoy many privileges and opportunities not afforded to those who work longer hours for less pay and are as much in need of provision for old age. That 2½ per cent contribution from the province is a lift which working classes generally are as much entitled to receive as are the teachers.

GOOD ROADS

The members of Bruce County Council, who have hitherto voted against adopting a system of county roads, will now be able to say to those who would have inaugurated this system earlier: "I told you so." for at the present session of the Legislature a bill has received its second reading to increase the Government grant to a trunk line through any county that will link up with the Provincial Highway system, from 40 to 60 per cent. for construction and 20 to 60 per cent. for maintenance. The exact wording of the bill is:

The Minister may designate any main highway of a county road system to be known as a "provincial county road," toward the construction of which a provincial subsidy of 60 per cent. may therefor be authorized and paid in accordance with the provision of section 13 of the Act, and also a like percentage for maintenance in accordance with section 14 of The Ontario Highway Act.

The Government grant under the original Highways Act was 33 1-3 per cent. from the Government. The present Government increased that to 40 per cent. and 20 per cent. for maintenance. Now a road serving as a main artery through the country will receive 60 per cent. for construction and the same for maintenance. When the County Council meets at Chesley in June we have no doubt a system of county roads will be adopted and advantage taken of the present bill which will soon be an act of the Legislature.

The new bill for a Provincial Highway System provides for a highway through Ontario from Windsor on the Detroit River to the Ottawa, a distance of about 400 miles and costing approximately $2,000 to $2,500 per mile. The county roads will serve as feeders to the Provincial Highway. It is to be hoped the cost of this road will not exceed the estimate of the Toronto to Hamilton highway, which has cost over $35,000 per mile.

The Windsor to Ottawa Highway will run through municipalities which contain 52 per cent. of the population and 60 per cent. of the assessed value of the province. The municipalities through which this highway runs will bear 30 per cent. of the cost. The automobile fees which this year amounted to $614,000, and is estimated to be $780,000 in 1917, is to be used for the construction of this proposed highway. The highway construction will not be begun at present, owing to the scarcity of labor.

The Hamilton to Toronto road is being constructed under a commission and it is proving to be a costly experiment. The distance is 40 miles, and the cost of this 18 foot cement road, which will be used almost entirely by auto joy riders, will cost over $25,000 per mile. The cost of this road is being borne largely by the province, but the cities of Toronto and Hamilton bear a portion of the expense, as do also the municipalities through which the highway passes, also a frontage tax on the farms bordering on the road.

It is now up to the members of Bruce County Council to get busy on a big trunk project in this county. The auto has came to stay and as they are hard on the highways, it is up to the representatives of Bruce to put up their share of the cost, which has now been reduced from 60 per cent. to 40 per cent.—Chesley Enterprise.

LOCAL AND DISTRICT NEWS

Dog Poisoning

Excess dog population is considered a nuisance, and rightly so, but to dispose of the canines by putting out poison is directly contrary to law. A person setting poison anywhere out of doors is liable to a fine upon conviction. No one is allowed to kill any dog but his own.

Politics Before Country

Dr. J. C. Gibson, of Hibbing, Minn., sent along his subscription to The Advocate and makes some comments about the war situation. He says: "The way things are going on in Europe pleases me immensely, and I hope the Huns will get a lacing they never will forget. I have a box of cigars up on the war with a Hun here. We have a few of them here who used to meet and discuss things, but I guess they will have to whistle now to keep up their courage. What do you think of our noble 12 senators? The less said the better. Politics before country. For instance: LaFolette, I believe, had he voted otherwise he did have been relegated to political obscurity at the next election. Too many Huns in Wisconsin One of our representatives, Clapp, got his, anyway, so he won't represent Wisconsin next session. He was invited to speak at a Bible class meeting in Philadelphia, but after voting the way he did they recalled the invitation. Most of the prominent and leading educationists of the U. S. all endorse the Allies and their aims. I believe most Americans took little interest in the war until the break with Germany. But they find now that the Allies interests are our interests. There is some blue blood here yet.

Death of a Saugeen Pioneer

Mr Andrew Sutherland passed away Friday, March 16th, at the advanced age of 85 years, 2 months. For a long time Mr. Sutherland has been ailing, but a sturdy constitution aided him even in old age, to be out occasionally in the warm weather of last fall. He was the last of nine children born to the late John Sutherland of Aberdeenshire Mr Sutherland was born in old Scotland in 1831. At the age of 24 he came to Canada, and for a while he worked near Whitby. About 1860 he bought a farm on the 2nd of Saugeen. The farm had to be cleared and deceased entered into the work of homebuilding. Along with these duties he found time to serve St. Andrew's Presbyterian church in various offices, and also to serve his community as school trustee. He was well read in all the affairs of his county and province, and as a Liberal he took keen interest and was well posted in political affairs. For a number of years he has been living retired in Port Elgin, and it was the privilege of many of the older ones to pay frequent visits to his home, where a generous welcome awaited. Besides a wife, who will have the sympathy of all, there are left to mourn the following family: Mrs. McArthur, Alberta; William, Port Elgin; Mrs. Bain, Greenock; Mrs. G. S. Webb, Saugeen; Andrew, Saugeen; Mrs. Hammond, Perth; Mrs. Cooker, Chatham; A son and a daughter, (Mrs. James McEwing) predeceased their father. The funeral on Monday afternoon to Port Elgin Cemetery, was largely attended, a great many of the residents of Saugeen attending, to pay a last tribute to the memory of a good man. —Times.

"I FEEL LIKE A NEW BEING"

"FRUIT-A-TIVES" Brought The Joy Of Health After Two Years' Suffering

MADAM LAPLANTE

55 St. Rose St., Montreal. April 4th.

"For over two years I was sick and miserable. I suffered from *constant Headaches, and had Palpitation of the Heart* so badly that I feared I would die. There seemed to be a lump in my stomach and the Constipation was dreadful. I suffered from *Pain in the Back and Kidney Disease.*

I was treated by a physician for a year and a half and he did me no good at all. I tried "Fruit-a-tives" as a last resort. After using three boxes, I was *greatly improved* and twelve boxes made me well. Now I can work all day and there are no Headaches, no Palpitation, no Heart Trouble, no Constipation, no Pain or Kidney Trouble and *I feel like a new being*—and it was "Fruit-a-tives" that gave me back my health".

MADAM ARTHUR LAPLANTE.

50c. a box, 6 for $2.50, trial size, 25c. At all dealers or sent postpaid by Fruit-a-tives Limited, Ottawa.

THE NEWEST REMEDY

FOR

Backache, Rheumatism and Dropsy.

Kidney, Bladder and Uric Acid troubles bring misery to many. When the kidneys are weak or diseased, these natural filters do not cleanse the blood sufficiently, and the poisons are carried to all parts of the body. There follow depression, aches and pains, heaviness, drowsiness, irritability, headaches, chilliness and rheumatism. In some people there are sharp pains in the back and loins, distressing bladder disorders and sometimes obstinate dropsy. The uric acid sometimes forms into gravel or kidney stones. When the uric acid affects the muscles and joints, it causes lumbago, rheumatism, gout or sciatica. This is the time to try "Anuric." Send 10c. for trial package.

During digestion uric acid is absorbed into the system from meat eaten, and even from some vegetables. The poor kidneys get tired and backache begins. This is a good time to take "Anuric," the new discovery of Dr. Pierce for kidney trouble and Backache. Neglected kidney trouble is responsible for many deaths, and Insurance Company examining doctors always test the water of an applicant before a policy will be issued. Have you ever set aside a bottle of water for twenty-four hours? A heavy sediment or settling sometimes indicates kidney trouble. The true nature and character of diseases, especially those of the kidneys and urinary organs, can often be determined by a careful chemical analysis and microscopical examination—this is done by expert chemists of the Medical Staff of the Invalids' Hotel. If you wish to know your condition send a sample of your water to Doctor Pierce's Invalids' Hotel, Buffalo, N. Y., and describe your symptoms. It will be examined without any expense to you, and Doctor Pierce or his Staff of Assisting Physicians will inform you truthfully.

KNOW THYSELF!

Read all about yourself, your system, physiology, anatomy, hygiene, simple home cures, etc., in the "Common Sense Medical Adviser," a book of 1008 pages. Send to Dr. V. M. Pierce, Buffalo, N. Y., 50 cents in one-cent stamps for a cloth-bound copy. Customs prepaid.

Style—Comfort Power—Economy

This new Overland Country Club Light Four is a distinctive and smart car in the low priced car class.

The rich gray body, with black fenders and trimmings, is set off to pleasing advantage by red wire wheels that give just the right flash of brilliant color.

The two comfortable front seats move forward or back, independently, and a spacious aisle between gives free passage to a roomy seat for two passengers in the rear.

For riding comfort, the Overland Country Club is a revelation.

An unusual demand for this model makes it necessary to place orders at once to secure spring delivery.

BUTTER, 35c — **L. C. SPOFFORD** — EGGS, 37c

WALKERTON

Judging by the numerous cheques, each running into many thousands of dollars, which are coming with remarkable frequency right up here into this cow country to certain parties who have shares in some city munition plants, the profits which are being made out of war contracts are far more dazzling than anything Sheldon ever offered the people of Walkerton in his palmiest days when all his patrons were to become strangely and immensely rich. It seems that these factories are working on British or foreign orders, and while the Canadian Government has nothing to do with the fat prices they get,yet it is thought the government ought to get busy and confiscate a big part of these excessive profits, and not allow anybody to become immensely wealthy in Canada out of a war that is bringing privation and sorrow to so many Canadian homes. With this end in view the Preparedness Leagues of both Hrant and Walkerton passed strong resolutions last week urging the Government to heavily tax these enormous war profits, and thus bring into the coffers of the country some of the easy coin which is being made out of the great world tradegy, and which is furnishing the big fat cheques that are arriving with whtiom frequency to gild the bank accounts of parties who are already mighty well-heeled here.

Mr Wm. McDonald, store-keeper of Riverdale, and who was the Greenock merchant referred to in these columns last week as having ordered Epsom salts from a wholesale firm in London and having received in mistake saltpetre, which he unsuspectingly sold over his counter for salts, with the result that several head of cattle in that vicinity mysteriously died after taking of the stuff, had the goods analyzed in the city and on Friday last received back a report that the stuff was sodium nitrate, which is a twin sister to salt-petre, and, it seems, acts the same. Besides the several cattle that are dead through having it dosed up to them for salts, many people in that section had also close calls from poisoning. Mr. McDonald, himself, took a heaping teaspoonful of the dope and was fortunate enough to throw it up. Wm. Heidmiller and S. A. Melvin also partook of the remedy, but their stomachs rebelling they vomited profusely and thus saved their bacon. As the merchant had received a 125 lb. shipment of the stuff and was selling it rapidly, the wonder is that the affair didn't produce even more tragic and costly results. The London firm claims, it seems,that they got it for salts from a Hamilton wholesale house, and had shipped it to the Riverdale merchant as the genuine Epsom. It is anticipated that little or no trouble will be experienced in getting a settlement for dead cattle, as the place where the mistake was originally made will likely come good for this part of the performance.—Herald and Times.

DIED

GRIBBLE—In Eldersllie, on March 17th, Samuel Gribble, aged 84 years.

ARRAN COUNCIL

Council met March 10th, 1917. All present except Councillor Thomas, who had to attend his father in law's funeral. Minutes read and adopted. Treasurer's statement showed a balance to the credit of the township of $[illegible]. Communication from Miss Gaugh, Miss Riddle and Mrs J M Gordon thanking the Council for contributions to their Red Cross work; from J. Malcomson, re Clerk, re by law to extend the time of taking the assessment; from Co Treasurer lands patented in Arran in 1916; account from Rural Mills of $[illegible] for taking a person to London Hospital. Council could not entertain this as it had done so a short time ago in this case; from J A Speer, tendering his resignation as Assessor. On motion of Donovan and Hunston the resignation was accepted. P H King resigned his position as Auditor, which was accepted. On motion of George and Hunston, P H King was appointed Assessor in place of C A Speer, resigned. By-law was passed confirming appointment. By-laws were passed appointing pound keepers and fence viewers for 1917. Pathmasters were appointed to look after the bridges during the freshet in their beats. The following orders were issued, namely: A G Kepler, account for road oil, $[illegible]; A G Kepler, 3 months salary, $[illegible]; H T Potts, 3 months' salary, $[illegible]; J H Wismer, grant to Board of Agriculture W.R. $10; John Crawford, wood for hall, $11; Tobey Bros. goods to Geo Gibbons account, $2; A G Kepler, postage, $1. Council adjourned to April 14.—R. T. Potts, Clerk.

Pathmasters—J D Potts, John McKinnon, W J Skelton, Jas Stinson, Frank Scrimgeour, H Smith, B Hunston, J McNamee, Jas Tyson, W C McKelvey, H Wolfe, M Galbraith, C Farrow, Jos McCurdy, A Mills, Gordon Greig, E Potts, Wm Tambling, Jas Gallilier, Jerry Brown, Jas Close, H Hotsenpiller, Wm Thomson, Wm Shanahan, John Welsh, H Byers, J J Crawford, Jno Hannell, Jos Coleman, H Alexander, H McMullen, H Kennedy, M C Patent, John Lawer, A M Kinz, W H Trotter, J Holmes, R Orange, M Hogarth, G Nell, H Crawford, T Orme, Geo Tipplin, W Cordick, F Kennedy, E J Morrow, W McKeon, A McDonald, Chas Kearns, W F Mullen, Wm Hass, Geo Fawcett, W Ross, John McDonald, Wm Cruickshanks, A Powell, G T Patterson, Adam Geddes, H Porter, F Scott, O Stewart, J Hindman, S Blakely, F Bennett, W J Miller, F Arnell, H Broadfoot, E Howe, A Eby, H Porter.

Poundkeepers—W J Kepler, J J Wagner, J Brown, J Ferguson, M Hogarth, C Swinton.

GREAT HOSPITAL WORK BY BRITISH

DESCRIPTION OF HOSPITALS ON THE WESTERN FRONT.

Wonderful Organization at the Large Casualty Clearing Stations.

A correspondent of a London newspaper sends the following description of British hospital work on the western front:

When a man is wounded at the front it is the work of the battalion stretcher-bearers to get him down to the battalion dressing station; and the heroism with which the stretcher-bearers have worked has become a commonplace. From the dressing station he is passed on as quickly as possible, receiving only such immediate attention as the nature of his injury requires, to the field ambulance, and thence to the casualty clearing station, which is, in fact, a hospital of considerable size.

Such hospital may have had at the beginning of a battle a permanent staff of about 100 persons, including, besides the executive officers, six or eight doctors, officers of the R. A. M. C., as many nurses, and 80 orderlies. On to this staff were thrown during a period of 14 days, in the case of one hospital, and with some others it was the same, over 12,000 cases, which included, of course, many Germans. It is true that before the 14 days were up new doctors had arrived, and the number of officers attached has now been more than doubled. But in the first few days of the rush it can be guessed what the work was. The doctors, the nurses, the orderlies worked until literally they fell asleep in the few seconds of waiting between one case and another.

The hospital nominally has 200 beds, being "capable of expansion." It had 800 beds in use for a night, but only for a night; and the day that I was there it had 132. It is in tents, which accounts for its capacity for "expansion," and is situated near a railway, where there is a train of Red Cross carriages constantly in waiting. And the object kept always in view is to evacuate the patients as rapidly as possible.

Smooth, Quick Work.

Only necessary operations are performed. Roughly it may be said that these include all cases of severe abdominal injuries. Wounds in the chest are generally kept here, dressed and put to bed, until the wound settles down before being sent forward for operation. A few head wounds only have surgical treatment, the doctrine being that it is after the operation that rest and quiet are essential, and there is less risk, except in the case of very severe injuries, in sending the patient on by barge to the place where he can finally rest than there is in operating at once and having to move him afterwards.

For the rest, the first essential is to have an abundance of dressing tents, all clustered round the operating rooms. I was at one of these stations on a day when the stream of wounded was at its worst, and it was an impressive thing to see the rapidity and smoothness with which the work went on, the patients being laid, screened as well as could be from the sun, on stretchers on the ground before each dressing tent, having only a short wait before their turn came to pass into the silent interior, to be examined and dressed and to pass out at the other side. They are cleaned and comforted and fed, all their belongings and equipment are taken from them, and within, generally, two or three hours of their arrival they are borne, dressed only in pyjamas or in their shirts and trousers, as their wounds may permit, to the train or the barge to be taken with all possible care to the base.

There is a complete system of records and of labelling each case, on cards fastened to the patient's clothing, which begins at the regimental dressing station and is continued and elaborated at each stopping place on the way down. All the things which are taken from the men, not, of course, including their valuables and small personal properties, which travel with them, are turned into the "pack store," and are also systematically evacuated and sent down to headquarters.

System is Ingenious.

An ingenious plan has been adopted of establishing these hospitals, as far as possible, in pairs close together, so that each in time of stress can relieve the other. In "peace" times, such as prevail in the lulls between a great advance, each hospital of a pair takes patients on alternate days only, so that on every second day neither has any new cases coming in. At first they take their cases in alternate batches of 400, orderlies being stationed down the road to deflect the motor ambulances as they come, to one hospital or the other. So one would be clearing out its batch of 400 while the other was receiving, and in this way neither becomes impossibly congested.

The station's responsibility for a patient ends when he is duly delivered on the railway platform or at the barge. There the Evacuating Medical Officer steps in and sees that all are properly entrained and started for a base, where they are distributed to their appropriate destination, whether they go to England or are held at the Base Hospital in France, as "A," "T.B." or "P.B.," which letters mean that a man is fit to be returned to active service as speedily as possible, or that he must remain temporarily at the base, to be examined once a week, till adjudged fit for service, or permanently at the base, when he will be examined only once a month.

With our own wounded are, of course, a number of Germans, who, it is needless to say, receive precisely the same treatment and the same care as our own men.

SCHOOL LIFE AND SCHOOLS.

Greater Attention Must be Paid To Making Schools Attractive.

Impressions made upon the young mind are lasting. This is especially the case in school life. Psychologists agree that, until about twelve years old, boys are entirely taken up with their own interests and have not begun to recognize the need of group efforts. It is, therefore, in the early age that the child forms his individual opinion of the school and teacher. In later life his interests become more associated with his school fellows and this memory offsets any deleterious effect which an unattractive school may have caused.

According to a recent survey of educational conditions in the county of Dundas, Ont., by the Commission of Conservation, 98 per cent. of 400 farmers and 92 per cent. of their wives attended public school only. Their education, therefore, must have been completed at an early age. Thus the impression created by their public school surroundings must be indelibly written upon their minds and remain there during life. Every consideration, civic and individual, renders it essential, therefore, that school conditions be made agreeable and that the teacher be suitable to the work. Greater attention must be paid to making our schools attractive, to bring the scholars to them, and make life pleasant for them while there. We are continually urging greater and higher educational facilities for our children, but are we making the best use of existing opportunities? A prime requisite to this end is initiative on the part of the teacher. In his or her hands much needed improvement can be made in building and grounds. Any expense entailed can readily be secured, if not by direct collection from the parents, through the medium of some form of entertainment, and it is not hard to arouse the enthusiasm of the pupils in such undertakings.

In most country schools there is the nucleus of a good school. With a progressive teacher, the necessary improvement to the surroundings could be made at minimum cost, and conditions created which would provide memories of his school and his teacher throughout the pupil's later life.

Measuring the Wind.

The speed of the wind is measured by means of an ingenious instrument called the anemometer. It is like a weather vane, with cups instead of letters at the ends of its arms. The cups, catching the wind, spin round, and thus turn the central shaft. This passes down into a box in which are several dials. The indicators of those dials are connected with the shaft, and move according to its revolutions. Thus the number of revolutions of the cup in a certain time gives the exact speed in miles an hour.

EFFICIENT SYSTEM OF THE RED CROSS

CENTRAL OFFICE IN LONDON A WONDERFUL STOREHOUSE.

How the Great Red Cross Society Deals Effectively With a Vast and Complete Task.

There is, to the ordinary mind, but little romance connected with the collection and despatch of stores to the various hospitals run by the Red Cross Society, yet a walk through the long corridor of their stores department, in the heart of Pall Mall, London, opens up vistas alluring in the extreme, says London Answers.

Here, from all parts of the Empire, come the gifts of large-hearted and grateful people for the wounded, and it is here that they are sorted, packed, and valued, and sent out to the places where they are most needed.

Every article received, be it a bedsock or an X-ray outfit, is classified, and a value placed upon it, so that accounts may be kept orderly, and the amount required for the complete maintenance of a hospital of so many beds arrived at in a systematic way.

Universal Providers.

In the basement of the Pall Mall offices—which are the Red Cross headquarters—ladies may be seen every day making up consignments of drugs and bandages, or counting socks and hospital suits, slippers, and shirts, in order that there may be written across each and every requisition at the shortest possible notice the words: "These goods have been despatched."

An idea of the urgent orders which have been dealt with in two weeks recently will be gained if you will try to comprehend what the following list comprises: 1,200 stretchers, 2,500 pairs of slippers, 10,000 handkerchiefs, 500 X-ray outfits, 5,000 pairs pyjamas, 5,000 wool helmets, 12,000 pairs heelpads, 500 operating gowns, 1,200 bedrests, and thousands of shirts specially constructed for helpless cases; toothbrushes and tooth-powders, enamelled drinking mugs, shaving sticks, rubber gloves (all of one particular size), hairbrushes, feeding-cups, and a host of other things.

Fabulous Figures.

And these huge numbers are by no means representative of the enormous amount of stuff sent out from London. They are simply the articles asked for by urgent telegram only, and in all cases they have been despatched the same day as they were asked for.

Only once has the Red Cross been caught napping, and that was when a requisition for 10,000 "comfort bags" —which are the small receptacles for Tommy's personal belongings, supplied to each patient—came in. But within thirty-six hours these had been collected and sent off to the Continent.

Mere figures cannot tell the romantic story of this aspect of Red Cross work, but over $1,000,000 has been spent in stores, and about $2,500,000 is the value of the gifts received. One hundred thousand cases of goods have been despatched to hospitals both at home and abroad, and over two million garments supplied.

Here are just a few instances of the universal character of Red Cross stores.

Puddings and Pianolas.

One hospital asked for a kitchen outfit to feed 100 men; the apparatus was despatched in eight hours. An order received late in the evening—after the staff were supposed to have departed—for a complete outfit for an emergency hospital was completed before dawn next morning. Four hours was all the time taken to collect and despatch a complete plumber's shop to Calais.

Last Christmas a demand for 800 Christmas-puddings and 120 turkeys was received at midnight, and, although the turkeys had to be purchased and the puddings made, the order was completed during the following afternoon.

Queer jumbles come in on the requisitions, and it is quite a romance to read through the cables that are being constantly received. One in particular, recently received from East Africa, asked for pillows, pencils, playing-cards, calves'-foot jelly, music-rolls for pianolas, an ice-making plant, and a soda-water machine.

At Saloniki the troops of the Allies have but little to assist them in the way of recreation, and games are sent out in thousands. Two dozen portable harmoniums have been sent out in answer to an appeal made by Army chaplains for music for their services —a gift which, while not strictly within the scope of the Red Cross, is greatly appreciated by the Tommies.

Egypt is a peculiar country, and peculiar demands come from it at times. For instance, silent punkas to keep the air moving in the hospital wards, toothsticks dear to the hearts of our gallant Indian troops, "sparklets" and soda-water machines for making cooling drinks—all these are asked for and sent.

There are some hospital launches at work on the Tigris, and difficulty was found in getting fuel for their use. Pall Mall immediately rose to the emergency, and sent out 200 tons of patent fuel in blocks, thus enabling the launches to carry on their merciful work at full speed.

Gardening Tools for Flanders.

An aspect of this work that has not as yet come to the notice of the public is the supply of weed-killer for clearing the graves of our heroes who have fallen "out yonder." Not only did the Red Cross Society send out weed-killer to Flanders, but they also improved on the order, and added a complete set of garden tools—rakes, hoes, spades and forks—so that the last resting-places of the gallant dead should not be neglected.

Latterly, too, 50,000 young vegetable plants have been supplied to the Continent. These are planted around the various rest camps, hospitals, and convalescent stations, and not only do they provide a constant supply of fresh vegetables for the sick and wounded, but they provide a means of recreation for those patients who are able to get about, and upon whose hands time hangs all too heavily after their strenuous labors in the firing-line.

Mesopotamia demanded 20,000 yards of wire gauze-netting to keep the sand flies and mosquitoes from further adding to the misery of wounded men. As newspaper readers will know, these flies are a terrible pest out in that far country. In order to fill this order, it was necessary to scour all England, and it speaks volumes for the efficient organization of the Red Cross stores department that this quantity was discovered, bought, and despatched within two days. As a matter of fact, they purchased every inch of the netting they could, and left England completely out of stock.

But the sick and the wounded are not the whole of the Red Cross' care; they look after the welfare of our prisoners also. This part of their work originally commenced by the sending of Christmas parcels, but it was soon realized that Christmas was not the only time parcels were required, and that the prisoners of war were short of many things which were sheer necessaries.

Bread, tinned meat, jam, tea, milk, sugar, cheese, dripping, even soap, were all needed, and many are the letters of appreciation and thanks for parcels received daily from men who had been unfortunate enough to fall into enemy hands.

Good Advice.

The grammar school principal went from room to room explaining what to do in case of fire. The pupils listened with respectful attention until he came to his final instructions, then smiles and giggles disturbed the principal's serenity.

"Above all things," he said, "if your clothing catches fire, remain cool."

As a substitute for the door mat there has been invented a device provided with horizontal brushes to remove dust from the soles and tops of shoes and the bottom of trousers as well.

Farm Crop Queries

Conducted by Professor Henry G. Bell.

The object of this department is to place at the service of our farm readers the advice of an acknowledged authority on all subjects pertaining to soils and crops.

Address all questions to Professor Henry G. Bell, in care of The Wilson Publishing Company, Limited, Toronto, and answers will appear in this column in the order in which they are received. As space is limited it is advisable where immediate reply is necessary that a stamped and addressed envelope be enclosed with the question, when the answer will be mailed direct.

Henry G. Bell.

Question—M. P.:—I have purchased two tons of ground limestone to experiment with. How, when and where shall I apply it to get best results? I intend to sow oats, barley, corn, sugar-beets, clover and wheat. The land is all under-drained and fall plowed except corn stubble and beet ground; soil, good clay loam. Intend to sow barley on corn stubble land disced up in the spring and seed to red clover.

Answer:—I would advise you to pick out three acres of uniform corn stubble land. Apply one ton of ground limestone to the first acre and thoroughly disc it in, in preparing the seed-bed for the barley which is to be seeded to red clover. On the second acre which should lies right between one and three thoroughly disc the land but do not apply limestone and seed to barley and red clover. On acre No. 3, apply the remaining 1000 lbs of ground limestone and discuop the land in preparation for the grain seed. Just before seeding time, or a week or ten days after having worked the limestone into the soil, apply 200 to 300 pounds of a fertilizer analyzing 2 to 8% ammonia and 8 to 10% available phosphoric acid. If your seed-drill has not a fertilizer drilling attachment, scatter the fertilizer as evenly as possible over the acre and thoroughly harrow it into the ground. Then sow your barley and red clover as before.

At harvest time weigh the results from the three individual acres separately and you will have a clear demonstration of,—first, the value of the lime, second, the value of the lime and fertilizer. Besides weighing the barley, be sure to note the earliness with which it ripens on each plot and the weight per bushel of the grain when it is harvested. Also note how successful the grass and clover seedings have been on each plot.

Ground limestone is a corrector of soil sourness and is not essentially of plantfood. When you have limed the soil you have corrected its condition so that clover will thrive on it, but when you have added 200 to 300 pounds of fertilizer in addition to the lime, you have given available plantfood to the tiny clover crop just the same as you give whole milk to the young calves, and the results from seeding both the young barley and clover crops should be quite as apparent as they are in good feeding of live-stock.

Question—S. C.:—Am thinking of sowing a couple of acres of beans. How would they do on sod plowed in the spring? The land is sandy loam which has not been worked for quite a while. Would sow the beans with a ten hoe drill. How deep should they be planted and would the common white beans be all right?

Answer:—Beans should do well upon spring plowed sod, if after plowing great care is taken to thoroughly disc and harrow the seed-bed, and possibly if the ground appears to be too loose to roll it and follow with a harrowing. The point is that the turning under of the heavy sod may make the seed-bed too loose and actually injure the water supply around the growing plant. This can be avoided by thoroughly working the seed-bed into a compact but still mellow form.

The general rule, in sowing seed, is to put them not deeper than four times their longest diameter. This would mean that the beans should not be planted deeper than 2½ to 3 inches. The common white bean is a serviceable type to grow but you should take care to sift out all the undersized and injured beans and to pick out 100 beans and lay them between a damp cloth, keeping them in a warm room. You can watch the sprouting of these beans after they have been prepared as described, and if at the end of a week or ten days they do not sprout strong and show considerable vigor you will do well to obtain new seed.

COMING BACK TO DEVASTATED HOMES.

This picture shows graphically what faces the Belgian refugees when the Germans have swept over their towns. This aged couple after wandering homeless and penniless for months have returned to pick up the shreds of their lives. Where there was a prosperous town they find only ruin and desolation.

What is left for them to do? It seems hopeless, yet thousands of them have faced their reconstruction period long before it was safe to do so, with the same fortitude that the Belgian nation displayed in resisting the invasion.

But these courageous people must have help, until they can get on their feet again and find means to keep themselves alive, they must receive aid from their friends abroad. At least food must be supplied them.

This is the work the Belgian Relief Committee undertook to do and has done with a thoroughness that has astonished the world. It has tirelessly labored to give these people the chance they have so well earned to re-establish themselves.

In this work it has been aided by the people of Canada most freely, and it is dependent on Canadians still, with their brothers in Great Britain and the United States, to continue the work as long as the Germans remain on Belgian soil. Subscriptions should be sent either to the Central Belgian Relief Committee at 59 St. Peter Street, Montreal, or to the local branches.

ESSENTIALS FOR THE GARDENER

Construction and Care of Hotbed and Cold Frame—Both Are of Greatest Assistance in Obtaining An Early Start With Market Produce.

The gardener's greatest aids in raising early crops are the hotbed and the cold frame. The hotbed enables him to plant seed and produce seedlings long before the seed planted out of doors has begun to germinate. The cold frame enables him to get the seedlings produced in the hotbhouse gradually accustomed to outdoor conditions and to raise these into strong, sturdy planting stock by the time the garden is ready for them.

The cold frame is used in hardening the plants which have been started in the hotbed or in mild climates for starting plants before the seeds can be safely planted in the open.

Resetting plants from a hotbed into the cold frame gives them a better root system and makes them stockier and more valuable for transplanting in the open ground.

Building of Hotbed.

The hotbed should be in some sheltered, but not shady, spot which has a southern exposure. The most convenient size is a baxlike structure six feet wide and any multiple of three feet long, so that standard three by six feet hotbed sash may be used. The front should be twelve inches high in the back and eight inches on the front. This slope is for the purpose of securing a better angle for the sun's rays and should be faced toward the south.

The hotbed not only must collect any heat it can from the sun, but also must generate heat of its own from fermentation in fresh manure. Fresh horse manure, free from stable litter, is best for generating heat.

If the hotbed is to be an annual affair, make an excavation eighteen inches to two feet deep, about two feet greater in length and width than the frame carrying the sash. Line the excavation with plank or with a brick or concrete wall. A drain to carry off surplus water is essential. After a sufficient amount of fresh horse manure has been accumulated, fill the pit, and while it is being filled tramp the manure as firmly and as evenly as possible. When the ground level is reached place the frame in position and bank the sides and ends with manure. Place about three inches of good garden loam on top of the manure inside the frame and cover it with the sash. After the heat has reached its maximum and has subsided to between 80 degrees and 90 degrees F., it will be safe to plant the seeds. Select the plumpest, freshest seeds obtainable. Use standard varieties and get them from reliable seed houses.

Crisis in Plant Life.

Keep the bed partly dark until the seeds germinate.

After germination, however, the plants will need all the light possible, exclusive of the direct rays of the sun, to keep them growing rapidly. This is a crisis in plant life and ventilating and watering with great care are of prime importance. Too close planting and too much heat and water cause the plants to become spindling. Water the plants on clear days in the morning and ventilate immediately to dry the foliage and to prevent mildew.

The cold frame, so useful in hardening plants started in the hotbed and for starting plants in mild climates, is constructed in much the same way as the hotbed except that no manure is used, and the frame may be covered either with glass sash or with canvas. A cold frame may be built on the surface of the ground, but a more permanent structure suitable for holding plants over winter will require a pit eighteen to twenty-four inches deep. The cold frame should be filled with a good potting soil. The plants should have more ventilation in the cold frame, but should not receive so much water. It is best to keep the soil rather dry.

In transplanting, remember that plants usually thrive better if transplanted into ground freshly cultivated. Transplanting to the open field is best done in cool, cloudy weather, and in the afternoon. This prevents the sun's rays from causing the plant to lose too much moisture through evaporation. In transplanting the gardener will find a child's express wagon an excellent trolley tray for bedding out his seedlings.

Your Problems

Conducted by Mrs Helen Law

Mothers and daughters of all ages are cordially invited to write to this department. Initials only will be published with each question and its answer as a means of identification, but full name and address must be given in each letter. Write on one side of paper only. Answers will be mailed direct if stamped and addressed envelope is enclosed.

Address all correspondence for this department to Mrs. Helen Law, 75 Castle Frank Road, Toronto.

H.B.M.:—1. For your boys of eight, eleven and fifteen years of age, the following books are recommended: "Lorna Doone," by Blackmore; "Story of Great Inventions," by E. E. Burns; "Legends of King Arthur and His Court," by F. N. Greene; "Old Greek Stories," by Jas. Baldwin; "Adrift on an Ice-pan," by Dr. W. T. Grenfel; "David Livingstone," by C. S. Horne; "The Boy's Nelson," by H. F. D. Wheeler; "Lives of Poor Boys Who Became Famous," by S. K. Bolton; "Historic Boyhoods," by F. S. Holland; "Heroes and Heroines of English History," by A. S. Hoffman; "Plutarch's Lives for Boys and Girls," retold by W. H. Weston; "Ivanhoe," and "Kenilworth," by Sir Walter Scott; "Tom Brown's Schooldays," by Thos. Hughes; "John Halifax, Gentleman," by Miss Mulock. There is also a splendid series of twenty volumes, for boys and girls from eight to fourteen, of which a few titles are: "Birds That Every Child Should Know," "Earth and Sky That Every Child Should Know," "Water Wonders That Every Child Should Know." Some of the other subjects treated are: "Wild Animals," "Pictures," "Songs," "Trees," "Famous Stories," "Heroes," "Heroines." This series affords a vast amount of useful information in very readable form.

L.W.:—The wedding anniversaries are as follows: 1, Cotton; 2, Paper; 3, Leather; 4, Fruits and Flowers; 5, Woolen, 10, Tin; 12, Silk and Fine Linen; 15, Crystal; 20, China; 25, Silver; 30, Pearl; 40, Ruby; 50, Golden; 75, Diamond.

H.I.R.:—1. Milk dishes are the most valuable bone-forming foods. 2. It is said that a very hot nail will not split plaster when it is driven into it. 3. The best way to soften butter is to invest over the plate of butter a bowl which has been first heated with boiling water. 4. A good plan is to paint the lowest step of the cellar stairs white. Or a folded newspaper can be tacked to the bottom step. 5. To cut new bread try using a knife which has been dipped in very hot water. 6. Fresh coffee stains can be removed by pouring boiling water through the fabric. 7. If steak is rolled in flour before frying, it will keep in the juice and make the meat more tender and delicious.

C.B.:—Iron rust stains cannot be taken out by water. Try a mild acid, such as cream of tartar, spread on the stain and washed through by hot water, or dilute oxalic acid. When the stain is removed be sure to wash out the acid.

V.D.F.:—A good play for your school concert would be "The Making of Canada's Flag," in which from fifteen to twenty-five children may take part. Another patriotic play for boys and girls is "The Key to Jack Canuck's Treasure House." It deals with our splendid national resources. Both these plays may be obtained from city booksellers at 25 cents each.

I.N.:—A mixture of one-half ounce borax, one-half ounce glycerine, three ounces rose water and two ounces bay rum will soften and whiten the hands. Cornmeal is also excellent as a whitener, and glycerine and lemon juice mixed is recommended. If a bowl of oatmeal is kept beside the kitchen sink and rubbed over the hands after washing it will prevent roughness.

THE ART OF GRAFTING.

When in the spring the sap begins to move in the stock, be ready; this occurs early in the plum and cherry, and later in the pear and apple. For the grafting, if possible, on a mild day during showery weather. The necessary tools are a chisel, or a thick-bladed knife or a grafting iron (with which to split open the stock after it is sawed off smoothly with a fine-tooth saw), a hammer or mallet to aid the splitting process, a very sharp knife to trim the scions, and a supply of good grafting wax. Saw off a stock at the desired point, split the stock a little way down, and insert a scion at each outer edge—taking care that the inner bark of the scion fits snugly and exactly against the inner bark of the stock. This—together with the exclusion of air and moisture until a union results—constitutes the secret of success. Trim the scions wedge shaped, insert them accurately; the wedge should be a trifle thicker on the side which comes in contact with the stock's bark. Lastly, apply grafting wax. Each scion should be long enough to have two or three buds. The "spring" of the cleft holds the scion securely in place and therefore tying should be unnecessary. If both scions in a cleft grow, one may later be cut away.

When grafting large trees it is best not to cut away too much of the tree at once; therefore a few secondary branches should be left untouched, and these, after the scions are thriftily growing, can gradually be cut away the following years. Or, part of a tree can be thus top-grafted one year and the remainder the next. Many a worthless tree has thus been entirely changed.

You can't graft a pear or an apple on a cherry or plum tree, or vice versa. The stone fruits and the pomaceous fruits are separate families and refuse to intermarry.

The following formula for grafting wax will be found satisfactory: Melt together until thoroughly mixed four pounds of resin, two pounds of beeswax and a pound of tallow. Pour this mixture into a vessel of cold water. Grease the hands with tallow, and when the wax is cool pull it like taffy until it becomes light and smooth. It may then be shaped into balls or sticks, and will keep indefinitely in a cool place. Paraffine substituted for beeswax makes a harder as well as a cheaper wax.

Here is a substitute for grafting wax that is much cheaper: Take common putty, put it on good and thick and fill all the cavities smoothly. Then take cloth, tear it in strips, wind it around the putty and tie it with string.

It is best to use scions which were cut very early this spring or last fall; they can be kept in moist sawdust or sand.

Horse Sense

Chronic indigestion is indicated by the following symptoms: Unthriftiness, capricious appetite, increased thirst, irregularity of the bowels, dry, staring coat, hide bound, sometimes slight, colicky pains.

If due to imperfect mastication have teeth attended to. Give purgative followed by a dram each, ginger, gentian, nux vomica, and bicarbonate of soda 3 times daily, and food of first-class quality.

Increase the feed gradually, and give regular exercise at some kind of work.

When the hair begins to shed, the heavy coated horses should be clipped.

When not at work, have a blanket handy to throw over the clipped horse and he will not take cold.

There will be no delays in the spring work if the work teams are properly prepared at the start.

Gradually toughen up horses that have been standing in the stable. A poor collar hurts worse than a heavy load. Adjust the traces to the length of the horse. Get your horse as near as possible to the load he is to pull.

Mud-spattered harnesses on a clear day look as if something were wrong. Wash them up after the spring storms and bad roads are over, and keep them washed. A harness that is permitted to go dirty will not last so long as one which is cleaned and oiled often.

A horse that does not eat when food is before him is wrong somewhere. Look at his teeth. Watch all danger signals.

Wind up the week's feeding with a bran mash.

Poultry

Stop feeding geese twelve or fifteen hours before you kill them.

A few sickly hens will undermine the best-founded efforts at success.

Five to ten per cent. of the feed given in winter should be meat in some form.

Fresh cold air is the only thing that will keep the hens from freezing to death.

It will help to get eggs the year around if you thin out the overcrowded houses.

When chickens are permitted to roost in and about the stables, why should there be surprise when horses and cattle become lousy?

Some folks try to make money out of geese without water. Quite like making bricks without straw. If nature has not provided you a stream or pond fed by springs, make a pond of your own. Eggs from geese that have water to swim in are more apt to be fertile than those which come from dry land layers.

The Dairy

The tested and approved cow, and the dairyman determined to do his best, make a winning combination.

Above all things let no one pester the bull. Nine out of ten cross bulls are made so by wrong treatment on the part of some one who either does not think or who does not know any better.

With all our kindness let us keep a firm hand and a good stout staff on the bull.

The cow due to calve soon should be fed only laxative, easily digested food.

Toughen your cows, not by exposing them to the raw spring winds and storms, but by daily exercise on sunshiny days, and careful stabling when the winds whisk around the corner.

Before we offer a farm for sale, we know it pays to slick it up and make it look the very best we can. Same way with a cow we want to sell. We can't expect men to take much interest in a rack of bones or a dung heap fast enough to pair of kind legs. Clean up. Put a good coat of flesh on your cow, and then offer her for sale.

Pastures which are used one week too early in the spring will generally run short at least three weeks earlier than if they had been properly conserved.

Hogs

Rig up an old pasture for the hogs this season. It will be a great saving in feed.

Lots of folks down-town never know what good bacon or ham is. Make yours extra good this year.

The constant cold weather of the past months has been the means of keeping many pigs closely housed, and this has resulted in a great many cases of crippling amongst the swine herds of this country.

It is essential that the brood sow be fed a well-balanced, succulent, nutritious, milk-producing ration while suckling the litter. Dairy by-products, such as skim-milk, buttermilk or whey together with meals such as shorts, ground oats, barley, oil cake and the like are all highly suitable for the feeding of the sow at this season.

One reason why the storms of winter break so many panes of glass in the farm homes of this country is because the putty gets loose and lets the glass break easily. Take some comfortable day very soon and go over all the winrows. Ten cents may save a dollar's worth of glass.

The Sunday School

INTERNATIONAL LESSON APRIL 1.

Lesson I.—Jesus Gives Sight To The Blind—John 9. 1-38 Golden Text—John 9. 5.

Verse 1. Passed by. A spurious addition to John 8. 59 (see margin) would link this verse with the last. It seems quite general "some day as he went along the street." From his birth. Evidently a well-known character, whose history the disciples knew; compare verse 8.

2. Rabbi. The actual word used wherever our Gospels have "Master" literally, Teachers. Who sinned. This is India's problem, on which the whole superstructure of reincarnation is based. Jesus believed in the possibility of prenatal sins; this verse does not mean that they thought of a pre-whose existence. Parents compare the old proverb about the father's eating sour grapes and the children's teeth set on edge. Jeremiah repudiated it, but there was a partial truth in it which he retained (Jer. 32. 18).

3. Jesus rejects this theory of suffering altogether. Man's suffering is only God's opportunity: compare John 11. 4, and 2 Cor. 12. 9.

4. We must. Note the rebuke to their hard theorizing in the presence of sorrow. They should be looking out for opportunities of helping their Master in his Father's works. While it is day. See John 11. 9; 12. 35. The parable itself guards against universal man's intellectual and spiritual work is often done at night. But just as our work for daily bread normally stops at sundown, so the opportunity of ministering to men in their sorrow will cease with death.

5. When. There is a distinct suggestion that this visit (compare John 17. 11) is not the only one. See Lesson Text Studies for March 15 verse 12.

6. Compare Mark 7. 33; 8. 23. The primitive belief in the healing virtue of saliva is used by Jesus to help faith: the point is that what heals comes from him. Anointed. Read, "put the clay on his eyes"; the margin has an improvement on the text, but it misses the true point.

7. Wash. The word used implies the washing of a part, here the face. Pool of Siloam. "Siloa's brook that flowed fast by the oracle of God," as Milton calls it. The pool is still there. Sent. That is "flowing, gushing forth." But John fastens on a mystical interpretation, the spring is a type of the water of life.

8. Began. As to-day in India, there was no other livelihood for a blind man who had no relatives to support him.

9. No. For of course the fact that he could see, with them disproved identity.

11. Went away. As with the ten lepers, faith was tested by bidding him leave the Healer's presence.

35. Cast him out—See verse 22 and John 16. 2. The Son of Man (margin)—So read, beyond doubt. Since this great title refers (as it. in future judgment, there is special significance in verse 39 in this connection.

37. He it is—Compare John 4. 26.

38. Worshipped—Jesus accepts a reverence which angels refuse (Rev. 22. 8, 9).

Bedtime Stories

THE PARIS DOLL LIKES HER NEW HOME.

It was past 12 o'clock in Toytown and the big fat Policeman had come around as he always did every night to see if there were any new dolls in the window.

Sure enough! There was a new dollie, with big blue eyes and light golden hair, and the big Policeman thought the big Boy Doll was looking at her very strangely.

No wonder, for the Paris Doll had just been put in the window of Toytown that very afternoon, and she was so very beautiful that all the other dolls stopped looking out of the window just to see her. The Brown Monkey stopped pulling the Stuffed Cat's tail just to see what it was all about. The Tin Soldiers stood up very straight as if to salute, while the Wooden Firemen looked around to see if there was a fire anywhere.

"Have you been here very long?" asked the Boy Doll of the Paris Doll.

"Oh, no," said the Paris Doll. "I came from across the water. The dear little girls packed me in a box and gave me a lot of kisses to give to Canadian boys and girls, and one of the dollmakers taught me English so that I could understand what was said to me."

"That is very wonderful," said the Boy Doll. "I hope you like it here."

"I know I shall," said the Paris Doll, "Every one is so kind."

Just then the big Policeman turned his back and the Brown Monkey threw a block at the window and the big fellow jumped right up in the air. He turned around very quickly and thought he saw all the dolls, tin soldiers and firemen laughing at him. I wonder if they really were?

Sheep Notes

Where a flock or individuals in it are not doing well, there is no mystery about it. Remember parasites, internal as well as external.

If you are up to date you will read the experiment station reports on sheep and lamb feeding, and then file them to read again.

Blessings on the ewes that bear twins, and this is the year that it will pay to raise them. In every sheep track there springs up a clover plant. Sheep and clover are great partners. For genuine pasture improvement, at little expense, the sheep is the leader. Did you ever think that millions of weeds that would otherwise mature seeds get ripped by sheep?

Many pounds of wool are lost every spring by letting the sheep run where fences and bushes will catch them and tear off big pieces of the fleece. Small matter? Nothing like this is too small for the farmer's attention.

Pity the people who live in the tropics; they never enjoy the miracle of spring.

CANTIRE

The welcome notes of the robin are once more filling the air.

John A. McIntyre had a number of his neighbors help move his effects to his new farm near Tara. He expects to move family next week.

Mr and Mrs Archie McAllister, William Johnston and William Rice, all hit the trail for the west last week.

Mr and Mrs M J Benfather entertained a number of the young folks of Cantire on Friday evening week

We are pleased to see Mr D A McIntyre is able to go about again, and has been calling on some of his old neighbors. Dan has had a severe shaking but with the advent of warm weather will soon recuperate.

Mr George Anderson is taking in logs at the portable mill these days. Krug Bros of Chesley had an agent through this locality with a view to procuring timber. Although offering good prices there was not much hope of securing any quantity unless it was bought on the stump, as the farmers have their hands full attending the stock and when they have to compete with the munition factories which pay from $3.50 to $5.00 a day for help, it is no wonder a large number have settled down to just do what they can till time works a change.

Mr Russel Muir has his hands full these times. Four of his horses are sick with pneumonia.

Children Cry
FOR FLETCHER'S
CASTORIA

TWELFTH CON BRUCE

Spring is at hand, and the robins are singing again. So you may get your seed grain ready.

The sap is running. Everybody is again on the job, making maple syrup.

Mrs Charles McArthur has moved to her new home on the 15th. We welcome her to our neighborhood.

Mr John Bell and his sisters have moved to the townline of Brant and Eldersilie, up near Chesley.

Mr D. A. Campbell, of Dornoch, was visiting at the home of his father-in-law, Mr Colin McGillivray.

A little daughter arrived at the home of Mr and Mrs Duncan Deaton last week.

GLAMIS

The congregations were small in all the churches Sunday owing to the bad roads The snow is going fast and it will be a few days before the wheels can go, but we welcome the spring.

Mr Alex McSeveny's sale came off on Saturday. Everything went off well.

John L. McKay and daughter Annie left on Wednesday for Port Arthur.

Captain Miniee gave an illustrated address in the Presbyterian church on Thursday night in the interest of the Belgian Relief Fund. The offering and subscriptions taken amounted to $210.

A number from here attended the Baptist Home Missions Board meeting in Paisley last Thursday afternoon.

Earl Percy, of Saskatchewan, spent a few days with his friends here on his way to Halifax. Earl is in the hospital service and expects soon to go overseas.

Miss Ada Cunningham is spending some time at Mr John Deehan's and Mr Robert Russel's.

The Red Cross Society sent off another shipment on Thursday last.

ELORA ROAD NORTH

Miss Katie Campbell is visiting at Chippewa Hill.

Mr Thos Rae is employed with his brother-in-law, Mr A L. McKinnon.

Mr Neil McArthur, jr., has gone to Vancouver in charge of a car-load of horses.

Mr and Mrs R. H. Fraser entertained a few friends last Thursday night.

Mr. Laurence Winch is suffering with the mumps.

Quite a number of people from the Elora Road attended the hockey match at Ebenezer last Wednesday night.

BETTER THAN MANURE

EDWARD WOOD, ETHEL, ONTARIO, says:

"I tested Homestead Bone Black Fertilizer on oats, corn and potatoes. The results were beyond my expectations. My corn was better on the fertilized part of the field than on the other where I put 12 loads of good barnyard manure per acre with manure spreader, 60 bushels per load. I highly recommend the use of your high grade fertilizer.

Write Michigan Carbon Works, Detroit, for free book and particulars about their Homestead Bone Black Fertilizer.

SECOND CON. ELDERSLIE

The home of Mr and Mrs D Walks was the scene of a social gathering on Tuesday night of last week, when honor was paid to their son Lieut. Wm Walks, who is going overseas with the veterinary corps Mr. J. Young was elected chairman of ceremonies for the evening. The appended address was read by Mr Jas. Buchanan and Mr Thos Brown made the presentation of a purse of money. Following the recipient's appreciative response there were short speeches by Messrs. Jas Vanclse and Thos Brown, and patriotic singing by a chorus of ladies. The balance of the evening was spent in dancing."

TO LIEUT WILL WALKS:

Dear Friend—We your friends and neighbors, have gathered here this evening to do honor to you, one of Canada's noble sons, who have offered their services to their country, to help our glorious Empire and Dominion free from the sway of the tyrant and his accursed Prussian militarism. We know that you are well prepared to do your bit, to meet, unflinchingly, many a stubborn foe in front and dangers in this righteous cause, and we are glad of this knowledge. We ask you to accept this purse of money, not for its intrinsic value, but as a slight token of our respect for you and for the stand which you have taken in this era of horror, anxiety and trouble. Although you are leaving for overseas now, we hope that by the time you have reached the blood stained battlefields of Flanders the Hun will have returned, crushed and broken, to the Fatherland, and that peace will reign over all Europe. We know that you will be sustained through the dark hours by a Higher Hand, and ask you to remember that our thoughts go with you. We hope that we shall soon welcome you back to Canadian soil with the rest of our victorious boys who have fought to maintain our glorious standard, the Union Jack.

BURGOYNE

Quite an event took place at Burgoyne manse on Saturday, 7th inst. Mr Robert Alexander and Miss Annie McVeety being quietly united in wedlock by Rev W J Watt. The contracting parties were accompanied by the bride's sister and husband, Mr and Mrs McRae of Saugeen. They are both residents of this community and their wedded life will commence at the present home of the groom on the Johnstownbrock farm. Congratulations are extended to the young couple in this new sphere of life.—Port Elgin Times.

On Friday evening the friends and immediate neighbors of Mr and Mrs Donaldson met at their home and presented them with the following address:—

DEAR BOB AND ROSIE.—You have recently taken one of the most important and solemn steps in life, and we, a few of your many friends, wish to commemorate the event and also to convey to you in a very slight measure our appreciation of your sterling qualities. Your pleasant manners and ever smile have always been an inspiration to those of us with whom you have associated, and we are pleased to note that the matrimonial state has produced an additional happiness. We hereby desire to welcome you as neighbors and as a slight token of the esteem in which you are held we ask you to accept these articles. Trusting that you may long be spared to test them, and that your wedded life may be long, pleasant and prosperous, we signed on behalf of your friends, DOUGLAS DONALDSON, DUNCAN CAMPBELL, ANDREW DONALDSON.

Mr and Mrs Gow block were the recipients of a number of useful articles, comprising a suite, silver knives and forks, and a number of pieces of granite ware.

CASTORIA

Always bears the Signature of Chas. H. Fletcher

UNDERWOOD

Eddie Schmidt and Mac Brown left for Sandford Inne, Park, on Monday of last week.

Mr W. A Coleman and Mr McNab spend a few days in Toronto last week.

Mr Albert Coleman, of Clifford, is visiting at his home here at present.

Captain Minnie, a returned soldier, will conduct the evening service in the Presbyterian church here on Sunday. There will also be an illustrated lecture on Tuesday evening in the interests of the Belgian Relief Fund.

Miss Florence McLean is visiting friends in Port Elgin.

Mr [illegible] has rented his farm to Lachlan McDougall, of the 6th, and moved to Harriston last week.

Mr [illegible] George has moved to his farm on the 6th again, Mr Wm McDonald of the 12th having rented the farm Mr George was on down the 5th while Mr Wm Conyer of Kinloss has purchased and moved onto the farm formerly occupied by Mr McDonald.

There will be no service in the Presbyterian church here Sunday morning on account of Mr McNab being away that day.

Born—On March 8th, to Mr and Mrs Wm Connolly, a son.

Born—On March 9th, to Mr and Mrs J B Knapp, a daughter.

HOW MRS. BEAN MET THE CRISIS

Carried Safely Through Change of Life by Lydia E. Pinkham's Vegetable Compound.

Nashville, Tenn.—"When I was going through the Change of Life I had a tumor as large as a child's head. The doctor said it was three years coming and gave me medicine for it until I was called away from the city for some time. Of course I could not go to him then, so my sister-in-law told me that she thought Lydia E. Pinkham's Vegetable Compound would cure it. It helped both the Change of Life and the tumor and when I got home I did not need the doctor. I took the Pinkham remedies until the tumor was gone, the doctor said, and I have not felt it since. I tell every one how I was cured. If this letter will help others you are welcome to use it."—Mrs. E. H. BEAN, 528 Joseph Avenue, Nashville, Tenn.

Lydia E. Pinkham's Vegetable Compound, a pure remedy containing the extractive properties of good old fashioned roots and herbs, meets the needs of woman's system at this critical period of her life. Try it.

If there is any symptom in your case which puzzles you, write to the Lydia E. Pinkham Medicine Co., Lynn, Mass.

MORTGAGE SALE

UNDER and by virtue of the powers of sale contained in a certain mortgage, which will be produced at time of sale, there will be offered for sale by public auction, on **Thursday, the 19th Day of April, 1917**, at the hour of two o'clock in the afternoon, at the **Grand Central Hotel, Paisley**, by Richard T. Pearce, Auctioneer, the following property, namely:—

All and singular that certain parcel or tract of land and premises situate, lying and being in the Village of Paisley, in the County of Bruce, and known as Lots Numbers Nineteen (19) North and Nineteen (19) South, and Twenty (20) North and Twenty (20) South on the west side of George Street South, in Howes Subdivision of the Village of Paisley.

On the lands so described is said to be erected on stone foundation a two storey brick or frame and dwelling house.

Giant Flowering Carnation

FREE!

Address a postcard to us now and receive by return mail a copy of our new illustrated 80-page catalogue of Garden, Flower and Field Seeds, Root Seeds, Grains, Bulbs, Small Fruits, Garden Tools, etc.

SPECIAL—We will also send you free a packet (value 15c) of our choice

Giant Flowering Carnation

This carnation is a great favorite; the flowers are large and fragrant and the plants do well outdoors. Transplanted into pots in the early fall they bloom profusely from October till the end of May. Extra plants are easily propagated from them by cuttings, "pipings" or layering.

Send for our catalogue and learn of our other valuable premiums. 15

Darch & Hunter Seed Co., Limited, LONDON CANADA

Serve Save Produce

EVERY ONE CAN do something for his country

Some can bear arms
Some can produce food
Some can make munitions
Some can give money

It is the privilege of all to help.

YOU CAN SERVE by Fighting—Working—Saving—Giving

This is NATIONAL SERVICE

Are YOU doing your part?

ALL EYES turn now to the Canadian Farmer, for he can render the Empire SPECIAL SERVICE in this sternest year of the war.

But—our farms are badly undermanned—25,000 men are needed on the land.

With insufficient help, the Man on the Land fights an uphill fight to meet the pressing need for Food.

CITY and TOWN can help.

Municipal Councils, Churches and Schools, and other organizations, both of men and women, can render National Service by directing all available labour to the Land.

Farmers themselves can exchange labour. School boys can assist.

Were you raised on a farm? Can you drive a team? Can you handle fork or hoe? If you can't fight, you can produce. Spend the Summer working on the Farm.

Let every man, woman and child in the Dominion who has access to Land, no matter how small the plot, make it produce Food in 1917.

For information on any subject relating to the Farm and Garden write:—

Your Winter's Entertainment

WHEN you rely on the New Edison Diamond Amberola for your winter's entertainment, you are not confined to Grand Opera Singers or Tango Dancing.

For instance; there are more than seventy Quartette Records; from the frivolous "Pussy Cat Rag" and tender melodies like "Old Black Joe" to the magnificent quartette from "Rigoletto," the "Gloria" from Mozart's Twelfth Mass and beautiful sacred hymns as "Jesus, Lover of My Soul" and "Abide With Me."

The NEW EDISON DIAMOND AMBEROLA

If you like music that thrills—that makes you *feel* as well as hear—just come in and let us play some of the rousing selections made expressly for the Edison Diamond Amberola by the British Male Quartette—Knickerbocker Quartette—and Metropolitan Quartette.

Then, you'll be able to examine the Edison for yourself—the diamond reproducing point, unbreakable and long playing records, superior motors and construction, concealed horns, and cabinets made in true period styles, in perfect harmony with the finest furniture. 56

Thomas A. Edison

PETER McKINNON, - - PAISLEY, Ont.

—THE ADVOCATE office has a splendid stock of wedding stationery and calling cards on hand, also the most beautiful styles of type, so we are able to turn out the finest lines of wedding invitations, announcements, cards, etc. We can do work fit to invite the best of people to a wedding, so why pay two or three times as much to city printers or engravers?

Paisley Mercantile Co.

The People's Popular Store

WE will again this week have on sale on our bargain tables many of the lines of goods named last week, together with new lines, of which the following are a few specials:

Rugs, Linoleums, Ends of Carpets, Window Shades and Lace Curtains

As to our general stock, it has never been more complete, and although there has been a great advance in the price of goods all along the line, yet through our buying many months ahead, we are able to give our customers many of the staple lines of goods at much better valuation than if they were bought now.

In Dress Materials and Wash Goods

of all kinds we are showing a good range, and at prices that cannot be repeated later on. We would, therefore, advise you to do your Spring buying as early as possible, as prices of all goods will surely go higher.

Our Millinery Department

is now in full swing and our milliners have been very busy since the Spring Opening and have now a large display of Ladies' Hats of very newest styles for Easter.

See our beautiful range of Ladies' Collars ---just arrived

THE PAISLEY MERCANTILE CO.

THE CITY BAKERY

"THE BREAD THAT IS MAKING PAISLEY FAMOUS"

Having engaged a No. 1 all-round baker with years of experience, we are in a position to give you better quality and greater variety for the same money. Mr. A. Gilchrist has been working in different cities and small towns, so with his wide experience the public can depend on getting "quality first" and always.

Our Grocery shelves are stocked weekly with FRESH Groceries and many little delicacies, such as Pure Strawberry Jam, Crab-Apple Jelly, Pimento Cheese, Ingersoll Cream Cheese, Plain or Stuffed Olives, Peanut Butter, Horse Raddish, Sardines, Lobster, Herring in Tomato Sauce, and many other little specialties you will find on our shelves.

We will keep a full stock of Five Roses and Stark's high grade flours, bran, shorts, Blatchford's molasses and meal, poultry foods and tonics. Always in the market for coarse grains. W STARK.

To Raise Ministers' Salaries

Delegates from the Baptist churches from Southampton, Port Elgin, Tiverton, Glenelg, Walkerton, Williscroft and surrounding country assembled at the Baptist church here to discuss the plan of the home mission board of Ontario to increase the salaries of ministers to a minimum of $900. Addresses were made by Mr E Roy Sayles of Port Elgin, and Rev Mr Schutt of Toronto. It was moved and carried unanimously by those present that the plan be formed in the following resolution: "That we, the members of Baptist churches assembled at Paisley do approve of the plan of the home mission board for the increase in pastors' salaries and that we pledge ourselves to go back to our respective churches and do all in our power to have the salaries raised to the proposed standard."

—Mr Hugh McKerracher is in Toronto for a few days.

—Mr H Crewe, of Port Elgin, was in town on Saturday.

—Mr L C Spofford was on a business trip to Toronto this week.

—Some plowing was done in this neighborhood on the last days of March.

—Mr S Ballachey has returned from a two weeks' visit to Brantford friends.

—Mrs Stewart, of Sharon, Pa. is visiting at the home of her niece, Mrs J. A Logie.

—Mr Robt Irving went to Toronto lately, and is working in a munition factory.

—Mrs Cook, of Toronto, is visiting at the home of her parents, Mr and Mrs H. Reid.

—Mr Andrew Colwell, of Weyburn, Sask., is down on a visit to his old home on the 6th of Bruce.

—Mrs D McArthur and daughter Helen went to Brampton on Saturday to visit her mother for a few days.

—Mrs. Buchanan and daughter, of 9th Elderslie, have moved to Paisley. They are residing on Goldie St.

—Mrs Husson, of Guelph (nee Miss Minnie Crewe) is visiting old friends here, the guest of Miss Winch, Elora Rd north.

—Irwin Bros. of Walkerton, had a carload of horses delivered at Paisley on Monday, which they drove to Walkerton for shipment.

—A meeting of the Women's Institute will be held in Putnam's hall on Thursday afternoon at 3 o'clock. Members are requested to return all finished work.

—Mr. and Mrs. H. T. Potts of Tara, announce the engagement of their daughter Dolly to Mr. George H. Munson, the wedding to take place on Saturday, April 7th.

—Friends here have received word of the death of George Fleming, a former Paisleyite boy, at Calvin, N. D., on March 25th. The deceased was a son of Mr Chas Fleming, now of Walhalla, N. D.

—The young people of the Paisley Baptist Church sent 8 pair socks and 8 certain suits to the boys in France, and 6 pair socks to be given to any boys in the 160th who need them most.

—Religious leaders in England issued an appeal to have Good Friday observed as a day of repentance and prayer, and in some centres in Canada an endeavor is being made to give effect to it. Services will be held in all Toronto churches.

—All who are in sympathy with the work of supplying our boys in the trenches and hospitals with necessary comforts are asked to help by providing refreshments (pan sviches and cakes) for the "At Home" Friday, April 13. Come and enjoy a social evening.

—Mr. J. W. Hopper of Burgoyne has purchased a grey percheron stallion from Hodgkinson & Tisdale of Beaverton. This horse was brought over from France just before the war broke out. He has taken a first prize in Toronto since coming over. He is rising five years and weighs over 1800.

Bruce Tp Soldier Died of Wounds

Mrs D E Mewhinney, of Deer River, Minn., informs us that her brother, Pte. Wm. J. McDougall, died in France on March 5th, from wounds received on active service. He was a former Bruce Tp. boy, his home having been on the 4th con.

St. Patrick's Tea was a Success

Although a report of the event has been somewhat belated in reaching us, the St. Patrick's tea held at Mr W C Walmsley's, north Bruce, brought in a nice sum for Red Cross. The total proceeds amounted to $56.30, of which $19 was from the sale of a quilt made by the Red Cross ladies of the section. A good programme was given to which a number of outsiders contributed, viz: Miss Leggett of Underwood, Miss Mable Stanley of Paisley, Mr Wm Cole, McLean Bros and Wm Parker. The chair was occupied by Mr Arch McLean.

Bruce Co. Gave $27,116.60 for Red Cross

According to the official report just issued, Bruce County distributed the above amount for Red Cross on appeal made last October. The contributions by municipalities are stated as follows: Elderslie $1,508, Greenock $1,002, Huron $1,104, Kincardine Tp $653 40, Kinloss $735 00, Lindsay $260 55, Saugeen $1,002, St Edmunds $67 50, Hepworth $350 56, Lucknow $2,000, Paisley $773 12, Port Elgin $1,648 75, Tara $503 55, Teeswater $581 85, Tiverton $318 60, Chesley $1,305 50, Kincardine T'n $3,383 02, Southampton $650, Walkerton $1,507, Wiarton $500— total $27,116 90.

Village Property for Sale

THE Hathwell property. Comfortable brick house, good stables, and about 3½ acres of fine garden land. Will be sold at a bargain. Apply to H H PUTNAM.

WALL PAPERS

At the Same Old Prices!

We are sacrificing a percentage of profit to make up for the increase in cost of goods.

We have a wide range of fascinating designs with winsome colorings, new foliage and floral tapestries and new shadow effects with ready cut borders.

THE EARL'S SECRET

Or, a Martyr to Circumstances.

CHAPTER XXVI.—(Cont'd).

Violet trembled and looked troubled. "I do not understand," she murmured, hurriedly. "Why should you leave England? Why should you leave me?"

"Answer me first," he replied, brokenly, and with fearful earnestness, partly real, partly feigned.

"I will answer, and truthfully," said Violet, with low intensity. "I do not love him; you know that my love is buried forever, and that I have no heart to give. My hand would have been his, all unworthy of its acceptance as it is, but—but—for this."

"I forbid it! I forbid it!" cried the captain, grasping her arm. "You shall not marry him, Violet, if you do not love him. I would rather see you in your grave than the wife of Fitz Beladale! Oh, Violet, forgive me this wildness, but you do not, cannot know the state of my heart. Violet, I love you!" he added, rapidly, in answer to the look of deep and profound amazement upon Violet's beautiful face. "I love you, and have loved you since I first saw you—do not turn from me! I am not worthy of you, but at least I love you for yourself alone. Can he—can that foolish boy say that? I am rich, he is poor. His family is ruined, and he seeks in a marriage with you but the means wherewith to rebuild his crushed fortunes. Do not speak!" he continued, eagerly, leading her to a sofa, and leaning over her where she sat silent, motionless, as if under a spell. "I know it to be true, for I have heard him own it. I have heard the earl speculate on it; the very money-lenders are waiting for it, that they may seize upon the wealth which you will bring him!"

"It is false!" said Violet, starting to her feet. "It cannot be true!"

"It is; see here," he replied, rapidly, and with lessened yet telling earnestness he reasoned and convinced her.

Then she sank upon the couch and covered her face with her hands, sobbing violently.

"Are all men base and vile?" she cried. "Oh, where can I turn to find the true and the real? Where, where?"

"Here!" exclaimed Howard Murpoint, touching her breast, and speaking in a soft, soothing, almost paternal tenderness. "Here is succor and safety, dear Violet. I do not ask you to love me; that we cannot expect, until I have proved, ere long, my undying devotion to you! I do not ask you anything else but the right to protect you from the worthless adventurer and mercenary suitor. Will you not, if you could but know that it was his dead father's last wish that we should be united. He would, had he lived, pleaded for me more eagerly than I can plead for myself. Will you not listen to his voice, which, though dead, speaks through me, and be mine? Come to me, Violet, my own, my darling! Let me be protector, your shield, your husband!"

Violet struggled to rise, but he held her fast, in his embrace, as her dress. She felt faint, sickened, and thoroughly overcome. She drooped, and fell back.

"Say 'yes'—say you will be mine—say you will let me guide and protect you!" he whispered, tenderly.

Violet, driven to bay, confused, bewildered, overcome, placed her cold trembling hand in his, and the captain knew that at last he had won the great stake for which he had been so long playing.

CHAPTER XXVII

The next morning the eminent and respectable Mr. Thaxton received a short—a very short—and very mysterious letter.

"Dear Sir: If you have any desire to learn more of the mystery of Pentuddie you may satisfy your curiosity to some extent by meeting the writer of this letter at the ruined chapel on Mildmay Park. Should you decide to come, make your way there to-morrow night unseen and conceal yourself behind the middle pillar near the chancel, where you may see and hear much that will astonish and enlighten you."

The letter was unsigned and the handwriting was a strange one to Mr. Thaxton.

He sat and turned the letter over several times, and read it over and at last he muttered:

"I knew that mystery would turn up again. I felt certain of it, and here it is. I will go."

Thereupon he rang the office bell and issued an order for the packing of his traveling-case.

That next day the Penruddie train bore three passengers important to this history—Mr. Thaxton, Leicester and Stumpy.

Leicester saw Mr. Thaxton alight and knew that his letter had taken effect; he carefully avoided the keen eyes of the old lawyer, and he and Stumpy cut across a field near the station and left the village behind them.

Toward midday Stumpy cut out toward the village and found a boy loafing about. He gave him a letter for Job, the carrier, and told him to take it to him and give it him quietly.

The lad, delighted with a sixpence, tore off, and soon slipped into Job's hand this note:

"Be at the old chapel to-night at mid-night. If M."

Job read it and asked the boy who had given it to him.

The lad told him a gentleman, and described Stumpy.

Job at once concluded that the captain had disguised himself, and determined to obey the mysterious missive.

The night fell, dark and cheerless.

Toward midnight Mr. Thaxton carefully picked his way to the old chapel, and, not without sundry shudders and quakings, took up his place behind the middle pillar.

For some time the silence and awful solitude of the place was unbroken save by the whizz of the bat and the subdued screech of the owl.

Mr. Thaxton began to grow cold and shivery, and had almost decided to return to the inn when a slight noise attracted his attention, and he saw a light approaching.

It was carried by a short man, whom he at once, by the aid of the light, distinguished as Job, the carrier.

Here, at least, was something tangible and corroborative of the letter.

He dared scarcely breathe, so eager and curious was he and he watched Job, who looked round cautiously, and at last seated himself upon the tomb of his master.

He struck a match, and, after some time, and immediately there appeared a blue misty light from among the pillars.

Job started to his feet with an oath.

"Come, no larks with me, lads!" he said, savagely. "This is a stale game."

The words died out on his lips, for as the light approached nearer it disclosed the form of the long-lost Lancaster Dodgen.

There was his pale face and lank hair all dripping with water, and weeds clung to his white shroud and hung at his elbows.

He looked as if he had just risen from his watery grave.

Job's knees shook and he fell to the ground, the spirit drew nearer and nearer and bent down upon him with fierce eyes, which glowed like fire from his chalky hued cheeks. Job's fear grew almost to madness. Here was a ghost indeed! One to make his heart quake and his soul shudder to its innermost core.

"Master Leicester!" he grasped. "Master Leicester! have mercy on my soul! Have mercy!"

The fearful words rolled through the chapel, and the ghost seemed to hear them, for in a sepulchral voice, it formed the word, "Confess!"

"I will, I will," grasped Job. "I'll confess all—before a magistrate, Master Leicester, dear Master Leicester—oh, Heaven, how terrible! Oh, Master Leicester, I didn't think you'd be drowned! I'd never a done! I'll confess all! I'll confess what I've seen, I'll tell how the captain put the police in the old bureau! I saw him do it. I see him and Jem Starling; and I know who killed Jem! I know! I know! Oh, Master Leicester, have mercy on a live man and I'll tell all!"

"Confess!" said the ghostly voice.

"I will," said Job. "I'm a smuggler, we are all smugglers, but the captain is the chief; he drives us to it and takes the money—oh, mercy, Master Leicester! and knows a secret way through the dead squire's room to the beach! The captain knows! and the captain sent you away, Master Leicester, and murdered you as he did Jem Starling. Spare me, Master Leicester, and I'll tell all if they hang me for it. I've meant to do it many a time, but now your ghost has come I'll do it, or you'd never leave me! Oh, Lord! oh, Lord!"

(To be continued).

About the House

Spring Cleaning.

Housecleaning time looms up again and the housewife has visions of change and improvement in the home.

Before the cleaning campaign begins it is well to take stock and see just what are the resources and the possibilities of the home and its furnishings; and right here we would advise the housewife to begin at the front door or, better still, the front gate, and look her home over as if it belonged to another family. We are so accustomed to our own things that we often fail to see their defects; but not so with the belongings of our neighbor—dear me, no! We enter the other person's home with a critical eye and are ready to condemn or approve, benefit or become envious, according to our disposition and the circumstances. A tour of inspection undertaken in an entirely impersonal mood is sure to bring out some items of interest, and the progressive housewife will take note of these, talk them over with her family and make the changes. Sometimes a room is improved by a rearrangement of the furniture. Sometimes there is much to be gained by changing the purpose of the room.

Changes which make for convenience and comfort or show improvement in taste, are desirable and need not be expensive. Much of the bric-a-brac would be better placed in the attic where it would not need frequent dusting. Many a good frame holds a meaningless picture. It is so easy to get reproductions of the best in art, that there is little excuse for poor pictures nowadays. If the frames are shabby, a little paint will do wonders. Eliminate the cushion covers which are too good to be used, and replace them with covers which can be used, and washed when necessary. Much time is spent in the kitchen; it should therefore be convenient and sanitary in its arrangement. The stores where housekeeping goods are sold should be visited at frequent intervals. There is always something of interest to see. Many of the devices are really labor-saving, some are not; but the progressive woman will select those best suited to her requirements.

Above all, let us see that the boys' rooms are not made a dumping ground for misfits. It is a grave mistake to imagine that the boy does not care what sort of room he has. No member of the family will appreciate more highly a pleasant room with suitable furnishings.

The Constituents of Food.

The five principal elements of food necessary to maintain health are Proteids, Carbohydrates, Fats, Minerals salts, and Water.

The source of proteins are meat, milk, cheese, butter, eggs, fish, grains and legumes. Their chief use is tissue building, repairing waste, and making muscle. They also supply the same amount of heat as starches.

The source of carbohydrates is in starches and sugars, and they are found chiefly in green vegetables, grains and fruits. They are used to supply energy or power to do work. To a small extent they build tissue. They also furnish heat.

The source of fats is in beef, lard, chicken, and in olives, corn, peanut and cotton seed oil. Fats in the body furnish a greater amount of heat than starches. They are also used for building tissue.

The source of mineral salts is principally in green vegetables, grains, milk, meats, eggs and fish. Salts are also needed by the body; they are also needed for the formation of bone and teeth structure and in tissue building.

Water is the most necessary of all foods; it forms a part of all tissues and is the important factor in the blood stream. It is present in large amount in all body fluids. It carries nourishment to the blood and regulates the bodily process of elimination.

Value of Fish as Food.

For working people of all classes—those who work with their heads as well as those who work with their hands—fish is an economical source of energy to enable them to carry on their work, and for children and young persons it furnishes the very materials that are needed to enable them to grow healthy and strong.

Another very important reason why fish should be generally used is its easy digestibility. In this connection, however, it is important to note that, as in other foods, the digestibility and nutritive value of fish largely depends on the cooking.

In buying fresh fish, see that the eyes are bright and prominent, and the flesh firm, not flabby.

Fish may be divided into two classes, oily and non-oily. Of the two, oily fish are the most nutritious; they comprise such kinds as salmon, trout, mackeral, herring and eels, and have the oil mingled through the flesh. Haddock, hake, pollock, and halibut, etc., are non-oily fish; that is, the oil is contained in the liver and is removed when the fish is dressed for cooking. They are thus more suitable for invalids, and people of weak digestion, than the oily kinds.

In preparing fish for cooking it should not be allowed to stand in water for a long time. It spoils the flavor, and the food substances are likely to be dissolved.

Hints on Frying Fish:—There are three ways of preparing fish for frying, 1st, dipping it in milk and flour; 2nd, coating it with prepared batter; 3rd, egging and crumbing.

Dripping, lard, or oil can be used and should be smoking hot before the fish is put in, so as to harden the outside, thus preventing the fat from entering into the fish, which would spoil the flavor and make it indigestible. Only a small quantity should be fried at a time. As soon as it is brown on both sides, drain on paper and place on a hot dish. Allow the fat to cool a little, strain, and put it away for future use.

Hints on Boiling Fish:—Clean and wash in plenty of cold water. Add a little salt to the water; this will help to clean it, and keep the fish firm. Cod, haddock, mackeral, whitefish, salmon, etc., are best suited for boiling. Put the fish into warm water with a little salt and vinegar. Allow ten minutes for each pound of fish, and fifteen minutes over, if large. Boil slowly. When cooked it should have a creamy appearance, and come easily from the bones. Lift out carefully, let drain, and place on a hot dish. Serve with melted butter, parsley, caper or anchovy sauce.

The water in which fish is boiled should not be thrown away, for it can be used for soup stock and fish sauces and stews.

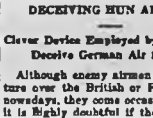
Melted Butter Sauce:—One and a half ounces of butter melted in a saucepan, stir in one ounce of flour, add gradually ½ pint fish stock, stir and bring gently to a boil. Add a pinch of salt and grated nutmeg.

"Don't Dip to the Bottom."

That is what a dear old lady on the next farm to ours said to one of the boys when she served minute pudding with cream and maple-sugar sauce. That boy had found out somehow that the biggest grains of sugar lay at the bottom, and he knew how to get them. But mother knew, too, and she was thinking about the other boys and girls. Sometimes it seems as though most of us need that same caution. We are so apt to dip to the bottom to work for the very best of everything, forgetting that such a course means that others must go without. That dear old mother wanted her boy to stir the sugar up till all the little folks could have a fair share. She was right, too. Let's not dip to the bottom! Let's give every man his fair share of the sugar and the cream.

Don't put off saving your money until you are middle-aged. The people of wealth are usually the ones who commenced to plan and save their money while they were yet young men and women.

DECEIVING HUN AIRMEN.



Clever Device Employed by French to Deceive German Air Scouts.

Although enemy airmen rarely venture over the British or French lines nowadays, they come occasionally. Yet it is highly doubtful if the information they obtain is worth the risks they run.

The French in particular have organised an elaborate system of deceit for the prying Taube. Hundreds of artists are employed in painting gigantic pieces of scenery, all of natural size and color. These are cunningly arranged behind the lines—churches, towers, villages, trains, so deftly depicted that from a height it is quite impossible to distinguish them from the real thing.

Thus a Hun battery may be induced to waste expensive ammunition on what it is told by aerial observers is a camp full of soldiers, while in reality it is merely shelling lath and canvas.

For motorcycles there has been invented a pump that automatically fills a tire with air as a machine is running.

Doctor Tells How To Strengthen Eyesight 50 per cent In One Week's Time In Many Instances

A Free Prescription You Can Have Filled and Use at Home.

Tonden—Do you wear glasses? Are you a victim of eye pains or other eye weaknesses? If so, you'll be glad to know that according to Dr. Tonden there is real hope for you. Many whom eyes were failing say they have had their eyes restored through the simple means of this wonderful free prescription. One man says, after trying it: "I was almost ready to throw away my glasses and buy eyes to match, as I could get no good at all. Now I can read everything without my glasses and my eyes do not water as much. At night they would pain dreadfully; now they feel fine all the time. It was like a miracle to me." A lady says: "The atmosphere seemed hazy with or without glasses, but after using the prescription for fifteen days everything seemed clear. I can even read fine print without glasses." It is believed that thousands who wear glasses can now discard them in a reasonable time and multitudes more will be able to strengthen their eyes so as to be spared the trouble and expense of ever getting glasses. Use the coupon below to secure a generous supply of the prescription, enough in fact to entirely restore the eyes to normal strength and vision if the right treatment is followed. Here is the prescription: Go to any active drug store and get a bottle of Bon-Opto tablets. Drop one tablet in a fourth of a glass of water and allow to dissolve. With the liquid bathe the eyes from one to four times daily. The eyes should be open and rolled in all directions during the bath, so that the liquid may come in contact with every part of the eyeball. Almost immediately after the first bathing you will notice a little, hazy cloud appear before the eyes, then it will disappear and you will see things more clearly. Keep this up and in a few days you will be able to read fine print without any glasses and your eyes will look bright and clear. Let your friends know how they can have their eyes restored to strength and vision without glasses. Cut out the coupon below and send it with your name and address to the Bon-Opto Co., 1200 Bon-Opto Building, Watertight Place, Marshall, Mich., and they will send you a generous supply of the prescription free of charge.

For immediate overseas service, join

The Royal Naval Canadian Volunteer Reserve

Overseas Division.

The Navy must be kept supreme—more men are needed to man the fleets which are sweeping the seas of commerce-raiders and submarines. Canadians joining the R. N. C. V. R., Overseas Division, are sent at once to England for training.

PAY $1.10 a day and upwards—Free Kit—Separation allowance as in C. E. F.

No experience necessary—Candidates must be sons of natural born British subjects—Ages 18 to 38.

Experienced men from 18 to 45 may enlist for service in the Canadian Naval Patrols to guard Canadian Coasts. Pay from $1.05 a day and separation allowance.

For particulars apply to COMMODORE EMILIUS JARVIS, Naval Recruiting Officer, Ontario Area, 103 Bay Street, TORONTO, or to the Naval Recruiting Secretary, Ottawa.

FOR
Indigestion and Biliousness

Indigestion, biliousness, headaches, flatulence, pains after eating, constipation, are all symptoms of stomach and liver troubles. And the more you neglect them the worse you suffer. Take Mother Seigel's Syrup if your stomach, liver, or bowels are slightly deranged or

MOTHER
SEIGEL'S
SYRUP

have lost tone. Mother Seigel's Syrup is made from the curative extracts of certain roots, barks, and leaves, which have a remarkable tonic and strengthening effect on all the organs of digestion. The distressing symptoms of indigestion or liver troubles soon disappear under its beneficial action. Buy a bottle to-day, but be sure you get the genuine Mother Seigel's Syrup. There are many imitations, but not one that gives the same health benefits. 1011

Advance Spring Fashions

A great deal of voile and muslins will be used this spring. The counters of the stores are already overflowing with voiles of all descriptions; plain, sprigged, figured, striped and checked. Bordered materials, too, will have a place among the fashionable fabrics, whether printed or embroidered and whether of cotton or silk.

Plain voile combined with linen in a matching color has been used in the fashioning of some of the advance spring dresses, and, though unusual, the combination is entirely pleasing.

7640

Voile and Linen Dress

Indian embroideries on sports coats of heavy cream-colored silk make very attractive trimmings, and they are also effective on coats of dark blue serge. These embroideries are worked in silks or heavy mercerized cottons in very bright colorings with a number of colors mixed together. As this is to be a spring and summer of high colors, these embroideries will, in all probability, take very well. Parasols and bags to match the costumes showing such embroideries are also to be had to complete the finishing touches.

These patterns may be obtained from your local McCall dealer or from The McCall Co. 70 Bond St. Toronto. Dept. W.

WHY NOT SQUARE MONEY?

Some of the Advantages of Square Over Round Coins.

A movement is on foot for the introduction of square money into England. Whether it will come to anything remains to be seen; but the idea certainly has its advantages.

What would these advantages be? Well, for one thing, the Mint authorities would save an appreciable amount of packing, from the well-known fact that square money will fit into a square box with less waste of space than will round. This also applies to the case of all large traders and bankers, who have to despatch large quantities of bullion every month.

The private individual will probably be more interested in the matter when he hears that the gross total of money lost every year in England through coins dropped amounts to many thousands of pounds. This is largely due to the fact that round coins, when they fall to the ground, are apt to roll into unlikely places, from which they are never recovered. A square coin would lie dead where it pitched.

In China coins are pierced with a square hole in the centre. In this way they can be strung together and carried without fear of loss. Might we not learn a lesson from the Orient in this?

Another argument in favor of square coins is urged by artists, who declare that it is almost impossible to get a really artistic design "in the round" when so little space is allowed. A rectangular coin would give the designer a real chance of distinguishing himself.

MARCH WEATHER RHEUMATIC WEATHER

Victims Can Cure Themselves With Dr. Williams' Pink Pills.

With the coming of March people who are afflicted with rheumatism begin to have unpleasant reminders of their trouble. The weather is changeable—balmy and springlike one day, raw cold and piercing the next. It is such sudden changes of weather that sets the pangs and tortures of rheumatism, lumbago and sciatica going. But it must be borne in mind that although weather conditions start the pains, the trouble is deeply rooted in the blood, and can only be cured through the blood. All the lotions and liniments in the world can't cure rheumatism. Rubbing may seem to ease the pain while you are rubbing, but there its value ends. Only through the blood can you cure rheumatism. That's why Dr. Williams' Pink Pills have so many thousands of cures of this trouble to their credit. The new, rich blood which they actually make drives out the poisonous acid and rheumatism is vanquished. Among many sufferers from rheumatism who have been cured by this medicine is Mr. C. H. McGee, freight shed foreman for the G. T. R. at Peterboro, who says:—"In the course of my work I am naturally exposed to all kinds of weather, with the result that about two years ago I contracted rheumatism which settled in my legs. At times I could scarcely walk, and often had to quit my day's work owing to the stiffness and the pain. I tried different remedies without getting any help until I began the use of Dr. Williams' Pink Pills. I used six boxes of these and can say that I am about as well as ever I was. I still take the pills occasionally, and I hope that my experience may be of benefit to some other rheumatic sufferer."

If you suffer from rheumatism, or any other disease of the blood, begin to cure yourself to-day with Dr. Williams' Pink Pills. Sold by all medicine dealers or by mail at 50 cents a box or six boxes for $2.50 from The Dr. Williams' Medicine Co., Brockville, Ont.

PALACE A HOME FOR CRIPPLES.

Mutilated Italian Soldiers Housed in Former Dwelling of Kings.

The war has turned the palace of the Bourbon Kings of Naples into a home for mutilated soldiers, says an Italian writer. Around the exquisite marble table where the guests of the "Rol Soleil" of Naples dined in the garden on hot summer nights—the ladies in powdered headdress and panier skirts, the men with lace at their sleeves and embroidered coats—to-day are gathered the pitiable fragments of humanity that war has left in its wake. There are neither candles nor massive silver, neither sweetmeats nor rare wines. The Italian Government allows 70 cents a day for their lodging and maintenance, and food is high in Naples.

Once sumptuous chambers of the royal palace have been turned into schoolrooms in the month that the hospital has been running. In one those who wish are taught tailoring, in another shoemaking—the legless naturally, for one must have two hands to make shoes or clothes. Those who have lost an arm are taught telegraphy or typewriting. But many of the latter must begin further back than that and learn to read and write first. For reading and writing in southern Italy are not common accomplishments, so there is a schoolroom—a primary schoolroom—where the alphabet and multiplication table figure on the blackboard in front of these grown children who have known only to give an arm or a leg to their country. And an arm or a leg to these simple peasants in livelihood—their own and their families'.

Which is why some do not study. They are suspicious. Mutilated, they are entitled to a Government pension, and they are afraid that when they have learned a new trade by which they can live the Government will say: "You no longer need help—make your own living." So they sit all day in the sunlit royal garden, with its faience flower pots marked with fleur de lys, and watch the changing lights on the Bay of Naples and think of what life used to hold for them before the war came to change it utterly.

The sea once came to the very wall of the garden where they sit. Below the balustrade was a sea pool where the courtiers of Carlo III. fished from the terrace. Later, when the people of Naples voted the Bourbons out and the house of Savoy in as rulers of United Italy, Garabaldi gave the palace to Alexandre Dumas, and the Government of Italy had no end of trouble to get it back from the famous author. But the soldiers who wander through the spacious rooms of the palace to-day know none of these things. They know only what they have given to their country. They merely wait the issue of war.

SICKLY BABIES

Sickly babies—little ones who are troubled with their stomach and bowels; whose teething is painful; digestion bad and who cannot sleep well—can be made healthy and happy with Baby's Own Tablets. Concerning the Tablets Mrs. Wilfrid Damons, Val Brilliant, Que., writes:—"Please send me a box of Baby's Own Tablets as I would not care to be without them. I have used them for constipation and vomiting and am well pleased with the result." The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

A Hint to Swimmers.

In an address before the leading ear, nose and throat specialists of the United States, Dr. Hill Hastings of Los Angeles recently called attention to the danger of a person's swimming, and particularly diving, when he has a cold in the head. Comparatively few persons realize that it is dangerous, and many even believe that when they have recovered from a cold and are still annoyed by excessive thick secretions in the nose they can find relief by diving or plunging the head under water. The purulent matter washed out is not only a danger to others, says Dr. Hastings, but the diver himself runs a risk of forcing some of the pus into his middle ear. Most specialists have observed that cases of mastoid abscess are common every summer during the swimming season. At the large ear, nose and throat hospitals it is recognized that the swimming season invariably brings on "a crop of mastoids." The advice to keep out of the water until a "head cold" is entirely cleared up cannot be too strongly emphasized.

STOMACH MEDICINES ARE DANGEROUS

DOCTORS NOW ADVISE MAGNESIA

Just how dangerous it is to indiscriminately dose the stomach with drugs and medicines is often not realized until too late. It seems so simple to swallow a dose of some special mixture or take tablets of soda, pepsin, bismuth, etc., after meals, and the folly of this druggling is not apparent until, perhaps years afterward, when it is found that caustic drugs have almost eaten their way through the stomach walls. Regrets are then unavailing. Even in the early stages when indigestion, dyspepsia, heartburn, flatulence, etc., indicate excessive acidity of the stomach and fermentation of food contents that precaution should be taken. Drugs and medicines are unsuitable and often dangerous—they have little or no influence upon the harmful acid, and that is why doctors are discarding them and advising sufferers from indigestion and stomach trouble to get rid of the dangerous acid and keep the food contents bland and sweet by taking a little pure bisurated magnesia instead. Bisurated Magnesia is an absolutely pure antacid which can be readily obtained from any drug store. It is absolutely harmless, is practically tasteless and a teaspoonful taken in a little warm or cold water after meals, will usually be found quite sufficient to instantly neutralize excessive acidity of the stomach and prevent all possibility of the food fermenting.

AMATEUR INVENTORS.

Gentleman Invented a Gun to Shoot Around Corners.

Among the ideas sent in to the Munitions Inventions Department are some extraordinary ones from amateurs anxious to assist the country towards victory. One very helpful one, says a writer in the Atlantic Monthly, was from a lady who desired to exterminate Zeppelins. Her argument was:

"The clouds float in the air, and the clouds are made of water. Ice floats in water, so ice will float in the air. Let us freeze the clouds, therefore and send up anti-aircraft guns in balloons to fire upon them." She admitted that she did not know exactly how to freeze the clouds, but she left that to the experts.

"A gentleman invented a circular gun which shot around corners, and not only provided working drawings of his invention, but also a beautiful water-color picture of the Huns being exterminated by its mediation.

"Another man is blessed with 'perspective ideas' and thinks he can find ranges without a base by the aid of perspective. He wandered around with a certificate signed by an adjutant to the effect that he actually had found three ranges correctly. The number he had found incorrectly was not stated."

Nature's Best Food Laxative is the bran which makes up the outer coating of the whole wheat grain. But why eat coarse bran cakes when you can accomplish the same purpose by eating Shredded Wheat Biscuit and at the same time get all the rich, body-building material in the whole wheat grain prepared in a digestible form. A perfect food—just enough proteid to build healthy muscle, just enough carbohydrates to supply heat and energy, just enough bran to keep the bowels healthy and active. For breakfast with milk or cream, or for any meal with fruits. Made in Canada.

THE PEACE COMET.

Startling Phenomenon Due to Arrive Next Summer.

Peace is coming; and with peace comes a comet—one of the largest on record—which is due to make its bow to this sphere during the early summer.

"The peace comet," as it is appropriately termed, is travelling at the rate of 131 miles a second, or over 1,134,000 miles per day, and this is its first appearance for 60,000 years. A vivid imagination would be needed to conjure up the happenings of our world when another 60,000 years have passed, and when the 1917 comet makes its reappearance.

A German, by name Professor Wolf, of Heidelberg, is responsible for the 1917 comet, and he first discovered it on April 27th, 1916. Now the American observatories have sighted the spectacle, and have cabled the news to Greenwich Observatory, says London Answers.

We are told that the coming comet will be one of the most astonishing and wonderful of all phenomena. It is exceptionally large, and the nearest point reached by it to the earth will be 104,000,000 miles. Yet in July of this year it will be visible to the naked eye, though astronomers are dubious whether it will outshine in brilliancy the great comet of 1882, which latter actually brushed the sun's corona in passing round the sun, and travelled at the rate of 300 miles a second.

The Lady Spoke Last.

My five-year-old boy and my three-year-old girl were talking. Glen said, "I'm older than you," and was feeling vindicated over the fact. Ila who always had a ready reply, said, "Well, I'm newer than you."

When Your Eyes Need Care

The Grand banks of Newfoundland supply more fish than any other section of the sea.

Minard's Liniment Relieves Neuralgia.

A machine for planting forest tree seedlings has recently been invented which is capable of planting from 10,000 to 15,000 such seedlings in a day when operated by three men and two horses.

ANY CORN LIFTS OUT, DOESN'T HURT A BIT!

No foolishness! Lift your corns and callouses off with fingers—It's like magic!

Bore corns, hard corns, soft corns or any kind of a corn, can harmlessly be lifted right out with the fingers if you apply upon the corn a few drops of freezone, says a Cincinnati authority.

For little cost one can get a small bottle of freezone at any drug store, which will positively rid one's feet of every corn or callus without pain.

This simple drug dries the moment it is applied and does not even irritate the surrounding skin while applying it or afterwards.

This announcement will interest many of our readers. If your druggist hasn't any freezone tell him to surely get a small bottle for you from his wholesale drug house.

Two sets of revolving rings instead of one feature a new double egg beater of twice the ordinary capacity.

Minard's Liniment Cures Dandruff.

ISSUE No. 12—'17

Gasoline for Wounds.

The ambulance surgeons and many of the field hospitals of Europe use gasoline for the first cleansing of wounds of soldiers brought in from the battlefields. According to a writer in the British Medical Journal, the skin and then the surface of the wound are cleansed by vigorous rubbing with a swab of absorbent cotton soaked in gasoline. Swabs of cotton are wound round a pair of artery forceps or a probe soaked in gasoline, and the wound is cleansed from the surface inward as far as the instrument can be pushed. The process is continued until the swabs come out perfectly clean. The gasoline does not cause any special smarting, and patients do not complain of its use; but if the gasoline is left on the skin and strips of adhesive plaster are applied close together over the dressing, so that they prevent evaporation, the skin will blister. Gasoline properly used seems to clean up not only the surface but the depths of wounds better than anything else that has been tried. It has been used in Canadian hospitals and in many American iron and steel foundries for many years to clean contused or lacerated wounds that contain deeply embedded dirt.

Says She Suffered For Many Years

Then Dodd's Kidney Pills Cured Her Kidney Troubles

Mrs. Felix Ascah Found No Relief in Doctors or Hospital Treatment, but Dodd's Kidney Pills Brought a Speedy Cure.

Haldimand, Gaspe Co., Que., Mar. 26th (Special).—Mrs. Felix Ascah is telling her numerous friends here that her complete recovery from kidney disease from which she suffered for years is due to the splendid work of Dodd's Kidney Pills.

"My trouble started from a strain," Mrs. Ascah says. "I suffered for years. I was attended by a doctor and was also treated at a hospital. I suffered from stiffness in the joints, I had a bitter taste, especially in the morning, and at times was subject to severe headaches. I had a pressure and often a sharp pain at the top of my head and my skin itched and burned at night.

"Neither from the doctor nor at the hospital did I get any permanent relief. Then I started to use Dodd's Kidney Pills and two boxes did me so much good I feel like recommending them to everyone who has kidney trouble."

Dodd's Kidney Pills cure sick kidneys. Cured kidneys strain all the impurities, all the seeds of disease, out of the blood. That makes good health all over the body. That's why those cured are so enthusiastic in regard to Dodd's Kidney Pills.

The land holding the Eddystone lighthouse is the smallest bit of all-the-year-round inhabited land in the world.

All good druggists and turf goods houses sell SPOHN'S. SPOHN MEDICAL CO., Chemists and Bacteriologists, Goshen, Ind., U. S. A.

The Paisley Advocate

PAISLEY, APRIL 4th, 1917

—President Wilson has at last committed his nation to the cause of the Allies in the war against Prussianism. Shake! all U S subjects who are ready to join in the fight for democratic liberty. We are right glad to have you as allies in this great struggle.

—The shipbuilding industry in Canada is being called upon to do its share towards beating the submarine menace. Contracts for over $25,000,000 worth of ships have been placed with Canadian shipyards. Efforts are to be made to systematically speed up the making of vessels for the carrying trade.

—The Ontario Department of Public Highways has a little scheme to save municipalities expense in bridge building. The idea is to have stock plans of bridges on hand, and when a municipality wants to have a bridge built it can describe the position to the department and one of the stock plans for a bridge of the required size can be sent. This will save architects' fees.

—Military drill, with all the titles and gold lace foldo-rols of military show, is what some people are very busy in attempting to foist upon the schools of this province. Some time ago school boards were asked to sign a requisition to the Department of Education, asking that military training in connection with schools be adopted. Paisley Board unanimously recommended that physical exercise be introduced for the development of the physique of pupils, but not under the name of military drill.

There are likely to be several notable amendments made to the Ontario Temperance Act at this session of the Legislature. The changes are designed to add considerably to the powers of officials in enforcing the law. It is proposed to reinstate the "Indian List" clauses, so that persons designated as addicted to the too frequent use of liquor in their houses. Express companies must keep records of their deliveries, which will be subject to inspection by officers. Standard hotels are to be relieved of business tax for 1917-18-19. "Blind piggers" will not be allowed to import liquors.

—All signs point to a great boom in gardening this summer. Many who never put a seed in the ground before are buying recklessly, and resolving to raise a crop or die in the attempt. Even should their efforts not be the success they anticipated they might be employing their time to worse advantage. Experience teaches a lot in one season's operations. With our large area of nice gardening land in Riverside Park, it might be a good move on the part of the council to offer plots to citizens to work. Eight or ten acres could be spared to be divided into quarter or half acre gardens. No doubt some who have no land themselves would be glad to avail themselves of such an opportunity to help production. Or the council might do a little municipal farming for patriotic purposes. We understand such plans will be talked over at the council meeting this (Wednesday) evening.

—When the Legislature was dealing with the supplementary estimates Mr. Wm. McDonald (North Bruce) was heard at his best in the lighter vein. He cited many instances from the curriculum to show "that education had fallen into the hands of faddists." The first case quoted by Mr McDonald was, "Draw and paint a box of onions." "How does that look, or rather how does it smell?" was the comment of the member for North Bruce, and then he advised: "Teach them to grow onions instead of drawing them." Another choice specimen which made the members of the House rock with laughter was: "Draw a picture of the noisy geese that babbles o'er the pool." "He is a goose who put that on the paper," declared the member for Bruce. "Draw a picture of the Attorney-General with his ear to the ground, and that would be more true to life," he added. Then turning to Dr. Pyne, Mr. McDonald asked: "Why don't you clip the wings of these jackasses who put these things on the paper?"

Mr. Sam Carter—You mean their ears. (Loud laughter.)

Mr. McDonald—Yes their ears.

The member for North Bruce strongly contended that art should not be made a plucking subject.

—Canadians are more interested than ever in Russia since the recent revolution which promises to make that country as democratic as we are ourselves. The following illuminating comment on the Russian awakening is by a Hebrew writer: "Until now there were two Russias, two entirely different Russias, with different hopes, aspirations, achievements, and claims to the attention of the world. There was the Russia that made treaties with other nations, that sent diplomats abroad and received diplomats at home, that employed the army to crush the people, that built prisons in place of schools, that banished the best sons and daughters of Russia to Siberia, and that incited, organized and participated in the massacres of Jews and other oppressed nationalities within the Russian Empire. That Russia has now been overturned by the other Russia, which gave to the world Tolstoi and countless other great liberals, which produced martyrs, which wanted schools instead of prisons, which fought for liberty, for the opportunity of development and independence, that sent relief and succor to the famine-stricken, that gave the literature, the art, and the spirit of liberty created within the Russian people. . . . The Liberals saved the Russian Government from a revolution earlier in the war, in the hope that a United Russia would be victorious, and that reforms would then be introduced leading to emancipation. The Liberals and the Revolutionists saved the Government from a general strike which was threatened as a protest against the incompetence and corruption of the Government about a year ago. The reactionary Russian Government was so short-sighted that it failed to appreciate this spirit on the part of the real patriots of Russia. Instead of turning toward the road of reform, the Russian Government resolved to throttle the will of the people in the Duma, to crush the Liberal tendencies which swept the Russian Empire, and extreme measures were met by extreme measures on the part of the people. . . . Freedom for the Russian people must lead to the emancipation of the Jews. The Jewish question is intimately interwoven with all phases of the political, social and industrial life of the Russian people, and without the emancipation of the Jews the rejuvenation of Russia is inconceivable."

Cold Steel in the Domestic Circle

A Greenock Tp couple are having their troubles ventilated in court. A few days ago the husband laid a charge against his wife that she had attacked him with a butcher knife. The case was heard by a Walkerton magistrate, who concluded that the accused should be sent up for trial on a charge of "assault to do bodily harm." The woman denied that she intended to use the knife in carving up the man who had chosen her as his life partner, but that she merely held it in her hand, and that hubby had attempted to take it away from her, in taking wounds by coming in contact with the edged tool.

Some Farm

Mr. Louis E. Richardson and his father, J. J. Richardson, V.S., formerly of Paisley, are now ranching and farming at Consul, Sask. In a recent letter to the Advocate, Lou informs us that they have 3,040 acres of land, 120 cattle and 175 horses. They had letters from two blacksmiths and two farm hands in response to their advertisement in this paper a few weeks ago. Lou says he met Billy Clark at Ashcroft, B.C., last summer. Most of the boys and girls he went to school with in Paisley are scattered over the Dominion, he notes. He intends taking a trip around this district bye and bye and will then learn the location of all he can.

A Strong Woodsman

Mr. Sam Babcock, who has signed up for overseas in the Forestry Section of the 122nd Battalion (Muskoka Wildcats) now training at Galt, performed a stunt on Wednesday last which proves him to be fully qualified for the work to which that section is designed to do. He split 10½ cords of stovewood in 6¾ hours, on a wager of $5. He not only easily won the bet, but is also entitled to the wage of 25c per cord for the work. The unfortunate gentleman on the other end of the bet was Mr. Elias Bailey. The woodpile was at the Central Hotel and was visited by many curious ones while Sam was at work.

Died at Gore Bay

Robert John Porter, a pioneer business man of the Manitoulins, passed away at his home in Gore Bay on March 20th. The deceased was a former Greenock boy, being a son of the late Andrew Porter, who taught in S. S. No. 7, and a brother of Mr Andrew Porter, of con 16. The deceased learned the trade of shoemaking with his uncle, the late Robt Smith, at Underwood. He went to Manitoulin with his father in 1879 and in 1880 started business as a shoemaker in Little Current. Afterwards he took charge of the old Royal Hotel, which he managed for several years. Nineteen years ago he went to Gore Bay and purchased the Green House. His genial manner and thoughtful attention to his guests made him a general favorite with the public, says the Gore Bay Recorder. He is survived by his widow and a family of five sons and three daughters. The deceased has been failing in health for about three years.

Death of a Greenock Pioneer

There passed away on Tuesday, March 27th, after a lingering illness, a highly respected resident of Greenock Township in the person of Peter McArthur, of Lorne. Born in Iona, Argyleshire, Scotland, he emigrated with his parents to Canada, who settled at Caledon where they remained but a short time, removing from there to Glenelg Tp, Grey Co, such a few years later coming to the Gore of Greenock, where the subject of this sketch soon grew into manhood. Being of robust physique and an expert axeman he soon took a prominent place in converting the forest of those days into the beautiful cultivated field of to-day. For a number of years he was engaged in the clearing business, as well as farming. Though he never sought public honors he was a member of the school board in No 8, Greenock for many years, retiring at his own request. He was Presbyterian in religion and a Liberal in politics, always being well versed in the public affairs of his country. Ahiram Lodge I. O. O. F. of Paisley took charge of the burial service he being a member of that order. He was also a member of Aldworth Lodge, A.F. & A.M. The large number of neighbors, also friends from a distance, who attended the funeral showed the high esteem in which he was held by the community. Besides a wife who will have the sympathy of all, there are left to mourn the following family: John and James, at home; Douglass in Toronto; Mrs Sterling, in Detroit; Edna, and Winnie at home. Two sons Peter and Campbell predeceased their father. There is also one brother, Duncan of Lovat, and one sister Mary of Toronto.

Successful Bazaar---Proceeds Over $565

The War Sale Girls' bazaar in the town hall on Tuesday was the culmination to an organized campaign of work for the benefit of unclaimed soldiers who are returning to Canada from the battle-fields in France, and was in every respect a decided success. The array of ladies' work and fancy goods on display in the hall told of the splendid skill and the patience of the feminine band. These were Japanese, Irish and Scotch booths, attended by girls costumed according to the popular ideals as to what each should wear, while a gypsy booth, where fortunes were handed out for a nickel, the attendants strikingly bedecked in clothing rich in colors and jewelry. A candy booth, a touch-and-take booth, a grocery counter and a tea-room, together with sellers of tickets for numerous articles that were drawn for, made the civic building a place where no human being could go with money from which they did not wish to part. During the afternoon the hall was thronged with a busy, buzzing, busying multitude, and in the evening there were periods for bazaar business and periods for entertainment. The programme of music was a new, novel and attractive one to a Paisley audience as was the bazaar itself. The numbers included Highland and skirt dancing by little Mary Spong of Ellengowan; Hawaiian chorus by the candy booth girls; Japanese song by Miss Netta Johnston and Japanese girls; Irish song by Miss Mabel Stanley and Irish girls; "Face all Chorus" by the girls of the same; and last but not least, gypsy recitation by Miss Miller; gypsy song by Mr. Art Pfaff; song, "Yet How and His his Little Wives," by Mr Ryan and Japanese girls. Reeve Steele occupied the chair. Full particulars as to all the articles drawn for are not yet available. The total of proceeds is not yet definately arrived at, but will be in the neighborhood of $565. Mrs F F Ballachey is president of the War Sale Girls organization, and Miss McKerracher secretary.

HIS HEART BADLY AFFECTED

"Fruit-a-tives" Soon Relieved This Dangerous Condition

632 Gerrard St. East, Toronto.

"For two years, I was a victim of Acute Indigestion and Gas In The Stomach. It afterwards *attacked my Heart* and I had pains all over my body, so that I could hardly move around. I tried all kinds of Medicine but none of them did me any good. At last, I decided to try "Fruit-a-tives". I bought the first box last June, and now I am well, *after using only three boxes.* I recommend "Fruit-a-tives" to anyone suffering from Indigestion".

FRED J. CAVEEN.

50c. a box, 6 for $2.50, trial size, 25c. At all dealers or sent postpaid by Fruit-a-tives Limited, Ottawa.

GOLDEN WEDDING

Mr and Mrs William Davison, of Inkerman St, happily celebrated the fiftieth anniversary of their marriage on Tuesday of last week, surrounded by a company composed of all the members of their family and a few near relatives who assembled at their home in the afternoon. At 6.30 the company were ushered into the dining room, where a bounteous repast had been prepared by the fair ladies. When the good things had been disposed

of after-dinner speeches were made by Rev Mr Diehl and members of the family. Mr Davison referred back fifty years to his wedding day, when he had to walk over thirty-five miles to be on hand for the occasion. Letters of congratulation were read from many friends who could not be present. Tokens of remembrance for the comfort of Mr and Mrs Davison in their declining years were presented to them by the friends gathered, these including easy chairs, footstools and hall rack.

William Davison was born near Uxbridge, and at the age of twelve years his parents and family moved to Sullivan Tp, travelling that distance across country by ox team. They settled near Desboro. Mrs Davison was born near Caledon, a daughter of the late George Fleming, of Owen Sound. When she was a child the family moved to Sydenham Tp, where they lived when her marriage took place on March 20th, 1867. Mr and Mrs Davison remained in Sullivan Tp. until they came to make their home on the 20th of Greenock in 1871. About five years ago they retired from the farm in Paisley. It has been their experience to see this northern country change from a solid bush tract without roads and develop into a fine farming district with excellent highways in all directions. Their family of three sons and one daughter are all living and were present at the celebration, viz: George, Sam and Jenny in Greenock; Wm H, hardware merchant, Paisley. A wide circle of friends of this aged and respected couple will join in wishing them many happy returns of the day.

Telephone Rate Goes Up

The Commissioners of the Bruce Municipal Telephone System met at Underwood on Thursday last to strike the rate for the year. After going carefully into the situation it was decided to strike a rate of $14.00 for 1917. The Interhuron extension and the 10th of Kincardine extension will be carried out this summer.—Reporter.

The Walker House, Kincardine, has been closed—the landlady, Mrs. Walker, finding the step necessary on account of the scarcity of help. The hotel had been running for over fifty years.

WOMAN SUFFERAGE.

Its War Time Aspect.

London, Eng. The women of England are doing their duty. They are taking care of the wounded, or if they cannot assist in work of that kind they are adding their services to promote the good work. They are knitting and sewing for the soldiers at the front. The suffragists have given so little trouble to the government that it will undoubtedly soften the hearts of those in Parliament, since the "militants" have turned all their energies to aid the fighting men of England, and no sufferage, may soon come after this terrible war is over.

Thousands of women in Canada have overcome their sufferings, and have been cured of woman's ills by Dr. Pierce's Favorite Prescription. This temperance medicine, though started nearly half a century ago, sells most widely to-day, because it is made without alcohol or narcotics. It can now be had in tablet form as well as liquid, and every woman who suffers from backache, headache, nervousness, should take this "Prescription" of Dr. Pierce. It is prepared from nature's roots and herbs and does not contain a particle of alcohol or any narcotic. It's not a secret prescription for its ingredients are printed on wrapper.

Many a woman is nervous and irritable, feels dragged down and worn out for no reason that she can think of. In ninety-nine per cent. of these cases it is the womanly organism that requires attention; the weak back, dizzy spells and black circles about the eyes, are only symptoms. Go to the source of trouble. When that is corrected the other symptoms disappear.

St. Thomas, Ont.—"I wish to say for the benefit of other women who suffer that I recommend Dr. Pierce's Favorite Prescription as a great help. I have personally recommended the same to many who in turn have been helped a great deal by its use."—Mrs. F. J. Fournier, 19 Grove st., St. Thomas, Ont.

Made-to-Measure

Suits and Overcoats

It has always been our aim and ambition to give our customers the best possible satisfaction in the tailoring business. Our Suits and Overcoats are made in a high-class, careful manner. They have earned their reputation from the way they are tailored, as well as from the pure materials from which they are made. The quality has always been a prime factor in our tailoring and always will be. We invite you to inspect our stock.

Twenty Months in France

We are having lovely weather here now, lots of sunshine. The cold spell do not last so long, so I think the worst of winter is over. We are camped out on an open field now. Horses are tied out on lines and we are billeted in tents on a nice big green field that had not been camped on for some time. It is a great change sleeping on the ground again. This is Sunday and as I am writing I can hear several different noises in the distance. The artillery is roaring away continually. Riddenly there is a heavy bombardment on not many miles away. The aeroplanes are buzzing overhead, going backward and forward from their aerodromes to the front lines, and now and then a Fritzie plane will come over and our anti-aircraft guns will bark out like a big dog up a tree after a squirrel. Church services are being held somewhere in the camp and a band has struck up a hymn which mingles melodiously with the other harsher sounds. Meanwhile I can picture mangled and bleeding bodies of both sides lying side by side in the trenches, and imagine I can hear the moans of the wounded, waiting for assistance. Often these bombardments last for hours, and sometimes days. Such are the horrors of war. But evidently it cannot be avoided. Men must suffer and die by the thousands, but it is for the right and we hope that this world-wide war will soon be over and that we can get back to dear old Canada once more and live in peace. I saw Jack Hamilton and Leslie Shaw on the road about two weeks ago when we were on the move. Just had about two minutes to talk to them and then had to double on and catch up with the convoy. They are both driving in the artillery and both are looking fine. Would have liked very much to have a good old old chat with the boys, but just had time for a few hurried questions and answers and then au revoir. That song, "Gee, but it's great to Meet a Friend from Your Own Home Town," certainly seemed true to me then. I even started to hum it after I had caught up with the convoy, swaying backward and forward on my horse en route. Well, I must close for this time. SGT A H BABCOCK

The Late Pte. Milford W. Switzer

Who died from pneumonia at 30 Casualty Station, France. Eldest son of Mr and Mrs Thos Switzer, cont., Saugeen.

The Department of Trade and Commerce issued last week very interesting figures relating to the wages being paid for farm help throughout Canada. The returns show that the average wages paid during 1916 reached a higher level than in any previous year for which returns were collected. For the whole of the Dominion the wages per month during the summer, including board, averaged $42.23 for male and $22.46 for female help, as compared with $37.10 and $20.20 in 1915. For the year 1916, including board, the wages averaged $297 for males and $228 for females, as compared with $243 and $200 in 1915. The average value of board per month returned as $17 for males and $13 for females, the corresponding figures of 1915 being $14.52 and $11.45. By Provinces the average wages per month for males and females respectively in the summer season, including board, are as follows: Prince Edward, $31.36 and $17.81; Nova Scotia, $36.77 and $19.11; New Brunswick, $35.74 and $16.06; Quebec, $40.79 and $16.70; Ontario, $39.41 and $20.58; Manitoba, $48.37 and $26.97; Saskatchewan, $48.66 and 25.76; Alberta, $52.23 and $29.12; British Columbia, $49.86 and $28.66. Of course when we are thinking of the high prices that the farmer is getting for nearly everything he produces and imagining that he is getting enormously rich, we should keep before us these figures, and bear in mind how greatly they are in advance of the wages paid even a few years ago. And not only must we remember that wages are high, but that labor is very scarce even at any price, and that this has resulted, all over Canada, in a decided under-production during recent years. Indeed, the farm labor problem is one of the pressing problems in Canada to-day, and one that must have more serious consideration than it has had in the past.

Always bears the Signature of Chas. H. Fletcher

A Detroit paper says: since the outbreak of the war 27,000 stalwart young Canadians have crossed the border here. We interpret this to mean that 27,000 stalwart young Canadians were cowards with cold feet. Think of the contrast! Ray Fluker, a young Canadian was settled in Detroit with his parents, but his true British blood impelled him to do his duty to the Empire, and he left the "ark of safety" to enlist with the 147th Greys. He is now in France. All honor to such young men, but shame on the cowards who have fled for safety.—Durham Chronicle.

When Norman McDonald and Gertrude Cavill were driving out of Paisley about two weeks ago, a horse and cutter driven by a Paisley boy who must have been asleep or moon-struck, ran into them, sending the shaft of the cutter through Gertrude's clothes under her arm, and tipping Norman's cutter over backwards. The Paisley horse kept serenely on its way and Gertrude was so securely impaled by the shaft that she was dragged a short distance before the horse could be stopped. As a result of the accident she is the possessor of several riddled garments and three broken ribs, though feeling sore Miss Cavill by being well bandaged, is able to be up and around. Her escape from instant death is truly miraculous.—Chesley Enterprise.

There will be no Easter excursion or special Easter rates this year. The Easter Canadian Passenger Association, after consultation with Sir Henry Drayton, in view of the general railway situation and the war conditions, has decided to cancel rates and excursions this year. This will help the railways in their fight against car shortage and freight congestion. It will greatly restrict travelling, which is usually very heavy in the Easter season. The only special rates which will be permitted will be to students and commercial travellers. In addition to prohibition of excursion trains, the railways are not permitted to run any special trains except for the moving of troops.

11-ACRE BRITISH SHELL FACTORY

HUGE OUTPUT OF HEAVY ARTILLERY AND SHELLS.

Britain Has Accomplished More in 18 Months Than Germany in Forty Years.

As a part of the vast organization for making munitions, the British Government began the building of immense Government arsenals. There are about a score of these, entirely outside of the thousands of private factories under Government control for war-work. When the history of the war comes to be written, no phase of it will be more worthy of eulogy—except the staunchness of the Entente soldiers and sailors under heavy handicaps—than the wonderful energy and capacity shown by the Munitions Department of Britain in getting done in a year and a half more than Germany had achieved in forty years. In the first year of the war, before the British people woke up to the vast seriousness of their position, the production of heavy guns and shells was not speeded up in any noteworthy degree. With all his foresight, Kitchener did not realize the need of high explosives, and immense bonfires. He concentrated attention upon shrapnel. In the Spring of 1915 the British army was in a serious plight, owing to lack of ammunition. At one time it did not have a week's supply.

A Big Creation.

But in May, 1915, when Lloyd George became Minister of Munitions, the real work of organizing a tremendous supply of heavy artillery and shells began. Immense new arsenals were planned. One of these, which is described by Arnold Bennett, the well-known English writer, is a sample of what British engineering genius has been able to accomplish. The proposal for the factory was made on July 8, 1915, and was sanctioned on August 17. The land used was then a dumping ground. Part of it being subjected to flooding, foundations of the arsenal were laid on piles. The ironwork was started by September 23, and by March 26, 1916, power was installed. In the first week of June, 127 shells were made. Within a year of the sanctioning, August 17, 48,549 shells had been delivered. The output now is 10,000 a week, and they are big shells. The factory covers 11 acres—think of the area—and it is all under one roof, a wonderful example of constructive and engineering skill.

Woman's Effective Work.

Of the five thousand men and women who labor unceasingly in this 11 acre factory, nearly one-half are women. A large proportion of them are young, and have husbands in the army. They not only help themselves financially by so working, but, more important, they also help to beat the enemy, and to save British soldiers—perhaps their own husbands. Women are in the roof controlling the overhead electric traveling cranes that command every foot of the floor space. Each has a rope to slide down to the floor with, and for practice she is obliged to slide down once a week. Other women drive electric carriages on the floor itself—miles of line—slitting in a sort of easy chair, and pulling levers. Six and nine-inch shells cannot be lightly thrown about. The latter weigh more than a man, and either electricity or two men are required to move them. Electricity does 90 per cent. Many other women are in peg top trousers, but these do not hide the femininities that shine from the delicate shoes, or the blouse and tie, or the flowers in vases decorating the immediate neighborhood.

Complicated Work.

The factory creates its own electricity. Steam is at the bottom of it. In some sections hydraulic power is used. Inside the factory, are the forges which receive steel ingots of 350 pounds each. Each ingot is dropped into a hydraulic machine in which a pressure of 750 tons is applied, and comes out in the shape of nine-inch shells. These are put through a score of minor operations, to which the rough carcass is "submitted," its nose bored, cavity bored, screw-thread milled in the cavity, the channels cut in the part where the copper band goes, the base plug is fitted, the inside polished and varnished, the varnish dried, and the base is faced. Then comes the fastening on of the copper band, and when this important operation is completed, the shell goes to the painting department. The paint is sprayed on, the shell case put into gas-heated cupboards for drying, and then sent away for loading. The steel making and the loading are far-away mysteries so far as this large factory is concerned.

Careful Testing Necessary.

Some of the operations which differ for the 6-inch shell from those for the 9-inch, are conducted only by men, as in the forging department. Painting is done exclusively by women. Women excel in briefer operations demanding close concentration, the men in the longer processes. A very important part of the work is the checking. Every shell has a particular biography on a card that travels with it. Every one is gauged, and weighed, and periodically tested. A certain percentage are deliberately sawn to pieces, and samples turned into bars, and the steel tested for tensile strength by machines of such power that they pull fragments apart. Nothing is neglected to ensure the artilleryman a shell that performs correctly in the finest fraction. The assemble of the factory is wonderful. Not a foot of space is wasted or out of joint in the whole eleven acres. The women work in three shifts, the men in two.

TIT FOR TAT.

How an Englishman Got Even With the Grand Vizier.

The Turks in these latter days have lost a lot of their old-time arrogance, and are by way of losing more. Charles Alison, at one time chief interpreter to the British Embassy, however, got one back at the Grand Vizier, to whom he had been sent on important business by Sir Stratford Canning.

In the middle of a discussion the Turk rose from his seat and said his prayers on a carpet spread for him by an attendant, concluding with a curse on all Christians, very emphatically uttered, and going through the motion of spitting over his right shoulder and left in utter abhorrence.

Alison was quite equal to the occasion. Presently he, too, left off business to pray in a corner, doing it in Turkish, and invoking curses long and deep on the followers of Islam. To the scandalized Pasha he explained that Christians also had their religious duties, and that he had no doubt the formal curses of their prayers meant as little to them as they did to the Mohammedans.

Two rival shops, in a certain town, lately indulged in vituperative strife, trying their level best to give tit for tat. For a long time they ran a neck-and-neck race, but—they were butchers, or, as they prefer to be styled, meat-purveyors—one of them put the final lid on and set the whole town laughing by putting on his shop front the noble motto, "God Save the King!"

But the sting lay in the fact, well known locally, that on the previous day his rival had put up a boastful poster saying: "We are Purveyors to the King!"

A certain notorious deadhead got heavily sat on lately. He wrote to a famous actor: "Having heard so much of your acting, I should be glad of an order for a box!" As the actor had seen this gentleman's ads. all over the town, he replied: "Having heard so much of the splendid and everlasting furniture you make, I should be very glad of a suite gratis as a sample!"

Boy Hero of Gallipoli.

John Bradbury, a Holloway lad, enlisted when he was fourteen years of age, in the Gloucesters, giving his age to the recruiting sergeant as nineteen, says the London Chronicle. He went to Gallipoli, was in the second landing at Suvla Bay, and took part in the battle of Chocolate Hill, where he distinguished himself with wonderful coolness and courage. With another young soldier, he went across "No Man's Land" for water, each taking twelve bottles. Bradbury's companion was wounded and fell, and Bradbury proceeded alone with his own bottles and those of the other boy, filled them and returned safely through the curtain of fire.

CHARGED BY A "BEE" WHALE.

Narrow Escape of Whale Hunting Party of Japanese Fleet.

In his book, Whale Hunting with Gun and Camera, Mr. R. C. Andrews, who made moving pictures of the work of the whalemen, describes an exciting adventure with a "sei" whale while he was with Capt. Andersen of the Japanese whaling fleet:

As we came close we saw that the whale was in a school of sardines, which were frantically dashing here and there, causing their huge pursuer a deal of trouble to follow their quick turnings. But he managed his lithe body with wonderful skill, and before the fish left him many yards behind was always ploughing after them again, with his great tail sending the water in swirling green patches astern. As he rose, about sixty fathoms ahead, and turned to go down, his back came into view. Just behind his fin we saw a large white mark.

"That's a harpoon scar," said Andersen. "It is a bad sign. He may give us a run for it, after all."

We had been waiting two minutes (it seemed hours) when the boatswain shouted:

"He's coming! He's coming! On the port bow!"

In a second the water began to swirl and boil, and we could see the shadowy form rise almost to the surface, check its upward rush and dash along parallel with the ship.

In the mirror of my camera I saw the enormous gray head burst from the water and the high fin cut the surface. Andersen's harpoon gun crashed in my ears, and before I could see through the veil of smoke the sailors shouted, "Dead!" The next instant the black cloud drifted away, showing the whale lying on his side motionless. I tried to change the plate in my camera, but before I could draw the slide and reset the shutter the animal had sunk. Apparently he had been killed almost instantly, for the rope was taut and hung straight down.

In a few minutes Andersen gave the word to haul away, and the engineer started the winch. No sooner had the rattling wheels ground in a few fathoms than we saw the line grow slack, and then slowly rise. Faster and faster it came, with the water dripping in little streams from its vibrating surface.

In a few seconds the whale rose about ninety fathoms ahead and blew. He lay motionless for a moment and then swung about and swam directly toward the vessel. At first he came slowly, but his speed was increasing every moment.

"Full speed astern!" yelled the gunner, dancing about like a madman. "He'll sink us! He'll sink us!"

The whale was coming at tremendous speed, half buried in white foam, lashing right and left with his enormous flukes. In an instant he hit us. We had half swung about, and he struck us a glancing blow directly amidships, keeling the little vessel far over and making her tremble as if she had gone on the rocks, then bumped along the side. Turning about with his entire head projecting from the water like the bow of a submarine, he swam parallel with the ship. Suddenly, however, he rolled on his side, thrust his fin straight upward, and sank. It had been his death struggle, and this time he was down for good.

We had had a narrow escape. If the whale had struck squarely, he would have torn such a hole in the steamer's side that she would probably have sunk in a few seconds. The only thing that saved her was the quickness of the man at the wheel.

The Bank of England.

The Bank of England is not a Government institution. It is a very flourishing private company, founded in 1694, which owes much of its success to the fact that it is actually Britain's banker. A yearly salary is paid the Bank for management of the National Debt of England—$1,625 per million pounds of such a debt up to five hundred million, and at the rate of $500 for every million pounds above this amount. Assuming, then, that a War Loan realizes $12,500,000,000, the Bank of England would receive an annual sum of $1,250,000 for this work alone, to say nothing of the income derived from managing the old National Debt, which, on the outbreak of hostilities, was $3,250,000,000.

WORDS OF WISDOM.

Frost out and grass land not too wet? Time for the roller then.

Get up a little club among your neighbors to buy your lime, grass-seed and fertilizer.

It is a good thing to follow the procession when the procession is headed the right way.

We know of folks who pay a hundred-fold more attention to the bed of lettuce and garden seas than they do to the trundle-bed and the little chap that sleeps and grows in it. That isn't you, though, is it?

When he was well along in years a farmer said: "I have grown some big crops in my life, but the crop that has brought me the most satisfaction has been the crop which came from sowing kind words and doing good things as I went along. Frost never cuts that crop down. No blight ever strikes it. The harvest is sure and big.

In every home there is no more delightful hour than when the folks, young and old, meet in the family circle before bedtime. The boys and girls grown old will forget some things, but they always will remember this little trysting place in the home when things were talked over together heart to heart, and when the thoughts turned toward the best things.

A pretty good thing for neighboring farmers to do is to band themselves together to help one another out about butchering and marketing anything in the meat line which is to be turned off. Almost always there will be some in the community who are competent to do this work in excellent shape.

Sometimes it is necessary to cut a joint of stovepipe, and it is usually a very difficult task. Try this method: Take the measure of the pipe and mark it where it is to be cut, and then take a can-opener, drive it in and follow the mark. By going very slowly you will find that you can do a very satisfactory job.

Seed-corn can be very easily spoiled between now and planting time. During warm and damp days corn will absorb considerable moisture and then a cold snap will injure the germ. If possible it should be moved to a warm place now; this is even more essential at this time than it was last fall. Plan to test your seed-corn.

It takes a lot of time to sort over a quart or two of nails of different sizes every time you want a particular size; but if you make a nail carrier out of a little box, say ten inches or a foot long and eight inches wide, with small compartments for each size of nail, and then keep each compartment free from any but the particular size it is made to contain, you will gain a good many minutes that would otherwise be wasted hunting for what may not be in the box.

Hence the Delay.

Paddy Dolan bought a watch from the local jeweller with a guarantee to keep it in order for twelve months. About six months after Paddy took it back because it had stopped.

"You seem to have had an accident with it," said the Jeweller.

"A small one, sure enough, sir. About two months ago I was feeding the pig and it fell into the trough."

"But you should have brought it before."

"Sure, your Honor, I brought it as soon as I could. We only killed the pig yesterday!"

PERILS OF POWDER WORKERS.

Cool Daring and Great Carefulness Necessary for Safety.

Smokeless powder is made in sticks, something like macaroni. It goes through a number of processes, and for the sake of safety those processes are conducted in small buildings remote from one another.

In a United States plant the powder is conveyed from one building to another on flat cars drawn by electric motor cars. Six one-hundred-pound open boxes are loaded on each flat car. The wheel trucks have to be blocked by a wooden bar, which the brakeman adjusts before the motor starts.

One day last spring a brakeman failed to adjust his wooden bar properly. The car derailed, and the powder was spilled down an embankment. No guard happened to be near, and as quickly as possible the brakeman and the motorman shoveled up the powder and put it back on the car. In a few moments the load was delivered at the grinding house, and no one except the two men knew of the accident. Unfortunately, they had shovelled up some gravel with the powder. The three men in the grinning house heard the harsh crunching of the small stones as they passed through the rollers.

Every powder-mill employee receives minute instructions about what to do when anything goes wrong, and one of the three, following instructions, threw open the door to make a way of escape.

The crunching continued. One of the gravel-stones emitted a spark as the rollers crushed it. In an instant there was a great flash and a roar, and the building disappeared. Three blackened and mangled corpses were picked up. In order to save themselves from rebuke and perhaps from discharge, two workmen had sacrificed the lives of three other faithful men and placed the lives of thousands in jeopardy.

In another plant a young man operating a cutting machine, in which long sticks of smokeless powder are cut into shorter pieces, saw an iron nail coming down with the powder. He did not have time to stop the machine before the knives struck the nail. If he tried to snatch it out he might lose a hand. If he let it go nothing but a miracle could prevent an explosion, for the nail would be sure to give off a spark if struck by the knife.

There was only a fraction of a second in which to decide. With the coolness that characterizes those who spend their lives in the presence of danger, he snatched the nail from under the knife and put it into his pocket. So quickly did he move that not even the skin of his hand was broken.

Sneezing Kills Aviators.

Katherine Stinson, the girl flyer, when asked if she was afraid she might fall, replied that sneezing was the only thing she feared. She declares that nine-tenths of the accidents in the air are caused by aviators losing control of their machines while sneezing. "The aviator," says Miss Stinson, "passes through numerous strata of air of different temperatures. He often catches cold and sneezes violently. When you sneeze, for the moment you lose control of yourself. If you do that while in the air your friends are going to gather up your remains."

CHILDREN'S GAS HELMETS.

Kiddies Protected From Hun Poison at Christmas Entertainment.

An interesting article describing how Christmas was spent by the New Zealanders at the front, written by Mr. Malcolm Ross and forwarded to the London Times by the High Commissioner, Sir Thomas MacKenzie, contains the following:

It was a very kindly thought on the part of the New Zealand Division to brighten the Christmas of the children in the villages where we are billeted. An officer was sent post-haste to Paris and came back with a vanload of toys and presents such as young people love to get, especially at Christmas. I have just come in from one of the entertainments provided by the division, and never before have I seen such an enthusiastic and excited throng of happy children. Many of them, poor things, have lost fathers and brothers. Some of them even have had sisters and mothers killed in the war, for the shelling of some of the villages along this part of the front has been very fierce.

But to-day all those little ones were happy, for was there not a great Christmas tree reaching nearly to the roof of the "Kapai" Theatre (built for us by the Maories), and was there not also a real Father Christmas (a young Frenchman of the Corps of Interpreters) bent down with the weight of years and the great sack of toys that he carried on his back? The hall was packed with some 400 children and as many of their mothers and sisters as could get away, and every child went home happy, with some little gift from the men who have come farther than any other soldiers to fight in this cruel war.

In the village near the guns, on the eve of Christmas, I witnessed a similar scene. Here the children not only received presents, but something to eat and drink as well. The Brigadier-General and the A.A. and Q.M.G. graced the entertainment with their presence—as the Divisional General did the bigger entertainment, and the cure in his black robes made a charming speech of thanks. But there was a difference. There was a great rent in the ceiling of the building in which the children were gathered together. It had been made by a German shell. Yet, braving the guns, Santa Claus had come to the front in French Flanders.

And there was this further difference. Each little child carried, handy, a gas helmet, neatly folded in its khaki bag, for was there not all this morning prominent in the village street, the big board with the painted sign—

DANGER.
DE GAZ.
ASPHYXIANTS

just because the wind was from the direction of the German trenches? Every week these little children are taught their gas drill, just as they are taught their spelling and their arithmetic, so that the tiniest tot knows just what to do if the alarm sounds and the poison cloud comes along. Santa Claus and Poison Gas! And a little girl of four with her gas mask handy. What reflection upon the methods introduced by our peace-loving friends, the Super Men!

Sergeant—Why did you salute me? I'm not an officer! Recruit—No, I know you're not; but anything will do to practise on!

The Doings of the Duffs.

Farm Crop Queries

Conducted by Professor Henry G. Bell.

Henry G. Bell.

The object of this department is to place at the service of our farm readers the advice of an acknowledged authority on all subjects pertaining to soils and crops.

Address all questions to Professor Henry G. Bell, in care of The Wilson Publishing Company, Limited, Toronto, and answers will appear in this column in the order in which they are received. As space is limited it is advisable where immediate reply is necessary that a stamped and addressed envelope be enclosed with the question, when the answer will be mailed direct.

Question—H. T.:—What is the value of sweet clover for roughage, as a pasture, and its effect on the soil? When should it be sown, and how much per acre? Would it be all right to sow with other clover and grasses?

Answer: — The attitude toward sweet clover is turning from one in direct opposition to one of considerable favor. The plant for a long time was looked upon as a troublesome weed, but it is now regarded as a valuable source of roughage and good material for pasturage and a form of legume which is beneficial to the soil. Sweet clover plants grow exceedingly rapidly and will thrive on soil of low fertility. On account of its rapid growth if it is not cut sufficiently early it will make hard unpalatable hay. For roughage sweet clover should be cut at the time the flowers begin to show. Sweet clover plants contain a peculiar organic matter known as Coumarin, which gives it a characteristic odor. At first this is distasteful to cattle; however, they soon learn to eat sweet clover hay and actually prefer it later to poor forms of hay. If a good seeding is obtained, sweet clover will cut at least two or three crops a season. If cut early and handled carefully the hay will retain a large percentage of the leaves which are most valuable in the feeding ration. As a pasture, sweet clover is valuable especially if pasture is cut over with the mower sufficiently often to keep down plants which would grow up and become woody. Again the livestock pasturing on the sweet clover have to acquire a taste for the plant. Sweet clover has a beneficial effect on poor soil. In our investigation of the question of legumes improving the fertility of the soil we were not able to obtain definite figures as to the amount of nitrogen fixed by any of the legumes under all conditions. The consensus of opinion is that if the soil is rich the legumes will tend to get a large amount of nitrogen from the soil like other grain crops, but if the soil is poor by virtue of the bacteria growing on the roots of the legumes they can make use of considerable of the nitrogen of the air circulating around the roots of the plants. Under all conditions, of course, the growing of legumes adds organic matter to the soil and organic matter is exceedingly valuable, in that it gives the soil water-holding capacity, plant-food-retaining capacity, opens up heavy clay soils binds together sandy soils and forms the home and food of bacteria.

In seeding sweet clover, Michigan Agricultural College advises from 15 to 20 pounds per acre of hulled seed, or 20 to 25 pounds per acre of unhulled sweet clover seed. Speaking generally, the hulls of the seed are so hard that frequently the seed does not germinate until the second year. Sweet clover seed should be sown about the same time as other clover is sown in the spring. A mixture of sweet clover and other clovers would be all right, but speaking generally, it is not best practice to sow sweet clover seed with a grass mixture. The grasses tend to offer too strong competition for the young sweet clover plants. Care should be taken to inoculate the soil at the time of seeding, so that the right kind of bacteria for the clover will be present in the seed bed.

Question 1.—W. T.:—Are oats that are mowburnt till they are light brown on the hull good for seed?

Answer:—Oats that are burnt until they are a light brown color should be carefully tested before they are used for seed. Count out two lots of 100 each. Place these between wet blotters or damp cloths. Keep near a source of heat such as a stove or furnace, for a period of a week or ten days. At the end of this time count the seed that have sprouted strong and you will have the percentage of seed that will germinate. Speaking generally any sweating of oats in bulk to such an extent that it discolors the hull of the oats is very detrimental to the vitality of the seed. If you have to use the oats for seed and find the germination is only 60 per cent., necessarily you will have to increase your rate of seeding to double what is normally used, in order to be sure of a good stand.

Question 2.: I have a field of stiff clay land which was ploughed once last fall. What is the best way of working it into a seed-bed for the oats in the spring?

Answer:—In preparing fall plowed stiff clay land for a seed-bed for oats this coming spring, I would advise that you apply 1,000 to 2,000 pounds per acre of air-slaked burnt lime. Scatter this evenly on top of the plowed land as soon as the soil is sufficiently dry to work. Follow the application by a careful and thorough discing and harrowing. This air-slaked burnt lime, besides correcting any sourness in the soil, will gather together the tiny soil particles and make the crumb of the soil a little coarser so that air can circulate better in the seed-bed.

When you are seeding to oats, I would advise also seeding to clover and timothy. After you have taken off one cutting of hay plow under the second crop of clover to increase the organic matter. Your stiff clay land will not greatly improve in texture until you have increased the organic matter or humus within it.

TIME FOR INDOOR GARDENING

Preliminary Sketching of Rows and Space to Be Devoted to Varieties Means Time-Saving Labor.

Seeds for planting the home vegetable garden should be ordered at once, so as to be on hand as soon as the weather and condition of the soil make planting possible. Before ordering seed the home gardener should look over his plot, measure its area, size up the soil, decide on the best location for each vegetable and determine how much seed he will require for the space available for each kind. Seeds cost more this year than in recent seasons and they may go higher, so it is well to be prepared.

It will be helpful to make a rough plan of the proposed garden. On this plan indicate the spaces to be used for each variety and also by means of colored pencils or symbols show where a second crop is to be planted or interplanted between growing rows, and also arrange for the second and third crops which are to follow those previously harvested. Such a plan will enable the gardener to keep the ground busy all season, supplying fresh vegetables during the summer and producing in the late fall root and other crops for winter use.

Once the preliminary spading and working of the garden has been done, it is an easy to raise two or three crops as to keep the garden clean of weeds for producing only one picking. Those who are not used to gardening or who wish to have their children take an interest should have some one to do the heavy spading or breaking up of the soil. This work frequently disgusts novices and children who would continue an interest in the garden if the task was simply to cultivate soil already broken up. A couple of hours of labor would be sufficient for a small back yard. In case of a patch from twenty-five to fifty feet and upwards, it is cheaper to have the place plowed and harrowed at a cost of about $1.50 for that area and more in proportion to larger extent.

The questions of how much space and time one must have for certain mixed crops and results are important, but just now these can be deferred, since out-door work is impossible on account of the hard winter and late spring. Indoor gardening such as the seed buying and planning spoken of is possible.

Many plants can be started in the house, both vegetable and flower, and be ready to plant out when the ground is dry and warm. Even without a hotbed one can get earlier crops of tomatoes, cabbage, cauliflower, pepper, celery and lettuce by starting seed early in boxes in the house. Early potatoes sometimes are forced in the same way.

Seeds so planted germinate and are ready for transplanting by the time it is safe to sow the same kind of seed in the open ground. When danger of frost is over and the soil is dry enough to work, therefore the home gardener starts his early garden with seedlings well above the surface. Transplanting, if properly done, instead of hurting, seems to help such plants develop a strong root system. Garden enthusiasts should get a good deal of pleasure from this kind of preliminary indoor gardening. They also can use boxes to hasten the blooming period of many sorts of flowers which stand transplanting.

Any sort of wooden box filled with good soil answers the purpose. The following directions for making seed boxes and handling the plants should be carefully followed.

Seeds of early tomatoes and cabbage, as well as cauliflower and pepper, should be planted in a seed box in the house at once. The seed-box should be three to four inches deep, twelve to fourteen inches wide and twenty to twenty-four inches long. Special boxes can be bought cheaply, if nothing suitable can be found around the home. A layer of about one inch of gravel or cinders should be placed in the bottom of the box, then it should be filled nearly full of rich garden soil, or soil enriched with decayed leaves or manure. Bonemeal, sand and backyard soil, equally mixed, is good.

Soil should be pressed down firmly with a small piece of board and rows made one-fourth to one-half inch deep and two inches apart crosswise of the box. The seed should be distributed eight to ten to the inch in the rows and be covered. The soil should be gently watered, so as not to wash up the seeds, and the box set in a warm place in the light—in the sunshine by a window being best. Water enough must be given gently from time to time to cause the seeds to germinate and grow thriftily, but not enough to leak through the box. If a piece of glass is used to cover the box it will hold the moisture in the soil and hasten the germination of the seeds.

When the plants are from an inch to an inch and a half high they should be thinned to one or two inches apart in the row, so as to give them space enough to make a strong, stocky growth. If it is desired to keep the plants which are thinned out, they may be set two inches apart each way in other boxes prepared as mentioned for the seed box.

When the weather becomes mild the box of plants should be set out of doors part of the time, so that the plants will "harden off" in preparation for transplanting to the garden later. A good watering should be given just before the plants are taken out of the box for transplanting, so that a large ball of earth will stick to the roots of each one.

The Sunday School

INTERNATIONAL LESSON APRIL 9.

Lesson II. Jesus Raises Lazarus From The Dead—(Easter Lesson)—John 11. 17-44. Golden Text—John 11. 25.

Verse 17. Allowing a day for the journey each way, this means that he died very soon after his sisters sent the message.

19. Jews. Remembering the regular association of the name in this Gospel, we see a contrast implied between the impotent comfort of an outworn system and the fullness of joy in sorrow that Christ bears.

20. The active Martha behaves like Peter in John 21. 7 (and Matt. 14. 28). Mary, like the beloved disciple there, waits for the Master's call.

21. As verse 32 shows, this was what the sisters had been saying to one another all through those days. On the Greek this is a little untranslatable difference, individualizing Mary's words; she puts my in a more emphatic position.

22. Shalt ask—Literally, Shalt have asked. The phrase is inclusive, and covers what she thinks he has been asking already.

23. Jesus would draw from her by an ambiguous phrase how far she really ventures in the vague hope that her last words have hinted.

24. Her venture has been too much; she falls back on the great ultimate Hope, but dares not anticipate anything more.

25. Compare Paul's preaching of "Jesus and the Resurrection." The Resurrection is not a future event: it is a present Power, and not merely a fact, but a Person. Paul preached this so urgently that his careless hearers in Athens thought "resurrection" was the name of a goddess! (Acts 17. 18.) Shall he live—As the next verse shows, Jesus means that death will not destroy the name, it will not interrupt life, but only change its sphere.

27. I have believed—The tense implies a faith previously won and abiding still—"I have learned to believe." She pronounces her creed as it has come to her; the Lord had been giving her an implication of it which was all present more than she could take in.

43. The short way to help the faith of the sisters which we may believe was needed in cooperation. Lazarus was "sleeping," and must be awakened; the Lord acts in accordance.

44. Bound—Long swathes of linen were wound round and round the body. Napkin—Compare John 20. 7. It was a handkerchief, named from its use for wiping away sweat, and now used to cover the face of those whose toil is done. Loose him—The Lord's attention to a homely detail like this, or the child's need of food in the Jairus story (Mark 5. 43), emphasizes the sense of mastery. There is no mighty wrestling with Death, as in the case of Elijah: the Lord of Life has only to issue his command. See John 5. 28.

Readers will not overlook Browning's "Karshish the Physician," in which the deepest lessons of the story are wonderfully handled. Its problems are, of course, manifold and cannot be mentioned here. The Evangelist's purpose is the main thing to remember, as expressed in John 20. 31. Compare 2 Tim. 2. 18 and note how this story corrects a perversion of the great truth it is meant to teach.

The Dairy

Give the live stock buildings a thorough spring house-cleaning. Disinfection of the walls and floors with some cheap disinfectant will prevent the spread of any contagious diseases and will increase the health and vigor of the stock.

One cause of cream failing to ripen properly is keeping it at too high a temperature. This interferes with the ripening, and also gives the butter an oily flavor.

The value of accurate knowledge properly recorded had a clear demonstration at a recent farm sale of cattle. The owner says that the Babcock test and his scales made him $600 that day in the sale of ten cows and heifers. This may be readily accepted when it is known that one cow, without a pedigree, sold for $210 on her record as a milk-producer.

To give proper care to milk you must have the equipment with which to do it. The dairyman is keeping his cows on expensive land. He is selling all of his crops through them. What he gets from milk is his reward. Surely then, it is worth while giving the milk proper care in order that the resultant product may bring the best price possible.

Watch closely, in the interests this spring, the results of the matings made last year. Live stock and feeds are sure to be high for some years to come and time or money should not be thrown away on indiscriminate breeding.

Your Problems

Conducted by Mrs Helen Law

Mothers and daughters of all ages are cordially invited to write to this department. Initials only will be published with each question and its answer as a means of identification, but full name and address must be given in each letter. Write on one side of paper only. Answers will be mailed direct if stamped and addressed envelope is enclosed.

Address all correspondence for this department to Mrs. Helen Law, 75 Castle Frank Road, Toronto.

A. H. B.:—This plan has been tried by a mother and was successful in curing her little daughter, who had violent spells of temper. When a fit of temper came on, the mother took a basin of cold water and sponged the little girl's face and neck, holding the cold sponge long at the temples, behind the ears, and at the back of the neck. In a few moments the tense little muscles relaxed, the eyes grew less wild and the child would lie down. Then the mother would take her daughter's hand and talk to her lovingly but firmly on self-control. After six or seven treatments a complete cure was brought about.

L. D. M.:—1. The milk bottles that are used for infant feeding can be thoroughly cleaned by rinsing first with cold water, then washing with hot soapsuds and a clean bottle brush. Rinse the bottles both inside and outside in an abundance of flowing clean water, preferably under the cold water faucet; examine each bottle to see there is no cloudiness or speck remaining. Then place in a bottle rack and set in a moderately hot oven for an hour. The bottles will be sterile and fit for use. Bottles may also be put over a fire in a boiler filled with cold water, to boil for half an hour, after which they should be carefully drained and kept dust-free. But the oven method is preferable. Cool the oven slightly by opening the door a few minutes before removing the bottles; this will prevent the cracking that might result on sudden exposure to the colder air of the room. 2. To tell when a child has scarlet fever the following should be noticed: The hatching period is from a few hours to several days, no longer. Then comes a scarlet rash, appearing first on the neck and chest, then covering the face and body. This eruption peels as scales and flakes. There is fever and quick pulse, and the "strawberry tongue." The glands in the neck are swollen and there is sore throat. The discharges from the nose and throat are more dangerous than the rash—more catching.

D. G.:—Try these games at your party for boys and girls. 1. "Pictured Verbarium." You take some long word, such as "Caribbean" or "Beloochistan", and by rearranging the letters find a number of smaller words, such as cat, loot, bean, belt, and others. Then from advertisements in the papers and magazines cut out pictures which represent the words and paste them on cards for an exhibition. From these pictures the guests are supposed to guess the smaller words and then pick out the individual letters and guess the whole large word from which they are taken. 2. "Geography." Take each letter of the alphabet and in five or ten minutes' time write down as many towns, seas, rivers, etc., as you can think of which begin with the letter chosen. 3. "Change Places." For this the players sit in a circle and there must be a leader, who tells a story. The story teller goes very rapidly, intending as he goes along, and suddenly and frequently introducing the phrase "change places." No attention must be paid to this unless he adds, "The King is here." Then all must jump up and try to take different seats. In the confusion the leader tries to slip into a seat, and then the one left without a place has to start a story. It adds much to the excitement if the leader sometimes seems on the brink of giving the sentence which means a general move, such as "Change places, the King will come room," or something else of royal news, to which no attention should be paid.

Bedtime Stories

THE KATY THAT DID.

There was once a time when there weren't any katydids. There were katies, dear, yes! Ever so many. But every single katy was a didn't! Do you know what it was that they didn't?

They had hopping parties, of course, and swinging bees and tree-climbing contests. And the papa katies went to the club, while the mamma katies had afternoon teasy in one another's homes; they brought their sewing and talked about the children, quite like all the other insect families. And their only didn't was—they didn't sing!

You've no idea what a difference it made. Why, the woods seemed just as still! There were bees humming in the sunlight, and flies buzzing and crickets chirping. But they weren't noisy, you know, compared with katies that do. They made just nice, sociable sounds, to say that the wood was beautiful and wasn't it lovely to be alive!

Oh, all the other wood people had voices, some for the daytime and some for the night! They trilled and piped and flutied, and sang solos and choruses—all but the katydidn'ts. But the katydidn'ts were busy with their hunting and their housekeeping. So they did not mind not being musical. And the only times that they did care was when they saw a party of wood people on their way to singing school.

The woods was a wonderful place. There were trees and bushes and flowers and grass. And every tree and bush and flower and blade of grass had the finest juices for eating and the coolest nooks for sleeping. No wonder that the wood people were happy!

The trees and the bushes were all glowing with red and gold that day. And the flowers were gold and purple. Golden leaves covered the ground. Even the brook that ran through the wood was dotted with tiny gold ships that had once been leaves.

All the wood people were busy spinning warm wraps and making their houses snug for the winter. On every side you could hear the whir of spinning wheels and the sound of hammering.

They were so busy that no one saw the hunter. No one paid any attention when he stopped to light his pipe. No one noticed the lighted match that he flung away.

The match fell on a leaf. The flame burned to the end of the match, then it set fire to the leaf.

Now, the leaf lay by a heap of grass, and the grass lay near some sticks, and the sticks lay beside some dry bushes, and the dry bushes lay beneath some dead trees. If the flame burned the leaf, the leaf would light the grass, and the grass would light the sticks, and the sticks would light the dry bushes, and the dry bushes would light the dead trees, and the dead trees would set the whole forest afire, and all the wood people would die!

And no one of all the busy wood people saw the burning leaf. Did I say no one? Ah, but one little katy did!

She was a weak little katy! And such a timid little katy! The other katydidn'ts were always laughing because she was afraid to hop very far or to climb very high. She was dreadfully afraid now. Why, her heart knocked so hard that it nearly knocked her over! But there was no one else. So—

The little katy hopped upon the burning leaf and caught it by the stem. She spread her wings and whizzed into the air. Straight over the brook she flew and dropped the burning leaf into the water!

There were plenty of wood people who saw that, I can tell you! They came crowding out of their houses, crying all together:

"Did you see the fire fall into the water? Who found it? Who caught it? Who put it out?"

Ms. how the katydidn'ts swelled with pride! Their own little katy had saved the forest. Such a fine little katy! And such a brave little katy! All the forest should know. Old and young, they found their voices at last. And they shouted over and over again:

"Katy did! Katy did! Katy did!"

And that is how there came to be katydids!

Horse Sense

Symptoms of acute indigestion are uneasiness, lying down and rising, suppressed breathing, eructation of gases or attempts to vomit, pain usually continuous but varying in intensity.

Give 2 to 3 oz. oil of turpentine in a pint of raw linseed oil as a drench. Foment the abdomen. If pain be severe give 2 drams of the solid extract of belladonna. Repeat if necessary in 2 hours. Give rectal injections.

Pampered stock, like pampered people, soon decline in vitality.

A wordless argument in favor of clipping the horse in the early spring is an overcoat covered with hairs.

Make haste slowly with the team when the first warm days come. You know how easily you get tired yourself on such days.

The better the sire the higher the dividends will pay and in no line of live stock does this hold more emphatically true than in horses.

More horses, heavier horses and horses in better condition all through the working season will lower production cost. Prepare the horses in the early spring for a hard summer's work by regularly exercising and gradually increasing to heavier work.

When the spring work begins it is high time to give the horses' shoulders proper attention. To work a horse with a sore shoulder is barbarous. The collar should fit so that one can easily get the hand between the bottom of it and the horse's throat. If it is too large it will be sure to make the neck sore, and if too small it will choke when the horse pulls. Never use a pad under a collar so as to make it fit; a pad keeps all air out from under the collar and the shoulders soon scald in hot weather. The first thing to do when going to work a colt is to see whether there is a collar to fit him. If not, go and buy one.

Poultry

Take only healthy birds for breeders. A vigorous cockerel and yearling hens are best. If pullets are used have them well matured. In light breeds, mate one male to 20 females, and in heavier breeds one male to 15 females.

Undersized or very large eggs are more apt to be infertile than medium-sized eggs.

The poultryman makes his greatest profit from the chickens which are hatched before May 1. The early hatched cockerels are sold as broilers when the broiler market is at its best. The flood of late hatched broilers brings prices down and congests the market. The greater returns received from early hatched broilers go far toward defraying the cost of raising the pullets. These pullets in turn begin laying when eggs are bringing the highest prices and when there is the greatest shortage of strictly fresh eggs.

Sheep Notes

Shear fairly early, at least before the very warm spring days arrive, and thus save the ewe discomfort and loss in weight. With wool as valuable per pound as butter, the greatest care should be taken to produce the cleanest, best fleece and properly to care for the same after shearing. Co-operative marketing will add from two to eight cents per pound revenue from your wool.

Clean all vermin from the flocks and herds before the young stuff comes. Feed is too high in price to waste on lice and ticks, and the newly-born animals will thrive better if they are free from them.

Undocked and uncastrated grade lambs are always an indication of primitive methods in the handling of sheep, and no farmer who takes an interest in his flock will neglect the performance of these operations.

Hogs

The man who makes the most satisfactory returns out of hogs is the man who is in hogs all the time, and only to the extent that his farm will conveniently carry.

For Ontario farmers, the bacon type of hog is beyond question the type to be produced. That is the type which both the home and the English market calls for, and for this type these markets will pay a premium.

The hog is essentially a by-product of the farm and a means of turning to valuable account commodities which would otherwise be largely waste, such as whey or skim milk, small potatoes, grain shelled in the field.

The hog, like other meat animals renders it possible to make a double profit out of coarse grains—one profit in the real "home market" for the grain itself, and another in the manure produced in feeding.

The bacon type can be produced at least as cheaply as the thick fat.

For the production of the bacon type of hog, one finished at 150 to 200 pounds, barley is one of the best of feeds, and will give a greater gain for the amount of feed used than will corn; but barley should be mixed with other grain to increase its palatability. In a general way oat chop is the best grain for growing hogs, and barley and corn and shorts for finishing. Milk in all cases adds to economy in production.

Arrange for hatching in April The early chick makes the winter layer.

SECOND CON. ELDERSLIE

Mrs Geo Anderson has returned from Owen Sound, where she was getting treatment for throat trouble.

Mr Fred Vancise is visiting her brother James on this concession for a few weeks.

The spring freshet has passed off quietly this season. No damage has as yet been done in these parts.

Arthur Lillico, law student of Toronto, spent a few days last week here at the home of his parents.

Andrew Green is able to be out again after being laid up with a sore knee.

Mr and Mrs Jas Vancise, Fred and Allan Vancise all spent Sunday with Gillies Hill friends.

Mrs (Rev) J B Brown, of Keady, spent last week visiting friends here.

DIED—On March 29th, Samuel Gribble, of lot 10, con 2, aged 84 years. Mr Gribble was one of the oldest residents of this section, having come here about the year 1856. He first settled on lot 7, but later he purchased lot 10 from Wm Cassels, where he resided until the last summons came. Over a year ago his health began to fail, and for the last eleven months of his life was confined to his bed. Beside his aged partner he leaves to mourn his loss a family of one son and three daughters—Lizzie, of B C; Mrs Minto Jackson (Mary), of this con; Hannah and David at home. The funeral service on Thursday last was conducted by Rev J A Hillis and interment was made in Chesley cemetery. The family have the sympathy of all in their bereavement.

One of the enterprising farmers of this section started plowing on March 31st.

GROWTH SIMPLY WONDERFUL

WILLIAM EYLAND, Sarnia, Ontario, says:

"I have used Homestead Bone Black Fertilizer and am so greatly pleased I want to tell you of it. I had a piece of ground where nothing would grow, not even weeds, and I planted strawberries and put some fertilizer on them and the growth is simply wonderful. In fact, it beats anything around the neighborhood."

Write Michigan Carbon Works, Detroit, for free book and particulars about their Home Bone Black Fertilizer.

EDEN GROVE

March 19th was a gift letter day in the lives of Mr and Mrs D W Gregg. It was their golden wedding day, and although they did not "go up to Dover" by way of celebrating the anniversary, nevertheless the occasion was marked by a very pleasant occurrence. Their three sons and son-in-law planned a surprise, coming to the home of their parents in the afternoon and presenting them with appropriate memories of the day—a gold-headed cane to father and a gold ring and silver tea set to mother. Mr and Mrs Gregg have lived in this community for more than the half-century of their wedded life. Mr Gregg is a Canadian, born near Ottawa, and came up here when he was but 10 years of age. Mrs Gregg (nee Ann Scott) is a native of Sligo, Ireland, and was only a girl when her parents settled on the lowsitse of Brant and Greenock. Upon their marriage Mr and Mrs Gregg took up farming on lot 36, con A, and remained there until 16 years ago, when they came to live in the Grove. Their sons are: Jas A, Pinkerton; Robt J, Paisley; D W, in Brant; and W T, in the west. Their only daughter was the late Mrs R Alexander.

CANTIRE

Rev Mr Hillis of Chesley occupied the pulpit of Gillies Hill church on Sunday afternoon, and delivered a rousing sermon.

Messrs Alex Gowanlock and J C Johnston each delivered fine horses to buyer Galbraith last Monday.

On Friday evening last a large crowd of friends and neighbors met together to spend a social evening with Mr and Mrs John A McIntyre before leaving for their new home in Arran Tp. As their effects have already been moved, the reception was held at the home of the former's step-father, Mr Angus Bell, whose commodious residence furnished an ideal place for such a gathering. Mr A D McKay was master of ceremonies, and acted his part in a manner which showed he was no novice in this capacity. Mr and Mrs McIntyre were called to the centre of the room and presented with an address and handsome rockers. Mr McIntyre, on behalf of himself and wife, thanked the donors for their beautiful gifts, and assured them the happy days spent in this neighborhood would never be forgotten, and invited them to pay a visit to their new home. Short speeches were made by a number of those present, all expressing sorrow at losing such good citizens. The address was read by Jas Muir and the presentation made by Peter McAllister. The remainder of the evening was spent in dancing. Below is the address:

TO MR AND MRS JOHN A MCINTYRE:

Dear Friends—We, your friends and neighbors, learning of your departure from our midst to another field of usefulness, and recalling with pleasant memory all the happy associations of the past, remembering the sterling qualities, rugged honesty, and generous neighboring spirit of you both and realizing your loss to our community, feel that we cannot let the occasion pass without naming you of our sincerest respects, and hope the future may have much of prosperity, health, and happiness in store for you both, beg of you to accept this gift of two easy chairs. We hope that you and your good lady may long be spared to sit in them and recall the scenes and memories of the friends you left behind. Signed on behalf of your friends and neighbors,

Peter McAllister
James Muir

On Friday an incident occurred in Cantire which might have provided a theme for the facile pen of Peter McArthur. A little five-weeks-old porker belonging to Jack Esaor in some way managed to get out of the pen, and like the headstrong little turkey we used to read about in school days, thought it was big enough to run about alone. It was soon scampering over the snow banks, but not being aware of the dangers of spring tide it ran out on the ice, and, foolishly trying to make across the creek, was caught in the swirling current and carried down a distance of twenty rods into Donald Reid's field. Here it got into an eddy where another little brook empties into the creek. By this time it was beginning to show signs of exhaustion when it was noticed by the aforementioned and Geordie Stewart who happened to be working near the buildings. Both hastened to the rescue. The roar of the turbulent little stream was as music to the ears of Geordie, who thought of the days when as a bit laddie he listened to the plash of the waves against the rocks of his native town of Stonehaven. He had taken part in rescue work before and something had to be done, and as he is a brav piper himsel he no doubt thought of the brave deed of the hundred pipers when they swam the Esk. With a bound he leapt over the little barn, and the plash of Geordie's feet caused little Grumphy to shift again, and fortunately it got out on the snow, and then the chase began. Through the water and snow the two ran until the man's pal came up on the other side and joined in the chase, when the little dodger was soon grabbit by the hind legs and carried to safety. It was clean enough to make a pet for any society woman, but it was shivery and cold and a drap o' Glen Livet would have done it nae ill, but in these days when blind piggers are so hard beset by the provincial sleuths, it was deemed safer to take no chance, so piggy was carried back to its mother, a wetter, but, we hope, a better pig.

ELDERLY WOMEN SAFEGUARDED

Tell Others How They Were Carried Safely Through Change of Life.

Durand, Wis.—"I am the mother of fourteen children and I owe my life to Lydia E. Pinkham's Vegetable Compound. When I was 45 and had the Change of Life, a friend recommended it and it gave me such relief from my bad feelings that I took several bottles. I am now well and healthy and recommend your Compound to other ladies."—Mrs. MARY RIDGWAY, Durand, Wis.

A Massachusetts Woman Writes:

Blackstone, Mass.—"My troubles were from my age, and I felt awfully sick for three years. I had hot flashes often and frequently suffered from pains. I took Lydia E. Pinkham's Vegetable Compound and now am well."—Mrs. PIERCE COURNOYER, Box 229, Blackstone, Mass.

Such warning symptoms as sense of suffocation, hot flashes, headaches, backaches, dread of impending evil, timidity, sounds in the ears, palpitation of the heart, sparks before the eyes, irregularities, constipation, variable appetite, weakness and dizziness, should be heeded by middle-aged women. Lydia E. Pinkham's Vegetable Compound has carried many women safely through this crisis.

EBENEZER

(Intended for last week)

The social that was held in the rink on Wednesday night was a big success As the weather was mild, everybody wanted to have the final skate of the season, so there was a large crowd present. The girls' hockey match between Paisley and Ebenezer was a thrilling game. The Paisley girls played exceptionally well, considering the little practice they have had. The home team worked more combination than their opponents. This, coupled with their fine scoring abilities, won the game for them by the score of 9 to 8.

On Thursday night the boys' hockey team from here drove over to Chesley and played a team composed of Dobbinton and Chesley players. At full time the score was 4 all, and as our boys had to catch the train there was no time to play off to decide the winner. The boys here have had a very successful season. They played 8 games, out of which they won 4, lost 3 and tied 1. It has been suggested that a team from here would make good in the Northern League next winter.

Miss Dolly Potts, of Tara, visited friends here for a few days last week.

Mrs. Alfred Robinson, who has been seriously ill this winter, is able to be out again.

Baby Loreen Potts is recovering after an attack of bronchial pneumonia.

Mr. and Mrs. Alex Anderson, of Chesley, visited at Mr. C. A. Thomas' for a few days.

Mr. John Welsh, of Markdale, and Mr. Neil Welsh, of Keady, visited at Mr. Robert McKelvey's last week.

GLAMIS

The saw mill is running these days. Mr Schwass expects to have all the logs cut this week.

Misses Florence and Mary Webb spent a few days last week in Toronto.

Miss Minnie McNally, of Lapeer, Mich, spent last week at her home. She returned on Saturday. Easter is two weeks earlier on the other side.

Mr Robert Jackson, who spent the winter at Niagara, arrived home on Saturday.

Mr Jas Cunningham met with rather a painful accident last week. While rolling a log the crowbar flew up and struck him in the face.

Mrs Jackson, who spent the winter months with friends on the 2nd, returned to her home on Monday.

Miss John Deehan gave a 10 cent tea in the hall last Thursday. On account of the bad roads not many from outside attended. The sum of $22 was realized for the Red Cross Society.

Mr Donald McKinnon, on the 10th of Kincardine, had a sale of stock and implements on Thursday. The family expect to retire and live in Ripley.

TWELFTH CON BRUCE

Mrs Buchanan of Paisley has been visiting at Duncan Beaton's for a couple of weeks.

Miss Jennie Greaves of Paisley is visiting her brother on the twelfth.

Miss Minnie McInnes was calling on the twelfth for a few days.

Mr Bill Barnes is home from Port Elgin for a week.

We are sorry to learn that Mr Eldon McGillivray is suffering with a felon on his hand.

Mr Alex McGillivray was up from Port Elgin attending the funeral of Mr Peter McArthur of Lovat.

Mr Cottrill Morris is employed at Mr Jno A. Howe's for the present.

Mr Russell Scott has gone to work with Alex H. McGillivray for the summer.

PINKERTON

Miss Campbell, of Paisley, is visiting her friend, Miss Ellen Gibb.

Mrs Harvey Elliot and daughter Grace left last Thursday to spend some time with friends in Molesworth.

Miss Cora Kleggborn, of Kitchener, is visiting her cousin, Miss Hattie Gale.

At the meeting of the Red Cross last Thursday, which was largely attended, the drawing of the ticket for the valuable quilt donated by Mrs Nicholls, took place. Mr Carl Argent, of Paisley, held the lucky ticket. The sum realized on the quilt was $84.10. A hearty vote of thanks was tendered to Mrs Nicholls at the close of the meeting.

A number from here attended the Bruce Prepared ness League at Walkerton Friday. Mr Jim Gale is home from Toronto.

FARM HELP!

BRUCE COUNTY BRANCH OF

Ontario Public Employment Bureau

Astoria Shoes

For Men, in the new shapes and colors, Leather and Neolin Soles and Heels.

We have a large variety to select from, and you will find a splendid showing of the "right now" styles.

It's a pleasure for us to show them to you.

Many characteristics distinguish the "Empress" from other shoes. We offer a large assortment of "Empress" brand in the newest models for this season's advanced shoe styles. It's a pleasure for us to show them to you.

H. PFAFF & SON

"The plow is our hope," declared Right Hon. David Lloyd George, the Prime Minister of Great Britain. The tremendous significance of these words in the face of a world shortage of food must be a matter of concern to all. It points out the path of duty to men and boys unable to enlist in the army but capable of helping to increase production.

Help the farmer increase production

At this supreme hour when ample food production is one of the indispensable means of victory, the country faces a serious shortage of men and boys on the farms. The Department of Agriculture emphasizes the urgency of every man and boy taking to heart this splendid opportunity for patriotic service.

Boys Decide now to help in the war. If you are between the ages of 14 and 18, and have good farm record, you can secure promotion at school by enlisting for farm service any time between April 20th and May 20th.

Parents are urged to encourage their boys to enlist for farm service. The physical and moral welfare of your boy will be advanced by a summer spent close to Nature; an interest will be awakened in an important industry of the country that will be a help to him in his whole future.

Men The Department appeals to retired farmers, to men following no occupation (retired), to business men who can spare at least a portion of their time, to all men who can arrange their affairs so as to help some farmer. Every man is invited to enlist for farm service.

Confer with your District Representative of the Department of Agriculture, or write or visit Ontario Government Employment Bureau, 13 Queen's Park, Toronto. 21

The People's Popular Store

WE will again this week have on sale on our bargain tables many of the lines of goods named last week, together with new lines, of which the following are a few specials:

Rugs, Linoleums, Ends of Carpets, Window Shades and Lace Curtains

As to our general stock, it has never been more complete, and although there has been a great advance in the price of goods all along the line, yet through our buying many months ahead, we are able to give our customers many of the staple lines of goods at much better valuation than if they were bought now.

In Dress Materials and Wash Goods

of all kinds we are showing a good range, and at prices that cannot be repeated later on. We would, therefore, advise you to do your Spring buying as early as possible, as prices of all goods will surely go higher.

Our Millinery Department

is now in full swing and our milliners have been very busy since the Spring Opening and have now a large display of Ladies' Hats of very newest styles.

See our beautiful range of Ladies' Collars ---just arrived

Our Shoe Department

Is in good shape for the spring season's trade. We are showing a splendid selection of Men's, Boys', Women's, and Children's Shoes and Rubbers.

—F Stevenson's quick healing salve is the best made. We have a choice line of tobaccos and cigars, stationary and school supplies. Agent for daily papers and magazines. Give us a call.

—See our adv. and do not forget to order your coal early. A Fisher & Son.

—All who are in sympathy with the work of supplying our boys in the trenches and hospitals with necessary comforts are asked to help by providing refreshments (sandwiches and cakes) for the "At Home" Friday, April 13. Come and enjoy a social evening.

Patriotic At Home

Friday evening, April 13th, under the auspices of the Patriotic League, with the assistance of the Baptist and Benedicts of Paisley. Cards, games and refreshments from 8 to 10 p m; dancing after. Admission—Ladies 25c, gentlemen 50c; extra for dancing, 50c for gentlemen. Everybody come and have a grand social evening for the benefit of the patriotic cause. In the Town Hall, Paisley. Tickets for 60-lb can of honey and electric reading lamp will be drawn for.

Business Announcement

The undersigned having purchased the Flour, Feed and Seed business of Mr R G Eckel, desires to solicit the patronage of the public. Having decided to do a strictly cash business, we give notice that all goods sold must be paid for within 10 days from the date of purchase. We will keep a full stock of Five Roses and Stark's high grade flours, bran, shorts, Blatchford's molasses meal, poultry foods and tonics. Always in the market for coarse grains. W STARK.

CARD OF THANKS

The members of the Scotch booth in connection with the War Sale desire to thank particularly those local ladies who assisted with donations of baking, also the friend in Niagara Falls who donated articles.

The Council talked over the proposition to use part of Riverside Park for garden plots or farm crop. As there are no requests as yet for plots, and as most only a few acres could be sown in crop, it was considered not worth taking up.

—Miss A Campbell, of Mill St, has gone to Detroit to take a position.

—Miss Bell McKinnon went to Chicago last week, and has a position in an hospital, as a clerk.

—Mr Stewart McKenzie, of The Advocate staff, went to Toronto on Tuesday to enlist for overseas.

—W S Mitchell was home over Easter. He is again in uniform, having joined the engineers' corps, training at London.

—Miss Neilson was operated upon for appendicitis on Tuesday, at the home of her parents at the Baptist parsonage.

—Mr And Johnston, who was down from Amazon, Sask, for part of the winter, is returning to the west this week.

—Mrs Pratt, who has been staying with her mother, Mrs Bates, since Mr Bates' death, returned to her home in Toronto on Monday.

—Gr. Oscar Winch, of 64th Battery, Guelph, was up spending his last leave at the home of his uncle, Mr John Bannerman, Elderslie.

—Mr Silas Bailey has bought the building in which he has his implement agency, corner of Queen and church sts., from Mr J. Jacques.

—Ticket sellers for the honey and lamp to be drawn for on April 13th, are requested to make their returns at McArthur's bookstore by Friday.

—Mrs Godfrey, of Lewiston, N Y, left for her home on Monday after a visit to her sister, Mrs Storrie, Ross St. Miss Cassie Wagner has also returned to her home at Newton.

—The North Bruce and St Andrew's Presbyterian churches have made their fourth call for a minister since the resignation of Rev Mr Sawers. Their last choice is Rev Mr McDougall, of Keady.

—Mr S Ferguson, head salesman in Ballachey, Laidlaw & Co's store, has accepted a former position in Leamington, and left for that town on Monday. Mrs Ferguson went to Ingersoll on Saturday.

—Mr and Mrs Robert Johnston, Miss Mary McArthur, Mr Douglas McArthur, of Toronto, Mr and Mrs Sterling of Detroit, were among those who attended the funeral of the late Peter McArthur of Lovat.

—Mr John Nuttall, of Bruce Tp. had been suffering with a sore heel for months and recently went to Toronto Hospital for treatment. An operation disclosed the fact that a piece of broken needle was the cause of the trouble.

—The Women's Patriotic League of Elora Rd. north for the month of March shipped to Red Cross headquarters:—3 pillows, 12 pillow cases, 18 towels, 4 cakes of soap, and in the trenches 23 pairs socks besides a quantity of cake, tobacco, home-made candy, and chewing gum. This makes a total of 103 pairs of socks sent overseas by this society since Jan. 1st.

—Two more Paisley soldiers who have lately crossed the channel and gone to the front are Bandsman L R Putnam, of the 93th, who exchanged his band instrument for a rifle and went as an infantryman with the 20th Batt., and Wm Anstead, who enlisted with the 160th, but has been transferred to a transport corps and promoted to be corporal.

Away for Easter

Mrs A. B. McCallum, Mrs McKerracher, Miss McKerracher, Mrs Robt Irving, in Toronto; Mr and Mrs A E Archer to Mount Forest.

Funeral of Mrs. Black

News of the death of Mrs (Dr) Black, which occurred at the family home in Clifford on Tuesday, caused a universal feeling of profound sorrow among her former fellow townspeople in Paisley. The remains will be brought to Paisley on Thursday, and a funeral service will be held in Knox church at 2 30 o'clock p m. Interment in Stark Vale cemetery.

Recruiting Reinforcements for the 160th

For some time there has been an agitation in favor of having re-inforcements for the 160th Bruce Battalion recruited within the county. Major Hay and other officers of the 32nd (Bruce) Regt, proposed to carry out the scheme, and communicated with the Militia Department in regard thereto. The Major also requested the Bruce Preparedness League to co-operate in the plan, his communication being presented to the League at a meeting held in Walkerton on March 30th, by Capt O E Klein. The meeting put itself on record as willing to assist in the work. Some objection being raised to the 32nd officers launching the recruiting campaign, Capt Klein suggested that it might be well to hand the job over to returned soldiers, they to work in unison with the Bruce Preparedness League.

Building Blocks, Window and Door Sills, Culvert Tile, Well Curbing, Lawn Rollers, Lawn Vases, Verandah Columns, Balusters and other fancy Cement Products.

Building Material

Cement, Lime, Lath, Shingles, Glazed Sewer Pipe and Flue Lining. Mortar Color, Etc.

Our Store Is Full of Good Articles like Liquid Veneer

Woodwork, Pianos, Furniture

Carriages, Automobiles, Bicycles

Applied with a Cloth

Not a Varnish, but a Surface Food

Wonderful for Dusting

Cleans and Polishes in One Operation

DEAR MADAM—

We just want you to try Liquid Veneer on your dusting cloth and see the remarkable work it will do. You can dust, clean and polish all at once—at one sweep of your dusting cloth.

Go over your Piano, Furniture, Woodwork, Picture Frames, White Enamel Surfaces, Hardwood Floors, Brass Bedsteads, Chandeliers, or any surface you want renewed, polished, cleaned or dusted. It carries away dust, smokiness, dirt and finger marks and obliterates scratches, leaving the surface clean, pure and sanitary, and with a beautiful, high, glossy finish. We handle both the 25c and 50c sizes.

Kindly favor us with an early call and look over our various lines. We will cheerfully show you our goods and answer your questions. We guarantee you good goods, sound values, and the very best possible service.

Your sincerely,

L. C. SPOFFORD

SEES DEATH OF GERMANY'S HOPES

NEW BRITISH ARMY WILL LEAD ALLIES TO VICORY.

Troops of King George Come to Rescue of Noble France. Bled White.

An American correspondent in France writes the following article:—

As I left the British front for Paris early in March, an English officer said to me:

"Stranger things could happen than that the final blow against these barbarians be delivered by the armed force of the great English-speaking nations of the world, two nations with laws and customs of approaching similarity."

I had spent forty-eight hours with his command, and I take off my hat to the King's army. They are the real goods. They have that which France had in 1914 and now lacks—youth. And every man is in the game heart and soul, not only for the honor of England and the cause of France and right, but as a sporting proposition, full of enthusiasm, grit, gayety and the stuff that wins.

The marvel of it is that they are all trained soldiers; there is absolutely nothing of the recruit about them. While with them I was permitted that rare thing for a correspondent, to advance in their conquering company upon territory relinquished by Germany. I was deeply impressed by their earnestness, their eagerness; and I could not but think of the doggerel, the slogan if you will:

We don't want to fight, but by Jingo if we do
We've got the men, we've got the ships, we've got the money, too.

There were not any ships around, although a boat would not have been by any means an inappropriate thing in the sea of Somme mud and water, and I did not see any money; but the men were there by the hundreds and hundreds and hundreds of thousands, each alert, bright-eyed, vigorous, imbued to the core with the spirit that counts. I saw in it all sure death to Hun hopes; for the Boche is always a Hun to the Englishman.

Recovered Territory.

They have taken in the last seven days almost 5,000 prisoners and ninety officers in addition. They have planted the flag of right over what is left of the villages of Ligny-Thilloy, Thilloy, Le Barque, Warlencourt, Ppy, Miraumount, Petit-Miraumont, Grandcourt, Puitieux-au-Mont, Serre, Gommecourt and some more. They have advanced upon a front of thirty-seven kilometres long and from five to nine deep, changing the German line from a crooked zig-zag that would measure thirty miles on a straight line, to the half of an eccentric ellipse measuring less than twelve. They hold every road to Bapaume (Bapaume has fallen since this was written) and the railroad from Arras to Peronne is at the mercy of their heavy guns. The road to Cambrai, twenty kilometres away, is an open book to them, and the town with it. Look at the map and see what this means.

Huns the Only Dead.

I was with their advance as it entered two of these villages, a privilege as yet given to no other correspondent in this war. These two villages are but mutilated effigies of the peaceful hamlets of early 1914. But they are part of the great objective of recovered France. And the only Boche, the only Huns in this great theatre, is a dead one.

Off in the middle distance the men [illegible] Bapaume through my glass. Bapaume, the scene of a Prussian victory in 1871, and soon to be the scene of an English victory of 1917. Its church spire reached up into the gray sky, while before and behind it shells tore the air.

I saw thousands of khaki-clad Tommy Atkins covering thousands of square feet of recaptured ground with pick and shovel. They were like a crowd of ants, each working for the other; or like a great crowd of feverish gold seekers as I remember seeing upon the seashore at Nome. They were mine seeking, indeed, but mines of death. For the Boche is a gentleman who plants little mines to kill the hated enemy after he has taken ground, comfortably installed himself and is enjoying his cup of tea. I won't say how many of these mines I saw unearthed. It would take three figures alone in a space 2,000 meters long by 75 deep.

Devastation Wrought by Shells.

One sector that the Boche relinquished was most exceptionally fortified months and months ago. At two occasions during November and January, it had been unconquerable. It rests upon a front of three kilometers deep, a vast and practically demolished fortification, not a single square yard of muddy ground about it being free from the pot mark of shell. Its trenches no longer existed, the shelters were crumbling holes, the barbed wire a mass of tangled nothing. There was not a living thing about, not even a trench rat. But there were a lot of dead ones, and dead horses, and some unburied dead men.

I saw where three German 240 batteries had worked. The guns themselves were still there, intact save for spiking and missing essential parts. Beside them were a quantity of perfectly good unexploded shells that presently will go upon a death journey in the opposite direction.

The prisoners I saw, three lots of them coming in under Tommy escort, were not the second and third rate men I had seen on other sections of the front. They were from twenty-two to thirty years old, giants in stature, and seemingly well fed. One would say they were the very flower of what is left of the Boche army, and in the shell-torn hell they had evacuated only the best type of soldier could stand the gaff. Many of them spoke either French or English.

As I said at the outset of this story, I take off my hat to the King's men. No man who has seen its youth, its vigor, its splendid morale, its stupendous amount of artillery of all calibers, its acres and acres of unexploded shell, and the soldierly quality of its officers, can do otherwise. They hold the Boche on their section of the front, an increasing section, too; and the Boche knows it. They have men in France and more coming.

BOOKS OUR BEST FRIENDS.

Wonderful Amount of Consolation in Our Books.

In the passing days of our lives, when the fires of passion have been well aired out; when we have come face to face with the vicissitudes of life and find out that we have either won or lost the battle, let our best friends be books.

We can commune with them so long as we please, and when we are tired we can shut them up. This is more than we can do with our friends of the human family.

When a man comes home at night, harassed and hacked with the worries of life, he wants not only rest for the body; he wants rest for his soul, for his heart, for his mind.

The wife who hopes to develop in the home a perfect atmosphere of content, will study her husband's moods. When he is worried; when his mind is a bit distraught and he desires mental rest, he will read. There is a wonderful amount of consolation in our books. Sometimes he may yield to light literature. At other times he will place his thoughts on more sinews and heavy topics.

Our books are real friends. It does not make a bit of difference how sick a man may be, if he will have read to him a chapter or two of "Pickwick Papers," he will smile. Read your little one just a page or two of "Little Men," or of "Little Women" and see the rest that will spread over his face, that beautiful expression of soothed pain. Let any one who is in trouble, and who has no friend, gather himself in solitude with a good book. There is much consolation in it. It has real, unexplainable source of relief. It is like the tender touch of a woman's hand on a parched and fevered brow. It rests the mind, it brings for the time being at least surcease to sorrow.

The temperature of a new electric station can be regulated to four different degrees.

THE EMPIRE'S FOOD.

The Fine Achievement of one Canadian Railway.

What appears to be new light upon the policies back of the construction of railways in Canada is furnished in a paragraph in the last annual report of the Canadian Northern Railway issued recently.

This paragraph deals with the hauling over the rails of the Canadian Northern of some 132,000,000 bushels of grain destined chiefly for the feeding of the Allies overseas, and runs:

"Inasmuch as many of the security-holders invested their funds in the company's undertakings, believing that the heart of the Empire would some day need to draw heavily upon the wheat fields of the Canadian West, it is with pride that the directors present these figures, illustrating the extent to which the prairies have been opened up, made productive and the produce marketable by the company's railways. There were probably few who thought that the crucial necessity would come so soon; but having come, it must be considered fortunate that the Canadian Northern system and the country tributary to it were sufficiently developed to take an important part in supplying the Empire's food requirements."

Twenty years ago a new epoch commenced in Canada, and also apparently in the Mother Country. In the "Tight Little Isles" across the Atlantic, earnest minds were occupied with the problem of feeding the people of Britain, a problem that would be a very sober fact in the event of that country being involved in hostilities with any European power of the first class. The policy seems to have been arrived at then, to rely upon the power of the British navy to keep the seas open for the passage of cargo vessels, and also to rely upon the opening up of vast areas of wheat lands in suitable localities overseas, in order that an adequate supply of food products be produced to fill the holds of the ships for the people of Great Britain for all time to come.

Towards the close of the century, the people in the west began to clamor for rail facilities for the vast areas without railways lying to the north of the Canadian Pacific, and therein lay the cause of the origin of the Canadian Northern Railway system in 1896. Apparently the ability to grow wheat of the country it proposed to open up, and the backing the people of Manitoba granted the enterprise, were sufficient inducements to the men directing the surplus gold of Britain, and the funds necessary to complete the initial construction were readily forthcoming. Until the commencement of hostilities in Europe in 1914, British gold continued steadfast, and as the Canadian Northern extended its network of lines throughout the Prairie Provinces, before reaching out with its many feeder lines to the seaports on the east and on the Pacific, a steadily increasing supply of wheat was moved out from the territory cultivated for the first time by the settlers who had poured in hard upon the heels of its construction gangs.

During 1915, when Canada harvested the largest crop in the history of the country, and incidentally the most valuable, the yield along the lines of the Canadian Northern in the west was enormous, and from this territory came the 132,000,000 bushels of grain that were handled over the lines of the system during 1916 as outlined in the company's annual report.

But the effect of the investment of this British gold in the Canadian Northern Railway is not confined to the production of food-stuffs transported across the Atlantic to feed the war-scrapped nations of Europe. Every outside, the yield along the lines of the Canadian Northern in the west was enormous, and from this territory came the 132,000,000 bushels of grain that were handled over the lines of the system during 1916 as outlined in the company's annual report.

But the effect of the investment of this British gold in the Canadian Northern Railway is not confined to the production of food-stuffs transported across the Atlantic to feed the war-scrapped nations of Europe. Every settler in the vast regions opened up by the lines of the railway has been a customer for the goods produced in the industrial establishments in eastern Canada, in the United States and in Europe. It would be almost impossible to compute the number of the army of workingmen who have drawn their wages in this direct way from the western wheat lot, and no figures have been compiled to show the extent and value of the business provided the manufacturers of eastern Canada by the opening up of that vast western market. As the prospects of peace become brighter, the expectation that there will be a movement from abroad to the fertile lands of western Canada greater than anything the country has yet experienced, is growing into a fixed belief on the part of Canadians generally. Should it develop, this potential development—made possible solely because the railways have furnished a network of lines serving the lands which will be developed by the incoming tide of humanity—will add enormously to the new business of the industries in Ontario and Quebec, and new armies of workmen will be engaged upon the task of supplying the needs of the western people.

British gold—and, since the War, American gold—has been the means of facilitating a great deal of the development in Canada in other ways, but there can scarcely be any doubt that its greatest achievement in this country has consisted in the furnishing of the funds for the building of the railways opening up unpeopled territories within the Dominion. For upon the development of these territories hinges a great deal of the prosperity of all the people in Canada.

TOMMY ATKINS, ACTOR.

Army and Navy Strive to Counteract the Horrors of War.

Tommy Atkins is an inveterate actor. Whenever he can manage it he gets up a show at the Front, making the theatre, writing the play, and acting the parts himself. Every day the theatrical costumiers are bombarded with requests from officers and men to send them wigs, dresses, grease-paints and other paraphernalia.

Some of the recent productions just behind the firing-line have been of quite an elaborate description. This Christmas saw a new pantomime, entitled "Cinderella Turn Up," written by a rifleman; there has been an all-soldier-star performance of "The Critic"; while Shakespeare, revues, modern comedies, and even propaganda plays receive their due attention. Only the war play is banned.

Not only in the ramshackle, temporary theatre does Tommy delight to play the actor. He loves to do a little imitation in the trenches, too, and there is a great demand from individuals for Harry Tate moustaches. Charlie Chaplin "bowlers" are also popular; not to mention Crown Prince noses, Tirpitz whiskers, and George Robey eyebrows. If he cannot get anything more lifelike he makes what he can of Guy Fawkes masks, sometimes putting these up over the top of the parapet for the Germans to fire at.

The Navy, too, is very keen on amateur theatricals, and besides giving performances on its own is extremely well catered for by what is known as the "stage ship." This is a ship specially fitted up as a theatre, and possessing a stock company of actors and a stock repertoire of plays. It patrols the North Sea, calling at our various men-of-war, and Jack Tar is never more delighted than when this travelling theatre draws up alongside of his vessel, announcing that a performance will take place to-night at eight.

Huns Piling Coal Up.

Piles of coal, covering scores of acres, are being heaped up around the collieries at Charleroi, Liege and Mons, where nearly 50,000 Belgians are working in night and day shifts. Although there is great shortage of coal at places less than a hundred miles away, none of the coal is being moved, as the German authorities require all available means of transport for military purposes.

A PROFITABLE INDUSTRY.

Plan for Assistance and Encouragement of Poultry Keepers.

The present year will see a great increase in the number of poultry keepers. The almost prohibitive prices of eggs and poultry during the past winter have caused many consumers to seriously consider the home production of these very necessary and useful commodities. It is important also that any efforts put forth in this direction result satisfactorily.

Many difficulties present themselves in attempting to rear chickens successfully on a small lot. Experience has shown that the best way for poultry keepers to enter the poultry business is by the purchase of pullets in the fall. Well-matured pullets are the most reliable winter egg producers and if well cared for will not only produce plenty of fresh eggs for the breakfast table but also return a reasonable profit on the expenditure entailed.

Ordinarily, well-matured pullets are rather scarce and difficult to obtain in the fall of the year. It is believed, however, if the matter were taken up systematically by poultry Associations that the difficulty could be overcome, and, incidentally, serve as a means of increasing interest in the poultry industry. Practically every large town and city has its local poultry association. It is suggested that each association give some publicity to the suitability of thrifty, well-matured pullets for profitable winter egg production and advertise the fact that the association is prepared to constitute itself a medium to arrange for the hatching and rearing of pullets this spring and for their delivery in the fall. It could be announced that orders would be taken during the month of April and the first part of May. All those desiring pullets in this way could be required to join the association and make a small deposit covering the number required.

The association could then make such arrangements as might be necessary with nearby co-operative associations, farmers and breeders for the growing of the pullets, a minimum price to be decided upon for the different breeds and varieties. In the fall these could be assembled at some central depot in each locality and the distribution made in time to permit of the proper housing of the stock in permanent winter quarters before the severe weather set in, say by the last of October.

In order that greater effectiveness may be given to this proposal, the Dominion Live Stock Branch is prepared to extend, to all associations qualifying under these provisions, the same assistance that is given to associations desiring to purchase other kinds of pure-bred live stock, namely, the payment of reasonable travelling expenses, during the time required to conclude the purchase and transport the stock to destination, of representatives of associations, in any section of Canada, desiring to purchase pullets in lots of 300 and more. Should it be desired, the Live Stock Commissioner will also nominate a suitable person who will be directed to accompany this representative and assist him as far as possible in the selection and shipping of the pullets.

In the general interests of the poultry industry throughout the Dominion and the urgent need this year for increased production of egg and poultry and the releasing thereby of a large surplus for export to Great Britain, it is hoped that as many associations as possible will take advantage of this proposition. All associations desiring to become active in this direction are requested to write the Live Stock Commissioner, Ottawa, at once for further advice and instruction in the matter.

ODD MISSIONS OF RED CROSS.

Activities Not Confined to Caring for Wounded and Prisoners of War.

Help in the location of Brigadier-General Victor Williams, formerly of Toronto, in a German hospital after the "Juno show" along the Canadian front.

Upkeep of a grave at Cologne.

Search for the wheresabouts of the late Lieut. John Galt of Winnipeg, also a prisoner in Germany.

Distribution of illimitable quantities of biscuit to hordes of hungry captive Russians.

Payment of interest on pawn tickets for goods in the hands of brokers in Germany and Belgium.

Renewal of life and fire policies in Belgium.

Collection of a court tailor's bills and release of his household furniture upon which the Kaiser's emissaries had already set the deadly tax seals.

Funds sent to Jerusalem for the upkeep of tombs and for the Eveline Rothschild Charity School.

Negotiations for the removal of two children of disputed nationality from a convent in Strasbourg to England.

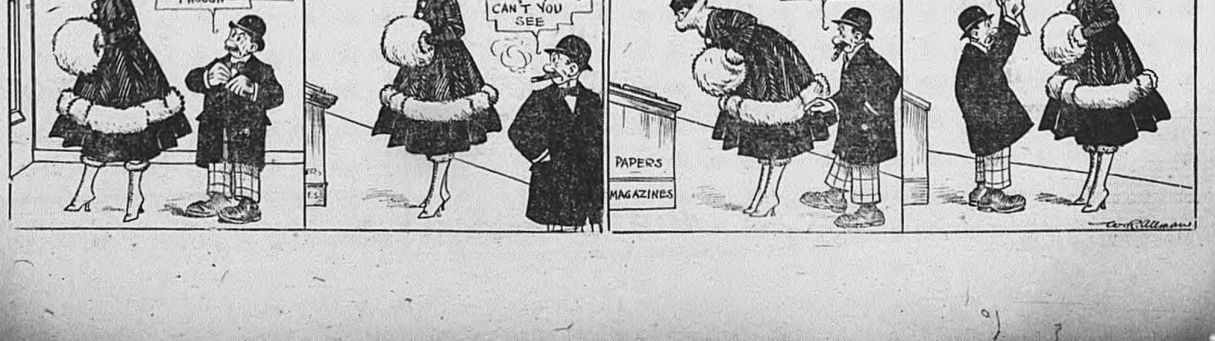
Saving of the stocks and shops of British subjects in Germany, whose property was about to be seized by the Huns for outstanding taxes.

Personal escort to England of a young English lady from a convent in Mons.

Recovery from the Royal Palace of Potsdam of presents, the property of foreign ladies who had been attached to the German court prior to the war.

Location of a missing Scots farmer believed to be in a German hospital about to undergo an operation for appendicitis, and whose signature to certain documents was necessary to secure the lease of a Highland farm.

Surely, indeed, a diversity of commissions. Yet these are some of the activities of the Red Cross.



Money remittances to British prisoners through the Red Cross trebled within the last six months. It has lately been arranged by the American Express that British officers interned in Germany may have their pensions or drafts up to a limited amount cashed by the German camp commandants, who forwarded them for payment to the company. Doubtless some fond parents wonder when they see the drafts how so much money can be spent in a German prison camp. Money remittances have also been transferred from Germany to German prisoners of war in England and through the same agency the effects of German prisoners of war deceased have been returned to Germany.

If any orchard planting is to be done this year it is now time that orders for trees should be placed.

Miss Bright (to her small brother) "Willie, put Mr. Borelegh's hat down you might damage it. Besides, he will want it in a few minutes."

The needle of a compass does not point true north. The north magnetic pole does not coincide with the north pole.

THE EARL'S SECRET

Or, a Martyr to Circumstances.

CHAPTER XXVII.—(Cont'd).

"Confess," said the ghost, drawing nearer.

"I will! I will!" screamed Job, and he fell face downward upon the earth in a swoon of horror.

At that moment two figures sprang out from the darkness.

One was Stumpy with a lantern, the other Mr. Thaxton.

Both rushed at the prostrate man, over whom the ghost was bending.

Stumpy seized Job, Mr. Thaxton seized the ghost, and commenced tearing off its shroud.

"Stop!" said a voice. "Stay your hand, Mr. Thaxton. I am indeed Leicester Dodson."

"What!" exclaimed Mr. Thaxton, falling back with astonishment. "What! you alive!" and then he snatched at the linen-bandaged hand, and shook it like a madman.

"Yes, me," said Leicester, with a thrill of triumph and exultation in his voice. "I have not come back to the world a moment too soon," he added, significantly. "You have heard this man's confession."

"I have," said Mr. Thaxton.

"And believe it?" asked Leicester, slowly.

"As I believe that there is a sky above us," said Mr. Thaxton. "I always knew that Howard Murpoint was a villain, and I was waiting for a Nemesis to track him down. Little did I think that you would be that Nemesis! And who is this?" he asked, motioning toward Stumpy.

"My best and truest friend," said Leicester.

"Then give me your hand," said Mr. Thaxton, and, to Stumpy's astonishment, the respectable lawyer grasped the ex-convict's hand and shook it heartily.

"And now what is to be done with this fellow?" He is too precious to be lost sight of."

"I have a cart near here," said Leicester, "and I thought that if you would stand my friend you would not mind taking charge of him till the morning."

"Certainly," said Mr. Thaxton, eagerly. "A capital plan! He shall not leave my sight, and to-morrow he shall be before the magistrate."

"Lend a hand, sir," said Stumpy, "for he's coming to."

The three carried the senseless Job to the cart, jumped in themselves, and Stumpy drove to Tenby, while Leicester removed his ghostly disguise and reassumed his Spanish one.

CHAPTER XXVIII.

Quite unconscious of the Nemesis which was already on his track, the captain was rapidly bringing his scheme to a climax.

The world was, of course, very much astonished to hear that Mr. Howard Murpoint was the man Miss Mildmay was to marry, and many blamed her for her fickleness.

But Violet was perfectly indifferent to praise or blame; she pursued the even tenor of her way, calm, serene as usual, with the peaceful and almost sad smile on her face and her usual gentle manner to all.

Mrs. Mildmay had been very much surprised to hear that Violet had, so to speak, changed her mind. But Mrs. Mildmay thought it was a very good change, for she believed the captain to be the best and cleverest man in the world, and perhaps considered him the handsomest.

When Violet went to old Mrs Dodson, the mother of the man she had loved and whose memory she cherished, she was fearful that the old lady would be grieved.

Perhaps Mrs. Dodson was, but all she said was:

"Violet, my dear, you will do what is right, I know, and—and if this seems to you right, do it. But do you love him?"

"I cannot do that," said Violet, kissing the old lady's hand with a loving tenderness. "You know where my heart is—it will never leave Leicester, never! But Mr. Murpoint does not ask me for love, but for respect and esteem."

"And you give him these?" asked Mrs. Dodson, with a slight shade on her brow.

Violet's face shadowed and reflected that shade of distrust, but almost instantly she replied:

"I cannot conceal anything from you who have been a mother to me, dear. One time, I neither esteemed nor trusted Mr. Murpoint—indeed, I disliked him. But all that feeling has gone," she continued, hurriedly. "He has been a true, a kind friend to me—he was my father's friend, and how dare I distrust the man he loved and trusted. No, when the feeling I have spoken of has come over me I have cast it off as unworthy and unjust. Lately"—and she sighed—"it has not come. Mother, I seem to have no feeling, no emotion. Life is but a dream and a sleep to me sometimes, and I think that I shall wake perhaps, and—but there!" she broke off, springing to her feet and putting up her hand as if to ward off the feeling of unhappiness which was creeping upon her. "I will not give way to it. I will trust my father's best friend, and I will try with all my heart to be a good wife to him."

"Heaven bless you!" said Mrs. Dodson, sobbing. "Would that I could have been a mother indeed to you. But it was not to be. My boy was taken from your side, and it is not right that you should remain alone in the world, wedded to a shadow, Violet, you will not change to me? You will love me still?"

For answer the gentle girl threw her arms round the old lady's neck and burst into tears.

"You will always be my mother!" she said, "for are you not Leicester's?"

So the pure, just-minded girl strove to trust and love the man whom she had consented to take as a husband.

He, meanwhile, was all smiles and honeyed words, looking handsomer and more confident than ever.

The world declared that there was no end to his success and that he was the most wonderful man of the time.

Soon it was rumored that the marriage between him and the wealthy Miss Mildmay was to take place immediately, and that when it did Howard Murpoint M.P., would be made a baronet.

No wonder the great man looked happy as he rode his magnificent hunter in the park or appeared in the salons of the elite with his beautiful betrothed on his arm.

But was he happy?

Who could see him when he was alone—at night when he sat crouched within his easy-chair in his own room, or pacing up and down with the stock restlessness of a tiger caged and ferocious, well fed but distrustful?

None saw him but his bad angel and himself as he looked into the mirror which reflected his dark, working face.

The world knew nothing of the twenty thousand pounds which Mr. Wilhelm Smythe had extorted from him.

The world knew nothing of the scar on his leg which the convict gang-chain had left there; of the perjury which his brain had plotted, or the vile murder his hands had wrought.

These and other crimes the world knew nothing of, but he knew, and though he strove to forget he could not. In the dead of the night, or perhaps in the gray dawn when he had thrown himself upon the bed to woo sleep after a day of willful pleasure or a night of dancing and fashion, sleep would come, but bring but dreams with it.

He dreamed he was in the prison cell; toiling in the hot sun under the Portland cliff, with the horrid chain galling at his leg. Then visions of the haunted chapel at Penruddic crowded his brain; and one night he started up, cold with horror, from a vision of Jem, mangled and ghastly, standing beside his bed pointing to a red, gaping wound. Then, too, in those dreadful waking hours, when sleep would not come, fear took its place, and he moved in an agony of dread, fancying that his secret was known, that the detectives were on his track and that the gallows was looming before him.

Preparations for the wedding were proceeding, hastened by the great man's commands and purse.

(To be continued).

Be Proud of Your "Company" Cake

Made with Five Roses Flour, it keeps its freshness and flavour longer. Light, but firm of texture, it won't crumble under the keen-edged knife. Your guests are sure to praise it.

FIVE ROSES FLOUR

FOR BREADS - CAKES - PUDDINGS - PASTRIES.

About the House

Meat Economy.

Use less; once a day is ample if supplemented with legume dishes, milk soups, cheese dishes, attractive bread and cereal dishes, and eggs when they are cheap enough.

Serve carefully at the table; it is better to serve twice than to send remnants to the garbage pail.

Use cheaper cuts. We pay largely for flavor, tenderness, and excessive fat is the expensive cuts.

We buy meats chiefly for their protein food value. The cheaper round, shank, and neck cuts give more for the money.

The cheaper cuts chopped fine make a Hamburg steak as quickly broiled as a porterhouse.

Prolonged cooking at the lower temperatures will make the toughest cuts tender and improve their flavor. This can be accomplished economically in the double-boiler when the coal or wood fire is being used for other things; in the casserole or close-covered stone crock in the coal stove oven when it is left for the night; or in the fireless cooker when gas or electric stoves are used.

Stews.—To many Canadians the word brings a memory of savorless chunks of meat swimming in a watery gravy. In intelligent hands it becomes a dish of infinite variety through the combination of different meats with different vegetables and seasonings, into juicy pieces of meat bedded in meat savory sauce.

Make a little meat go a long way. Spread the flavor over other nutritious but more neutral-flavored food, e.g., meat pies, Irish stew, potpies with dumplings, stews with plenty of savory gravy, served in a border of rice, mashed potatoes, boiled beans, macaroni or vegetables.

Use every part of a meat purchased. Fry out the fat and use for the table, and use for shortening and other purposes; trimmings and bones for soups, and left-overs for "made" dishes. Avoid using too strong heat for roasting and broiling, which ruins bones and trimmings for the soup pot, besides wasting heat.

Eliminate meat from the diet of the small children. The normal child will thrive better on milk, cereals, and eggs in place of meat. A child's appetite is what the parents make it. Do not feel sorry for the child whose breakfast is oatmeal and milk, and supper is bread and milk with a bit of biscuit and jam; thee hild is well fed.

Eggs may replace meat in the adult diet whenever the price per dozen goes below the cost of 1½ pound round steak.

Fish Recipes.

Salmon Cutlets. — Chop rather coarsely the contents of a tin of salmon, and mix in an equal bulk of breadcrumbs, seasoning the lot according to taste. Then, with the aid of beaten eggs, form a fairly stiff paste, which can be made into cutlets, and each coated with egg or milk and browned breadcrumbs. Heat in a frying pan with dripping.

Creamed Finnan Haddie.—Two cupfuls of white (or cream) sauce, two tablespoonfuls of butter, three eggs, one tablespoonful of grated cheese, two cupfuls of flaked finnan haddie, pepper. Boil one egg hard. Add the butter and yolks of two eggs to cream sauce, cheese and pepper and minced hard-boiled egg. Then add the fish and heat the mixture.

Baked Codfish.—One cup rice, one quart milk, one cup shredded codfish, three tablespoons butter, four eggs. Cook rice and milk in double boiler until rice is tender and has absorbed the milk. Add well-beaten egg yolks, codfish that has been soaked, and butter. When cool add the stiffly beaten egg whites. Bake and serve with the melted butter.

Fish Pie.—Remove the bones and skin from any cold cooked fish, shred it and add seasoning to taste. Butter a baking-dish, cover the bottom with mashed potatoes and add the fish and small bits of butter. Season and cover with a top layer of potatoes and bake in a hot oven for ten minutes or until it is brown.

Household Hints.

Pictures should be hung on an agreeable level with the eye.

When a screw becomes loose, remove it and fill the hole with bits of sponge packed in tightly. Then replace the screw and it will hold as firmly as ever.

When slipping geraniums remember that the woody stalks cut back and set in rich soil will make the best blooming plants.

To set growing house plants in a tub and spray them with a bath spray is one of the best methods of giving their leaves the necessary moisture.

After washing oilcloth and linoleum, be sure to dry it properly. If left damp it will speedily rot and soon become totally ruined. It is a great mistake to use too much water for washing it. The cloth should be wrung out and passed lightly over the surface.

A campstool to hold the clothes basket is a convenience on washday. It is light, easily carried about, and when not in use takes up little room. In hanging out the clothes and taking them from the line the stool saves stooping and keeps the bottom of the basket clean.

Time will be saved if the housekeeper will sit down with pad and cook book and plan the meals for at least three days, and as each meal is planned a list is made of the food to be purchased; by this means the marketing can be done for three days in little more time than would be required for one.

When a child has the slightest tendency to crooked legs he should have a very special treatment. His bones are too soft, and he needs more lime and iron. He should be taken off his feet at once, and have salt water bathing and massage.

Door mats should never be shaken against a wall. It causes the fibre to break. They should be placed face downwards and beaten gently with a stick or brush head. Mats treated like this will last twice as long. This method is also cleaner and easier.

To freshen a skirt that has become wrinkled and mussed from packing or otherwise, brush carefully, so that all dust may be removed, and hang over a tub of boiling hot water. After it is thoroughly steamed it will look like a tailor cleaned garment.

To avoid valuable time looking for the different buttons in your button box take a wire hairpin and straighten it out; then shape the wire in a circle and bend each end back after stringing all of one kind of buttons on the pin, and hook one end through the other. It takes but a minute and you always have the different kinds right at hand.

According to a lately issued edition of a dictionary, there are now 450,000 words in the English language.

PARKER SERVICE

Known Everywhere — Available Everywhere

Just because there is not a "Parker" Agency near you is no reason why you should do without "Parker Service."

The excellence of our work is so well known that it need only be mentioned here.

But the convenience of our service by mail to distant customers is not. Articles of any sort can be sent us either by parcels post or express, and returned in the same manner. We pay the carriage charges one way. Every precaution is taken to ensure their safety in transit.

So many things can be "rescued" by cleaning or dyeing that the value of this service will be apparent to everyone.

When you think of cleaning or dyeing, think of PARKER'S. *Send for a FREE copy of our useful and interesting book on cleaning and dyeing.*

Be sure to address your parcel clearly to receiving dept.

AFTER MEALS

When digestion falls, whether from loss of tone, climatic changes, overwork, or errors of diet, nothing so soon restores tone and healthy activity to the digestive system as the root and herb extract—Mother Seigel's Syrup. It tones and regulates the liver and bowels, and clears the system of the decayed products of indigestion—the fruitful cause of headaches,

TAKE THE DIGESTIVE TONIC

lagnor, acidity, heartburn, flatulence, brain fag, and biliousness. It makes food nourish you, and thus builds health on good digestion.

MOTHER SEIGEL'S SYRUP.

The new 1.00 size contains three times as much as the trial size sold at 50c per bottle.

PEERLESS POULTRY FENCE

A Real Fence—Not Netting

Strongly made and closely spaced—making it a complete barrier against large animals as well as small poultry. Top and bottom wires No. 9—intermediates No. 12 wire—made by the Open Hearth process which tries and other tests have proven to be the best. Used for cresting, ash about our farm and ornamental purposes. Write for catalogue and prices.

The Banwell-Hoxie Wire Fence Company, Ltd.,
Winnipeg, Man. Hamilton, Ont.

USES OF CONVERSATION.

"When Two Come Together One Apprehends Before the Other."

In discourse with a friend, our thought, hitherto wrapped in our consciousness, detaches itself, and allows itself to be seen as a thought, in a manner as new and entertaining to us as to our companions. For provocation of thought, we use ourselves and use each other. Some perceptions—I think the best—are granted to the single soul; they come from the depth, and go to the depth, and are the permanent and controlling ones. Others it takes two to find. We must be warmed by the fire of sympathy to be brought into the right conditions and angles of vision. . . . Homer said, "When two come together, one apprehends before the other"; but it is because one thought well that the other thinks better; and two men of good mind will excite each other's activity, each attempting still to cap the other's thought. . . . By sympathy, each opens to the eloquence, and begins to see with the eyes of his mind. We were all lonely, thoughtless; and now a principle appears to all; we see new relations, many truths; every mind seizes them as they pass; each catches by the mane one of those strong coursers like horses of the prairie, and rides up and down in the world of the Intellect.—Ralph Waldo Emerson.

If crackers are stale crisp them in the oven.

Redpath SUGAR

No one ever doubts REDPATH quality, because in its Sixty Years of use no one has ever bought a barrel, bag or carton of poor Redpath sugar. It is made in one grade only—the highest.

"Let Redpath Sweeten it."

2 and 5 lb. Cartons—
10, 20, 50 and 100 lb. Bags.

Canada Sugar Refining Co., Limited, Montreal.

Apply to COMMODORE EMILIUS JARVIS,
Naval Recruiting Officer, Ontario Area,
103 Bay Street, TORONTO,
or to The Naval Recruiting Secretary,
308 Wellington St., Ottawa.

The Paisley Advocate

PAISLEY, APRIL 11th, 1917

LOCAL AND DISTRICT NEWS

McCutcheon—Neal

Mr W N McCutcheon, formerly of the Standard Bank staff, Paisley, and now in the head office, Toronto, was married on Wednesday, April 4th, to Annie Leah, eldest daughter of Mr and Mrs G Neal, at their home, 775 Dovercourt Road. Mr and Mrs McCutcheon will be at home to their friends at this address after April 15th. THE ADVOCATE joins the groom's Paisley friends in congratulations and good wishes.

The Censor's Humor

The censor is not without a sense of humor surely. A soldier recently writing home to his people, describing how he had been buried alive for a couple of hours in a demolished dugout, but eventually was extricated by his comrades. He added, by way of consolation:—"I had the satisfaction of sending five of the Germans to Hell." The Censor, in passing the letter had drawn a line through the sentence, but wrote underneath: "It is not permitted to refer to the whereabouts of the enemy."

Red Cross Supplies

Following were the contents of Red Cross bales packed by the Women's Patriotic League on Mar 27th: 96 prs socks, 6 suits pyjamas, 25 flannel shirts, 1 pair wristlets, 68 pillow covers, 1 doz buckaback towels, 10¾ doz Turkish towels, 3 doz personal property bags, 6 furnished housewives, 7 wash cloths, 300 mouthwipes, 28 prs socks knitted for Red Cross with yarn supplied through Mrs McPhedran. Donated by Knox church class—9 prs socks, 13 Turkish towels, 6 furnished housewives, 3 doz personal property bags. Total number of socks knitted in 4 weeks, 133 pairs.

War Sale Ticket Drawings

The lucky numbers and the holders of them for the fancy work, etc., drawn for at the War Sale on April 3rd are as follows:

No.	Article	Donor	Holder
66	Table napkins	Mrs Ernst	O R Irwin
88	Centre piece	Miss Cornish, Mrs McKee	do
38	Pig	Mr I Lorentz	David Dunlop
20	Luncheon Set	Mrs J Hallachey	Mr Weller
31	Day pillow	Mrs Ernst	Mrs Muir
71	Table cover	Mrs Leitch	Mr Ballachey
11	Pin holder	Mrs Fairley	Miss Fairley
26	Crochet yoke	Miss McKerracher	Mrs White
3	Crochet set	Miss Straley	Miss Cook
2	Crochet insertion	Mrs J Craig	Mrs Allum
21	Box of candy		Miss May Bell
165	Guessing No of potatoes in box		J McMillan

For the luncheon napkins, given by Miss McLeod, the lucky number is 56. Whoever has this number is requested to present it as soon as possible.

About Entertainment Notices

There are some very estimable people who cannot understand why a newspaper should not give free space to every entertainment which is held for patriotic, benevolent and religious purposes, and they are apt to think, even if they do not always say, very mean things when their requests have to be refused. This misconception is due to a very prevalent belief that newspaper space costs nothing, and to a failure to realize that advertising is one of the only sources of revenue to the publisher. There is no more reason why a publisher should give away his goods, even for a worthy cause, than a hardware merchant or grocer. His space should be dealt with on a business basis and he should be left free to make his contributions in the form which he prefers, and not have others make them for him.

Creamery Opens Soon

Paisley's largest summer industry in that institution in which the skimmings of lacteal field that is extracted from the benignent bovine is converted into marketable product. By the time the gentle spring zephyrs have wafted away this unreasonable and unwelcome return of winter the lowing herds will be daily winding o'er the lea of every farm where cows are kept for what can be got out of 'em. Mr J A Logie, manager of the Paisley creamery is therefore again occupied with preparations for the ensuing season's operations. The farmers and their wives will be more ready than ever, because of the scarcity of help, to sell their cream rather than churn it themselves, so the prospect is very favorable for the central butter works. The list of patrons has been growing longer each successive season, and will probably be further extended in 1917.

Home for Easter

Misses Ella Carter, Mildred Johnston, Meta Allen and Constance Cornsack from Toronto; Miss Elsie McLennan from Stratford; Miss Lucile Fraser from Mount Forest; Mr W McIlride, from Kimberly; Miss Jean Hamilton from Maple Hill; Miss Vera George from Dresden; Miss Rose Bryce from Desboro; Miss Agnes McDougall, from Massey; Miss Gladys Sinclair, from Toronto; Mr W H Reed of Winnipeg, at the home of his parents, Mr and Mrs H Reed, also Bruce Reed of Guelph, a grandson, Mrs Patterson of Sarnia and Mrs Moffat of Carlisle, sisters of Mrs Reed; Mrs Aitchison of Elora, daughter of Mr and Mrs A Jack; Miss McLachlan of Walkerville and Mrs Turnbull of Dundas, daughters of Mr and Mrs D Brown; Pte Angus Russell at his home, 6th Bruce, on last leave; Miss Gwynne, visiting her sister, Mrs J Logie; Pte Herb Farrow, of 248th Grey batt, visiting his cousin, Miss Kate McNeill; Pte Robt Bowser, of the 223rd Batt, Hamilton, at Mr Geo McKillop's, 6th t, Saugeen; Miss Ethel Barnett, from Harriston.

The 160th Honored

A junior officer of the Bruce Battalion writing from England to his friends in Walkerton says: "The general impression is that we will not leave here before April 15th, and when we do go we will be a unit in the 13th Brigade, 5th Division, meaning a fighting unit with a reserve of at least one battalion behind us training to be ready to reinforce us to cover casualties. The 160th Bruce has had honor handed to it alright. After a general inspection of a week ago we have been handed the distinction of being first battalion in our division, which, in fair consideration that the second battalion has been in training here since away last summer. You have "gotta" hand it to us and Major A McLean Moffat. In about two months you will be reading in the papers the casualties of the battalion. If you are lucky enough to know where we happen to be next, how to account for the gain at that point. Everyone is on his toes, hoping, trusting, waiting for an open field to test Queensbury cabbage against a Brits. Ye Gods! Let it be soon!"

JOHN ROWLAND AND THE 32nd OFFICERS

At the meeting of Bruce Preparedness League held in Walkerton, Mr John Rowland stirred up a rather lively time by rehashing an old but baseless charge against officers of the 32nd Bruce Regt. Mr Rowland must know that Major Hay and Lieut Hickel have very good reasons for not being with the 160th. The Major was incapacitated through ill health, and has since been under treatment for various troubles. The Lieut was in business and as there were scores of junior officers tumbling over each other to get into the battalion he did not seek a commission. Nevertheless, both these officers were active in recruiting work, though not heard from on the platform, and have to their credit quite a good list of recruits to the 160th and other overseas units. Mr Rowland is a very patriotic Britisher and has done good work for the patriotic causes, but he does not carry a license to impugn by word of mouth the patriotism of other men who are as ready to fight for empire as is any man by the name of Rowland. Mr Rowland should be as reasonable as he is zealous. Quite likely he is realizing by this time that he got in wrong on this topic. So far as the two Paisley officers are concerned, they would be well pleased to see returned soldiers or any others take charge of the proposed recruiting campaign, but they did what they considered to be their duty in promoting the new movement. We would judge by the following extract from the Telescope's report of the League meeting that Capt Klein handed Mr Rowland some things that should give him a proper slant of thought hereafter:

The secretary read a letter from Major Hay of Paisley stating that the officers of the 32nd Batt'n had been asked by the Militia Dept. to establish a depot for the purpose of obtaining recruits to reinforce the 160th Batt'n, and he asked for the League's assistance in obtaining the necessary recruits.

Mr. Otto Klein, who was called upon to explain this matter further, stated that as the 160th Batt'n was to go to France shortly as a fighting unit, there would soon be a call for reinforcements. He said the people of Bruce should be proud that the Batt'n had been Overseas over-strength, and had been chosen to go as a unit. He did not agree with a previous speaker, that there were no more recruits to be got in Bruce County. Away back in the Peninsula, there were scores of available men who up to now had not been made to realize their responsibility in this war. The townships of Carrick, Culross, and others, which had not yet done their full share in the recruiting could also be looked to for a number of recruits.

Mr John A. Rowland took issue with Mr Klein and started a lively word storm. The old score which is reported to have existed between the authorities of the 160th and the officers of the 32nd owing to the senior appointments of the Overseas Batt'n not being given to officers of the County Batt'n, was re-opened. Mr. Rowland said he meant what he said when he stated there weren't recruits to be had. If there were any they were out behind the barn. He had failed to see Major Hay, Mr. Klein and the others take part in recruiting for the 160th. Was there money in this for somebody? It would be money wasted. He had no use for Church parade officers. Why didn't they come out and help the recruiting for the 160th? He had not seen Major Hay or Mr Klein on any platform.

Mr Klein—"No, Mr. Rowland was monopolizing all the platform in the County." Mr. Klein went on to say that he would like to tell more than he could tell but as he was still an officer of the Militia, his lips were sealed regarding his reasons for not joining the 160th Batt'n. He was surprised that Mr. Rowland should lose his temper in this way and to hear people that had brought men all the way back from the Front to get them jobs here as officers, talk about "wasting money."

VILLAGE COUNCIL

Council met 5th April, members all present. Minutes of last meeting read and signed.

Mr Geo R Welsford requested reduction in charges for pool licenses.

Communications: From Hydro Electric Commission stating that the cost of connection with Eugenia Falls would be over $60 per h p per annum, that it would be best for this municipality to wait until after the war for the development of power from the proposed construction on Saugeen river at a point near Port Elgin and that on council's request an engineer would be sent to investigate and report on present conditions here; from the Dominion Alliance with form of petition to Dominion Parliament for signature, against the manufacture in and importation into the Dominion of liquors for beverage purposes.—Filed.

The charity committee reported a visit to Mrs Margaret Devine on 24th March to investigate conditions, and found her sick and destitute. Committee engaged Mrs Darrock at $1 per day to attend her until she was in a condition to be moved to county hospital.

The reeve filed several letters to him addressed, requesting payment for services to Mrs Devine.

Pearce — Houston — That this council petition the Grand Trunk Railway Co through their local agent here to build a concrete sidewalk from their station to Queen St and to have an electric light placed near station gate for convenience of the travelling public.—Carried.

Houston — Sperrow — That the clerk write the Hydro Electric Commission as to expenses in having its engineer make an inspection of our present lighting system to find the cause power actually supplied to streets.—Carried.

The following payments were authorized, viz: Murdoch Leitch $25, E C Wilkins $33 33, Weigbmaster $1377, Paisley Elect Light Co $32 58, D A Lyon $2 10, Paisley Advocate $6, T F Pearce $1 75, Thos Sperrow 75c, Wm Sperrow 70c, Geo H Flood $1 40, Mal McDonald $1 40, Herman Boettger $1 40.

$1,160 for a Cow

Very high prices were paid for many animals sold at the Western Ontario Sale of pure bred Shorthorns at London on March 28th. A number of cows sold for over $500, one for $700, one bringing the record price for London of $1,160. This was Athelstane Rosewood 7th, three yrs old; bred by William Waldie of Downie Tp, near Stratford. The purchaser was F R Edwards, of Tilsis, Ohio. Buyers were present from Ohio, Illinois, Wisconsin, Michigan, and most western provinces, but most of the high priced animals remain in Ontario.

AUTOINTOXICATION OR SELF-POISONING

The Dangerous Condition Which Produces Many Well Known Diseases.

HOW TO GUARD AGAINST THIS TROUBLE

"FRUIT-A-TIVES" — The Wonderful Fruit Medicine — will Protect You

Autointoxication means self-poisoning, caused by continuous or partial constipation, or insufficient action of the bowels.

Instead of the refuse matter passing daily from the body, it is absorbed by the blood. As a result, *the Kidneys and Skin are overworked*, in their efforts to rid the blood of this poisoning.

Poisoning of the blood in this way often causes Indigestion, Loss of Appetite and Disturbed Stomach. It may produce Headaches and Sleeplessness. *It may irritate the Kidneys* and bring on Pain in the Back, Rheumatism, Gout, and Rheumatic Pains. It is the chief cause of Eczema — and *keeps the whole system unhealthy* by the constant absorption into the blood of this refuse matter.

"Fruit-a-tives" will always cure Autointoxication or self-poisoning — as "Fruit-a-tives" acts gently on bowels, kidneys and skin, strengthens the bowels and tones up the nervous system.

50c. a box, 6 for $2.50, trial size, 25c. At all dealers or sent postpaid on receipt of price by Fruit-a-tives Limited, Ottawa.

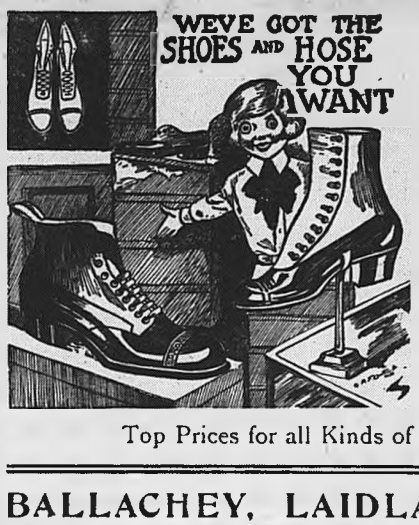
Flour and Feed
Lumber
Coal and Wood

Having decided to add Coal to our Lumber and Wood yards, we are now ready to receive orders for Coal. Send in or telephone your orders at once as we would like to have all orders in, so that we can send them in by 1st May, as prices advance on that date.

A. Fisher & Son

Death of an Arran Pioneer

One of Arran's oldest and most respected pioneers passed away on Thursday morning last in the person of Mr John McFadden. Mr McFadden was born in the county of Perthshire, Ireland, on the 10th day of August in the year 1832. When three months old his parents emigrated to Canada and settled in Holland, where he resided until he was 19 years of age, when he moved to the township of Arran. At the age of 22 he settled on lot 1, con B, and commenced to hew a home for himself out of the dense forest. Three years later he was united in marriage to Maria Wolfe of Arran Tp. They resided on said lot clearing the land and enduring the privations and hardships associated with the lot of the early pioneers. In the year 1879 Mr and Mrs McFadden gave up active work on the farm and retired to Walkerton where they lived until Mrs McFadden's death, which took place on March 7th, 1893. After breaking up his home in Walkerton Mr McFadden lived with his son William at Ashwright for six years, and since then he has resided with Howard in the old home where he passed his remaining days. He was an upright, honest citizen, a good neighbor, and was highly respected in the community. He leaves behind him a family of five sons and two daughters: Dr Andrew, in Collingwood; William, in Port Elgin; Howard, in Arran Tp; Warren, in Port Arthur; Dyer, in San Francisco; Mrs D McLean, in Port Arthur; Mrs John Darrach, in Collingwood. The remains were laid away to rest in Ebenezer cemetery on Sunday afternoon beside his beloved wife and one son and one daughter who predeceased him.



Anness—Bannett

On Wednesday evening, April 4th, the home of Mr and Mrs John Bannett, 2nd of Bruce, was the scene of a very pretty house wedding, when their eldest daughter, Alice, was united in the holy bonds of wedlock to Mr Angus Anness, youngest son of Mr and Mrs J Anness, of the 10th con. Exactly at 6 o'clock the bride, who was unattended, took her place beside the groom under an arch of evergreens which was resplendant with wedding bells and Union Jacks. The Rev Mr De Mille, of Glamis, performed the ceremony in the presence of the immediate friends of the bride and groom. The bride looked lovely in her bridal robe of shadow lace over white mesaline silk, and wearing a boquet of white carnations and lily of the valley. Her travelling suit was of navy blue serge and white hat. After the ceremony the guests repaired to the dining room, where a beautiful wedding repast was partaken of. The presents received by the young couple were both useful and costly. The evening was spent in singing, games and music, after which, amid showers of rice and confetti, mingled with the good wishes of the guests, the young couple left for their home on the 10th Bruce, where they will reside on the groom's farm. They will be at home to their many friends after April 25th.

—Rev W J Watt, pastor of Burgoyne and Dunbarton churches, has accepted a call to Allandale, and the Bruce Presbytery has consented to the transfer. The membership at Allandale is 175, and the salary offered $1,300.

The Store with the Stock

Yes, We Have the Shoes--Hundreds of Pairs of Them

And to say that our prices are right is to put it mildly. The last six months has seen more of an increase in the wholesale price of shoes and leather goods than even the preceding year and a half, and our shoes carry none of that increase.

Men's Heavy Shoes from **$2.75** to **$6.00.**

Ladies' Solid Every-day Shoes, **$2 00** to **$3.00.**

Boys' and Girls' School Shoes, prices from **$1.75** to **$3.50.**

And Fine Shoes of every size, description and price.

Bring your feet in and let us make them comfortable.

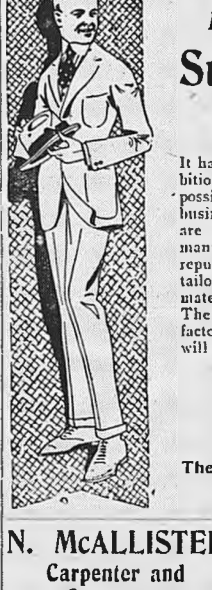
Our spectacles and lenses are guaranteed perfect in fit and focus.

A STOPPED WATCH

—one that will not go AT ALL—does not cause as much bother as one that runs now fast, now slow, in an erratic fashion.

The first you don't pretend to depend upon—the other is a constant source of annoyance.



Most people can afford a watch, but no one can afford an uncertain fast and slow one.

And when our Repair Department is so close at hand there is really no excuse for carrying anything but an accurate time-piece, no matter what the first cost was.

Consult us about any watch troubles that may arise.

Misery in Back, Headache and Pain in Limbs.

Dear Mr. Editor—For more than a year I suffered with misery in the back, dull headache, pain in the limbs, was sometimes constipated and slept poorly at night until I was about ready to collapse. Seeing an account of the wonderful qualities of "Anurio," prepared by Doctor Pierce, of Buffalo, N. Y., I sent for a box, and before using the whole box I felt and still feel improved. My sleep is refreshing, misery reduced, and life is not the drag it was before. I most cheerfully recommend this remedy to sufferers from like ailments.

Yours truly, W. A. ROBERTS.

NOTE: You've all undoubtedly heard of the famous Dr. Pierce and his well-known medicines. Well, this prescription is one that has been successfully used for many years by the physicians and specialists of Dr. Pierce's Invalids' Hotel and Surgical Institute, of Buffalo, N. Y., for kidney complaints, and diseases arising from disorders of the kidneys and bladder, such as backache, weak back, rheumatism, dropsy, congestion of the kidneys, inflammation of the bladder, scalding urine, and urinary troubles.

Up to this time, "Anurio" has not been on sale to the public, but by the permission of many patients and the increased demand for this wonderful healing Tablet, Dr. Pierce has finally decided to put it into the drug stores of this country within immediate reach of all sufferers.

I know of one or two leading druggists in town who have managed to procure a supply of "Anurio" for their anxious customers in and around this locality. If not obtainable send one dime by mail to Dr. Pierce for trial package or 50 cents for full treatment.

ENTOR—Please insert this letter in some conspicuous place in your paper.

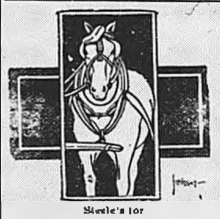
Overland Country Club

Style—Comfort Power—Economy

This new Overland Country Club Light Four is a distinctive and smart car in the low priced car class.

The rich gray body, with black fenders and trimmings, is set off to pleasing advantage by red wire wheels that give just the right flash of brilliant color.



The two comfortable front seats move forward or back, independently, and a spacious aisle between gives free passage to a roomy seat for two passengers in the rear.

For riding comfort, the Overland Country Club is a revelation.

An unusual demand for this model makes it necessary to place orders at once to secure spring delivery.

Keep hens this year

EGG and poultry prices, the like of which have seldom or never been experienced, certainly make it worth anyone's while to start keeping hens. By doing so you have fresh eggs at the most trifling cost. At the same time you have the splendid satisfaction of knowing that you are doing something towards helping Britain, Canada and the Allies achieve victory this year.

Increased production of food helps not only to lower the high cost of living, but it helps to increase the urgently needed surplus of Canada's food for export. It saves money otherwise spent for eggs and poultry at high prices, and saves the labor of others whose effort is needed for more vital war work.

The Ontario Department of Agriculture will give every possible assistance by affording information about poultry keeping. Write for free bulletin which tells how to keep hens (address below).

"A vegetable garden for every home"

Nothing should be overlooked in this vital year of the war. The Department earnestly invites everyone to help increase production by growing vegetables. Even the smallest plot of ground, when properly cultivated, produces a surprising amount of vegetables. Experience is not essential.

On request the Department of Agriculture will send valuable literature, free of charge, giving complete directions for preparing soil, planting, cultivation, etc. A plan of a vegetable garden, indicating suitable crop to grow, best varieties and their arrangement in the garden, will be sent free to any address.

Farm Crop Queries

Conducted by Professor Henry G. Bell.

Henry G. Bell.

The object of this department is to place at the service of our farm readers the advice of an acknowledged authority on all subjects pertaining to soils and crops.

Address all questions to Professor Henry G. Bell, in care of The Wilson Publishing Company, Limited, Toronto, and answers will appear in this column in the order in which they are received. As space is limited it is advisable where immediate reply is necessary that a stamped and addressed envelope be enclosed with the question, when the answer will be mailed direct.

Question—F. P.:—(a) What fertilizer would you suggest for corn in medium soil, and how much? Have no manure. (b) What is the best kind of soil for buckwheat, and when is the best time to sow, and how thickly?

Answer:—(a). For corn on medium soil I would advise "From 300 to 500 pounds per acre of fertiliser carrying 1 to 2% ammonia and 8 to 12% available phosphoric acid. If it is possible to obtain 1% potash, the addition will be of advantage to the crop. A satisfactory method of applying this fertilizer to the corn is to drill it in through the fertilizer dropping attachment of the wheat drill. Such a method of application puts the plant-food into the soil where the material can dissolve. The available plant-food acts on the young crop somewhat the same as whole milk fed to the young calf. It gives it a strong, healthy, vigorous start.

In using fertilizers do not neglect to grow clover or rye on this ground inside the next two years and then turn under a second crop of clover or a fair growth of rye or some other green manure. In using fertilizers you are adding plant-food but you are not adding organic matter or humus. Humus is essential to the producing capacity of the soil, hence must not be neglected.

(b) Buckwheat will do well on most any type of soil with the exception of muck. It is successful sown later than the average farm crops,—even town as late as early June. Probably late in May is be best time to seed it, using from 3 to 5 pecks of good seed per acre.

Question—T. L.:—What is the best fertilizer for strawberries, and when should it be used, on the vines that are bearing this year or the vines to be set out this year?

Answer:—In fertilizing strawberries, good results are obtained by using from 400 to 600 pounds per acre of fertilizer analyzing from 2 to 3% ammonia and 8 to 12% available phosphoric acid, and possibly 2 to 3% potash. This is best applied when preparing the bed for the planting of the young vines. When the ground has been thoroughly disked this available plantfood should be drilled in through the fertilizer dropping attachment of the wheat drill, or it should be broadcasted over the proposed strawberry bed and thoroughly disked and harrowed in. When the young vines are set they will profit greatly by the added vigor obtained from this available plantfood. As a rule, top-dressing growing strawberries has not been the most profitable way to apply.

Question—M. C.:—What is the best way to get rid of wild mustard?

Answer:—A practicable way to get rid of mustard is to spray the young plants before they come into flower. For this purpose a spray machine such as is used for spraying potatoes might be used. Empty a 100-pound sack of sulphate of iron into a kerosene or vinegar barrel. Fill it up to the chine with water and stir until the sulphate of iron is dissolved. Strain the solution through several thicknesses of cheese-cloth when pouring it into the tank of the spray machine. To be most effective, it is well to apply 50 gallons of this material to the acre. The more powerful the spraying machine the better, since the mist is most effective when divided into finest particles. A pressure of 80 to 100 pounds at the nozzle should be maintained. A two-horse spraying machine will spray from 20 to 100 acres of grain in a 10-hour day. In actual tests which have been carried out, this method of treatment has proven very efficient in killing out the troublesome weed. It does not hurt the grain crop.

TRAINING THE PRECOCIOUS CHILD

Great Wisdom is Needed That the Brilliant Child May Be Well-Balanced and Win Success in Later Life.

Whenever we meet an unusually bright or precocious child, there is sure to be some fond and admiring friend or relative hovering near, anxious to "show it off." As a matter of fact, the child of average ability is in much less danger than the backward or precocious one.

The backward child may not be understood or it may not have the most intelligent methods used in its management. For this reason, such a child may fail to achieve as much as he might under favorable circumstances. However, no one expects very much of a deficient youngster, and if he is given healthful surroundings, good care and sympathetic understanding, his handicap may in time be partly overcome.

Very often the child who is exceedingly bright in certain respects is decidedly average or below at some point. It will bulge out on the opposite side. The bulging or noticeable characteristic is pretty sure to be balanced by a dent somewhere. This may be the case with that many people who are really brilliant in some directions are not well-balanced or evenly developed all around.

There is also grave danger that precocious children may be "spoon-fed" by their parents and teachers, crowded with more than their normal capacity. A little boy who was fond of music and who readily and exceptionally well with his violin lessons was urged to long periods of practice and encouraged to take part in many public entertainments. These things were accomplished at the cost of play and sleep. The child developed a nervous trouble and was obliged eventually to give up both school and music.

It is frequently remarked that the pupil who is unusually brilliant in school, winning much favor and many honors, is not always a success in later life. There are reasons why this is often so. If book knowledge comes too early through an extra good memory or the ability to see through a problem quickly, little mental training is given, and when that individual goes out into the world, superficial methods and the expectation of getting much and giving little, do not make for success.

The precocious child is in danger of becoming over-confident, egotistical, lacking in thoroughness, and patronizing in manner. Too often such children do not develop the mental and moral fibre which effort and discouragement, more determined effort and final victory bring out. One star pupil was recently heard to boast that he could stay out of school three days, attend one day, and still keep up with his class. It may be the old story of the hare and the tortoise. He is gaining a contempt for educational advantages and is likely to be handicapped for life with the idea that persistence and concentration of effort are not necessary for him.

Teachers often remark that they are the best instructors in the subject which were hard for them to learn as pupils. They know where the difficulties lie and how discouraging they are.

Great wisdom is needed in handling the precocious child so that it may be well-balanced and kindly and realize the necessity of achieving its own best.

Mothers and daughters of all ages are cordially invited to write to this department. Initials only will be published with each question and its answer as a means of identification, but full name and address must be given in each letter. Write on one side of paper only. Answers will be mailed direct if stamped and addressed envelope is enclosed.

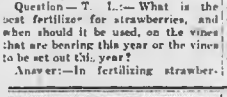
Address all correspondence for this department to Mrs. Helen Law, 78 Castle Frank Road, Toronto.

M. E. S.:—A child four or five years old should drink at least a glassful of water between five o'clock supper and seven o'clock bedtime. Children should get the habit of drinking water both morning and evening. This will prevent a good deal of sluggish action of the liver, kidneys and bowels, and will obviate the need of laxatives, which are used altogether too freely.

F. H.:—1. It is misconception to believe a kitchen should be large. It should be small, compact, cheerfully and sanitarily finished, with cross ventilation, and an abundance of illumination. It should not, of course, be so small as to be cramped or congested. A long, narrow pantry should be studiously avoided. Built-in cupboards in the kitchen might take the place of a pantry and save steps. 2. Any worker desiring to eliminate waste motion and increase her efficiency 50 per cent., can ask herself these questions: Is my table, stool, board, or working surface at the right height? 2. Are my utensils and materials needed for this task all before me when I begin? 3. Do I have to stoop unnecessarily? Do I take useless steps? 4. Are my utensils arranged with proper regard to each other, and to other tasks? 5. Is my position comfortable? 6. Am I using the best and right tool for the purpose? 7. Is the tool properly adjusted and in good condition before I begin work? 8. Am I making any awkward motions, or ones I could omit?

L. N. T.:—Here is an extract from a book entitled "The Efficient Life," which may suit your case. It is a plan that is decidedly worth trying. A tired and nervous mother will often find fault unnecessarily, and cause friction in the home. Give mind and body a real rest every day, as this message advises:—

"Many mothers slave for their children so many hours a day that they have but little energy left with which to enjoy them and love them. As a result, the dullness and drudgery of existence are all they come to experience.



"One mother of five children for years took at least one hour a day for rest and quiet reading alone by herself. Nothing but absolute necessity could induce her to break into this hour.

"The result of this is not only that she had kept her own superb health, but she is a constant joy and inspiration to her children, her husband, and her friends.

"It is true that she might have done more dusting or mending or ironing than she has actually accomplished, but it would have been at the sacrifice of that whole part of her life which meant the most to herself and others."

W. E. K.:—Probably you will find all the good recitations you need in "Jessie Alexander's Platform Sketches." The price of the book is $1.00. As for drills, there are three little volumes you would find useful: "Ideal Drills," "Wilson's Drills and Marches," and "Twenty-five Drills and Several Motion Songs." They are 25 cents each.

R. W.:—How April Fool Day came to be no one really knows. Probably the best guess is that which credits the day to France, the first nation of all Christendom to begin the year on January 1 instead of March 25. Before the change was made the octave of the festival, April 1, was the day on which the celebration culminated, when visits were made and gifts exchanged. With the adoption of the reformed calendar in 1564, New Year's Day was celebrated on January 1, and only pretended gifts and mock ceremonial visits were made on April 1, with the idea of making fools of those who had forgotten the change in date. The custom once started was kept up after its origin was no longer remembered.

Mother Robin's April Fool.

Mother Robin played an April-fool joke on little Sammy Patterson; she played a joke and said "April fool!" at the right time, only of course she said it robin fashion. When any robin laughs after noon and says "Cheer up!" it sounds like "April fool!" and Sammy's robin probably knew what she was talking about.

She said Father Robin came back early that year, and built their nest the last week in March. Ever since Sammy was big enough to have a room of his own near his mother's room upstairs, the robins had built in an apple tree just outside his window. This was the first time, though, that they had come in March.

Sammy did not have to help them so long as March lasted. He sat string on the fence for Mother Robin to use, and bits of wool and rubber. He did everything a country boy could do to help a pair of robins get settled for the season. And they must have been birds of exceptional intelligence for they used the string. And then, the night April came, Sammy forgot about it.

That is, Farmer Sammy forgot the robins. For a few hours was because the first day of April was his day to play jokes on the family and then shout, "April fool!" He had much fun with everyone that day, and was so tired at bedtime that he was glad to believe what the clock said without asking a question.

Sammy's mother went downstairs after he had said his prayers and she had tucked him into bed; she supposed the little fellow would fall asleep in less than three minutes. He did not! The reason Sammy did not go to sleep when he closed his eyes was that he heard a curious tapping at the window after his mother had left the room; a gentle tap-tap-tap! tap-tap-tapping!

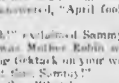
When Sammy opened his eyes wide and looked through the window he saw only the trees in the moon, looking pleasant.

Again came that gentle tap-tap-tap! tap-tap-tapping! Sammy sat up and wondered. It seemed to him then as if the man in the moon were laughing, for the man in the moon never seemed far away and Sammy always thought of him as a good friend.

Sammy said afterwards that he knew some one was trying to play a joke on him; he guessed that the very first second he hear the tap-tap tapping. Of course he did not think of Mother Robin. If he had thought of her he would have believed that she was too busy to play April-fool jokes on a little boy.

Tap-tap-tap! came that sound over and over, until at last the little boy called to his father and mother.

"Come quickly, please," he urged, "and come softly, because some one is playing ticktack on my window, and maybe you can catch him!"



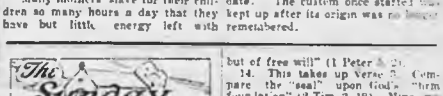
Father and mother came quickly and softly and both of them were laughing. They thought that the neighbors' boys were hiding outside the house with a ticktack. Mr. Patterson laughed because he used to do tricks like that when he was a boy. Mrs. Patterson laughed, because she thought how surprised some one would be when she opened the window wide and said, "What's there?"

Sammy's pretty mother did open the window and did say, "What's there?" But she was the one who was straightway surprised, because no one answered but Mother Robin. Mother Robin had laid one blue egg that morning, and she was on the nest keeping the treasure warm. When Mrs. Patterson said, "What's there?" Mother Robin understood her. Lead from under her wing and answered, "April fool!" cheerfully.

"Here enough!" exclaimed Sammy's father. "It was Mother Robin who has been playing ticktack on your window. Look at that, Sammy!"

Sammy looked. What he saw was a long string dangling from the top of Mother Robin's nest. A nail was tied to the end of the string, and it was that nail that made the tap-tap-tapping noise, indeed by the April breeze.

How Sammy and his father and his mother laughed when they saw that string that Mother Robin had worked into her nest, nail and all! The robin laughed, too, robin fashion.



For specific information regarding breeding, feeding, and general care and management of livestock, apply to your nearest experimental farm.

Feed is high, but it is not so high that one can afford to ruin a good pasture by turning cattle on it too early.

Labor on the dairy farms this year is going to be hard to get, and undoubtedly will cost all it is worth. It is a condition that will start many dairy farmers thinking about mechanical milkers.

The earlier calves are taught to eat the better. If the calf is given a small handful of ground oats, with the hulls sifted out, in the bottom of the pail after he is through taking up the milk he will be eating chop before he knows it.

A few years ago it was considered a normal thing for cows to give 2,500 to 3,000 pounds of milk in a year. Today yields of twenty to twenty-five thousand pounds have almost unnoticed. Animal husbandry has become one of the most important and progressive vocations.

INTERNATIONAL LESSON APRIL 15.

Lesson III. Jesus The Good Shepherd—John 10. 1-18. Golden Text—John 10. 11.

Verse 7. In studying the other parables of the Fourth Gospel, it must be noticed that the Evangelist reports parables in a way of his own, fixing upon one interpretation. Here, however, he has given a parable (verses 1-6 in the original form, and these verses are the interpretation. But the parable suggests two whole independent applications, which are given successively without any attention to their incongruity, a thing that matters less to Oriental than to Western modes of speech. In verses 7-10 Jesus is the door true shepherds and false are distinguished according as they enter through the Door, or "climb up some other way." Recall Milton's use of it, describing Satan's entry into Paradise:

"So clomb his first grand thief into God's fold;
So unlike into the church Jewish successors climb."

8. All that came are thieves (more gen. The addition before me was well have been an attempt to explain a hard phrase. He that comes was a special name of the Christ (see John 11. 27; Matt. 11. 3, etc. So the prophet Christ, who [illegible] sheep away. But they did not hear them (verse 8). Robbers (R. V. margin), sheep stealers, who will use violence.

9. This will refer to sheep-pens, as sheep. The true under-shepherd (1 Peter 5. 2-4) makes it his business to find pasture for the sheep. He can go in and go out freely, for he goes through the Door (verse 2). To such as possess salvation for we can be saved only by trying to save others. Compare Phil. 1. 19; 1 Tim. 4. 16. There is a vast multitude of true "pastors" the word is only the Latin for "shepherd" who were never ordained by human hands.

10. Cometh. The special sense still lingers about it from verse 8. Have abundance (margin) Christ never gives just enough: there are always loaves and fishes left over.

11. Here begins what is really a new parable, starting out of the other. A good shepherd, owning the sheep, will risk his life for those sheep when the wolf comes. The hireling has no motive for doing so: his life is worth more to him than his pay! Before, as well as after, this brief parable, Jesus tells us that such a shepherd illustrates what he is to his own. Layeth down. The tense shows that readiness to face death to rescue the sheep is intended: offers or risks comes nearer to the Greek. It is, of course, in the application of the parable that Layeth down becomes true.

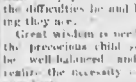
12. Whose own. All turns on this. Hence it is that Peter bids the Lord's undershepherds to "shepherd the flock of God . . . not for base love of gain, but of free will" (1 Peter 5. 2).

14. This takes up Verse 3. Compare the "seal upon God's firm foundation" (2 Tim. 2. 19). Mine own know me—Verse 5 is the converse. One recalls the "true Israelite" of John 1. 47 who instinctively recognizes "the King of Israel."

15. This is the note so often struck in John 17: the Lord applies to us a standard actually drawn from his own relations with the Father. It is essentially like Matt. 5. 48 and Eph. 4. 1.

For the sheep—In this context the suggestion is that he rescues his sheep at the risk of his own life. "Risk" we may well say for to Gethsemane he showed that he could conceive of God's finding at the last moment some other way of accomplishing his purpose. But here that possibility is barely in sight. He is sure the offer of life will be taken, as he is sure that knowing best his life he will rise it again.

16. This fold. The chosen People, who thought themselves monopolists of God's mercy. They shall hear and it appears that they are truly his sheep. Then there shall be one flock. The example there shall be one shepherd is made to eight. The difference between the Authorized and Revised's extraordinary blunders fold, a word perhaps the most disastrous translation mistake ever made in history. It was largely responsible for the anti-Christian view that unity consists in external and organized uniformity instead of in love. In Greek the word flock is derived from the most shepherd; the [illegible] is a contraction of the Old [illegible] depreciatory. The One [illegible] Jesus, but each should think [illegible] as Art has so consistently taught [illegible] of as Dean Stanley put the subject [illegible] one worship.



18. Have I may emphasize. In this reading is right, it is another link with Isaiah 53, in which the Lord looks back on his earthly career as closed and going on the cross. Human faith or authority, derived from God. For [illegible] action still from God to man but the right to give or even take the life God gave for his own purpose. Day [illegible] Jesus' sufferings [illegible] good, which justifies this rendering. This commandment. To sacrifice and to resume life alike. Careful study of the Synoptic record of the Passion will show that the Lord was no passive victim. He chose the time of his death (see Matt. 26. 5) and the charge on which he would plead (Mark 14. 61), when his enemies tried their best to escape both—the former because of the people, the latter because such a charge would not appeal to Pilate, the Roman procurator.

The symptoms of spasmodic colic are: Uneasiness, stomping, pawing, throwing himself down, rolling, getting up, etc. The attacks are spasmodic, and during the intervals patient is normal, may appear to want to urinate.

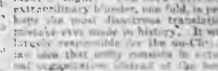
Drench with 1½ oz. each of laudanum, sweet spirits of nitre and tincture of belladonna in a pint of water. Repeat in 2 hours if necessary.

The general indifference to horse breeding at present in some farm sections offers all the more encouragement to those who follow the best popular course and raise horses before they are actually at a premium on the markets.

Brood mares must be properly exercised, preferably with light work but not where there is danger of straining or falling or being crowded between shafts. Watch the mares carefully at foaling. A clean, thoroughly disinfected bright cheerful box stall is the best place to foal a mare, unless the weather is warm and in clean, comfortable grass paddock is available. Yearlings and foals well fed and free from worms will make the greatest and most profitable gains on summer pasture, but if the pasture is short, a grain supplement is a most profitable investment. The secret of successful horse rearing is to keep the animals clean, healthy and constantly gaining in size and weight until maturity.

Sheep will turn to profitable account many waste products than will any other class of farm animals.

A sheep has a low nervous organization, and once neglected gives up with little effort. But kept in thrift with good care it will be as hardy as any other animal.



This is the season of the year when sheep need most care and labor. Reasonable attention in the lambing season will save a heavy mortality. A good shepherd will raise a 125% lamb crop.

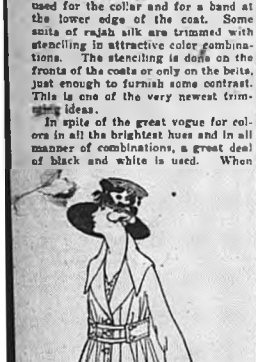
Don't forget the spring dipping. Although other work may demand attention, yet this is the one place of sheep husbandry that should never be neglected.

Shear fairly early, at least before the very warm spring days arrive, and thus save the eye discomfort and loss in weight. With wool at a possible per pound no better, the greatest care should be taken to produce the cleanest, best fleece and properly to care for the same after shearing. Cooperative marketing will add from two to eight cents per pound revenue from your wool.

Give the lambs an extra good start on grass. A lamb creep in the corner of the pasture and light grain feeding will usually be found most profitable.

Every farmer should develop the muscular system of his children, with good food, exercise and right training. Which shall it be?

The fibre of the Argentine gusto plant having been found suitable for lace manufacture, a lace factory will be established in that country.



One of the most costly buildings in Benares is a temple for monkeys. The followers of Brahma hold this animal sacred and worship it as a deity.

You Can Do Your Bit in the trenches, in the home, in the office, in the factory, in the store, when the body is nourished with foods that build healthy muscle without overtaxing the digestive organs. **Shredded Wheat Biscuit** contains the greatest amount of body-building nutriment at lowest cost. It strengthens the muscles of the stomach and intestines by making them do their normal work in a natural way. A better-balanced ration than meat or eggs, more easily digested and costs much less. Ready-cooked and ready-to-eat. For breakfast with milk or cream, or for any meal with fruits. Made in Canada.

April Fashions

There is a decided predominance of silks for spring. Among the silks for suits, poplin, rajah and tussur are strongly in evidence, and many novel ideas are noticed in the developments of these materials. On a suit of gold-coloured silk jersey, black velvet was used for the collar and for a band at the lower edge of the coat. Some suits of rajah silk are trimmed with stenciling in attractive color combinations. The stenciling is done on the fronts of the coats or only on the belts, just enough to furnish some contrast. This is one of the very newest trimming ideas.

In spite of the great vogue for colors in all the brightest hues and in all manner of combinations, a great deal of black and white is used. When

7699

A Smart Spring Coat in Barrel Effect

cleverly handled, this combination is always attractive. Solid black and white checked materials with rather large checks are considered smart for coats, both for the long separate coats and for shorter coats to be worn with white serge skirts.

A good many spring coats have taken on the lines of the new barrel silhouette, showing that this effect is not restricted to dresses only. A very smart model is fashioned with a deep band at the lower part, the fullness of the upper part gradually losing itself when it reaches the band. Machine stitching furnishes the finish of this coat, which is shown in the sketch. The material is soft, spring-weight velours, one of the favored spring fabrics.

Ribbons are coming in for a great deal of prominence this season. They are not used only for small accessories such as girdles and collars, but have become much more important and have been employed for parasols and hats. Very wide striped ribbons combining three or more harmonizing colors have been used very effectively to make parasols and to cover the entire crown and top of the brim of light-weight straw hats for sports wear. Matching parasols, hats and handbags made of ribbon or the pretty figured silks, are seen over and over again.

These patterns may be obtained from your local McCall dealer or from The McCall Co., 70 Bond Street, Toronto, Ont. Dept. W

Steady Those Nerves!

IMPURE BLOOD IN THE SPRING

The Passing of Winter Leaves People Weak and Depressed.

As winter passes away it leaves many people feeling weak, depressed and easily tired. The body lacks that vital force and energy which pure blood alone can give.

Dr. Williams' Pink Pills for Pale People are an all-year-round blood builder and nerve tonic, but they are especially useful in the spring. Every dose helps to make new, rich, red blood. Returning strength commences with their use and the vigor and cheerfulness of good health quickly follows.

There is just one cure for lack of blood and that is more blood. Food is the material from which blood is made, but Dr. Williams' Pink Pills double the value of the food we eat. They give strength, tone up the stomach and weak digestion, clear the complexion of pimples, eruptions and boils, and drive out rheumatic poisons.

If you are pale and sallow, if you feel continually tired out, breathless after slight exertion, if you have headaches or backaches, if you are irritable and nervous, if your joints ache, if your appetite fails and food does not nourish nor sleep refresh you, Dr. Williams' Pink Pills will make you well and strong. To build up the blood is the special purpose of Dr. Williams' Pink Pills, and that is why they are the best spring medicine. If you feel the need of a tonic at this season give Dr. Williams' Pink Pills a fair trial and you will rejoice in new health, new strength and new energy. Do not let the trying weather of summer find you weak and ailing. Build yourself up now with Dr. Williams' Pink Pills the pills that strengthen.

Ask for Dr. Williams' Pink Pills for Pale People and do not be persuaded to take something else. If your dealer does not keep these Pills they will be sent by mail, post paid, at 50 cents a box or six boxes for $2.50 by writing The Dr. Williams' Medicine Co., Brockville, Ont.

MUSHROOMS.

They Contain No More Nourishment Than Other Green Vegetables.

We sometimes hear the complaint that by neglecting to use the mushrooms that grow wild in the woods and fields Canadians are wasting an important food. The would-be economists tell us that it is easy to distinguish the edible from the poisonous varieties, and urge us not to despise this food supply, which, like the manna of old, comes overnight and asks only to be plucked and eaten. They sometimes attempt to show that in nutritive value a pound of mushrooms is equal to a pound of beefsteak. That is an exaggeration that the chemist easily disproves.

As a matter of fact mushrooms contain no more nourishment than any other of the green vegetables, and do contain as much or more indigestible material. Protein, which is the muscle building and waste-repairing element of food, contains nitrogen; and so food analysts formerly assumed that they could estimate the protein content of any food by the amount of nitrogen it contained. That is how the mistake came about. Mushrooms contain, it is true, a considerable proportion of nitrogen, but so do crab shells.

Some of the nitrogenous constituents of mushrooms, furthermore, are substances related to protein, but readily converted through putrefactive changes within or without the body into active poisons. The amount of actual utilizable protein is perhaps as much as is contained in cabbage or in other greens, but scarcely more.

A good mushroom, properly cooked, is a very luscious morsel and as such is a welcome addition to the dietary. If you are absolutely sure that the variety that grows on your lawn or in the neighboring fields is of the edible kind, by all means cook it and eat it; it will do you good and start the secretion of the gastric juice by reason of its palatibility. But if you have the least doubt of the innocuousness of the growth—and many poisonous kinds look attractively innocent—you had better leave it alone; the risk since been assured the deciding issue will be fought out: The munition factory; the shipyard; the purse; the wheat field; the potato patch.

One will suggests that, when victory comes, we shall have to thank our hen-coops! This is a long way from the playing-fields of Eton, to which we are supposed to owe our victory at Waterloo!

Still, in a multitude of counsel there is wisdom.

is too great and the possible gain in nutriment is too slight.

THE SPY CATCHERS.

Ceaseless Vigilance and Perfect Organization of Special Branch.

Closely allied to the Intelligence Services of the Navy and Army is the Special Branch of the Criminal Investigation Department at Scotland Yard, in London, England.

Its activities before the war were considerable—unobtrusively guarding great persons, keeping an eye on anarchists, and dealing with the suffragette movement. But the war has made it at once a great centre for counteracting the German spy menace and many men who have stood blindfolded before a firing-party in the Tower ditch at early dawn have had cause to curse its ceaseless vigilance.

So perfect was its organization at the outbreak of war that it was immediately able to send a detachment of men to work at headquarters in France, while the remainder speedily unearthed the tangled schemes of enemy spies in England.

The Special Branch was originally established to deal with Fenianism in England, and for many years was composed entirely of Irishmen—indeed, up to the outbreak of war it was still largely staffed by men from the Emerald Isle.

Few men know more of what may be called the criminal side of high politics than its veteran chief, Mr. Patrick Quinn, M.V.O.—himself an Irishman. Though the work of himself and his men has been done largely in silence, it has contributed in no small measure to the safety of the Empire.

THE ONLY MEDICINE FOR LITTLE ONES

Mrs Timothy Howes, Hillsfield, N.B., writes:—"I have always used Baby's Own Tablets for my three children and I can speak very highly of them as I could not get along without them. Baby's Own Tablets are the only medicine I would use for my children." The Tablets cure all the minor ills of little ones and the mother who always keeps a box of them in the house may feel reasonably safe against the consequences of sudden attacks of illness. They are sold by medicine dealers or by mail at 25 cents a box from the Dr. Williams' Medicine Co., Brockville, Ont.

A Simple Transposition.

Little 4-year-old Bessie was putting on her shoes for the first time and got them exchanged.

Going to her mother, she said triumphantly. "See, mamma, I got my shoes on."

"Oh!" said mamma, "but you have them on the wrong feet."

Bessie looked down thoughtfully and said. "I don't see how that can be. There are all the feet I got."

WHERE WILL THE WAR BE WON?

Battle of Waterloo Was Won on The Play-Grounds of Eton College.

We disagree and argue about the date on which the war will be won. But there is just as little unanimity regarding the place where victory will assert itself.

First we were told that it would be the Western Front; then the Eastern. Next came the information that the war was being won on the high seas.

All these seemed reasonable suggestions; but look through the following list of places where we have

THE COLONEL SAYS:

"Zam-Buk is a valuable addition to every soldier's kit." This remark was made by Lieut.-Col. A. C. B. Hamilton-Gray, R.C.D., Wellington Barracks, Halifax, N.S. He says further:

"I can speak from personal experience, as I have used Zam-Buk myself for cuts, burns and rheumatism, and believe there is nothing to equal it."

Zam-Buk, the great herbal balm, is a boon to the men in the trenches—it ends pain and heals so quickly, and instant application of Zam-Buk prevents all possibility of festering or blood-poisoning.

Don't forget to put some Zam-Buk in your next parcel to the front. All druggists, or Zam-Buk Co., Toronto; 50c. box, 3 for $1.25.

ZAM-BUK

Had Fourteen Fits In One Afternoon

But Is Made Well and Strong By Dodd's Kidney Pills.

Mr. R. J. Thompson, of Uxbridge, Tells the Story of His Terrible Trouble and Almost Miraculous Cure.

Uxbridge, Ont., Apr. 2nd (Special.)—Mr. R. J. Thompson, living near here, had fourteen convulsions in one afternoon. The doctors did not think he could live. Today he is well and strong. He says Dodd's Kidney Pills did it. But let him tell his own story:

"I am delighted with Dodd's Kidney Pills," Mr. Thompson states. "I have only taken eleven boxes and I feel like myself again.

"I was taken ill very suddenly. I ate my dinner and went to take a man home. I just got about three-quarters of a mile when I was taken with a convulsion fit. I had fourteen that afternoon and the third day I had nine more.

"The doctors said I could not live and if I did I would never be able to do anything again, as I had chronic Bright's Disease. But thank God I am doing my own work once again, by the use of Dodd's Kidney Pills."

Bright's Disease is the most advanced stage of kidney disease. It can be avoided if the earlier stages of kidney trouble are remedied by the use of Dodd's Kidney Pills.

Then and Now.

We are all at times haunted by our own past thoughts, and probably the Kaiser is no exception to this rule. If a copy of Edward Legge's new book, "King Edward, the Kaiser, and the War," just published, should fall into his hands, he will certainly get the jumps when he reads of his old letters. Here is an episode of his accession as German Emperor: "What a succession of joys and sorrows have passed over our family! Here am I suddenly placed by Providence on the mightiest throne of the world to be the guardian of the European Peace. What a splendid task for me to work night and day to administer to the wants and wishes of my people, and to think that the magnificent army obeys my commands!"

YES! MAGICALLY! CORNS LIFT OUT WITH FINGERS

You say to the drug store man, "Give me a small bottle of freezone." This will cost very little but will positively remove every hard or soft corn or callus from one's feet.

A few drops of this new ether compound applied directly upon a tender, aching corn relieves the soreness instantly, and soon the entire corn or callus, root and all, dries up and can be lifted off with the fingers.

This new way to rid one's feet of corns was introduced by a Cincinnati man, who says that freezone dries in a moment, and simply shrivels up the corn or callus without irritating the surrounding skin.

Don't let father die of infection or lockjaw from whittling at his corns, but clip this out and make him try it.

If your druggist hasn't any freezone tell him to order a small bottle from his wholesale drug house for you.

Give fine days between now and spring to pruning the orchard. Regardless of price prospects this year it will not do to neglect the fruit trees. Neglect this year means poorer returns next year and the year after.

Minard's Liniment Cures Burns, Etc.

With a steady winter and continuous blanket of snow, conditions so far are as favorable as they well could be for a fruitful season of production in 1917.

To whom it may concern: This is to certify that I have used MINARD'S LINIMENT myself as well as prescribed it in my practice where a liniment was required and have never failed to get the desired effect.

C. A. KING, M.D.

There will be no time for repairs to tools or harness after spring work begins. Now is the time to attend to all that sort of thing.

Minard's Liniment Relieves Neuralgia.

AN ANCIENT SPORT.

Kiteflying Has Been Favorite Amusement in China for Centuries.

The kite is one of the oldest toys in the world. It appears to have had its origin in China, where for thousands of years kiteflying has been the favorite amusement not only of the children but of grown persons, too. In Japan, Burma, the Malay Peninsula and other Eastern lands, kiteflying has long been as popular with all classes and ages as it is in China. From the Far East the kite long ago made its way to all other parts of the world. The young people of the Far East would consider it as very poor sport to fly kites as plain and simple as those which Canadian boys fly. Their kites are of many shapes and sizes. Most of them represent a bird, or a fish, or a dragon, or some other curious imaginary monster. The framework is commonly made of bamboo, and the covering is colored paper, or, in case of the best ones, silk. Often the kites have tails of great length.

The grown-up people have kiteflying festivals in which all the people of the village join. On such occasions some of the kites are of great size and of most elaborate design. At night they are sent up with long strings of lanterns tied to them. Nor are the people content with kiteflying simply as a pastime. They have contests that rouse great interest—contests in which one person tries to keep his kite in the air longer than his rival can, or contests in which one person tries to make his kite bring down or destroy the kite of the other.

In our times the kite has become a very useful tool of science. Men use it to study the conditions that prevail in the air far above the earth; thus it helps them to forecast the weather. It also helps them in building airships, in taking pictures, in signaling, and in life saving on the coast. The Chinese have long used kites to tow boats, and to drop their fishhooks well out to sea while they themselves stand on the shore.

This Simple Rule Soon Strengthens A Delicate Stomach

It really is unnecessary to deny yourself with pepsin pills or artificial digestives or to live on a miserable nursery diet. If you will observe one easy rule you can eat the hearty, nourishing food that your appetite craves and your body needs. That rule is to take a teaspoonful of Bisurated Magnesia in a half glass of hot water with each meal. Bisurated Magnesia is non-laxative and harmless and possesses remarkable qualities that promptly overcome impaired digestion, fermentation, acidity, catarrhal conditions of the stomach, distress after eating and other stomach disorders. As compared to calcined magnesia, which is certain to form in the stomach, Bisurated Magnesia is the preferred form, especially recommended for stomach purposes. Sold by all druggists.

The amount of moisture in the soil is much below the normal. All the more necessary, then, for early and thorough cultivation for conservation of soil moisture.

MONEY ORDERS

IT is always safe to send a Dominion Express Money Order. Five dollars costs three cents.

Alfalfa removes much lime from the soil and grows best on soils well supplied with lime.

W. F. YOUNG, P.D.F., 316 Lymans Bldg., Montreal, Can.
Absorbine and Absorbine, Jr., are made in Canada.

Have a Bottle Handy!

Sloan's Liniment is assigned its place among the trusted family remedies in thousands of medicine closets. Confidence in it is based on the uniform effectiveness with which it banishes the pains of rheumatism, neuralgia, gout, lumbago, sore stiff muscles, bruises, sprains and strains. Cleaner and easier to use than mossy plasters or ointments. It *penetrates* and relieves quickly *without rubbing.*
At all druggists, 25c. 50c. and $1.00.

Sloan's Liniment KILLS PAIN

GLAMIS

Miss Norah McNally is home from Toronto spending Easter vacation.

Misses Margaret McLennan and Lizzie Campbell spent Thursday in Harriston.

Mrs J H McLennan was in Clifford last week to see Mrs (Dr) Black, who is very low.

Miss Jennie McKeeman is spending this week in Toronto.

Miss Nettie Gunn is home for the vacation.

Mr Tom Thompson, who has been in Guelph hospital for some time, was able to return to his home last week.

Mr J C McCauley went home to Tara for the holidays.

Word came of the death of Mrs Chas Russell, who passed away at her home in Hamilton. Her husband was killed in action a short time ago. The family lived in Glamis about two years ago, and Mr Russell was leader of St Paul's church choir.

Mr Petrie Moffat, who has been teaching near Peterboro, gave up his school at Easter and has gone west to do his bit on a farm.

Born—To Mr and Mrs Robt McLennan, of Melville, Sask., a daughter. Congratulations to Mr and Mrs Jas McLennan on their first grandchild.

Born—To Mr and Mrs Alex McSweeu, on April 9th, a son.

Quite a number of the farmers are making maple syrup. This spring has been very favorable so far.

We are sorry to learn of the serious illness of Mrs Archie McFadyen, of the boundary.

Misses Jean and Katherine McDermid, of London, are home for the Easter holidays.

PINKERTON

Miss Mary McKee of Stratford, Miss and Celia Campbell of Toronto, Messrs Russell Birrell of Toronto, and R L Gartland of Palmerston, spent Easter at their homes here.

The many friends of Sam Rasburn, a former employee at the flour mills, will be pleased to learn that he has been promoted to the rank of corporal.

Miss Florence Diehl is spending the holidays at her home in Paisley.

Miss Sadie Colwell at Easter at her home in Kincardine.

Mr and Mrs Alfred Faldis and Miss Marie spent Easter at the former's parents' home near M

Rev Mr Cale attended a meeting of Presbytery in Port Elgin last week

The assessor, Mr Cassidy, made his annual visit to the village this week.

Mr Jack Wilson had the Bell phone installed in his residence last week. This makes 22 subscribers on the line.

Mr Bert Elphick returned from the west last week to help with the seeding at his home here.

Mr Wm Thompson returned to his home on Sunday after recuperating a few days at Mr Cecil Garland's.

ELORA ROAD NORTH

Mrs Archie Bryce is home again after a trip to the coast.

Mrs Morton who has been visiting at Mr John McDougall's, is returning to her home in Port Elgin this week.

Mr Wm Hagerdorn, of 8th con., is very busy in the sugar bush, having seven hundred trees tapped.

Mr Frank Pearce spent a few days at Mr. Thos. Switzer's of Saugeen.

Mr Gordon Kincaid has been employed with Mr Watson McKinnon.

The Patriotic League held their monthly meeting at the home of Mrs David Bryce last Thursday.

Wood-bees have been the order of the day in this locality. Some of them end in a dance in the evening which is a very good idea, as it makes the sawa run easier through the day.

Mr and Mrs R. H. Fraser spent Sunday at Williscroft.

GRESHAM

(Intended for last week)

On account of the illness of his wife, Capt (Dr) Misuilis could not keep his appointment to lecture in the church here. The pastor Rev Mr McNab was also absent, consequently there was no service here or in Underwood last Sabbath.

We welcome Mr and Mrs Lea Shipley to our neighborhood.

Parker Brothers are busy making maple syrup at present.

We regret to learn that Mr Allan McKinnon, Sr., is at time of writing very ill.

Miss Beatty, of Huron Tp., visited friends here lately.

Much sympathy is felt here for the family and friends of the late Peter McArthur of Lowat who died last week

The change for afternoon mail service on Route 2 took effect the first of April.

We are pleased to learn that Mrs Rich McGregor, who was sick, is convalescing nicely.

Mr George Brown disposed of a valuable horse lately.

Mr Henry Dent spent Sabbath at his home here with his granddaughter Mrs A. Pace, who, we are sorry to learn, is under the Dr's. care at present.

EBENEZER

Miss Annie Hasbidge, who is attending Normal School in Stratford, is home for the holidays.

Messrs Eph and Will Grant attended the wedding of their cousin, Miss Dolly Potts of Tara, to Mr George Munson of Derby. Miss Potts was an old Ebenezer girl and has a host of friends here who all join in wishing the young couple a long and happy sojourn through life.

Mrs Dalght Potts and children are visiting her parents, Mr and Mrs Andy King, of Arran Lake.

Miss Edna Burns, of Gillies Hill, visited at Mr Wm. Grant's for a few days.

Mr R. J McKelvey is laid off work suffering from neuralgia and lumbago. We hope R. J. will soon be able to be on the road again selling machinery.

One of the pioneers of this community passed away last week in the person of John McFadden. The funeral which was held on Sunday afternoon to Ebenezer cemetery was very largely attended. Those present from a distance were Mr Joseph Evans, of Toronto, Dr A C Wolfe, of Durham, Mr and Mrs Andrew McFadden, of Collingwood, and the Misses McFadden of Toronto.

CASTORIA

For Infants and Children

In Use For Over 30 Years

Always bears the Signature of Chas. H. Fletcher

TENTH CON. BRUCE

The weather of the past week was not very favorable for Easter hats and bonnets.

Mr John Caldwell spent the Easter holidays with his daughter, Mrs Bert Atkinson, in Wingham.

Mr Jas Heney, accompanied by his sister, Mrs Adam Case of Hepworth, spent the week end at Mr S Hussey's.

Mr Neil McDonald, jr, made a business trip to Cargill last week.

Mr R Atkinson, of Burgoyne, spent the week end at his home here.

On account of the volume of business done by Messrs Neil McDonald and Edgar Annes in horses and hogs during the past month, there is some talk of having the business tax imposed upon them. Mr Annes had out a load of 7 hogs last week which netted him $303. One hog alone weighed 680 lbs.

Mr and Mrs Alex Shipley, of the 8th, have got settled in their new home. They will be welcome citizens in this neighborhood, as they are both well known here. We wish them success in their new home.

ELDERSLIE COUNCIL

Gillies Hill, April 2nd, 1917

Council met on above date, all the members being present. Minutes of last meeting were read and adopted.

A petition was presented signed by five ratepayers of S S No 8, asking the council to appoint an arbitrator to act with one appointed by the council of Saugeen to consider the alteration of the boundaries of S S No 8 and U S S No 7 Saugeen & Elderslie. On motion of Messrs Fraser and Thomson, Mr Wm Grant was appointed.

Lewis—Thomson—That the reeve have charge of 30 sidercad, Elora road and all boundary lines, Councillors Allen and Thomson 15 sidercad and all roads east, Councillors Fraser and Lewis all roads west of 25 sidercad, and that the sum of $200 be apportioned to each division.—Carried.

Thomson—Allen—That this board do now adjourn to meet again the first Monday in May at 1 o'clock p m, for general business.—Carried.

R C PEARCE, Clerk

LASTING RESULTS

J. A. GORDON, Arkona, Ontario, says: "You ask me what I think of the Homestead Bone Black Fertiliser. Well I have used it for about five years and the first years I sowed I shut it off once across the field and my neighbor said he could see that strip eighty rods away and you could see it two years after in the meadow, so I think it pays all right."

Write Michigan Carbon Works, Detroit, for free book and particulars about their Homestead Bone Black Fertilizer.

BRANT COUNCIL

The municipal council of Brant met at the call of the reeve on the 4th of April. Members all present. Minutes of last meeting read and declared correct.

Rowand-Gregg—That By-law No. 95 A. D., 1917, a By-law appointing pathmasters, be amended by substituting Albert Lindau Schmidt, instead of Robt. Brockelbank in Div. No. 43, Chris. Koehn instead of Martin Gateman in Div. 47, Chas Roly, instead of Wm. Aiton in Div. No. 53, Wm Shantz instead of Thos. Kerry in No. 63, and appointing Wm. Atkinson in Div. No. 71.—Carried.

Rowand Johnston—That a grant of $30 be made to the Red Cross society workers at Ellengowan.—Carried.

Findley-Johnston—That By-laws No. 96 and 97, A. D., 1917, re Hydro Electric Debentures be now read a first, second and third time, passed, signed and sealed.—Carried.

Findley-Rowand—That the debentures to defray cost of installing Hydro-Electric current in the village of Elmwood be sold to Mr. Alex. Rae at par.—Carried.

Johnston-Rowand—That the Reeve and clerk issue orders on the Treasurer for all accounts passed at this meeting of council.—Carried.

Hydro Electric Commission, supplies for Elmwood.....	$ 30 30
Miss Mary Kerr, grant to Elora road Red Cross Workers Ellengowan.....	30 00
Ed. Connors, 16ft. Rock Elm lumber	4 32
Anthony Ernest, repairs to bridge at lot 72 Durham road	3 00

Gregg-Johnston that this Council do now adjourn to meet on Monday, 25th day of May, as a court of revision and for general business.—Carried.

M. A. McCallum, Clerk.

GIRL COULD NOT WORK

How She Was Relieved from Pain by Lydia E. Pinkham's Vegetable Compound.

Taunton, Mass.—"I had pains in both sides and when my periods came I had to stay at home from work and suffer a long time. One day a woman came to our house and asked my mother why I was suffering. Mother told her that I suffered every month and she said, 'Why don't you buy a bottle of Lydia E. Pinkham's Vegetable Compound?' My mother bought it and the next month I was so well that I worked all the month without staying at home a day. I am in good health now and have told lots of girls about it."—Miss Clarice Morin, 23 Russell Street, Taunton, Mass.

Thousands of girls suffer in silence every month rather than consult a physician. If girls who are troubled with painful or irregular periods, backache, headache, dragging-down sensations, fainting spells or indigestion would take Lydia E. Pinkham's Vegetable Compound, a safe and pure remedy made from roots and herbs, much suffering might be avoided.

Write to Lydia E. Pinkham Medicine Co., Lynn, Mass. (confidential) for free advice which will prove helpful.

GERTRUDE McCRAW, Teacher

—Rory McKenzie, the largest man living was born in Ashfield Tp, Huron country, in 1869. He stands eight ft in height and weighs 426 pounds. While still a boy he left home and has seen a great deal of the world, having been in almost every part of the globe. "Donald McGregor," as he is known on the stage in United States, is one of the chief attraction of a travelling show with which he is connected. After fourteen years absence from his relatives, last week he paid a flying visit to his father, Neil McKenzie, at St. Marys.

—The Clifford Express says that 25 hogs were delivered to a buyer in that village on Tuesday of last week by Sir. Marie Bros., of Elora road Carrick, which weighed 6690 lbs, and for which $1032.20 was paid. The price paid $15.45 per 100. The Sir. Marie Bros are progressive farmers and stock raisers. This lot of hogs and ten more not marketed were fed largely on the surplus milk from 14 cows, so that the maximum of profit is realized.

Astoria Shoes

For Men, in the new shapes and colors, Leather and Neolin Soles and Heels.

It's a pleasure for us to show them to you.

Many characteristics distinguish the "Empress" from other shoes. We offer a large assortment of "Empress" brand in the newest models for this season's advanced shoe styles. It's a pleasure for us to show them to you.

H. PFAFF & SON

As You Listen to the Band

in your own home, you realize that the New Edison Diamond Amberola is giving you music more perfect than can be heard in opera house, theatre or concert hall.

Remember that all *Edison Records* are made under ideal conditions—in a specially constructed concert room—far from the noises of the street, where there are no late comers and the inevitable chatter of the concert audience.

The NEW EDISON DIAMOND AMBEROLA

And such Bands as you may enjoy, too!

Highlanders Bagpipe Band
Artillery Band of Mexico
Sousa's Band
Police Band of Mexico
United States Marine Band
Garde Republicaine Band
National Military Band
New York Military Band
and Creatore's Band

The New Edison has the diamond reproducing point, unbreakable and long playing records, superior motors and construction, concealed horns, and the cabinets are made in true period styles, in perfect harmony with the finest furniture.

As usual, Edison owners have everything worth while in the new melodies, the old favorites, selections from the classics, and the popular dance and song hits of the day. Come in and listen to the bands. Get the complete list of Edison Records and tell us just what you want to hear. We'll gladly play your favorite selections—and thank you for the opportunity of letting us demonstrate the unrivalled superiority of the New Edison. 57

PETER McKINNON, PAISLEY, Ont.

Giant Flowering Carnation

FREE!

Address a postcard to us now and receive by return mail a copy of our new illustrated 80-page catalogue of Garden, Flower and Field Seeds, Roots, Seeds, Grains, Bulbs, Small Fruits, Garden Tools, etc.

SPECIAL.—We will also send you free a packet (value 15c) of our choice

Giant Flowering Carnation

This carnation is a great favorite; the flowers are large and fragrant and the plants do well outdoors. Transplanted into pots in early fall they bloom profusely from October till the end of May. Extra plants are easily propogated from them by cuttings, "pipings" or layering.

Send for our catalogue and learn of our other valuable premiums. 18

Darch & Hunter Seed Co., Limited, LONDON CANADA

Just like bringing in the outdoors

The skilful painter can bring into your home the soft, beautiful colors of the big outdoors by decorating your walls and ceilings with Lowe Brothers

Mellotone

—the liquid oil paint that is taking the place of wall paper in modern homes.

MELLOTONE colors are rich and warm. They seem to catch and hold the sunshine. They certainly do brighten things up for the indoor hours.

MELLOTONE is fadeless, washable, long-lasting and sanitary. Ask for a color card showing the soft-as-the-rainbow tints.

WAR!

Other nations are joining our Allies, and and so sure as our Allies are bound to win, so sure is the ORDERED suit going to win against the FACTORY ones.

We have been fortunate in securing a fine line of patterns, which we can guarantee for color, and of all-wool materials.

Come in and look them over before buying. Prices right with quality of goods.

Ladies' Tailoring a Specialty

I. S. Cruickshank

—Even if the Allies do break up the Hindenburg line within the next few weeks, and even if peace be declared by August, there is going to be a world shortage of food stuffs. The harvest to be reaped by the tillers of the soil in 1917 will not be sufficient to feed all classes of consumers for the ensuing year. Therefore it is important that every man produce as much as he can from the land.

Bowlers' Meeting

A meeting will be held in the council chamber on Friday evening at 8 o'clock, to re-organize the bowling club. All interested are requested to attend.

To Whom It May Concern

If the person who recently wrote an anonymous letter to another person will kindly make known to the receiver the identity of the writer, the receiver will esteem it a very great favor, and hereby solemnly affirms that such information will be received in most sacred confidence.

Business Announcement

The undersigned having purchased the Flour, Feed and Seed business of Mr E G Eckel, desires to solicit the patronage of the public. Having decided to do a strictly cash business, we give notice that all goods sold must be paid for within 30 days from the date of purchase. We will keep a full stock of Five Roses and Stark's high grade flours, bran, shorts, Blatchford's molasses meal, poultry foods and tonics. Always in the market for coarse grains. W STARK.

—Mrs Thos Muir and son Teddy are visiting in Toronto.

—Pte. Chris Parker, of London, was home over Sunday.

—Dr Thos O'Hagan was calling on old friends here for a few days.

—Mrs Robt Valentine was here from Southampton on a few days' visit.

—Miss Lily Woods, of Lovat, has gone to attend the Central Business College, Stratford.

—Miss Prudence Kerr returned to Dutton on Saturday after spending the Easter vacation at her home here.

—Miss Mary Webb, an ex-pupil of Paisley Continuation School, was successful in passing the Normal examination.

—Miss May McInnes and Alex D. Sinclair, of the 10th Bruce, have returned after a two weeks' visit to friends in Toronto.

—Pte M H Miller, reported among the list of casualties in Saturday's dailies, is a brother of Mrs John Howe, jr., con 13, Bruce.

—Mr Jas Fraser, of Winnipeg, is down on a visit to his father, Mr John Fraser, who we regret to report is not improving in health.

—Miss Nettie Parker, daughter of Mr Christopher Parker of Greenock, graduated recently as a nurse from St. Joseph's Hospital, Guelph.

—The Women's Patriotic League will hold a regular meeting on Friday, 20th inst., at 3 o'clock in Putnam's hall. A large attendance is requested.

—Cephas Kahberge, the most notable representative of the native Indian race in this part of Ontario, died on Sunday week at his home on the Saugeen Reserve.

—Mr L. C. Spofford is moving into the residence lately vacated by Mr G B Irwin. The latter has taken the new apartments above his tailor shop in the woollen mill building.

—Rev Jos Stewart, B A, son of Mr and Mrs W T Stewart, of 14th Greenock, received the degree of B D at the recent convocation in Burwash Hall, Toronto. Rev Mr Stewart is pastor of Drew circuit.

—Mr Stewart McKenzie, who went to Toronto last week to enlist, was accepted as a recruit for the 70th Battery of artillery. Stewart was very much needed on The Advocate staff, but could not be prevailed upon to remain in civilian clothes any longer.

—Mr Wm Mills, a brother of Mr Jas Mills, of 10th Bruce, and Mrs Wm Foster, of the 8th, is now police commissioner of the city of Fargo, N D. That city has the commission form of government, and the election of this former Bruce Tp man is the result of the first trial of the recall provision.

—The following are the officers of Arran Conservative Association: President Jas. Crawford; Vice Pres, Henry Ball; Sec., Alex Vance; Treas. T. G. Monkman; Chairman of polling subdivisions: Burgoyne, Deighton Potts; Arkwright, F. King; Invermay, Jas. Coleman; Hall's Corners, Jas. Berry; Allenford, J. Montgomery; Elsinore, Thos. Johnston.

—"Raise Garden Vegetables" and "Keep Hens This Year," are the headings of appeals made to Ontario urban dwellers to help production. A great many are going to do their best. Between the two classes of producers, however, there is little to be the old Cain and Abel strife arise unless the chickens are kept out of the gardens. Paisley has a by-law, providing that fowl shall not be allowed to run at large, and the probability is that more general enforcement will be called for this year than heretofore.

Flour and Feed
Lumber
Coal and Wood

Having decided to add Coal to our Lumber and Wood yards, we are now ready to receive orders for Coal. Send in or telephone your orders at once as we would like to have all orders in, so that we can send them in by 1st May, as prices advance on that date.

PHOTOGRAPHING ENEMY TRENCHES

MADE POSSIBLE BY BRAVERY OF FRENCH AIRMEN.

Describing Wonderful System of Trench Photography From Aeroplanes.

The most wonderful photographs of the war are taken in the air, and very few people see them. They do not appear in the picture papers, but they are constantly before the eyes of the generals.

As near as they possibly can be, they are kinema pictures of the daily life in the German trenches. Everything that is going on in the enemy's lines that can be seen by the naked eye is pictured by the marvellous French air photographers, says a writer in London Answers.

If a new gun is put up in a German trench one night, and any part of it shows to the observer in the air, you can make a bet that the flying-men will get a picture of it the next day.

How is it done? It is made possible by a wonderful system of organization, in which every section of the German trenches is minutely mapped out. Every photographer who "goes up" has his little bit of enemy ground to photograph day by day. He sits behind the pilot, with a large camera fixed in front of him.

The Prey of the Germans.

The camera has a very powerful lens, and the snapshots are taken through an aperture in the floor of the chassis. The aeroplane is built more for stability than for speed and fighting.

Its business is concerned solely with photographing. It has to fly low, and is consequently a target for the enemy guns and a prey for the enemy fighting machines.

For protection the aeroplane is attended by fast "chasers," that keep hovering near by for any sign of an enemy plane on the prowl for the scalp of an air photographer.

If he gets back safely his plates are developed. He and the experts who examine the pictures are so used to these daily photographs of the shell-ploughed land and battered trenches that they can piece them together with infinitely greater ease than a jig-saw puzzle. They will detect a slight change in the appearance of one particular trench. When the photograph has been enlarged it will become apparent that extensive barbed wire has been put up since the previous day. In the few hours during the night the Germans have made the trench stronger.

Trench Histories.

Now, this particular trench, like all the other trenches, has its own history all carefully recorded in a book of pictures and records—how many times it has been shelled, how many shells fired, what damage they did, what repairs the Germans did, and so on. The experts, if they cared, could tell you the day and the exact time that trench was last bombarded.

When they discover that the barbed wire has been fixed up, they will simply telephone to a certain battery that "looks after" this little sector, and in two minutes all that beautiful barbed wire will be blown into pieces as small as pins.

Then, a few hours later, our friend the photographer, before it gets dark, will fly out and take another picture just to prove the barbed wire is no more.

The Huns Can't Do It.

The battery commander will write down in his notebook how many shells—six or seven, maybe—it took to do the damage, and will perhaps discover that he might have done it just as well with only five shells. Down it goes in the notebook, and the next time he has to fire at that trench he will save one precious shell.

All this is made possible by the bravery of the French air photographers. It is their business, like that of our own camera-airmen, to tell picture stories every day about the movements of the Huns, and there is very little of importance that can escape the camera when it is in the clouds.

"Happily, our aeroplanes are much too numerous, and have put too much fear into the hearts of the Hun airmen, to enable them to take satisfactory photographs of our lines.

THE LENGTH OF LIFE.

The Secret of Health and Longevity is Moderation in All Things.

Sickness and death have always existed in the world and always will so long as man's physical constitution remains what it is. The body is evidently intended to last only a certain time, although man himself has unquestionably greatly shortened the length of its endurance. The limit of threescore years and ten, set by the Psalmist, deprives us of many years that are our due.

Students of longevity have established the rule that the animal body, including man's, should endure, barring accident, five times as long as it takes it to reach full maturity, as marked by the complete ossification of the bones. In man that period is about twenty years, and man should, therefore, live to round out a century. That he usually lives only a half or three quarters as long is his fault and the fault of his ancestors.

A French writer once asserted that a man is as old as his arteries, meaning that the degenerative changes of old age were dependent upon or measurable by the degree of hardening of the arteries. That is undoubtedly true to a certain extent, but epigrams do not solve problems or even explain facts. It affords slight comfort to know that we are as old as our arteries if we do not know how to prevent them from aging prematurely.

Fortunately, we do know many of the causes of the presenile degeneration that cuts us off before our time. Heredity counts for much. Some families are long-lived; in others, most or all of the members die young. That sounds hopeless, yet we can do much by hygienic living to lengthen our days even if we come of a short-lived family. More than that, we can transmit to our descendants a still higher degree of stamina. The other causes of early aging may be summed up in the one word excess—overwork, mental or physical, worry, overeating and even oversleeping. Moderation (not insufficiency) in all things—eating, drinking, working, playing, sleeping—is the secret of health and longevity.

DYNAMITE AND PEACE.

Donor of the Famous Nobel Prizes Invented a High Explosive.

The Huns were recently boasting that Germany was vastly superior to the rest of mankind because she had been awarded fourteen Nobel prizes, while France and Britain had only been awarded six between them. This statement anybody, if he takes the trouble, can verify for himself; and anybody who does so will find that up to date the number of Nobel prizes awarded to France and Britain, instead of being six, is twenty-one.

The Nobel prizes constitute one of the most piquant things in history, for they were instituted by the late Alfred Nobel, the inventor of dynamite, the first of the line of high explosives which have figured so constantly in all our talk and writing about the present war, and—most piquant of all—one of the big prizes is to go every year to "the person who has done most, or labored best, for the cause of fraternity among different peoples, for the suppression or reduction of standing armies, or for the formation and promotion of peace congresses."

There are five prizes provided, supposed to be given annually, although any one of them can be withheld if no candidate is considered to reach the highest standard. The five subjects are physics, medicine, chemistry, literature, and peace, and it is a fact that Germans have been awarded fourteen science prizes and not one peace prize!

The only English writer who has carried off the literary prize is Mr. Rudyard Kipling, who annexed it in the year 1907. In 1914 it was not awarded, and in 1915 it was divided between two Danes, one Swede, and one Frenchman. The donor was a Swede, and the value of each prize is about £8,000.

ONE WOMAN WORKER IN THE OLD LAND

TICKET-INSPECTOR ON RAILROAD INTO LONDON.

Telling of the Mirth, the Money, the Misery in the Life of a Lady "Jumper."

In pre-war days I used to travel from my suburban home to the City by the District Railway, says an English woman.

And when I was oblivious to everything except the contents of the latest magazine, I would suddenly be brought to earth by a whiskered autocrat standing before me and demanding "Tickets, please!" He would pop in at irregular intervals at various stations, inspect the tickets, and pop out again at the next, stopping-place. Sometimes I would go a month without seeing him, and I have received two separate visits from him in one week.

I conceived an antipathy to this bearded gentleman. I wondered he could not find something better to do than to be constantly popping in and out, worrying honest passengers like myself to show their authority to travel.

Defrauding For Fun.

Now I sympathize with him. For the war having changed everything, I now hold the position once held by my bearded antipathy, and am a lady "jumper," otherwise a ticket-inspector—or should I say ticket inspectoress?—on the District Railway.

We work in pairs, and it is our duty to board trains running anywhere on the strip of line between Barking in the east and Acton Town in the west, with its innumerable branches, to see that the company is not defrauded by passengers travelling beyond their distance, or riding first-class with a third-class ticket.

You may have seen us in our neat blue uniforms, with clippers to clip each ticket we inspect, and the shining black satchel in which we keep the money we take and the little receipt-book for excess fares.

We have to keep a duplicate of all money transactions, hand it over every evening, take the names and addresses of those who refuse to pay, and report any irregularities to headquarters.

I have learned quite a lot since I have been a lady "jumper." One thing is that men and women who attend church regularly, and who would scorn to do a dishonest action in other walks of life, regard the railway company as fair game for fraud. Numberless men whose income runs into hundreds a year will chuckle with glee when they have bested the railway company for three-halfpence.

The Would-be Lady.

My work is full of variety and interest, and I get good money and reasonable hours. When it is remembered that several millions of people use the District Railway every month it is hardly necessary to state that I meet some interesting characters.

I get most fun from the "would-be's"—those people who, to impress their fellows, ride first-class with a third-class ticket.

Women are the worst offenders. A few days ago I overheard a stylishly-dressed matron, who chanced to meet an acquaintance at Charing Cross, explain in reply to a question:

"Oh, my dear, of course I always travel first! I hate those third-class boxes! How people can endure them I do not know."

"Well, I'm going to do it to-day because I've had a bit of luck. In the ordinary course of events I think first-class is an extravagance. We can go down to Ealing together," said her friend.

When the train came in I boarded it from the rear, and before Westminster was reached I had worked my way along to the compartment where the two ladies were chattering.

"Tickets, please!" I said sweetly.

What I had expected happened. The lady who never travelled third-class had a third-class ticket, and as she paid me the balance her face was the color of beetroot.

Threatened With Violence.

I have had proposals of marriage, been invited out to dinner and the theatre, been threatened with violence, and once I was actually assaulted by a man who refused to show his ticket. Had I prosecuted him he would have been sent to prison, for magistrates everywhere are determined to protect women who are doing men's work.

On the way to the stationmaster's office, where he was to be given in charge, however, he chanced to let out that he had just lost his only boy at the front and to drown his grief had taken a little to drink.

Tears came into my eyes. I grasped his hand and told him to go home, and somehow I feel happy even to this hour that I did not prosecute.

It is no easy matter to keep an even temper when your fingers are stiff with cold and you have to write out a receipt for a grumbling passenger, who blames you because the fares have gone up fifty per cent.; but I, at all events, have released one man for the Army.

BRITAIN'S SINGLE OBJECT.

An English Factory Twenty Miles Long and Four miles Wide.

Everywhere I travelled in England I saw new factories being built. In a journey of three hours I saw six different factories of great extent in course of erection in the vicinity of towns and villages where there were no other factories. In the great manufacturing centers new extensions are being built. All these new factories are for the purpose of increasing the munition output, says an American visitor in England.

Although the manufacturing ability of England has been greatly increased, both by greater activity on the part of workingmen and by increased facilities, eighty per cent. of all the manufacturing facilities in Great Britain is devoted to munitions and armaments.

One of the establishments I visited employed 10,000 persons. Seven thousand of these employees were women. It was a small portion of the plant of a great munition concern.

In one factory it was almost impossible to see the boundary wall in either direction, and this factory, filling as several city blocks, is occupied almost solely by women, working at their lathes, producing fuses.

There is one Government munitions works, where they deal with explosives, that it twenty miles in length and averages four miles in width. Contracts for munitions are being made by the Government that will require five years to fulfill.

England is devoted to one single object; that is, to waging this war.

Very Awkward.

The son of the well-to-do family had recently joined up as a private, and was spending his Christmas leave at home.

Returning from a walk, his mother espied a figure in the kitchen with the housemaid.

"Clarence," she called to her son, "Mary's got someone in the kitchen. She knows perfectly well that I don't allow followers. I wish you'd go and tell the man to leave the house at once."

Clarence duly departed to the kitchen, but returned in about half a minute.

"Sorry, mother, but I can't turn him out."

"Can't turn him out? Why on earth not?"

"He's my sergeant!"

THE SENSITIVE APES.

Wild Animals Thrive in Captivity With Exception of Gorilla.

So well do the keepers of the modern "zoo" care for their charges, the wild animals, that much of the sympathy that the visitors feel for the captive beasts is out of place. Any sympathy that soft-hearted person has for captive gorillas, however, is not misplaced, says Miss Ellen Velvin in From Jungle to Zoo.

Many gorillas have been captives, but in spite of the greatest care none have lived more than a comparatively short time. There seems to be no particular ailment from which they suffer; nothing except intense home or heartsickness. They grieve themselves to death.

At first they show some interest in what goes on round them—perhaps because of a feeling that there is some way of escape. After a time they show less and less interest and take smaller quantities of food. There invariably comes a time when they refuse food altogether. Then the case becomes hopeless. They sit with their shoulders hunched up, their knees under their chins and their hands hanging listlessly in front of them or else raised to their heads, as if they suffered from headache. They never lift their sad and weary eyes for hours at a time. If you induce them to look up, there is an expression in their eyes that haunts you, so immeasurably sad and forlorn it is. They even cease the little futile show of temper that previously broke out at intervals.

All the anthropoid or man-like apes, such as gorillas, orange-utans and chimpanzees, are extremely sensitive to surroundings and environments. In order to keep these big apes in good health it is absolutely necessary to give them plenty of company, either of their own kind or of men—anything, in fact, to relieve the tedium of captivity, which they undoubtedly feel. When a chimpanzee gets a new companion he goes into the wildest state of excitement; he thumps the floor and walls, scampers round his cage and screams with delight.

QUEER CRAFT ON TIGRIS.

Used by British Army in Advance to Bagdad.

In their successful advance on Bagdad the British used some of the queerest craft in the world to navigate the Tigris.

These included the heavy teak-timbered craft which the Arab describes as china and of which the ship carpenters attached to the force built 170. These craft carry about 40 tons. They have short, stubby masts and just a bit of sail. Larger craft of similar design are called saffara. A total of 310 boats of these types were used for freight in the advance on Bagdad. These queer craft kept in touch with the advanced base throughout the operations northward from the Persian Gulf.

Other craft used included the "ballam" or canoe, ranging from over 100 tons down to the tiny craft of three-quarters of a ton, which causes Hannah to be described as "The Venice of the East"; the "mashoof," a hollow wedge-shaped craft for navigating the reed mazes of the great marshes, and the "guffah," a round basket, four feet deep and from four feet to nine feet deep and from four feet to nine feet in diameter, made of palmfrond riba held together by juniper wattles.

MANY NEW INDUSTRIES.

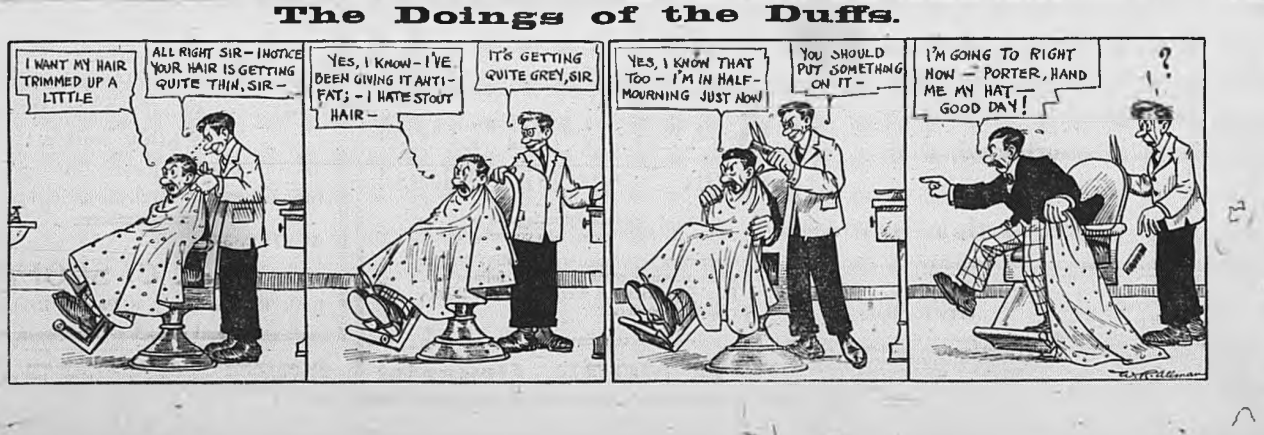
Developments in Eastern Canada's Plants Since 1910.

Approximately 75 new industries representing a capital investment of $12,000,000 have been located along the line of the Grand Trunk Railway in eastern Canada during the past year, according to the report of the Commissioner of Industries for that railroad. These industries will employ 10,000 men when in full operation. Extensions of already existing plants representing a capital of $6,000,000 and employment for another 4,000 men, have been made in the same period.

Among the plants under construction is a large refinery at Port Colborne, Ont., for the International Nickel Company of New York and New Jersey. This plant, which will mean an investment of several million dollars, places within the Dominion the refining of invaluable nickel ore and the distribution of the finished nickel, work which was previously done outside of Canada.

Other large concerns selecting locations in this district during the past year were the Dominion Sugar Co., Ltd., at Chatham; British Munitions, Ltd., Montreal; St. Catharines Steel and Metal Co., at St. Catharines; Kellogg Toasted Cornflakes Co., at Toronto; Dominion Dustless Sweeper Co., at Peterboro; and William Kennedy and Sons at Collingwood. These six plants represent an investment of approximately $3,000,000.

Since 1910, five hundred industries, with a total investment of about $100,000,000, have been located along the Grand Trunk Railway, with the co-operation of the railway.



GOLD ORNAMENTS REFUSED.

Bank of France Declines Patriotic Offer of Jewellery.

"Is gold wanted by the Allies?" "No," says the Bank of France emphatically. "Many patriots possessing valuable gold ornaments and others having family jewels have offered to lend these or even sacrifice them on the altar of patriotic duty, says a Paris correspondent. Those who approached the Bank of France with a view to the melting down of gold held in collections or in commerce, met with a quiet 'No need whatever in France,' as a reply. The Bank of France said to inquirers that the gold reserve is satisfactory, and that there was no intention of making tragic appeals for gold ornaments and trinkets to keep up the splendid pyramids of gold in the vaults of the bank after more than two years of outgoings.

"These desperate appeals are left to German financiers in desperate straits. Thus a telegram by way of Switzerland states that the president of the German Reichsbank calls upon all Germans of both sexes to sell at the bank for paper all their gold articles, and to cause all their precious stones abroad to be brought to the excise office for diamonds. The sacrifice of gold and jewels forms part of the necessary equipment of national forces, but the president of the Reichsbank regrets that many citizens do not grasp the necessity of this sacrifice. The Reichsbank does not yet demand the sacrifice of gold ornaments of great historic value or of artistic or sentimental worth, but all other gold jewelry must be forthcoming. So much for the Reichsbank after the firm and confident reply of the Bank of France."

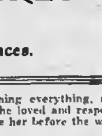
The Doings of the Duffs.

OUR SERVICE AVAILABLE EVERYWHERE

No matter where you live PARKER Service is right at your door. Wherever the postman or the express company go we can collect and deliver whatever you want cleaned or dyed.

Our service to distant customers is carefully handled so that goods are insured of safety in transit.

The excellence of our work has built up the largest dyeing and cleaning business in Canada and is known from coast to coast.



Almost any article can be cleaned by one process or another, brought back to a freshness that will surprise you—or made new by dyeing.

We pay the carriage one way on all articles sent to us.

Think of PARKER'S whenever you think of cleaning or dyeing.

THE EARL'S SECRET

Or, a Martyr to Circumstances.

CHAPTER XXVIII.—(Cont'd).

It was to be a grand wedding, much against Violet's wish, and the fashionable world was on tiptoe of expectation. For it was known that Mr. Murpoint was to be made a baronet and that he would take one of the largest mansions in Belgravia and commence a series of entertainments immediately after the happy couple returned from the wedding tour.

Violet's dress was ordered, the bridesmaids chosen, and the tour arranged before Fitz had returned to town from the execution of his little plot with Bertie and Ethel. He called for his letters at his club, and thrust them in his pocket unread; he noticed that men looked rather strangely and almost commiseratingly at him, and wondered what was the matter. Without much loss of time he called at Mrs. Mildmay's and asked for Violet.

Violet was upstairs in her own room, alone and musing, when the maid came to tell her that Lord Boisdale was in the drawing-room.

"Lord Boisdale!" repeated poor Violet, turning pale. "Did he ask for me?"

"Yes, miss," said the maid. "Particularly for you."

"Well," said Violet, sadly. "I will see him."

She was surprised that Fitz should ask to see her after the letter she had written to him, for it was a letter full of true womanly gratitude and kindness, explaining everything, and begging him, if he loved and respected her, not to see her before the wedding.

Now, Fitz had called, she thought, to harass her with reproaches, perhaps to accuse her of cruel insincerity. She determined to be brave and see him, so she went with rather faltering feet into the drawing-room.

Fitz rose at once and came toward her with suppressed eagerness.

"My dear Miss Mildmay—Violet!" he exclaimed, "I have come back, and left Ethel and Bertie the happiest couple in the world! You have heard the news, of course, and you think I have done right? Ah, if you could have seen them when the parson had made them one both turn to me and bless me! Bertie shaking my hand off, with tears in his eyes, and Eth, dear gentle Eth, clinging round my neck and declaring I had saved her! Well, well," and Fitz broke off to wipe with a hasty hand a suspicious moisture in his own eyes. "They are off to Italy, and I left them on the packet looking as happy as a couple of children, and I don't care what the world says and what the earl and countess say; I know I've done the proper thing and those two were made for one another!"

So he rattled on in his eager, simple way, utterly unconscious of the pallor of her face, with its look of astonishment and dread.

For Violet knew by his manner that he had not received her letter, and that she should have to tell him that she had refused him and accepted Howard Murpoint.

"Well," said Fitz, "they sent all sorts of messages to you, and Ethel implored me with tears in her eyes to assure you of her affection and love. Poor Eth, all her troubles are over now, and she's happy. Violet, dear, I hope that you forgive me and think I have done right? And will you make me happy, too, Violet?" and, with an imploring look, he tried to take her hand.

Violet drew it from him and sank on to the sofa. Fitz looked perplexed, and stared.

"You don't speak! You haven't said a word!" he said. "What is the matter?"

"Have you not received my letter?" she breathed.

"No," said Fitz, thrusting his hands into his pocket. "Perhaps it is here; I haven't opened them yet. Oh, Violet, you have not refused me; you don't mean to make me miserable for life! Don't say it!"

"I have written it," said Violet, paler and paler each moment. "I have written a full explanation. It can not be; it is forever impossible. Lord Boisdale—Fitz, I am to marry Mr. Murpoint."

"What?" exclaimed Fitz, "am I dreaming—am I mad? Violet, you are to marry the captain.

Violet rose.

"Let me leave you, my lord! I am so sorry that my letter"—then she turned and tried to leave the room.

But Fitz strode after her and seized her arm.

"Violet," he said, "one word more. I see I am not dreaming, that it's truth you are telling me. But if it is true there is villainy somewhere! You are right to reprove me. Heaven knows I am not worthy of you—but the captain!"

"Violet, if Leicester could come to life again, I would have yielded to him quietly, without a word, for I know you were his. But not to the captain! You never did and you never can care for him, and if you marry him it will be against your will, Violet, listen to me, I implore you. I believe—I am sure within my own heart that the captain, Howard Murpoint, is a rogue and a villain."

"Silence!" said Violet, sadly, yet indignantly. "You forget yourself, my lord! You have no right to say such cruel things, to attack an absent man. Mr. Murpoint will be my husband, and I will not—I dare not listen to such a groundless accusation. Enough! Not a word more. Leave me, I beg, my lord!"

"Yet one word more, I implore," said Fitz. "I will leave you and I will not see you again; but, mark me, I will not let the matter rest, and if you care for Howard Murpoint, as you would have me believe you do, warn him that there is one on his track who will search him to the heart, and who will, cost him what it may, find whether he is an honest man or the rogue he thinks him. Violet, Ethel has escaped his clutches, and you have fallen into them. Escape while there is time, I implore of you! See! I beg you on my knees to take time, to do nothing rashly, to break off this hateful this horrible engagement!"

"If there had been one thing wanting to confirm me in the path I have taken, Lord Boisdale, your words have supplied it. I will do my duty by an innocent man maligned, and be true to him. I will be true to the man I have promised to marry, though all the world rose to slander him."

"Violet, you do not love him!" groaned Fitz.

"No," said Violet. "But, though I have lost the power to love, I can still act with honor."

And, with a sad smile, she left the room.

Fitz rose, stunned and dazed.

He took up his hat and, leaving the house, walked in a maze to Lackland House.

As he was about to enter a footman came up to him.

"My lord, the earl is desirous of seeing you."

"Eh?" said Fitz, who was scarcely conscious of what he was about.

"Upstairs, my lord, in the earl's study."

"All right," said Fitz, and he ascended the stairs with a heavy gait.

Knocking at the study door, he received a cold, stern "Come in," and, entering found Lord Lackland seated in the same chair at the same table in the same room in which he had sat that morning when he informed Fitz that the Lackland estates were mortgaged and that the Lackland purse was empty.

"Good-morning," said Fitz.

The earl bowed with cold politeness. "You have arrived this morning?"

"This morning," said Fitz, "I haven't been in town three hours."

"I am glad of it," said the earl, "as I wished to see you immediately you arrived."

"I left Ethel— —"

"Thank you," said the earl, interrupting him with stately politeness. "I do not want to know anything of your disobedient and unfaithful sister. If I should at any time, I will come to you, who, it seems, is a partner and chief abettor in her misconduct. Be good enough not to mention her name to me."

"But, my lord," said Fitz, who was nearly out of his mind, "surely you do not mean to say that you intend to be hard upon Ethel for marrying where she liked? She has not married a dishonest sweep, or run away with one of the coachmen. Bertie is the best the most famous man in London—"

(To be continued).

There are 270 active volcanoes in the world.

Farmers will find it much to their advantage to sow the varieties which have been tested and recommended by the Experimental Farms or Agricultural Colleges. These institutions have excellent facilities for conducting seed tests. Where 14 varieties are being sown in one community probably 13 farmers are not sowing the most desirable. A great increase in production and profits would result if fewer but more suitable varieties were grown on Canadian farms.

"NUGGET" Shoe Polish

IS WATERPROOF

If you use "Nugget" water will not destroy the shine. Brush off the mud and the original polish is still there. Buy a tin to-day. All dealers. 10c. per tin.

"TAKE CARE OF YOUR SHOES."

Doctor Tells How To Strengthen Eyesight 50 per cent In One Week's Time In Many Instances

A Free Prescription You Can Have Filled and Use at Home.

London—Do you wear glasses? Are you a victim of eye strain or other eye weaknesses? If so, you will be glad to know that according to Dr. Lewis there is real hope for you. Many whose eyes were failing say they have had their eyes restored through the principle of this wonderful free prescription. One man says, after trying it: "I was almost blind and could not read at all. Now I can read everything without any glasses and my eyes do not water any more. At times they would pain dreadfully; now they feel fine all the time. It was like a miracle to me." A lady who used it says: "The atmosphere seemed hazy with or without glasses, but after using this prescription for fifteen days everything seems clear. I can even read fine print without glasses." It is believed that thousands who wear glasses can now discard them in a reasonable time, and many more will be able to strengthen their eyes so as to be spared the trouble and expense of ever getting glasses. Eye troubles of many descriptions may be wonderfully benefited by following the simple rules. Here is the prescription: Go to any active drug store and get a bottle of Bon-Optic tablets. Drop one Bon-Optic tablet in a fourth of a glass of water and allow to dissolve. Bathe the eyes in this solution two to four times daily. You should notice your eyes clear up perceptibly right from the start and inflammation will quickly disappear. If your eyes are bothering you even a little, take steps to save them now before it is too late. Many hopelessly blind might have been saved if they had cared for their eyes in time.

Note. Another prominent Physician to whom the above article was submitted, said: "Bon-Optic seems to be a very remarkable remedy. The ingredients are printed plainly on the label, so everyone can see exactly what they are getting. The manufacturers guarantee it to strengthen eyesight 50 per cent in one week in many instances or refund the money. It can be obtained from any good druggist. In use at the very few private homes I find should be kept on hand for normal use in almost every family. They are Dr. Lewis' Bon-Optic Tablets, Wentle, will no doubt order a supply at once.

GOOD DIGESTION

When your digestion is faulty, weakness and pain are certain and Cramps inherited.

Mother Seigel's Syrup corrects and stimulates the digestive organs, and banishes the many ailments which arise from indigestion.

FOR 40 YEARS THE STANDARD REMEDY

MOTHER SEIGEL'S SYRUP

FOR STOMACH AND LIVER TROUBLE

At all Druggists, or direct on receipt of price, 35c. and $1.00. The large bottle contains three times as much as the smaller. A. J. WHITE & CO. LIMITED, Craig Street West, Montreal.

About the House

Fat Economy.

The cost of meat fat is high. It must always be remembered the fat is paid for at the same price as the lean.

Much of the fat paid for dries out of the meat in the cooking and is not sent with the meat to the table. Much of the fat of the meat sent to the table is not eaten. What becomes of it? Much of it never reaches the table again. Too frequently it is fed to a useless dog, dumped into the soap grease, scraped into the garbage pail, or even thrown into the fire and burned.

The thrifty housewife saves every ounce of sweet fat for future cooking, and seldom has to buy special lard or oil for cooking. When any fat cannot be used for cooking, it is converted into soap.

One housewife reports her experience of saving and keeping the different kinds separate for different purpose, as follows:

Beef dripping for potatoes.

Pork dripping for sweet potatoes, gingerbread and ginger cookies; mixed with beef dripping for meat pastry.

Ham, bacon, and sausage fats for soups, vegetables, and things too numerous to mention.

Lamb fat for warming over beans.

Veal fat for omelets.

Chicken, duck, and goose fat for cookies, gingerbread, and spiced cakes.

Chicken fat with a little bacon proved delectable for cooking oysters in.

There is no doubt that a careful saving and use of meat fats lessens the butter bill to a considerable extent.

To Renovate Shiny Serge.

For dark colored clothing wet a piece of new black crinoline and lay over the worn spot. This should be covered with a dry cloth and pressed with a very hot iron. The heat will make the crinoline adhere to the serge, after which it should be pulled away quickly, as you would a plaster, raising the nap of the goods so that it looks dull again.

Reglueing Furniture

If you have never been successful in reglueing furniture so that it will stay glued, you may be more successful by adding a coat of shellac or colorless varnish. It is the dampness attacking the glue which undoes the most careful work, and when this is protected by a coat of varnish (after the glue is dry) you will have no further trouble.

Medicines From Garden.

Every vegetable garden is a medicine chest recognized by physicians as of considerable value in the treatment of diseases. Onions, for example, contain sulphur oil and are recommended for insomnia and as an aid to gastric digestion. They also help to allay rheumatic pains.

Turnips and parsnips have peculiar oily principles which are of value to an aperient and diuretic. They also are said to be good for coughs and hoarseness. Carrots are useful for correcting derangements of the liver. They are excellent as a dressing for painful wounds and swellings.

The tomato exercises medicinal effects not completely explained by the presence of alkaline salts. There is a principal present which, in a concentrated state, produces salivation and a free stimulation of the liver.

Advice to Home-Makers.

The home should be arranged in keeping with the occupation of its inhabitants. The light of bedrooms and the placing of the largest articles should receive careful attention. The lights should be so placed that the light falls upon the person dressing. The drawers should be kept in condition for easy pulling, and rubbing them with soap or paraffin is the means. When putting clothes away, either for Summer or for Winter, time is saved by making a list of each article, of its condition and of the receptacle containing it.

Trotting up and down stairs, especially when little children form part of the family, may be lessened by keeping a memorandum pad and pencil, some of the dusting articles, string and wrapping and writing paper upstairs. The bathroom could be free from clutter. A cleaning cloth, a brush and a whiskbroom should hang handily near the bowl. Every room in the house should have a basket to receive wastage. Plenty of hooks for individual use in the bathroom increase its usefulness.

Many details in the living-room demand forethought. Comfortable chairs should be so placed as to have abundant light for a reader. The settee by the fireplace may be used as a woodbox, and the seat along the window as the storage box of periodicals.

In the dining-room consideration of the children's convenience adds to the comfort of the family. Placing a little table for them near the mother is helpful, and a floor oilcloth under it keeps the rug or carpet clean.

The kitchen is the workshop of the house and has until recently ignored economy of labor and time. There is a logical order for arranging its tools. Articles required for any work should be together and within the worker's reach. The cold pantry, icebox, kitchen cabinet serving table and stove are used together and should be in close and continuous line. The sink should be in a butler's pantry or near the china closet. Always have plenty of table room near the sink. Have a high stool to sit upon while working, for nothing is gained by standing. The majority of experts as to kitchens agree that an area of ten by nine feet is the best size, and point to the compact kitchens of ships and dining-cars as proof of the soundness of their view.

Fish Sauces.

Tomato Sauce.—One-half can tomatoes, one-half onion minced, three peppers. Stew these together ten minutes. Melt one tablespoonful butter, add one heaping tablespoonful flour, strain the tomato on to this. Cook till it thickens, and pour around fish.

Sauce for Salmon.—Thicken one cup of boiling milk with one teaspoonful of cornstarch (or flour) and one tablespoonful of butter rubbed together. Add liquor from the salmon, season with salt, cayenne, and one tablespoonful of tomato catsup. Just before taking from the fire add one beaten egg.

The Paisley Advocate

PAISLEY, APRIL 18th, 1917

THE NEW FRANCHISE ACT.

The Ontario Franchise Act is now in force. By it every woman over 21 years of age, every soldier of whatever age, and any other man over 21 years left off the Municipal list, will be put on the list which will be prepared by a Board in each County or separated city, composed of five members as follows: 2 judges, Clerk of the County and Surrogate Courts, the Sheriff, and Clerk of the Peace.

In Bruce County, the Board will consist of Judge Klein, Judge Greig, Dr. Clapp, Sheriff Jermyn and Thos Dixon. This Board will name the registrars who shall act as enumerators for each municipality.

The new Act has nothing whatever to do with Municipal voters. If a man he has property is left off the Municipal list he will have only a Parliamentary vote if put on by the Registrar. Part 2 of the Municipal list will entirely disappear. There will be only parts one and two of the Municipal list; Part one for voters at Parliamentary and Municipal elections; part two for absentees who have votes at Municipal elections only. The lists printed in the local Municipalities will, in consequence, be much smaller than heretofore, as the names of no young men without property will appear thereon.

The only qualification to be put on the list by the registrars is to be 21 and a British subject, excepting with soldiers who will be entered on the lists regardless of their ages.

The chairman of the Board of Five shall give public notice of the date on which registrars shall commence their work, and when completed he sends his lists to one of the board to be known as the Clerk of the Board, and he orders 200 copies to be printed, which are to be sent to the same parties as the present municipal lists are sent to, also a notice is to be inserted in some newspaper in or near the municipality that the lists have been prepared and one of the Board shall hold sittings in the municipalities for hearing appeals. The decision of this revising officer shall be final.

The entire cost of this list will be borne by the government, and, of course, these lists will be prepared only every four years or whenever a bye-election is held. The polling places will be arranged in every municipality to accommodate the larger vote, and this will have nothing to do with the municipal polling subdivisions which under the new Franchise Bill will not have to be changed. There is nothing in the new Act to prevent the Municipal Assessors from being appointed Registrars, and the opposition put up an amendment that the Act be changed so that the Assessors must be appointed, but the motion was voted down. It is to be hoped the Board will appoint registrars who will do their work in a thoroughly impartial manner and not bring the Act into disrepute. Of course, if he does there is redress, but it involves considerable trouble. The Act seems to be a good one, but the actual working out of it will be the real test. —Enterprise.

This Coupon is for Every Farmer who is willing to use Help

The Empire must be Fed or we lose this War

As the District Representative of the Department of Agriculture I have orders to do my utmost, amongst other duties, to encourage production of Farm Products and particularly to assist in securing a supply of farm labour.

By a system, I report on both the available supply of labour and the local demand. If the demand exceeds the local supply I have the whole Province to draw on, through the Ontario Government Public Employment Bureaux which I represent in this District, and I will do my utmost to see that my District is supplied.

I am satisfied that if the farmers in my District who are anxious to fill a patriotic duty and take advantage of the strong demand there is and will be for every pound of food stuff that can be produced—want or will use the available labour, they can get good help by filling in, clipping out and mailing the above Coupon. But you should do it today.

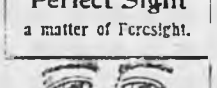
The Motherland sorely needs food.

Where is the Labour coming from? Everywhere.

It is streaming in to us from all quarters. Thanks to the deep interest shown by the Department of Agriculture, the Public Employment Bureaux, the Organization of Resources Committee, Boards of Trade, etc., a sweeping campaign has been carried on in the Cities, Towns, etc., to arouse the people to a sense of the duty they owe to the Farmer and to themselves to place hand and mind in readiness for a call to work on the land this season.

High School boys, retired farmers, teamsters, warehousemen and business men in thousands, preferably those who were raised on farms, are being lined up.

We are taking great care to impress on them that this means work—not a holiday—and they will all understand this thoroughly. In most cases the workers will be actuated by fine patriotic motives, ready to work and work hard.



This is a sincere endeavor to co-operate with the farmers to increase food production. We know you Farmers will do your part.

Our boys at the Front must not go hungry.

District Representative
Department of Agriculture
N. C. McKAY
WALKERTON, ONT.

Perfect Sight

a matter of Foresight.

Many cases of eye trouble are cured by early application of proper lenses. Present neglect means future trouble.

A STOPPED WATCH

—one that will not go AT ALL—does not cause as much bother as one that runs now fast, now slow, in an erratic fashion.

The first you don't pretend to depend upon—the other is a constant source of annoyance.

Most people can afford a watch, but no one can afford an uncertain fast and slow one.

And when our Repair Department is so close at hand there is really no excuse for carrying anything but an accurate time-piece, no matter what the first cost was.

Consult us about any watch troubles that may arise.

I. SHOEMAKER

Jeweler and Optician

Grieg—Hall

A quiet but pretty wedding took place at the home of Mrs Hiram Byers on Wednesday, March 28th, at five o'clock, when their youngest daughter, Marian Helen, became the bride of Mr Braxton Gordon Greig. The ceremony was performed by Rev. W. J. Watt, B.D. The bride, who was given away by her brother, entered the drawing room to the strains of the "Bridal Chorus" from Lohengrin, and took her place beneath an arch of evergreens and flags. She was daintily attired in a gown of duchess satin trimmed with ivory lace and rose buds, also wore the customary bridal veil, and carried an exquisite bouquet of carnations and maiden hair fern. The groom's gift to the organist was a pretty pearl brooch. After the ceremony and congratulations the bride led the way to the dining room, which was tastefully decorated, where a dainty dejeuner was served. The evening was spent in music and games. The high esteem in which the young couple are held was shown by the many and costly gifts. The bride's going away suit was of navy blue serge with white hat faced with black and willow plume.

Russian Vodka Shipped In

License Inspector White confiscated a couple of cases of unclaimed wet goods at Lucknow last week. One of the cases contained a rare curiosity—Vodka, the famous Russian drink whose manufacture is now prohibited in Russia. This stuff was made in Holland and shipped to a young Russian who is working on a farm, and who having no premises of his own, would have to take the goods into the property of his employer, which happens to be a "public place." The immigrant was told that this was sure to get him and his employer into serious trouble so he allowed the precious liquid to be confiscated. The Vodka is a wicked-looking mixture and by reputation quite as wicked as it looks. Inspector is awaiting instructions from the Department as to the disposal of the liquor.—Telescope.

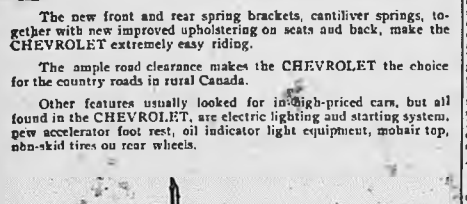
"CHEVROLET"

The Only Car at Its Price in Canada Fitted with Electric Starter and Electric Lighting Equipment



The powerful valve-in-head motor insures CHEVOLET owners of ample speed, with sufficient surplus power to take hills on high gear.

The selective sliding gear transmission, with three speeds forward and reverse, makes motoring a pleasure and facilitates progress in congested traffic and over bad roads.

The new front and rear spring brackets, cantiliver springs, together with new improved upholstering on seats and back, make the CHEVROLET extremely easy riding.

The ample road clearance makes the CHEVROLET the choice for the country roads in rural Canada.

Other features usually looked for in high-priced cars, but all found in the CHEVROLET, are electric lighting and starting system, new accelerator foot rest, oil indicator light equipment, mohair top, non-skid tires on rear wheels.

LOCAL AND DISTRICT NEWS

A Lesson in Loyalty

Alexander Stewart, the Harriston man prosecuted for seditious utterances in a conversation with Mr John Rowland of Walkerton, pleaded guilty to the charge when he came up for trial at Guelph assizes last week. He was allowed to go on suspended sentence, on providing $2,000 bonds for future appearance. The judge commended Mr Rowland for making the complaint in this case.

160th the Best Yet

Col. Shannon, the commanding officer of this military district paid a remarkably high compliment to the 160th Bruce Batt. in talking over the phone to President John Rowland of the local Preparedness League on Friday. The Col. referred to the Bruce Batt. not as "one of the best" but as the best battalion which has gone overseas yet. And the Col. more than any other man is in a position to know. —Telescope.

McInnis—Warren

A pretty little 20th century romance is the term we may be permitted to use in alluding to the marriage of one of Paisley's most popular young ladies, Miss May Warren, adopted daughter of Dr and Mrs A R Allen. Last September Miss Warren took charge of a rural school near Chatsworth, and this Easter-tide she became the bride of Mr George Elwood McInnes, secretary of the school section. The marriage was consummated quietly on Tuesday at Owen Sound. The Advocate joins in the chorus of good wishes from the bride's many friends in her old home town.

The Late Mrs. McLay

Miss G McBeath arrived home last week from Milwaukee, where she went when her family received word of the death of her sister, Mrs Angus McLay, in that city. The deceased was the third daughter of Mr Thos McBeath, of Goldie St. and was born and raised on the old homestead, 2nd of Elderslie. She was here last September on a visit to her father and friends. Prior to her marriage 24 years ago she was teaching school. She is survived by her husband and a family of eight children. The cause of her death was pneumonia, from which she had been ill for about twelve days.

160th Are Champion Athletes

The Bruce Overseas Battalion has been winning numerous honors in the athletic contests at Witley Camp. They did the best bayonet fighting that has been done in the brigade, also won out in a tug-of-war with the 134th team, who were never beaten before, and Pte Geo S Stewart, of Paisley, carried off the championship in the heavy-weight wrestling bouts. In the finals George was matched against Sergt Kemp who held the Canadian overseas forces championship in the heavy-weight class. Sergt Kemp is 6 ft tall, and had an advantage of 10 pounds in weight. Needless to say, the 160th soldiers and officers were greatly pleased with the outcome of this contest.

Mrs Robert Cassels

Mrs. Robert Cassels, whose maiden name was Amelia Tiers, passed away on Monday in her 84th year, 17 months after the death of her husband. Mrs Cassels was born in Toronto, lived in Streetsville for 20 years and came with her husband to Elderslie in 1857, the year she was married, and they settled on lot 11, concession 2, where they lived till they moved to Chesley 12 years ago. Their family consists of a son, Dr. W. G. Cassels of the Yukon Territory, and Miss Charlotte at home. Owing to a fall which affected her hip bone, deceased had been an invalid for over 20 years. She bore her affliction with christian fortitude. The funeral service on Wednesday was conducted by her pastor, Rev. J. A. Hetz. Thus another good woman has gone to be with God.

Patriotic At Home and Dance

The "At Home" held on Friday evening in the town hall, under the auspices of the Patriotic League, was, like all other entertainments in aid of patriotic work, a splendid success. With rugs, pictures, curtains and other accessories the hall was transformed into a large, cosy drawing room. The orchestra supplied music, assisted by Mr Barton Raynor of Southampton. A very enjoyable evening was spent with games and cards, followed by a dance after supper. The reading lamp drawn for went to Miss Lilian Trelford, and the can of honey to Bessie Murcer. Tickets sold for the lamp amounted to $11.20 and for the honey $28.50. Net proceeds (about $100) will be used by the Women's Patriotic League for purchasing material to make Red Cross supplies and soldier's comforts. The ladies of the League desire to thank all who patronized the affair and helped to make it a success.

The Late Mrs. (Dr.) Black

That the people of Paisley and surrounding district sincerely mourn the demise of Mrs Black, and sympathize with the bereaved husband, family and friends, was manifested by the large attendance at the funeral on Thursday afternoon. The remains arrived by the noon train, and the service was held in Knox church at 2.30 pm. Rev G C Little, B A officiated, and paid a beautiful tribute to the memory of the deceased. Rev L W Usshi assisted in the service. The casket was covered and surrounded by many rich floral offerings from loving friends and fraternal societies. The pall-bearers were Dr. Allen, G L Carter, H Fletcher, J H Steele, D McArthur and J P Fisher. Interment was made in Stark's Vale cemetery. Mrs Black was born at Middleville, Ontario, a daughter of the late Wm Leslie and Mrs Leslie, and was in her 49th year. She spent most of her girlhood days in Glamis, her mother removing to that place upon her second marriage to the late Thos Pickard. In 1893 the deceased was married to Dr M C Black, and the following year came to Paisley, where they remained until removing to Clifford about 18 months ago. Mrs Black was a most devoted wife and mother. Her life among us was marked by invariable calmness and gentleness of demeanor, amiability and sociability. In fact she was one of those persons who possess characteristics, virtues and graces that exert a refining and ennobling influence upon a community, and become endeared to all. She was gifted in voice and accomplished in music, and lent her assistance freely to musical events as well as to many other worthy interests in the village. It may be truly said that life will never be quite the same to many who knew her, while those who were near to her will long for her with unutterable longing for a mother's counsel and advice and a wife's gentle and loving sympathy. Beside her sorrowing husband, one daughter and one son, Zeta and Leslie, are left to mourn her loss. Her only living sister is Mrs J K McLennan of Glamis, and Mr F H Leslie of Niagara Falls is an only brother.

First Paisley Soldier Returns Wounded

Gr Dan McLeod, the first man from Paisley to enlist for overseas service, returned to town last week, having landed from England about a fortnight before. Gr McLeod enlisted as a piper with a Hamilton battalion of Highlanders in August, 1914, but later transferred to the 11th Battery of Field Artillery, went overseas with the First Contingent, and was in the earliest engagements in which the Canadians participated. He has been twice in the casualty list, shedding his first blood at Ypres. At the Somme he was again stricken down by shrapnel, and so badly were his legs shattered that he will not be fit for service again, and expects to receive his discharge shortly. He is a Scotchman, born in Rossshire, and came to Canada about two years before the war opened. He is a blacksmith by trade, and just prior to enlisting was employed in Heath's shop here. Finding Canada to his liking, he intends remaining in this country. He is a visitor at Mrs N D McLeod's while in town.

—Rod and Gun for April is on the newsstands, and its table of contents reveals much of interest to the devotee of rod and gun. Bonnycastle Dale writes in this issue of "Laddie the Boy Trapper;" A H Haines contributes a story "The Big Hook of Bald Knolls," descriptive of a deer hunt under unusual circumstances in B C; and there are other tales of hunting, fishing and canoeing equally interesting to the lover of the out of doors. "Fishing Notes" edited by Robert Page Lincoln, is replete with up-to-date articles for the discipline of the immortal Izaac while such well known writers as Lieut Townsend Whelen and Chas Ashlan contribute splendid articles on the Guns and Ammunition department of this issue. W J Taylor, Ltd, Woodstock, Ont, is the publisher.

The Overland Big Four—again improved and refined—is the car that built Overland.

This car for nine years has undergone steady development and refinement with the help and advice of an army of owners which now totals over three hundred thousand.

The unprecedented accumulated experience in building this type of car has taught us true balance as nothing else could—the value of right weight—the true tire, gasoline and oil economy—the utmost attainable riding comfort—the lines that truly express refinement and beauty.

The price is $1190 until May 1st—thereafter $1250.

The Light Six is the same model with changes conforming to approved six-cylinder construction and is likewise an excess value car at the price, $1380 until May 1st—thereafter $1435.

These cars represent a safe purchase at a very considerable saving on a basis of comparative values.

Our April deliveries are limited.

PERSONALS.

Ontario Woman.

Chatham, Ont.—"Some time ago I had a general breakdown. It terminated in quite a bad case. Dr. Pierce's Favorite Prescription was recommended to me by a friend who used it and received much benefit. I began taking it and in six months I was completely cured of my ailment and have never had any return of same. I can recommend this medicine as being good, if one will give it a fair trial."—Mrs. JOHN ACKERT, 67 Edgar St., Chatham, Ont.

At the first symptoms of any derangement at any period of life the one safe really helpful remedy is Dr. Pierce's Favorite Prescription.

Thousands of women in Canada have taken it with unfailing success.

Dr. Pierce's Favorite Prescription is a true friend to women in times of trial. For headache, backache, hot flashes, mental depression, dizziness, fainting spells, lassitude and exhaustion, women should never fail to take this tried and true woman's medicine.

Prepared from nature's roots and herbs, it contains no alcohol or narcotic, nor any harmful ingredient. In either tablet or liquid form. Write Dr. Pierce, Invalids' Hotel, Buffalo, N. Y., to-day for free medical advice.

Dr. Pierce's Pleasant Pellets not only the *original* but the *best Little Liver Pills*, first put up *over 40 years ago*, by Dr. R. V. Pierce, have been *much imitated* but *never equaled*, as thousands attest. They're purely vegetable, being made up of concentrated and refined medicinal principles extracted from the roots of American plants. Do not gripe. One or two for stomach corrective, three *or four for cathartic.*

Comrades!

If you cannot carry a rifle, you can serve your country on the farm.

"The plow is our hope," declared Right Hon. David Lloyd George, the Prime Minister of Great Britain. The tremendous significance of these words in the face of a world shortage of food must be a matter of concern to all. It points out the path of duty to men and boys unable to enlist in the army but capable of helping to increase production.

Help the farmer increase production

At this supreme hour when ample food production is one of the indispensable means of victory, the country faces a serious shortage of men and boys on the farms. The Department of Agriculture emphasizes the urgency of every man and boy taking to heart this splendid opportunity for patriotic service.

Boys Decide now to help in the war. If you are between the ages of 14 and 18, and have good farm record, you can secure promotion at school by enlisting for farm service any time between April 20th and May 20th.

Parents are urged to encourage their boys to enlist for farm service. The physical and moral welfare of your boy will be advanced by a summer spent close to Nature; an interest will be awakened in an important industry of the country that will be a help to him in his whole future.

Men The Department appeals to retired farmers, to men following no occupation (retired), to business men who can spare at least a portion of their time, to all men who can arrange their affairs so as to help some farmer. Every man is invited to enlist for farm service.

Confer with your District Representative of the Department of Agriculture, or write or visit Ontario Government Employment Bureau, 15 Queen's Park, Toronto. 81

Farm Crop Queries

Conducted by Professor Henry G. Bell.

The object of this department is to place at the service of our farm readers the advice of an acknowledged authority on all subjects pertaining to soils and crops.

Address all questions to Professor Henry G. Bell, in care of The Wilson Publishing Company, Limited, Toronto, and answers will appear in this column in the order in which they are received. As space is limited it is advisable where immediate reply is necessary that a stamped and addressed envelope be enclosed with the question, when the answer will be mailed direct.

Henry G. Bell.

Question—F. A. B.:—Can you tell me the cause of scabby potatoes and how to treat ground so as to prevent potatoes from becoming scabby? My potatoes seem to grow fairly well, but are always very scabby.

Answer:—Scab on potatoes is a disease caused by a parasitic fungus. When once it gets into the soil it remains there for some time. Potatoes should be grown in a rotation and should be kept off soil known to be infected with scab. It is not advisable to use wood ashes or lime on ground to be put to potatoes, as they make conditions right for the development of the scab. Fresh manure tends to produce suitable conditions for growth of scab.

If potatoes are planted on clean ground and treated with either formalin or corrosive sublimate at a cost of $1.00 to $1.50 per acre, no scabby potatoes will be present. The formalin treatment may be used, but we prefer the corrosive sublimate treatment, since it controls a number of other diseases besides scab. It is as follows: Dissolve four ounces of corrosive sublimate (purchased at any drug store) in 30 gallons of water. Soak the seed potatoes one and one-half hours before cutting. It is advisable to dissolve the corrosive sublimate in one or two gallons water and add sufficient to make up 30 gallons. This had best be done two weeks before planting and before potatoes sprout. The mixture can be used but four times, after which it should be thrown away, and a new lot made up. It should be prepared in wooden vessels. It destroys iron or tin. Since it is a deadly poison it should be kept away from stock and children. Do not feed any left-over potatoes that have been treated.

Question—E. L. M.:—How much corn for silage should be sown to the acre, and how far apart should the rows be?

Will corn in drills produce more silage to the acre than if sown in hills?

Which is considered the best method of seeding?

Has the corn planter any decided advantage over the ordinary seeder?

Answer:—The rate of planting corn for ensilage depends largely on the fertility of the soil. Plant closer on rich than on poor soil. The rows should be planted at whatever distance is convenient for cultivation, usually not closer than 36 inches. Corn can be planted closer for ensilage than if desiring for husking. If the ground is fairly rich drop the seed from 8 to 10 inches apart in rows. If much corn is wanted in the ensilage, it should be planted farther apart than if forage is the main consideration. More ensilage will be produced in drills than in hills. Unless the ground is likely to be extremely weedy, we would advise drilling for ensilage.

The ordinary corn drill is the best machine to use for seeding, especially when the corn drilled. I am not quite certain just what is meant by "the ordinary seeder," but if a "job" or hand planter is meant, one important advantage the drill has is that the corn can all be planted at a uniform depth.

Your Problems

Conducted by Mrs Helen Law

Mothers and daughters of all ages are cordially invited to write to this department. Initials only will be published with each question and its answer as a means of identification, but full name and address must be given in each letter. Write on one side of paper only. Answers will be mailed direct if stamped and addressed envelope is enclosed.

Address all correspondence for this department to Mrs. Helen Law, 75 Castle Frank Road, Toronto.

R. S. A.:—1. Probably the best vine to plant at a brick wall is Boston ivy. For a wooden wall the old-fashioned Virginia creeper is excellent, also Japanese Kudzu vine, and Trumpet vine. The last named has gorgeous orange red red flowers. For the verandah, there is nothing lovelier than the wistaria. Buy one plant each of the blue and the white and train them to intermingle. They bloom profusely in June. Another splendid flowering vine is the clematis jackmanii, bearing large purple flowers in July. The Japanese clematis has a small white flower and blooms in September. The climbing honeysuckle blooming in July, and the Dutchman's pipe make a good shade 2. For a hardy white rose choose Frau Karl Druschki; for crimson, Alfred Colomb; for yellow, Persian yellow; for pink, Mrs. John Laing. 3. Shrubs which bloom very early are forsythia or golden bell, and the flowering almond of which there are three varieties, red, pink, and white. The althea has a late season, from July to October, and is a handsome compact shrub attaining eight feet, and comes in four varieties of double flowers, blue, pink, red and white.

B. E.:—1. To preserve your spools of sewing silk, make a box two by four by ten inches, making the top serve as a lid. Cover with cretonne or linen. In each end make two grooves, two inches apart, and insert sticks slightly smaller than the inside of a spool. On these arrange your left-over spools of sewing silk, and whenever a special color is needed you can find it very easily on your spool.

file. 2. Have you tried giving each child a little plot of ground for a garden? Most children take delight in growing flowers and vegetables; it is a health-giving occupation, and is highly recommended as teaching thrift to boys and girls, to say nothing of patriotism in times like these. Of course, they will need oversight and encouragement, and it might be well to offer a prize for the best kept garden. Allow the children to take turns in supplying flowers for the house vases and vegetables for the dinner-table.

G. W.:—In "Comedies for Young Folk," there is a play entitled "The Hereford Benevolent Society," arranged for seven girls and one boy, which might suit you. "How the story Grew," for eight girls, and also "Aunt Deborah's Fuss Luncheon," for seven girls, would probably answer your purpose.

C. C. M.:—1. A wedding veil may be composed of tulle, of net, or of lace. 2. The bride's relatives occupy pews on the left side and those of the bridegroom on the right side of the central aisle. 3. If your daughter wishes to invite her Sunday school class, why not utilize them as flower girls? There will be plenty of wild flowers to be had, which they could carry in fancy baskets. In that case they should lead the procession, followed by the ushers, then the bridesmaids, and the maid-of-honor, and lastly the bride with her father. When leaving the church, the flower girls walk first, followed by the bride and bridegroom, then the best man with the maid-of-honor, and the ushers and bridesmaids.

The Sunday School

INTERNATIONAL LESSON APRIL 22.

Lesson IV. Jesus Anointed at Bethany—John 12. 1-11. Golden Text—Mark 14. 8.

Verse 1. Six days—Counting Passover and the day of the journey; we should say "six." It was Sunday—that is, Saturday evening—when he arrived, and sat down to the evening meal. Bethany—Mark 14. 3 suggests that he did not stay in Martha's house; the little party was at "Simon, the Leper's"—no doubt one of the Lord's grateful healed ones. A further hint that he did not stay with Martha may perhaps be seen in Mark 11. 12: imagine Martha letting him go away hungry in the morning! The reason would be, that his enemies would know where to seize him, and he meant they should not do it till the eve of the Feast.

2. Martha served. It was Martha's way of working out a love as deep as Mary's, and the best way, until Jesus himself expressed his own preference (Luke 10. 42).

3. Mary. Most men not identify the women; it is suggestive that he records the work that made her deed immortal (Mark 14. 9), and the ointment's name! John has one of his hints of the duty, like a woman's, to be named) who was a sinner, an entirely unfounded Latin tradition made her Mary of Magdala. Pure spikenard—the adjective is most important, as a name for an ointment, or perfume, is often misleading, though the margin is less unlikely. The Greek is pistic, which may be a local name, from the place where this perfume was made. Rod. Mark says he got this name from Luke 7. 38. An ingenious unproductive picture brings all three together and makes Mary of Bethany, the woman who "loved much" because she had been "forgiven greatly." The Evangelists, concerned with more important matters, do not satisfy our curiosity; why the Synoptists name neither woman we cannot tell.

4. Judas Mark only tells us that "some" said this, and at the end of the episode that Judas went to the high priests with his infamous offer. The suggestion is that the loss of this excellent opportunity finally decided the Wretch. How easily he could have persuaded Mary that the Lord would prefer to have the money given to the poor! Then he could have gone away with nearly three times as much as the high priests' thirty shekels! Believer, him up (margin). Only once (Luke 6. 16) is the word traitor used. The other is correctly rendered; it is the verb used in Gal. 2. 20 and makes us think more of the Divine purpose than of the black deed that was over-ruled to fulfil it.

5. Three hundred shillings. The Roman denarius (Mark 12. 15). Estimated by the size of the silver coin, the assumed total would be some fifty dollars.

6. This light on Judas's character is given us only here. Starting like the rest with a vehement conviction that the Master was the destined King of Israel, Judas imperceptibly came to put that earthly kingdom first, while they put him first with growing personal devotion. Hence he saw what they never saw, that the earthly kingdom was not coming and the discovery wrecked him. Worldliness, thus entering, dragged him down, and this verse shows what he has come to. Box (margin).—The word occurs often in vernacular texts accessible since the Revised Version was published: it means a box for holding small articles. Took away—Beyond question the right rendering.

7. Suffer her—Translate (as the same word in Mark 14. 6), "Let her alone; let her keep it." The phrase in John is a condensation of words which Mark gives more fully. It would be better understood if we placed it after Mary had just begun, supposing the protest to have started as soon as she broke off the neck of the hermetically sealed flask. Both Mark and John make it clear that this is "the day of preparation for burial" (so read). The margin, and the reading adopted in the American Version are alike impossible expedients to cut the knot.

8. Poverty is therefore inevitable—like war—and will be while the world lasts! So some wise folks argue from this passage; anything can be got out of the Bible if one has a mind to try! But a little common sense is not a bad qualification for an interpreter.

9. This account of the common people's coming prepares the way for the Triumphal Entry. The writer sees the significance in their detachment from the Jews, which precipitates action on the part of the alarmed hierarchy.

10. Chief Priests—Read High Priests: it is the same word in the plural. There were several ex-High Priests living, whose deposition by the Romans did not make them any less high priests in Jewish eyes. And there were priests of other families from which the High Priest was always taken. Took counsel—We know nothing of the results; they may well have succeeded.

Horse Sense

Bone spavin is generally indicated by well-marked lameness for a few steps or further, then going sound until again allowed to stand, a bony enlargement on the front, inside and outside part of hock.

Treat, blister with 2 drams each of biniodide of mercury and cantharides mixed with 2 oz. vaseline, repeat in about 2 weeks. If this fails to cure have joint fired and blistered.

The tractor fit- in with the spring work in a way that is hard for the horses to do. The horses have spent the winter in comparative idleness and are not in condition to go out and do the hardest kind of work. They will tire, while the machine will not.

More horse power is necessary for the use of larger machinery, which in turn does farm work more thoroughly and at a lower cost per acre or per ton of crop. More horses, heavier horses and horses in better condition all through the working season will lower production cost. Prepare the horses in the early spring for a hard summer's work by regularly exercising and gradually increasing to heavier work.

Poultry

HOW TO SET A HEN.

As the time approaches for the hen to become broody or set, if care is taken to look into the nest it will be seen that there are a few soft, downy feathers being left there by the hen; also the hen stays longer on the nest when laying at this time, and on being approached will quite likely remain on the nest, making a clucking noise, ruffling her feathers and pecking at the intruder. When it is noted that a hen sits on the nest from two to three nights in succession, and that most of the feathers are gone from her breast, which should feel hot to the hand, she is ready to be transferred to a nest which had been prepared for her beforehand. The thermal temperature of a hen is from 106 to 107 degrees F., which varies slightly during incubation.

Dust the hen thoroughly with insect powder, and in applying the powder hold the hen by the feet, the head down, working the powder well into the feathers, giving special attention to regions around the vent and under the wings. The powder should also be sprinkled in the nest.

The nest should be in some quiet, out of the way place, where the setting hen will not be disturbed. Move her from the regular laying nest at night and handle her carefully in doing so. Put a china egg or two in the nest where she is to set, and place a board over the opening so that she cannot get off. Toward the evening of the second day quietly go in where she is setting, leave some feed and water, remove the board from the front or top of the nest and let the hen come off when she is ready. Should she return to the nest after feeding remove the china egg or eggs and put under those that are to be incubated. If the nest, are slightly darkened the hen are less likely to become restless. At hatching time they should be confined and not disturbed until the hatch is completed, unless they become restless, when it may be best to remove the chicks that are hatched first. In cool weather it is best not to put more than ten eggs under a hen, while later in the spring one can put twelve or fifteen, according to the size of the hen.

Among the advantages of keeping pure bred fowls as compared with mongrels are: better results in breeding; more opportunities to dispose of eggs for setting, at high prices; uniformity in the eggs and a better appearance of the flock.

Sunlight, ventilation, fresh air; these are the prime essentials to success with incubator-hatched chicks. Fowls may survive for a generation or two without full provision for all this, but they gradually lose vitality and eventually die off.

Young chicks should not be given food that is liable to become soggy before it is digested.

The remains of the yolks in the newly-hatched chick will keep the bird alive without other food for over two days.

An occasional drink of sour milk will be beneficial to young chicks, as the lactic acid in sour milk attacks the organism which causes white diarrhoea.

Chicks that die before they are two days old are usually weaklings, which could not be saved easily. They probably come from eggs that had too hard a shell or else from eggs laid by diseased hens.

For young chicks provide lots of light, and warm air, a south exposure, and light, dry mill for scratching. The pens or brooders must be roomy and built so that sunlight will get in. By cleaning these often, chicks are not liable to suffer from lice and other vermin.

One of the chief causes of trouble with chicks is overfeeding. Overfeeding can be noticed at once, for the chicks will lie down a large part of the time. A healthy chick will always scramble into the thick of the crowd when food is offered.

Hogs

Farmers who intelligently feed and care for their pregnant sows, so as not to overfeed them with fat, but instead give them foods for the development of bone and muscle, are on the right road toward the production of strong, healthy litters. Their piggy-ness programme, however, does not end here.

Two weeks before farrowing, the sow should be put into a farrowing pen so that she will become acquainted and contented in her new quarters. The farrowing pen should be dry and free from drafts. Provide the pen with a good tight mash of 2 x 4 inch planks set eight inches from the wall and eight inches from the floor to prevent the sow from crushing the pigs against the wall. Use only a small quantity of bedding; leaves or straw are preferable. See that the sow has plenty of fresh water.

It pays to keep the sow quiet. Assistance at the time of farrowing should be at hand if the sow is nervous and need not be helped if she is getting along well. In cold weather put the newly born pigs in a well warmed basket, and after farrowing is over the pigs should be placed with the sow, care being taken that each one gets a teat. When the afterbirth is passed, it should be removed from the pen at once and burned or buried.

After farrowing the sow should have nothing but water and a little thin slop for the first day. The feeding for the first three or four days should be light, and the time consumed in getting the sow on full feed should be from a week to ten days, depending on the condition of the sow and the size and thrift of the litter. It takes plenty of sow's milk to make healthy growing pigs. If the pigs begin to scour, feed the sow less and give her plenty of strong lime-water.

It is very necessary that the little pigs have plenty of exercise and all the sunlight that can be given them. Do not allow the pigs to run out during a cold rain. If possible, provide green feed or roots. These keep the sow healthy and cheapen the ration. Encourage the pigs to eat grain after they are three or four weeks old. Build a creep for them so they can feed alone. At this age feed for bone and muscle. Give them all the skim-milk you can. If skim-milk is not available, give them some meal and plenty of pasture in season. In about eight or ten weeks the pigs will have practically weaned themselves.

Sheep Notes

The wool growers of Ontario still have an opportunity this year of disposing of their crop at even less expense than those of other provinces, who co-operate under provincial management, provided they send their product to the central grading and selling station at Guelph. The charges made by the other provinces have been $1.00 for membership and one cent per pound for the handling of the wool, while in Ontario the price will be, in all, five cents per fleece, to cover insurance on the wool, cost of twine, and wool sacks, cartage at Guelph, and all labor involved in handling the wool.

With handling done at this small price, and the market for the wool right at their door, the Ontario sheep men will have an advantage over the men of the Western Provinces that will offset the latter's advantage in cheap growing of the wool. The Westerners have such confidence in their system of marketing this product, and are so satisfied of the superiority of the East as a place for marketing, that they use this year renting a warehouse in Ontario and paying the freight from the West to Ontario, in order that their wool may be marketed here. The knowledge of this fact should be enough to induce all Ontario wool growers to take part in the new movement immediately by applying to the secretary of the Canadian Sheep Breeders' Association for application forms and rules governing these co-operative sales.

The Early Potato.

For the earliest crop only the most vigorous seed should be selected as conditions are not so favorable to the starting of the plant, in early spring as slightly later.

For the early crop a well-drained, fairly light soil should be chosen and cultivation should be deep so as to encourage cleanage through the early weeks of the plants' growth as the weather at that season is usually wet.

Before planting potatoes in an untried soil it is well to test for sourness by the litmus paper method, and if lime is needed, add it. The sets for the early crop should not be put in deep as the potato needs heat, light and air in growing. A depth of two to three inches is sufficient for the early planting though five inches is better for the main crop, which is planted when the ground becomes warm and dry to a greater depth.

For quickest results, the seed potatoes should be spread out in a light cool place, for some time before cutting, so that short sprouts may form, then at least two sprouts should be left to each set. Cutting sprouted seed must be done by hand and carefully, so as to avoid breaking the sprouts, and as a matter of fact no machine will satisfactorily take the place of the good hand worker for preparing potato sets, especially when the price of potatoes stands as it does at present.

Results of previous years show that at nine weeks after planting, in an early section, one may look for a good price in any year, and the early crop should be well worth growing in 1917.

Bedtime Stories

Phoebe's Namesakes.

"Phoebe! Phoebe!" called little girl Phoebe, imitating little bird phoebe on the clothes wire above her head. "I've a namesake, Aunt Alice, a name-sake that is a little bird!"

"You have more than one in the bird world, dear," returned Aunt Alice.

"Why, who are the others?" asked Phoebe.

"See if you can search them out by yourself," said Aunt Alice.

One morning on her way to school Phoebe caught a sound that made her stop and listen.

Yes, there it came again! A crisp, gentle little cry of "Phoebe! Phoebe!"

"That's not Phoebe Gray!" she thought excitedly. "It must be one of my other namesakes. Oh, oh, there it is! Why, it's a chickadee! That's not the chickadees' song. I thought they were all gone, anyway."

Phoebe could hardly wait until the close of school to tell Aunt Alice of her discovery.

"Chickadees do have a phoebe note in spring," said Aunt Alice. "So now you have two of your friends. You should hear your third namesake whistle, 'Pewit phoebe's soon, too."

"I never heard that song," said Phoebe. "I don't believe I know the bird that sings it."

"Oh, yes, you do," merely answered Aunt Alice. "You saw one the other day."

Phoebe sent about the woods and fields chanting softly to herself, "Pe-wit phoebe! Pe-wit phoebe!" and at last one day she recognized an answer.

"I've got it! I've got it!" she ran shouting to Aunt Alice. "It's the meadow lark. I always thought it said 'Spring o' the year,' though."

"You can make it say either," Aunt Alice replied.

A few days later Phoebe and Aunt Alice were walking along the roadside together. Fifteen or twenty goldfinches were warbling and whisking about overhead.

"Aren't they pretty?" cried Phoebe. "But, Aunt Alice, did you hear that?"

"A little note that sounds like a faint 'phoebe'?" said Aunt Alice. "Yes, it certainly does, though usually the goldfinch's song is a tinkle or a jingle of shells, and in the fall it is more like 'Chilee, chilee!' all day long."

"Well, I've found four namesakes anyway!" cried Phoebe. "That's a good many for one little girl, isn't it?"

Chicks should not be fed before 24 hours have elapsed after hatching, but fine sand should be available as soon as possible. This helps digestion.

A Wisconsin cow at 19 years of age produced 427 pounds of butterfat for the year. She had been fed silage all her life. There, says a The Breeders' Gazette, is the answer for the occasional skeptic one still hears sometimes saying that silage is not a success, that the acid destroys the teeth, and eats out the lining of the stomach.

Believe in Preparedness? Are you ready for Mr. Germ? Catching cold is a crime. Fortify yourself against cold germs and other germs by eating **Shredded Wheat Biscuit**, the food that supplies the necessary warmth and strength to resist disease. A better balanced ration than meat or eggs at a much lower cost. For breakfast with milk or cream.

Made in Canada.

POINTERS FOR GARDENERS.

Practical Advice for Amateur Growers of Vegetables and Flowers.

It is desirable that the frost should leave the soil of the vegetable garden as soon as possible, therefore anything that prevents the full force of the sun's ray reaching the soil should be removed. Warm sun and rains will soon rid the open spaces of all frost, and dry them sufficiently to justify digging.

Clear the ground and give the sun a chance if you are anxious for an early start in the garden. Rubbish heaps, boards, straw or litter of any sort on the surface of the garden will tend to keep the frost in the soil where these coverings exist long after the exposed surface has become frost-free. Litter is scattered over the surface of perennial beds to keep the frost in as long as possible. This is done because alternate thawing and freezing is injurious to these permanent plants. In most cases the covering should remain until the spring is sufficiently advanced so that anything in the nature of a heavy frost is unlikely.

There is no reason why an attempt should be made to turn over the whole garden at once. A much better method is to first dig a plot sufficient for radishes, lettuce, cress, onions, etc. This plot should be raked smooth, firmed and planted just as soon as it is ready. It will be ready for planting when the soil has become warmed up and not one minute before.

Garden seeds are too expensive this season to be wasted, but that is what will happen when the amateur fails to mix his commercial fertiliser with the soil in the furrows. If the seeds come into contact with the fertilizer, all their vitality will be burned out of them. This is a common error and explains why a great many seeds fail to sprout. The seedsman is not always to blame.

A common cause of poor results in vegetable gardening is too deep planting of the seeds. Germination will be much better in the spring when the plan of shallow planting is adopted. Later in the season, when the soil becomes warm, the seeds should go in deeper. With large seeds like peas and corn, it is often advantageous to sow them in a little trench, filling it in as the plants grow until the ground is level.

Put all your wood ashes on the garden, and if you get any quantity of soot when you clean out your furnace or chimney spread it around the roses or the aster plants.

Gathered The Materials.

"Grocery butter is so unsatisfactory, dear," said Mrs. Youngbride, "I decided to-day that we would make our own."

"Oh, did you?" said her husband.

"Yes; I bought a churn and ordered buttermilk to be left here regularly. Won't it be nice to have really fresh butter?"

Grape-Nuts

contains the rich supplies of phosphate of potash grown in wheat and barley.

Its mission is therefore clear and plain—it supplies what ordinary food lacks.

And it does its work in a sturdy, straightforward, dependable way, as tens of thousands of its users can testify.

"There's a Reason"

BROTHERS IN THE TRENCHES.

War Has Broken Down The Class Distinctions of Peaceful Days.

To illustrate the fact that soldiers of very different social classes, after fighting side by side, often become affectionate friends, the author of Notes on the War, a Frenchwoman, tells the following story:

A very jovial young soldier used to entertain his companions most delightfully by his irrespressible gayety. One day his spirits failed. When one of his comrades asked the reason, he said:

"In time of peace I am a clown in a music hall. It's my business to entertain people; but to-day I got a letter from my wife telling of the illness of our two children. She can't go out to work, and things look black. That's why I can't joke to-day."

Some days later the same comrade said, "You are merry to-day. What's happened?"

"Why, a letter from my wife says a man called and handed her three hundred-franc notes from his client, M. Jean Breton; so things are bright again for us. But who can M. Breton be?"

The other soldier was silent for a moment, but finally said, "Don't worry, mate. I am Jean Breton. I am rich enough to afford it. Now cheer us with one of your comic songs, please."

What He Was Going To Do.

Princess Patricia of Connaught has an autograph album and in her childhood days, she used to rule this book out into neat little divisions, one for each signature. When she asked the Kaiser to write his name, he scrawled it right across the page, and surrounded it with three bold circles—quite irrespective of the neatly-drawn little departments. At the time Princess Patricia was much grieved, but from subsequent events she considers this page of her album a symbol of what the "All Highest" was going to do to Europe.

SPRING IMPURITIES IN THE BLOOD

A Tonic Medicine is a Necessity at This Season.

Dr. Williams' Pink Pills for Pale People are an all year round tonic, blood-builder and nerve-restorer. But they are especially valuable in the spring when the system is loaded with impurities as a result of the indoor life of the winter months. There is no other season when the blood is so much in need of purifying and enriching, and every dose of these pills helps to make new, rich, red blood. In the spring one feels weak and tired—Dr. Williams' Pink Pills give strength. In the spring the appetite is often poor—Dr. Williams' Pink Pills develop the appetite, tone the stomach and aid weak digestion. It is in the spring that poisons in the blood find an outlet in disfiguring pimples, eruptions and boils—Dr. Williams' Pink Pills speedily clear the skin because they go to the root of the trouble in the blood. In the spring anaemia, rheumatism, indigestion, neuralgia, erysipelas and many other troubles are most persistent because of poor, weak blood, and it is at this time when all nature takes on new life that the blood most seriously needs attention. Some people drug themselves with purgatives at this season, but these only further weaken themselves. A purgative merely gallops through the system, emptying the bowels, but it does not cure anything. On the other hand Dr. Williams' Pink Pills actually make new blood which reaches every nerve and organ in the body, bringing new strength, new health and vigor to weak, easily tired men, women and children. Try Dr. Williams' Pink Pills this spring—they will not disappoint you.

Sold by all medicine dealers or sent by mail at 50 cents a box or six boxes for $2.50 by The Dr. Williams' Medicine Co., Brockville, Ont.

THE CABBAGE WORM.

How to Combat the Ravages of This Destructive Enemy.

The common cabbage worm, the most destructive insect enemy of cabbage and related crops begins its depredations as soon as the young plants are set out in the spring. Steps to combat it should be taken at an equally early date. Spraying with a solution of two pounds of powdered arsenate of lead, four pounds of arsenate of lead in paste form, or one pound of Paris green to fifty gallons of water should be begun as soon as the plants are set out and should be repeated as often as examination of the plants shows it to be necessary.

The common cabbage "worm" is the first generation usually develops on wild plants.

Hand picking may be practised successfully in small gardens. Where sprays are employed they should be applied in a fine mist, since coarser applications tend to gather in drops on the leaves and run off.

larva of a white butterfly having black tipped wings. The butterflies appear on warm spring days and continue about gardens and fields until after several severe fall frosts. Eggs are laid on cabbage and related plants where they hatch in from four to becoming full grown in from ten to fourteen days after hatching. Three it eats voraciously and grows rapidly,

For Wideawakes to Memorize.

Say, boys, did you ever stop to think
That we are the coming men?
That we've only a few short years to prepare
Ourselves for the work, and then
The fate of the world will rest in the hands
Of those who are boys to-day?
I tell you it makes a fellow feel that
He wants to be armed for the fray!
We can not afford to hamper ourselves
With habits that work us harm;
We need to be true of head and heart,
With a steady, strong right arm:
We need to be men—real, honest men,
With a love of life and its joys,
But ever ready to stand for the right;
And in order to do that, boys,
We've got to begin right now, or else—
No, I am not "Preacher Ben,"
And don't let's forget in our work or our play
That we are the coming men!

SATISFIED MOTHERS

No other medicine gives as great satisfaction to mothers as does Baby's Own Tablets. These Tablets are equally good for the newborn babe or the growing child. They are absolutely free from injurious drugs and cannot possibly do harm—always good. Concerning them Mrs. Jos. Morneau, St. Pamphile, Que., writes: "I have used Baby's Own Tablets and am well satisfied with them and would use no other medicine for little ones." The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

DIVIDING THE SPOIL.

Accident Which Foretells Similar Horrors in Shell-Swept Europe.

Greediness wiped out half the population of a small village in China, according to Capt. Fritz Uttmark There were only thirty people in the village, a retired spot on the Hwang River, and of the thirty, fifteen were instantly killed.

The Chinese government had been making experiments with some new shells. A mile from the village a company of soldiers had been doing target practice with the shells, and had then been sent to garrison a fort some distance away. During the target practice the soldiers would not let the villagers get nearer than half a mile to the guns, and the people, all ignorant coolies, had no idea what the shouting meant.

Some months after the target practice had ceased and the villagers had forgotten about it, two coolies, digging in a field, came upon a bright, round object. It was very heavy, and pointed at one end. Neither knew what the object was. As a matter of fact it was an eight-inch shell that had not exploded.

"It is mine," said the man who had dug the shell up.

"No, it is mine. I saw it first!" cried the second coolie. "You would not have known it was there if I had not seen it."

"And you would not have seen it if I had not dug it up."

For half an hour the two argued, each advancing his claim in high-pitched, squealing tones. At last they agreed to let an aged Chinaman, who was said to be very wise, settle the question for them.

"You must divide it equally," was the verdict of the old man.

Then came the question as to how they should divide it. They tried to break it with a rock, but the shell could not be crushed that way.

"Let the blacksmith divide it," suggested the old man.

To the blacksmith they went.

"I do not work for nothing," declared the smith. "I will divide it into three parts: one for the man who found it, one for the man who saw it first and one for me."

That arrangement had almost been decided upon when the old man who had given the decision in the case objected. If the blacksmith was to have a third, then he himself ought to have a piece for settling the dispute.

"Divide it into four parts," urged the man. "One for the finder, one for the man who saw it first, one for the blacksmith and one part for me."

To that they all agreed.

By this time the entire village had become greatly excited, the relatives of all four men crowding into the little blacksmith shop to see that justice was done. The blacksmith laid the shell on his anvil, and round him gathered all the people of the village. He swung his heavy hammer in the air and brought it down on the shell.

Bang!

The explosion killed all but two of the coolies who were in the blacksmith shop and injured half a dozen others who were standing at the door and the two windows.

For a long time the Chinese government could not find out the cause of the accident. The natives were convinced that a miniature sun had fallen from the clouds and, offended by the rough handling it had received, had become angry, and annihilated the guilty ones with their relatives and friends. The mystery was not explained until a small part of the shell casting was found.

THE CONTINENT OF LONDON.

At the Hub of the Empire Are Found All Sorts and Conditions of Men.

It is curious how ignorant the born Londoner is of his own city. All the wonders of the world are gathered in London, yet the Cockney takes long journeys in order to see them elsewhere.

In peace times, he would go to France, to Belgium, to Norway, to Switzerland, while all the time he could take a 'bus and visit these countries in London, though certainly minus their natural scenery.

But the essential atmosphere was to be found within a short radius of Piccadilly Circus. How many Londoners could say off-hand where to find the Swiss Quarter, the Scandinavian Quarter, the Chinese Quarter, the Russian Quarter, the Dutch Quarter, the Armenian Quarter, or what now remains of the German Quarter?

Wherever the Continental peoples wander they take their own country with them and reconstitute it, while the Belge invariably fits himself into native backgrounds. Thus you will find the true Paris in Soho; the real Russia at Stepney and Bethnal Green; the glamor of Italy in Clerkenwell; the spirit of Holland in Spitalfields; the mysterious Orient in Limehouse; Norway, Sweden, and Denmark in Shadwell; Switzerland off Tottenham Court Road; the repellent atmosphere of Germany in Great Charlotte Street; and the Armenian Settlement is—well, I wonder how many Londoners can locate that interesting colony?

YES! LIFT A CORN OFF WITHOUT PAIN

Cincinnati man tells how to dry up a corn or callus so it lifts off with fingers.

You corn-pestered men and women need suffer no longer. Wear the shoes that nearly killed you before, says this Cincinnati authority, because a few drops of freezone applied directly on a tender, aching corn or callus, stops soreness at once and soon the corn or hardened callus loosens so it can be lifted off, root and all, without pain.

A small bottle of freezone costs a very little at any drug store, but will positively take off every hard or soft corn or callus. This should be tried, as it is inexpensive and is said not to irritate the surrounding skin.

If your druggist hasn't any freezone tell him to get a small bottle for you from his wholesale drug house. It is fine stuff and acts like a charm every time.

River Beds

In Siberia some of the rivers are said to flow over ice many years old and almost as solid as rock. A tributary of the Lena is reported to have a bed of pure ice over nine feet thick.

After the Movies Two Eyes for a Lifetime Means to See Vivid Stage, Real Star Scenes—Motion Pictures, Sports, Scenic Beauties, Nature's Wonders—Refreshed, Strengthened by Motion Pictures Treatment. Russia's Railway Plans.

The Russian Council of Ministers has approved a plan for constructing 20,770 miles of new railway during the next five years at a cost of $300,000,000, says the New York World. A revolutionary Government which is concerning itself with these projects of peace is apparently on a substantial foundation.

Minard's Liniment for sale everywhere.

SAWYERS, BOX MAKERS & LABORERS WANTED

FIRSTBROOK BROS., Limited
253 King Street East, Toronto

Post Orderly (to last-joined recruit, whose letters, addressed "Mr. Jones," having caused the former much trouble in discovering the right owner)—My lad, every man has a rank. You must tell your friends to put 'Private' on your letters. "Very good, Sergeant." The next letters arrive: "Strictly Private—Mr. Jones."

A Great Sight.

The old gentleman beamed upon the little boy who stood on the crest of the hill one night at twilight, a happy, contented smile on his lips.

"I am very pleased to see you watching the beautiful red glow of the setting sun, my little man," he said, patting the youngster's back. "Do you watch it every night?"

The little lad chuckled.

"No, I am not watching the sunset, but I'm waiting for the train to come in."

Montreal Man Tells Wonderful Story

Bad Case of Bright's Disease Cured by Dodd's Kidney Pills.

George Sullivan, Who Suffered From The Dread Disease for Two Years Gives Credit for His Recovery to Dodd's Kidney Pills.

Montreal, Que., Apr. 9th. (Special.)—Completely cured of that most dreaded of all diseases, Bright's Disease of the kidneys, Mr. George Sullivan, 284 de St. Valiers St., this city, is spreading the good news that he found his cure in Dodd's Kidney Pills.

"I suffered from Bright's Disease for two years," Mr. Sullivan states in an interview. "I was unable to work for weeks at a time. I spent hundreds of dollars on doctors without receiving any real benefit and received outdoor treatment at the Montreal General Hospital.

"I was feeling very badly discouraged when a friend advised me to try Dodd's Kidney Pills. After using three boxes I was much better. I kept on till I had used nine boxes, when I was completely cured.

"Naturally I consider Dodd's Kidney Pills a wonderful remedy."

Dodd's Kidney Pills are no cure-all. They cure kidney diseases of all kinds from backache to Bright's Disease. The proof of this is their growing popularity in Canada for over a quarter of a century. If you haven't used them ask your neighbor about them.

Spite is anger which is afraid to show itself, it is an impotent fury conscious of its impotence.—eight days.

The caterpillar is velvety green, about the color of the cabbage foliage.

Good roads make better markets, better schools, better churches, better neighbors and better living.

And all diseases of the horse affecting his throat speedily cured; colts and horses in same stable kept from having them by using SPOHN'S DISTEMPER COMPOUND; 2 to 6 doses often cure. Safe for brood mares, baby colts, stallions, all ages and conditions. Most skillful scientific compound your druggist will supply you.

Spohn MEDICAL CO., Goshen, Ind., U. S. A.

SECOND CON ELDERSLIE

Miss Carmen McGill, student at Clinton Collegiate, spent the Easter vacation with friends on this line.

Alex Keith has gone to Owen Sound to take a position there.

Misses Maude Dawson, Jessie Young and Jessie Robertson are successful high school pupils at the recent exams. Congratulations.

Miss Mary Gregus spent last week with Brampton and Toronto friends.

Miss Mabel Lillico of Sudbury, and D C of Toronto, were Easter visitors at the home of their parents here.

Miss Susie Fortune, of Vesta, is attending her sister, Mrs W Manley, who is at present suffering from lung trouble.

The farmers of this locality who have a sweet tooth are all busily engaged making maple syrup and sugar, and report a very good tree this season.

Miss Linton, teacher of S S No 2, is spending vacation at Toronto.

Mrs D Keith and her daughter Miss Mary visited Owen Sound friends last week.

Miss Janet Blue spent part of last week with her cousin, Mrs W Young.

Thursday evening last marked the scene of a jolly gathering at the home of Mr Wm Robertson and his sister Miss Isabella, when about 90 of their friends and neighbors gathered to present them with a mirror and also spend a social evening with them before they leave this con. Mr David Walks was chairman. A short program was enjoyed by all. The chairman first called on Miss Jean Keith to read an address and Mr Robertson was presented with a writing desk, and Miss Robertson with a comfortable couch. Messrs Alex Campbell and Thos Smith, jr, made the presentation. Mr Robertson spoke briefly on behalf of himself and his sister thanking his neighbors for their kindness, also reviewing his sojourn of 23 years spent here. Messrs B Wright, D McGill, Jas Vencise, W J Allen, S M Ewart and Alex Robertson were all called on for short addresses. A Scotch song was given by T A Patterson and a couple of patriotic selections by the school girls. A substantial lunch was served by the la ies and the remainder of the evening was spent in social chit chat and dancing. To many friends here wish that Mr and Miss Robertson may long be spared to enjoy their new home wherever they may locate.

Word has come to relatives here of the death of two former residents of this con —Mrs Arch McGregor of Medora, Man. formerly of lot 21, con 3, who is a sister of Arch Lillico; and also Jas Boyd of Calgary, who was a son of the late John Boyd, formerly of lot 18, con 2.

In a letter to his parents, Mr and Mrs D Walks, written in England on March 23rd, Signaller Jack Walks stated that the Bruce Batt were all in readiness to cross the Channel and do their duty in quelling the foe.

Robt Jefkins spent Sunday with Tara friends.

Mr and Mrs Geo Hope attended the Maxwell-Ickler wedding last Wednesday.

The school board of No 13 have made some improvements at the school by putting on new outside doors and arranging the windows so that they draw down from the top.

Angus Taylor, of Cantire, is busy in this section with the sawing machine.

Wonder when winter 1917 will be over.

Mr and Mrs Geo Somerville and Miss Ida, of Cantire, were calling on friends here recently.

Mr and Mrs Fenton, of Gillies Hill, visited friends here last week.

On returning from Chesley on Saturday afternoon Mrs A Dawson and daughter Maude met with an accident. The horse took fright at something near the railway track and jumped back, breaking a shaft of the buggy. As Mrs Dawson is an extra good driver the horse did not get away, so there was no serious damage done.

Mr A Young and Mrs C Smellie are both under the weather these last few days.

At Wm Robertson's sale last week the prices ran high. Cows went from $50 to $114, sheep at $29, and a flock of hens sold for $50.

GLAMIS

Mr John Howson of Toronto spent a few days with his sisters, the Misses Howson.

Miss Maggie McKinnon is visiting her sister, Mrs John McDougall, on the 8th of Bruce.

Mr Gus McKinnon, of Wallaceburg, spent last week with his parents, Mr and Mrs John McKinnon.

Mrs J K McLennan left for Clifford as soon as word came of the death of Mrs Black.

Mr John Ferris is confined to the house at present, and is under the doctor's care.

Messrs Edgar Pickard and T A Pickard of Toronto spent a couple of days visiting friends here.

Quite a number of our Glamis folk attended the funeral of the late Mrs (Dr.) Black of Clifford, whose remains were brought to Paisley for burial on Thursday last. Mrs Black was well known here and very highly esteemed. The news of her death brought sadness to a good many hearts, although not unexpected, as she had been ailing for several months. Her friends knew that they would have to give her up, but we know that for her death is gain. She will be much missed by the sorrowing ones left behind.

Miss Mary Webb is teaching school near Southampton.

Miss Mabel Kirkton spent last week at her home here.

Jessie McLean, of Tiverton, spent the holidays visiting her old schoolmates around O'Neil's.

Mrs Jessie McDougall and two sons and M McDowell spent the week end at Mr Alex McSween's.

The Red Cross Society postponed their meeting on Thursday last on account of the funeral of the late Mrs Black.

Mrs Robert Jackson and his mother are moving to Kincardine this week. Rob. is going to work Kenneth McKenzie's farm.

PINKERTON

The funeral of the late Mrs Robt Johnston took place on Monday afternoon from the residence of her daughter, Mrs N Garland, to Douglas Hill cemetery. Mrs Johnston had reached the ripe age of 93 years, and died at the home of her son Alexander in Meriotte, Mich. Among the friends from a distance who attended the funeral were Mr and Mrs Alex Johnston, Mr Dave Johnston of Montana, Messrs George and Melville Johnston of Toronto, Mrs Walker and Mrs Stuart of Parkhead. The funeral was largely attended and was conducted by Rev Mr Gale.

Another shipment of Red Cross supplies was made this week by the local Society: 84 prs socks, 1 pr wristlets, 22 suits pyjamas, 6 quilts, 9 feather pillows, 6 pillow covers and 2 towels.

Another of our young men has responded to the call of duty and enlisted last week in the signalling corps. We refer to Spr Russell Birrell, who, on completing his examination at Toronto University, enlisted in the above named corps. He goes shortly to Ottawa, where he will train for a short time before going overseas.

School re-opened on Monday, with Miss Florence Diehl of Paisley in charge.

BURGOYNE

On Wednesday evening of last week the congregations of Burgoyne and Dunblane churches met in the church at Burgoyne to spend a social evening with Rev and Mrs [illegible] on the eve of their leaving for [illegible] new field of labor at Allandale. A very enjoyable programme of sing-[illegible] instrumental music and recitations, interspersed with a few speeches from the more prominent members, Mr and Mrs Watt were asked to the platform, when the following addresses were read and presented to them:

TO REV MR WATT:

DEAR MR WATT—We, your friends, have assembled to acknowledge in a simple way, on the eve of your departure for other fields of labor, your faithful services, your work for us, and your loving kindness as our pastor. During the past six years you have ministered unto us faithfully, giving a service of love and song to all our families. Whether in joy or sorrow, in either we have found you always at hand and ready to serve. Truly, the harvest has been great and the laborers perhaps have been few, but to you as chief laborer surely God has had a most faithful servant. We know that the charge of Burgoyne and Dunblane churches has combined heavy duties and we know that it has not always been possible for you to set aside much time for study among your scholars. While we regret deeply your departure from us, we rejoice that your services is to be rewarded in that you have been called to an important charge where at the same time it will be possible for you to set aside time for preparation and for further study. Your work among us has been blessed of God. We acknowledge the sincerity of your efforts, and have profited and been led to joy in the Word of God through your teaching and loving service. We have shared, and old and young take this opportunity of acknowledging the past you have strived to help lead us all to closer communion with God. We ask you to accept this purse of gold as a slight token of our appreciation, and accompanying it is the heartfelt wish of us all that God will bless you and be with you proper you, and finally receive you all to himself. Signed in behalf of the congregation by John Coleman, John Thomas, W J Mellor, Alex Melachlan, Alex Geddes, Alfred Burgess, Jas H Webster, A J Rowland, Jas C Wallace.

TO MRS WATT:

DEAR MRS WATT—We, the members of the W.M.S. Missionary Society of Burgoyne church, have learned with deep regret of your removal from our midst. You have been faithful as our leader, and in our intercourse with you we have learned to love you. Your removal causes a break in our ranks which will not be easily filled. Our sincere hope and [illegible] God will bless you in your new sphere of service in the wish of a host of friends at Burgoyne, and we only trust that [illegible] as you go. As a token of our [illegible] we ask you to accept this [illegible] Signed on behalf of the society, Signed [illegible] Mrs W J Mellor, Secy; Margaret McDougall, Treas.

Mr Watt made a very feeling reply on behalf of himself and Mrs Watt, stating that they were taken wholly by surprise, Mrs Watt left last week for her new home, Mr Watt to follow on Monday of this week.

In Use For Over 30 Years

Always bears the Signature of Chas. H. Fletcher

TWELFTH CON BRUCE

We have had another winter, the sleighs were out again. This is surely a late spring for Canada.

Messrs Bert Doulop and Hector McGillivary have been sawing wood for the past few days.

Mr Russell Cumming has returned home after spending two years with his uncle, Jos Stoddart, in Elderslie. Mr Eldon McGillivray has been engaged as his successor.

Mrs Esther McGillivray is home after spending two months with her sister in Dornoch.

Mr. Eli Barnes has gone to work for the summer with Mr J. McCulloch, Saugeen.

Mrs Alex McGillivray and two daughters of Port Elgin spent Easter week at their home here, and returned to Port on Saturday.

Mr John A. Howe sold a team of horses, also Mr Geo Scott sold one. Looks as if horses are still on the move.

Mr Thos. Foster lost a valuable horse last week.

LARGER HEADS—RIPENED EARLIER

A. NERRON, Dorchester, Ontario, says: "I used Homestead Bone Black Fertilizer on oats this Spring, leaving one drill width across the field unfertilized, and could see a difference of about a foot in the length of straw, and much larger heads. The grain on the fertilized part of the field ripened one week earlier than on the unfertilized part and was much better quality.

This was my first year using fertilizer and after getting such satisfactory results I intend using fertilizer again this coming Spring.

Write Michigan Carbon Works, Detroit, for free book and particulars about their Homestead Bone Black Fertilizer.

BRUCE TOWNSHIP

Mr John Hyde, jr of 7th Bruce, has two cows only, and both of these have this spring had twin calves. This is surely boasting production of the stock. The quartett of young bovines are all healthy and pretty.

The Thos Turnbull farm on lot 26 Bruce Saugeen has been bought by Mr Thos Hueston for $6200. This is a good property.

The officers of Bruce Tp Conservative Association are: Pres. John Nelson, Jpres; John Nuttall, Sec-treas; John Nelson, Asst-treas.

The demise of Mr Peter McArthur, of Lorne, caused a gloom which was felt over a large part of this township as he was widely known. He was a man of most kindly and genial disposition, and though quiet and unassuming, he made many warm friends and retained their respect and esteem throughout his life time. A great many from this township attended the funeral. The pall bearers were all neighbors of deceased, who visited him often during his illness: Messrs Neil McLeod, John McKay, Alex McGillivray, Hugh Fleteher, Thomas Temple and Hugh McGuinnan.

At the annual convention of the North Huron Sunday School Association at Paisley on May 7th, 8th, it was decided to organize the Tp of Bruce, with the object of promoting the growth and efficiency of the Sunday Schools by means of conventions and institutes and such other special agencies as may from time to time be adopted. Mr Fred Scrimgeour is the Tp organizer, and he proposes that a meeting be held in the Methodist church, Underwood, in the first week of May. All pastors of churches and superintendents of Sunday schools in the Tp are requested to be present on this occasion to organize and conclude arrangements for a convention in June, 1917.

THE TONIC THAT BRINGS HEALTH

"Fruit-a-tives" Builds Up The Whole System

Those who take "Fruit-a-tives" for the first time, are often astonished at the way *it builds them up and makes them feel better all over.* They may be taking "Fruit-a-tives" for some specific disease, as Constipation, Indigestion, Chronic Headaches or Neuralgia, Kidney or Bladder Trouble, Rheumatism or Pain in the Back. And they find when "Fruit-a-tives" has cured the disease, that they feel better and stronger in every way. This is due to the *wonderful tonic properties* of these famous tablets, made from fruit juices.

50c. a box, 6 for $2.50, trial size, 25c. At all dealers or sent postpaid by Fruit-a-tives Limited, Ottawa.

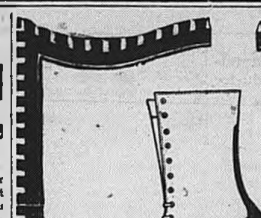
MUNSON—POTTS

Saturday, April 7th, was the scene of a very pretty wedding at the home of the bride's parents, Mr and Mrs H T Potts, Tara, when the marriage was solemnized of their youngest daughter Dolly to Mr Geo H Munson. Rev W S Daniels of the Methodist church performed the ceremony in the presence of twenty-five guests, relatives of the bride and groom. Promptly at the hour of twelve the bride entered the drawing room with her father, who gave her away, and took her place beside the groom in an alcove banked with evergreen, palms, ferns and flags. The bride was attired in a beautiful gown of ivory satin trimmed with chiffon and seed pearls. Her long veil was caught to the hair by a cluster of orange blossoms and she carried a shower bouquet of bride's roses and lillies of the valley. The groom's gift was a sunburst of pearls. Their only attendant, pretty little Dorothy Potts, niece of the bride, was ring bearer, dressed in pale pink carrying a basket of pink sweet peas, her gift from the groom being a locket and chain. Miss Annie Munson, sister of the groom, played the wedding march, her gift being a pin set with pearls. After congratulations the bride led the way to the dining room where a dainty wedding dinner was served. The table and room were prettily decorated with pale pink carnations, sweet peas and tulips. The happy couple left shortly after for Toronto and other points, the bride travelling in a navy blue suit with lemon silk crepe de chine blouse, and a neat little tuscan hat. They received many beautiful and useful gifts, including several cheques. On their return they will take up their residence on con 12, Derby.—Leader.

BRUCE TP. COUNCIL

Bruce Tp Council met in the Township Hall on above date, pursuant to adjournment. Members all present. Minutes of previous meeting read, adopted and signed. Communications read and dealt with: 1 and 2—From the Dominion Alliance, Ontario Branch, re petition to Dominion Parliament for Dominion prohibition, and soliciting co-operation of council by signing petition and forwarding.—Granted, and reeve and clerk authorized to sign in behalf of Council. 3—From Norman Robertson re certain Inverhuron lands.—Dealt with. 4—From C M Bowman, M P P, stating the Government had not yet brought down the resolution as to women's votes, but would forward copy as soon as available. 5—From W A McLean, Ontario Department of Highways, re the appointment of a superintendent of highways for the township.—No action. 6—From the Hydro Electric Association, soliciting membership.—No action. 7—Account from from W G Cole, for $40 for flasking and straightening bell.—Passed.



Geo H MacKay was appointed pathmaster in div 32 instead of Geo Tennyson, who has moved out of the div. A number of accounts passed. Committees authorized for tenders for certain bridges, and council adjourned to meet on the 26th day of May next as a court of revision and for general business.

How to avoid Operations

These Three Women Tell How They Escaped the Dreadful Ordeal of Surgical Operations.

Hospitals are great and necessary institutions, but they should be the last resort for women who suffer with ills peculiar to their sex. Many letters on file in the Pinkham Laboratory at Lynn, Mass., prove that a great number of women after they have been recommended to submit to an operation have been made well by Lydia E. Pinkham's Vegetable Compound. Here are three such letters. All sick women should read them.

Marinette, Wis.—"I went to the doctor and he told me I must have an operation for a female trouble, and I hated to have it done as I had been married only a short time. I would have terrible pains and my hands and feet were cold all the time. I took Lydia E. Pinkham's Vegetable Compound and was cured, and I feel better in every way. I give you permission to publish my name because I am so thankful that I feel well again."—Mrs. FRED BEHNKE, Marinette, Wis.

Detroit, Mich.—"When I first took Lydia E. Pinkham's Vegetable Compound I was so run down with female troubles that I could not do anything, and our doctor said I would have to undergo an operation. I could hardly walk without help so when I read about the Vegetable Compound and what it had done for others I thought I would try it. I got a bottle of Lydia E. Pinkham's Vegetable Compound and a package of Lydia E. Pinkham's Sanative Wash and used them according to directions. They helped me and today I am able to do all my work and I am well."—Mrs. THOS. DWYER, 969 Milwaukee Ave., East, Detroit, Mich.

Bellevue, Pa.—"I suffered more than tongue can tell with terrible bearing down pains and inflammation. I tried several doctors and they all told me the same story, that I never could get well without an operation and I just dreaded the thought of that. I also tried a great many other medicines that were recommended to me and none of them helped me until a friend advised me to give Lydia E. Pinkham's Vegetable Compound a trial. The first bottle helped, I kept taking it and now I don't know what it is to be sick any more and I am picking up in weight. I am 30 years old and weigh 145 pounds. It will be the greatest pleasure to me if I can have the opportunity to recommend it to any other suffering woman."—Miss IRENE PROTHEROE, 1923 Manhattan St., North Side, Bellevue, Pa.

If you would like special advice write to Lydia E. Pinkham Med. Co. (confidential) Lynn, Mass. Your letter will be opened, read and answered by a woman and held in strict confidence.

The undersigned having purchased the Flour, Feed and Seed business of Mr R G Eckel, desires to solicit the patronage of the public. Having decided to do a strictly cash business, we give notice that all goods sold must be paid for within 30 days from the date of purchase. We will keep a full stock of Five Roses and Stark's which grade flours, bran, shorts, Blatchford's molasses meal, poultry foods and tonics. Always in the market for coarse grains. W STARK.

I. O. O. F. Anniversary

The Oddfellows will attend the Baptist church on Sunday morning next, when the anniversary sermon will be preached by Rev. M Neilson. Members and visiting brethren will meet at Ahrens Lodge hall at 10 30 and march to the church.

Taken to Hospital

Mrs Devine, who is believed to be in her tenth year, and has been sick for some time with pneumonia, was taken to the County Hospital on Thursday last. She was accompanied by Mr D Eason, who says the old lady stood the journey well.

—How Ontario's potato crop dwindled in the last two years is shown by the official reports. In 1914 the crop was 23,000,000 bushs, 13,500,000 bushs. in 1915 and 7,000,000 in 1916.

—Miss Barbara McAllister of Gillies Hill is visiting friends in Walkerton.

—Mr John McMillan has bought the O'Hagan farm, west halves of lot 19 and 20, con B, Elderslie.

—Mr George reports the recent sale of Mr Alex Rose's farm, lot 30, con 8, Bruce to Mr W G Nicoll, of Greenock.

—The Red Cross Workers of No. 15 Bruce shipped last week—19 flannelshirts 23 suits of pyjamas, 54 pairs of socks.

—Old papers, rags, rubbers, &c, for Red Cross collection may be left at Gibson's store any time from now to 5th May.

—A meeting of the W. C. T. U. will be held in Putman's Hall on Friday, 27th, at 3 o'clock. A full attendance is requested.

—Mr. Harry Wagner and son John, of Newton, were up for a few days, visiting old friends, guests at Mrs. Storrie's, Rose Street.

—Misses Birdie and Myrtle Watson, of Detroit, were home recently for a week visiting their parents. Mr and Mrs S Watson, Victoria St.

—Mr Joe Heath has sold the blacksmithing business here with the intention of going west, and has rented the shop to his former partner, Mr Jas Brown.

—Sam Babcock is accepted for the forestry draft of the 222nd Batt. He went to Galt for examination also to Guelph, and came back on Friday night in khaki, on last leave. The soldiermen start for overseas at once.

—Mr and Mrs J A McArthur have got settled in their new and commodious home on Queen St south. The erection of this residence fills in another blank space and makes that part of the village more attractive and substantial in appearance.

—The Woman's Patriotic League purpose sending socks to our boys in the trenches. In order to do this they are asking for a shower of socks on May 5th (Sat). Yarn will be furnished at the Library. Every one who can knit please make an extra effort for that date.

—Mr and Mrs Walter F Bolger, of Charlotte, Mich., are over on a visit to Ontario friends, and spent a couple of days renewing acquaintances in Paisley, guests at Mr I Cruickshank's. Mr Bolger was station agent here a few years ago, and is now travelling agent for a section of the G T R in the U S.

Mr. John B. McCallum, of Hibbing, Minn., in renewing his subscription to The Advocate, says: "We are enjoying very prosperous times in this mining country at present, and think it will last for some time to come. We find your paper very interesting, as it keeps us in touch with all the people around Paisley."

—The old building on Church St., which was once Sinclair & Blackburn's sawmill and planing factory, is being torn down by Mr J S Dewar, who will use the material for building purposes. This was in its day one of our best industries. That was in the lumbering period of our development. Large quantities of logs were floated down the Saugeen river and held in booms, and the saws would be heard the greater part of the summer. Of late years the building was used as a hovestable.

—Jack McLeod, of Calgary, who recently returned to England after recovering from wounds, contracted mumps shortly after arriving there and was sent to Clivedon hospital, where he occupied the cot enclosed by the ladies of his old home town of Paisley. This is almost as notable a coincidence as that in which Miss Pollock, a former Chesley girl who went to England lately as a Red Cross nurse, had a brother as her first patient. The brother had enlisted in the west and they had not seen each other for several years.

Flour and Feed
Lumber
Coal and Wood

Having decided to add Coal to our Lumber and Wood yards, we are now ready to receive orders for Coal. Send in or telephone your orders at once as we would like to have all orders in, so that we can send them in by 1st May, as prices advance on that date.

Winnipeg, Manitoba Hamilton, Ontario

THE EARL'S SECRET

Or, a Martyr to Circumstances.

CHAPTER XXVIII.—(Cont'd).

"Thank you for the information," said the earl. "I know nothing of Mr. Fairfax, and I do not wish to add to my knowledge. Be kind enough to leave the subject where it is; it is one that is extremely distasteful to me. I wished to see you on business. Here are a number of bills—they have all been contracted by you—I pass them to you for payment."

Fitz stared at them.

"My lord," he said, "I cannot pay these! You know that it is impossible!"

"I have nothing to do with that," he said, coldly. "You are over age, you were twenty-two last month; you are liable, I believe."

"I am liable, I know," said Fitz, in despair, "but, of course, sir, I have always looked to you."

"And, I believe some time back, in this very room, I warned you that you could no longer do so. I have my own bills to pay, and I cannot concern myself with any others. Be good enough to take them away; they litter my table."

"But," said Fitz, "I cannot pay them, and you know that I cannot. What is to be done?"

"I regret that I cannot inform you. I should advise you to pay them, or in all probability the creditors will endeavor to compel you."

"In other words they will put me in prison."

"I cannot say: I know nothing about it. May I remind you again of the conversation which I before mentioned as taking place between us in this room: I ventured to advise you; my advice was not taken; you can not be surprised at my reluctance to repeat that advice."

"Is it my fault that Violet Mildmay very properly refuses to enrich a ruined house by marrying the poverty-stricken eldest son and heir, who, love her as he does, is utterly unworthy of her"?

"Your fault!" retorted the earl, with icy scorn. "I know, nothing of your affairs, but unless I am grossly misinformed it is your fault that Ethel has married a boy and refused a millionaire; that is enough for me. Go in the course you have before you, Lord Boisdale. Go in the path you are treading, and find yourself a penniless debtor, rotting in jail; it is perfectly indifferent to me. I have pointed out to you the secret of success—you have scourned it or failed to get it by rank foolery. I have done with you! Lackland Hall and money will last my lifetime; afterward it can go to the dogs, which I can see already at your heels. I am busy and therefore compelled to wish you good-morning."

CHAPTER XXIX.

We left Leicester and Mr. Thaxton, assisted by Stumpy, carrying Job to the nearest magistrate.

When Leicester had, as well as he was able, removed his disguise, and Job saw that Leicester was alive and in the flesh, he had shown the greatest joy, and that notwithstanding the impersonal peril which Leicester's whim had placed him in.

After a time, when Job reflected upon all the consequences which would fall upon himself, he grew wonderfully quiet, and sat at the bottom of the cart sullen and moody.

"I suppose I'll be hanged," he said, "and I deserve it; but I'll tell the whole truth, Maester Leicester, every word of it."

"In that case," said Leicester, "I will do my best to shield you from punishment."

"I'll turn King's evidence," said Job, with a grin. "I won't turn on the boys; but I'll be even with the captain, curse him!"

As the morning broke they had left the ruined chapel a long way behind, and were nearing Tenby. At this point Mr. Thaxton pulled up, and desired Leicester to step out of the cart, as he wished to say a word to him.

Leicester alighted, nodding to Job, warningly.

"Do not attempt to escape," he said; "I warn you."

"You leave him to me, sir," said Stumpy, cheerfully and significantly, and Leicester followed Mr Thaxton.

"It has just occurred to me, or rather I have been thinking of it all the way, that you are under a warrant still, Mr. Dodson! Any moment you are liable to arrest. There is a hundred pounds reward, remember, and so large an amount makes men keen. In Tenby there are many men who know you—or at least must have seen you often; you may be detected."

"Not through this disguise," said Leicester.

"Not through that disguise; but by your voice; you cannot disguise that sufficiently. I should have known you by it. Better stay out of the way quietly a while until Job's deposition is taken."

"Very well," said Leicester, "I follow your advice to the letter. All I want is to be near those I love and protect them until that villain is under lock and key. Then it does not matter what becomes of me," he added, sadly.

"Hem!" said Mr. Thaxton, "I think I know what is the matter. I have heard of Miss Mildmay's engagement, but that may be put right."

"Not by me," said Leicester, in a low voice. "I love her still, but I will not interfere with the quiet happiness which she enjoys. Fitz is a better man than I—and—but, there, let us talk no more of it," and he jumped into the cart.

At that moment, while Mr. Thaxton was starting the horse, they heard the noise of wheels behind them, and before they were aware aware of it a small, high gig was close beside them.

"Hello!" called out a voice, which Leicester seemed to recognize. "What, is it vegetables? no, small party enjoying themselves. Oh! what's that? A man handcuffed!" And before any one could prevent him he had dropped from his own gig and jumped into their cart.

"I know your face, my man," he said to Job, "and yours too, sir, if I'm not mistaken. You are a lawyer, Mr. Thaxton—concerned in the little affair at Penruddle; may I ask where you are taking this man—Job is his name, I think?"

Mr. Thaxton glanced at Leicester, apprehensively.

"You are quite right," he said, "The man's name is Job, and I am a lawyer. I detected him robbing this gentleman—a Spaniard—and his servant, and I am assisting them to take him to the nearest station."

"But you have the advantage of me," continued Sir. Thaxton. "For, although I seem to know your voice, I do not recognize you. May I ask upon what ground you thus exercise your curiosity?"

"Oh," said the stranger, with a laugh, putting off a large beard which had nearly concealed his face, "I'm Detective Dockett! You know me now, I suppose."

"He won't run away," said Mr. Dockett. "He'd follow me down a coal mine, or up in a balloon. Yes, I'm going on to Tenby, sir. I've had a little smuggling job on here. Perhaps I can do something for you in Tenby? Rum case that Penruddle murder, wasn't it? I suppose nothing has ever turned up, sir?"

"You are the person to know best about that. You were engaged in the case. No, nothing more ever transpired: No doubt Mr. Leicester Dodson committed the deed, and was killed himself in the struggle. But it is a painful case—and I don't like to talk about it."

(To be continued.)

FOR HEADACHES, BILIOUSNESS CONSTIPATION,

INDIGESTION

Nearly all our minor ailments and many of the serious ones, too are traceable to some disorder of the stomach liver, and bowels. If you wish to avoid the miseries of indigestion, dizziness, heartburn, flatulence, headache, constipation, and a host of other distressing ailments, you must see to it that your stomach, liver and bowels are equal to the work they have to do. It is a simple matter to take 30 drops of Mother Seigel's Syrup daily, after meals, yet thousands of former sufferers have banished indigestion, listlessness, constipation, and all their distressing consequences on just this simple way. Profit by their experience. As a digestive tonic and stomachic remedy, Mother Seigel's Syrup is unsurpassed.

MOTHER SEIGEL'S SYRUP.

THE NEW 1.00 SIZE CONTAINS 3 TIMES AS MUCH AS THE TRIAL SIZE SOLD AT 50c PER BOTTLE.

About the House

Preparing Rhubarb.

The spring months bring in an abundance of nature's best gifts, the fresh fruits.

Rhubarb is the earliest of our native fruits, it contains valuable mineral salts of an acid nature, which have very beneficial effects upon the liver and kidneys by causing a free secretion of bile. This is very desirable after the prolonged winter when, through lack of exercise and eating rich foods, these organs become sluggish and inactive, producing the so-called spring fever, which is nothing but a lack of energy and ambition, due in many cases to a torpid liver.

Eat freely of this very desirable fruit. Its tonic properties are a valuable addition to the diet. Below are a few methodods of cooking rhubarb:

Rhubarb Baked in Casserole.—Wash and drain a bunch of rhubarb, then cut in one-inch pieces. Put in a casserole and add one-half a cup of brown sugar. Place a lid in position and bake for three-quarters of an hour. Do not add any water. This is delicious. The casserole confines all the aroma of the fruit, so that none of it escapes.

Rhubarb Pudding.—Two cups stewed and sweetened rhubarb. One cupful bread crumbs. One-half teaspoonful nutmeg. Mix thoroughly and then pack in a well-greased mold. Steam for one hour and serve with hard sauce.

Rhubarb Roll.—Drain all liquid from enough cooked rhubarb to measure two cups, then make dough as follows: One cup flour, one-half teaspoonful salt, two teaspoonfuls baking powder, two tablespoonfuls shortening. Six tablespoonfuls milk or water. Sift dry ingredients, then rub in shortening. Mix to dough with milk or water. Roll on floured pastry board one-quarter inch thick. Now spread the drained rhubarb over the dough, leaving a space of one inch all around the edges. Now roll like jelly roll and then put in a well-greased baking pan, pouring over the roll: One-half cup rhubarb juice and one-quarter cup of sugar. Bake in a moderate over for forty minutes. This roll may be eaten hot or cold, with a sauce made from the rhubarb.

Rhubarb Sauce.—One cup rhubarb juice, one-half cup sugar, one tablespoonful cornstarch. Cook until clear, usually about five minutes. Serve hot or cold.

Rhubarb Dumplings.—Prepare a dough, using the recipe given for rhubarb roll. Cut after rolling in four-inch squares. Fill the squares with pieces of uncooked rhubarb cut in one-inch blocks. Fold over the dough, then tie in dumpling cloths and boil or steam for twenty-five minutes. Serve with sweet cream sauce.

Use of a Stencil.

Stencilling is one of the daintiest, yet easiest, method of decoration.

The uses to which a stencil can be put are almost too many to mention; all kinds of articles for personal wear can be so treated, such as scarves, dresses, sunshades, hands, etc., and for the home such things as lamp shades, cushion covers, curtains, bags, hangings, table covers, etc.

A useful little stencil to purchase is based on the wild rose and is very simple to work out; it can be applied to various articles, such as scarves, covers, curtains, bags, shades, etc.; the stencil is repeated, of course, as often as it is thought desirable—this will depend upon the nature and the size of the article that is to be decorated.

The colorings used for this stencil may be varied, such as red and green, pale pink and green; the coloring will depend upon that of the rest of the room. If the stencil is to decorate a hanging or cover, and if for dress purposes it will depend upon the general color scheme.

Some oil colors will be needed, one or two stencilling brushes, and if the work is to wash well it is wise to buy a bottle of stencilling medium.

Put out on an oil plate or palette, some Alizarin crimson, white, lemon chrome and blue.

If the material to be decorated is delicate pin it down with drawing pins on to clean white blotting paper, then pin the stencil in place.

Economy A National Duty.

It is said that Canadian women scarcely know the rudiments of economy. Though this may be too strongly expressed, it is certainly true that considerable quantities of food are wasted in the average Canadian home. This may be due to ignorance or carelessness, or both. But if the women once grasped the fact that conserving our food supply is, in a very real sense, war work, and a definite duty to the country, more intelligence would be brought to bear on the problem. There is a tendency to put the emphasis on patriotic work outside the home to the neglect of national service which is waiting for us in the kitchen. No appeal has been made for us to undergo hardship in our eating. All that is asked of the women is that they serve simple, wholesome meals, eliminating all available waste. This avoidable waste may be summarized as follows:

(1) Loss through poor cooking, (2) cooking in larger quantities than necessary, (3) buying materials of small nutritive value, (4) food out of season, (5) buying imported foods, (6) buying staple foods in too small quantities, (7) buying more of some foods than can be used before spoiling, (8) buying cooked foods that could be more cheaply prepared at home, (9) failure to make use of left-overs, (10) careless seasoning and unattractive serving, (11) too many meat dishes and too few cereal, egg, cheese, milk and fish dishes.

Utilizing Old Linoleum.

Don't throw away old pieces of linoleum. Trim the edges, punch holes evenly in each end, bring ends together, lace up with leather thong or ribbons, bind top, make a round wooden bottom and you have a decidedly handy waste basket, which can be kept clean inside and out by washing.

has never been offered as "just as good" as some more famous brand; for Sixty Years it has itself been that more famous brand—and deservedly.

"Let Redpath Sweeten it."

Made in one grade only—the highest!

Man's Staff of Life is the whole wheat grain—not the white, starchy centre of the wheat—make no mistake about that—but be sure you get the whole wheat grain in a digestible form.

Shredded Wheat Biscuit contains all the tissue-building, energy-creating material in the whole wheat, steam-cooked, shredded and baked. A perfect food for the nourishment of the human body. A better balanced ration than meat, or eggs, or starchy vegetables, supplying the greatest amount of body-building nutriment at lowest cost. For breakfast with milk or cream, or for any meal with fruits. Made in Canada.

Dainty Afternoon Frocks

The fluffy afternoon frock is to divide honors with sports clothes this season. While we know that sports clothes are all-important, that their charms are indeed legion, and that no woman who considers herself as having the least pretensions to being fashionable will be without a goodly assortment of them this year; yet, in spite of all this, we must acknowledge that there is a touch of severity about them that creates a craving for the contrast of dainty, frilly, lingerie frocks.

A Charming Way of Developing the New Bordered Fabrics

Silk marquisette is combined with charmeuse in many dainty dresses of the more elaborate kind. The firmer material takes, seemingly, the less important part, but it really is quite important, forming the background, as it were, to bring out the sheer material to greatest advantage. It may be used in a band at the edge of the skirt and in touches on collar and cuffs, or it may be used for a skirt with a long overdress of the sheer material falling over it. Georgette crepe is another of the dainty materials employed in this manner.

The crepe de Chine dress is to come in for more attention than it has had for a long time. Crepe de Chine is to be one of the most popular fabrics for spring and summer dresses. No one will regret investing in a dress of this material, seeing that it has so many advantages, among them that of being a material which can be laundered very successfully. When so many of the present materials must be dry-cleaned, a dress which can be laundered and look just as fresh as new is a great boon to those whose incomes do not permit of many extravagances.

Smart Bordered Fabrics

Among the fashionable designs used in dress materials borders appear very frequently. The bordered fabric with a design scattered all over the surface is one of the most striking of the new effects. Borders on plain materials have been used largely before, and they are again favored this season, but the border around an all-over design is the very newest fashion. Both the embroidered and the printed effects are looked upon with favor. The colors show the same tendencies noted in the other spring and summer materials; that is, they are quite gay and often combine several bright tones.

One of those fascinating bordered fabrics is illustrated in the sketch of an afternoon dress for a young girl. This shows by far the simplest and not the least effective way of using such materials. The border goes around the bottom of the skirt, and makes the belt, and a strip of it is applied around the edges of the sleeves, forming a veritable frame for the figure.

These patterns may be obtained from your local McCall dealer or from The McCall Company, 70 Bond St., Toronto. Dept. W.

A GOOD MEDICINE FOR THE SPRING

Do Not Use Harsh Purgatives—A Tonic is All You Need.

Not exactly sick—but not feeling quite well. That is the way most people feel in the spring. Easily tired, appetite fickle, sometimes headaches, and a feeling of depression. Pimples or eruptions may appear on the skin, or there may be twinges of rheumatism or neuralgia. Any of these indicate that the blood is out of order—that the indoor life of winter has left its mark upon you and may easily develop into more serious trouble.

Do not dose yourself with purgatives, as so many people do, in the hope that you can put your blood right. Purgatives gallop through the system and weaken instead of giving strength. Any doctor will tell you this is true. What you need in spring is a tonic that will make new blood and build up the nerves. Dr. Williams' Pink Pills is the only medicine that can do this speedily, safely and surely. Every dose of this medicine makes new blood which clears the skin, strengthens the appetite and makes tired, depressed men, women and children bright, active and strong. Mrs. Maude Bagg, Lemberg, Sask., says: "I can unhesitatingly recommend Dr. Williams' Pink Pills as a blood builder and tonic. I was very much run down when I began using the Pills, and a few boxes fully restored my health."

Sold by all medicine dealers or by mail at 50 cents a box or six boxes for $2.50 from The Dr. Williams' Medicine Co., Brockville, Ont.

Some Helpful Maxims.

He is truly happy who makes others happy.

You can pass into the temple of honor only through the temple of virtue.

Continual cheerfulness is a sign of wisdom.

The goddess of fortune dwells in the feet of the industrious. The goddess of misfortune dwells on the feet of the sluggard.

Clean hands are better than full ones in the sight of God.

Hypocrisy is a sort of homage that vice pays to virtue.

Health and understanding are the two great blessings of life.

Laziness travels so slowly that poverty soon overtakes him.

Nothing is well said or done in a passion.

He that overcomes his passions overcomes his greatest enemies.

Solitude is the despair of fools, the torment of the wicked, and the joy of the good.

It is a principal rule of life not to be too much addicted to any one thing.

Gain got by a lie will burn one's fingers.

A great man scorns to trample on a worm or cringe to an emperor.

Luck will carry a man across the brook if he is not too lazy to leap.

There is no one luckier than he who thinks himself so. Better suffer a great evil than do a little one.

Experience is the father of wisdom and memory the mother.

Doctor—You cough more easily this morning. Patient—I ought to, I practised nearly all night.

Auntie: "Is your father asleep, Elsie?" Elsie: "His eyes is, auntie, but not his nose."

HEALTH POSTUM FIRST

Scientific facts prove the drug, caffeine, in tea and coffee is harmful to many, while the pure food-drink—

POSTUM

is not only free from drugs, but is economical, delicious and nourishing

Made of wheat and a bit of wholesome molasses, Postum is highly recommended by physicians for those with whom tea or coffee disagrees.

Postum is especially suitable for children.

"There's a Reason"

Sold by Grocers.

Tells Just What They Did For Her

Well Known Lady Makes a Statement Regarding Dodd's Kidney Pills.

She Had Numerous Troubles, All of Which Came From Diseased Kidneys and Found a Cure in Dodd's Kidney Pills.

Ayre's Cliff, Que., Apr. 16th.—(Special).—Mrs. W. Coules Macdona, of The Farm, a member of one of the oldest families living in this neighborhood has consented to give the public the benefit of her experience with Dodd's Kidney Pills.

"My trouble started from overwork," Mrs. Macdona states, "and I suffered for two years. I was treated by a doctor, but the results were not satisfactory. My joints were stiff, I had cramps in my muscles, my sleep was broken and unrefreshing and I was heavy and sleepy after meals. I had bad headaches, my appetite was fitful and I was always tired and nervous. I was depressed and low-spirited, I had a bitter taste in my mouth, in the mornings and I was often dizzy.

"I perspired with the least exertion and I often had sharp pressure or pain on the top of the head. Then rheumatism was added to my troubles. I have taken just two boxes of Dodd's Kidney Pills and they have done me good, not only in one way, but in many. Even my rheumatism is much better."

Mrs. Macdona's symptoms all showed that her kidneys were wrong. If you have similar symptoms try Dodd's Kidney Pills.

ARSENICAL FLY POISON.

Warning on the Danger of Using Poison Composed of Arsenic.

Dr. Ernest A. Sweet, Past Assistant Surgeon, United States Public Health Service, is the author of a government health bulletin on "The Transmission of Disease by Flies," which contains a timely warning on the dangers of arsenic fly poison. Dr. Sweet considers their use a menace which threatens every home. That the fly poison peril is a real one is proved by the fact that the American Press has recorded 106 child poisoning cases in the last three years.

Dr. Sweet advises his readers to destroy flies some other way than with arsenic fly poison. He says: "Of other fly poisons mentioned, mention should be made, merely for the purpose of condemnation, of those composed of arsenic. Fatal cases of poisoning of children through the use of such compounds are far too frequent, and owing to the resemblance of arsenical poisoning to summer diarrhœa and cholera infantum, we believe that the cases reported do not, by any means, comprise the total. Arsenical fly destroying devices must, therefore, be rated as extremely dangerous and should never be used, even if other measures are not at hand."

The Japanese do not sleep on European beds, but on many thick, soft puffs piled one on top of each other upon the floor. For bed covering they use more of the same kinds of puffs. It is said that the Japanese emperor has twenty such puffs. One of these which covers him is made in the shape of a kimono and has a velvet collar. Probably he creeps inside of this, if he feels cold in the night.

Minard's Liniment for sale everywhere.

Teacher: "Robert, how is it you haven't learnt your lesson? It couldn't have been so very hard to learn." Bobby: "No, please, teacher; it wasn't because it was so hard to learn, but because it was so easy to forget."

ENTERPRISES OF ROYALTY.

Long List of Crowned Heads Who Are Engaged in Business.

The King of Spain is the proprietor of a large motor and bicycle factory near Madrid. The Kaiser runs a cafe at Potsdam, close to his castle-gates. His All-Highest also receives dividends from a large beer brewery in Hanover; and he is the sole owner of the big and flourishing porcelain works at Cadinen, which return him a profit of about 9 per cent. on a capital of $600,000.

King Peter of Serbia owns a shaving saloon and chemist's shop in Belgrade. Before the war, his majesty was the agent for a well-known French motor car. The Queen of Holland supplies from her dairy, near the palace at Het Loo, a large proportion of milk consumed by buyers in Amsterdam. The King of Wurtemberg draws a net profit of at least $50,000 a year from the hotels he runs in the Beach Forest.

The beautiful Queen of sorely-stricken Rumania started, a few years ago, a factory for manufacturing toothpicks. So successful was this enterprise before the war, that her majesty was able to make quite a comfortable income out of it.

The Czar of Russia is a timber merchant. The Duke of Wurtemberg owns perhaps the largest corset factory in the world. The Grand Duke of Saxe-Weimar is a butcher, and, like all Huns, does a flourishing business. The Archduchess Frederick of Austria invested nearly $2,500,000 in a candle-making factory near Budapest. The King of Denmark confines his commercial ventures to the stock exchange, and has made many considerable "deals."

The King of Sweden has a large interest in a Stockholm brewery. A large brandy distillery fascinates the new Emperor of Austria, who has put quite a large sum of money into this industry, which thrives remarkably well in the ramshackle empire. King Albert of Belgium, when a young man, courted fickle fortune as a reporter on an American paper at a salary of $15 a week. The King of Bulgaria enjoys the reputation of being the shrewdest and wiliest of all royal business men. He owns theatres, cinemas, tobacco factories, dairies, and has made considerable sums on the Austrian stock exchange.

The Largest Tree.

It is said the largest tree known, in thickness, is a partly decayed chestnut in Sicily, which is sixty feet across. Mexican cypress and the Oriental plane have reached forty feet. This puts the California big tree and the baobob in the background, but the big tree is of greater bulk in combined height and girth and the baobob is thickest in relation to height.

BABY'S OWN TABLETS AN EXCELLENT REMEDY

When the baby is ill—when he is constipated, has indigestion; colds, simple fevers or any other of the many minor ills of little ones—the mother will find Baby's Own Tablets an excellent remedy. They regulate the stomach and bowels thus banishing the cause of most of the ills of childhood. Concerning them Mrs. Paul Dinette, Chaneville, Que., writes: —"I can recommend Baby's Own Tablets to all mothers as I have used them for my little one for constipation and diarrhœa and have found them an excellent remedy." The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Where the Mother Was.

A young lady was walking in the country one day, when she came upon a boy about to climb a tree. There was a nest in the tree, and from a certain angle it was possible to see in it three eggs.

"You wicked little boy!" said the girl, "are you going up there to rob that nest?"

"I am," the boy replied coolly.

"How can you?" she exclaimed. "Think how the mother will grieve over the loss of her eggs."

"Oh, she won't care," said the boy; "she's up there in your hat."

I consider MINARD'S LINIMENT the BEST Liniment in use.

I got my foot badly jammed lately. I bathed it well with MINARD'S LINIMENT, and it was as well as ever next day.

Yours very truly,
T. G. McMULLEN.

Girls of Chili.

The Chilean girl's reason for being is marriage, and one of her earliest lessons is that woman's place is indeed the home and that man is ordained her master. Old maids have a particularly horrid time in Chili and most of them take the veil. There is little else for them to do, for they can't all become school teachers and no other career is open for the woman who does not marry. Women journalists, doctors, lawyers, stenographers and clerks are practically unknown.

Minard's Liniment Cures Diphtheria.

GILLETT'S LYE

Careless.

It is the law of a school in a town near Boston that only children born in that town shall attend. One little girl in this town was born while her parents were at their vacation in the country. This made her ineligible as a pupil of this school. In telling a playmate about it when she was old enough to understand the situation the child said:—

"You see, I was born while I was on my vacation.'

PAIN ? NOT A BIT ! LIFT YOUR CORNS OR CALLUSES OFF

No humbug! Apply few drops then just lift them away with fingers.

This new drug is an ether compound discovered by a Cincinnati chemist. It is called freezone, and can now be obtained in tiny bottles as here shown at very little cost from any drug store. Just ask for freezone. Apply a drop or two directly upon a tender corn or callus and instantly the soreness disappears. Shortly you will find the corn or callus so loose that you can lift it off, root and all, with the fingers.

Not a twinge of pain, soreness or irritation; not even the slightest smarting, either when applying freezone or afterwards.

This drug doesn't eat up the corn or callus, but shrivels them so they loosen and come right out. It is no humbug! It works like a charm. For a few cents you can get rid of every hard corn, soft corn or corn between the toes, as well as painful calluses on bottom of your feet. It never disappoints and never burns, bites or inflames. If your druggist hasn't any freezone yet, tell him to get a little bottle for you from his wholesale house.

After Brazil, Colombia exports more coffee than any other country, its annual shipments being about 132,000,000 pounds. The amount is reported to be produced by 125,000,000 coffee plants, and each plant is valued at 30 cents.

MONEY ORDERS

PAY your out of town accounts by Dominion Express Money Orders. Five dollars costs three cents.

It is stated that the amount subscribed by Dublin to the War Loan was in the neighborhood of $10,000.

Minard's Liniment Relieves Neuralgia.

John Herbert Pollock, Deanfield, has been appointed a justice of the peace for the county of Londonderry.

For Stiff Neck

Apply Sloan's Liniment *without rubbing* to the sore leaders and the pain will soon be relieved.

For rheumatic aches, neuralgia, gout, lumbago, bruises, strains, sprains and muscle stiffness, have a bottle handy.

Quickly penetrates and soothes, cleaner than mussy plasters or ointments, does not stain the skin.

At all druggists, 25c. 50c, and $1.00.

Sloan's Liniment KILLS PAIN

Their Bond of Sympathy.

The taxi swayed and narrowly missed a policeman, then swerved again as it dashed past another taxi, and in so doing just escaped collision with a lamp post.

"Please be careful," pleaded the lady occupant of the cab. "This is the first time I have ever ridden in a taxi."

"Madame, you have my sympathy," gasped the driver. "This is the first time I ever drove one."

The Paisley Advocate

PAISLEY, APRIL 25th, 1917

—The daylight saving scheme is again in effect in European countries for the summer. The people of the American continent do not seem inclined to adopt this innovation. We note, however, that the Canadian Credit Men's Association purpose asking the Dominion Government to pass a law that will be be effective between dates to be mutually decided upon. Canada and the United States should move together in this change.

—There is no getting away from the production cry of the season. The crop outlook of the world indicates a smaller acreage to harvest from, and therefore a shortage of products that are required to feed the people. There should be no land allowed to lie uncultivated where help of any kind sufficient to do the work connected with seeding, cultivating and harvesting can be obtained. Within the limits of this village there are fields that promise to go to waste unless the urgency of the food call is heeded. We understand the Women's Patriatic League are launching a campaign to grow potatoes and other vegetables that could be shipped to soldiers' hospitals or like institutions. The project is a commendable one, worthy of support and encouragement. Every little counts in a time like this. Riverside Park may yet figure in the yields of 1917 crop.

IMPROVED HIGHWAYS CHEME

Plans for improvement of the main roads of Ontario are now receiving the attention such an important movement deserves. It is proposed to begin the organized work by first establishing a central route through Ontario from Windsor to Toronto, thence eastward to Quebec. The municipalities in western Ontario are alive to the advantage of being located on such a highway, and there is much rivalry as to what route the Windsor to Toronto stretch should take. The southern towns of St Thomas, Woodstock, Brantford, Paris and Hamilton were first named to be linked up by the proposed Provincial Highway, but the more central towns and cities of London, Stratford St Mary's, Woodstock, Kitchener, Guelph, Acton and Brampton desire a route to be fixed farther north. Bruce county would naturally be more interested in the Guelph plan, as we would be afforded more direct connection there via the Elora road, which has been the main artery of road travel from Southampton to Guelph ever since this part of the country was opened for settlement in 1854. On Thursday last delegates from those municipalities desirous of having the Guelph route adopted waited upon Premier Hearst in Toronto and presented their claims. The Premier stated that no new road building would be undertaken during the war, but when the construction of a Provincial Highway was undertaken the Central route would be considered with the other. Wm McDonald M P P., who takes a great interest in the Good Roads question, represented Bruce Co at this meeting, and referred to the Elora Road as a trunk line from the north. This trunk line would receive 60 per cent from the Government for construction, and 60 per cent for maintenance. It would also induce the county to build other leading roads connecting with the Elora road, and thus form a network of good roads through Bruce County.

AGRICULTURAL EDUCATION

Scores of times we have heard our own Ontario educational system denounced in unmeasured terms, some of which were of course very unreasonable. We have long been of the opinion, however, that our system is not properly adapted to the needs of this country. It aims to make professional men of the students rather than farmers, and the tendency is admittedly towards driving young men and women off the farms rather than keeping them there. The Advocate has gathered from various sources a good deal of information as to what is being done in the way of introducing agricultural education in Canada and United States, and this information is given below:

At present there are in the Province of Ontario 10 high schools, 6 collegiate institutes and 5 continuation schools conducting classes in agriculture and the number is rapidly increasing. These schools are located in different parts of the province and represent 15 dirent counties. The attendance upon the classes is optional at present and the introduction of the courses into the schools is also optional, consequently the establishment of agriculture as a part of the high school course will proceed only so fast as public opinion will permit. The number of students now receiving agricultural instruction in the high school is about 800.

At the end of the second year of the course there is a departmental examination which may be counted as a pass subject. In 1916 about 180 spirants took the examination. This work includes experimental laboratory work, relating to the fundamental principles of agriculture, and is made as practical as possible.

A course in the middle school is also provided and is arranged for two years, but where conditions are favourable and students are able to carry the work, it is possible to cover it in one year. There is, therefore, practically a four-year course in agriculture arranged for the high schools, and the equipment is paid for by special grants distributed by the Education Department when the requirements are fulfilled.

A further provision is made for agricultural education by the establishment of a "department" in the high school under the management of an Advisory Council of men engaged in Agricultural pursuits. Such schools as provide the accommodation to carry on the department, are intended to be the fore-runners of regular Agricultural High Schools. Quoting from the regulations we have this statement: "When the public interests necessitate Agricultural High Schools they will be duly established and liberally aided by the Government."

At present one high school has organized a department and two others are making arrangements to do so. It should be said here that liberal financial encouragement is given by the Education Department towards establishing and maintaining not only a department in agriculture but also, on a similar basis, a department in household science.

County agricultural schools have been established here and there in the United States but they have not proved a success. They have become agricultural high schools. It was found that these schools could not secure the attendance because the courses did not lead anywhere except back to the farm. An ambitious student upon entering an agricultural high school is encouraged by the fact that this course may lead to a profession if he wishes. After taking the course, however, he may go back to the farm but he is attracted by the fact that there are other doors open to him.

Minnesota has now 175 agricultural high schools and no county agricultural schools. Wisconsin had several county agricultural schools, but has now only one. In Michigan the county agricultural schools have not been a success and there is now only one left. These three states are pushing as fast as possible the agricultural high school, which is nothing more than a high school giving a good course in agriculture. We have now in Ontario 21 schools and this number would be increased enormously if agriculture were recognized as an elective subject for matriculation. In the three States mentioned agriculture has a standing similar to that of other studies and may be offered for matriculation. The chief reasons why it is not introduced more rapidly are because of an extreme difficulty in securing qualified teachers, and because the subject has the standing of only an option, not being recognized at all in matriculation and being only a bonus for the teachers' examinations.

In conclusion it might be said that the influence of agricultural classes is already being felt, for, in several instances, boys passing the entrance are attracted to the high school for a year or two, knowing that they will receive some instruction on the principles of agriculture. In schools where such classes are not yet introduced, boys they pass the entrance, for if they go similarly situated stop school when back to the farm the high school has little to offer.

The Legislature of Alberta propose to spend $100,000 for schools of agriculture, and build four additional schools. Hon. Duncan Marshall, in explaining the policy of the Government with regard to agricultureal education, said that at the end of the war they wanted to be ready to give every young man and young woman in Alberta a chance of getting such an education and training as would enable them to better discharge their duties to the country.

THE PRODUCTION CAMPAIGN

No doubt the campaign for greater production of food stuffs, being carried on by the Organization of Resources Committee and the Ontario Dep. of Agriculture, will result in some good but it has all along seemed to us that just the right kind of appeal is not being made.

The information as to how to produce more, and the effort to get together the men who want work and the farmers who want men is effort well directed, but the average farmer is not moved by the patriotic appeal to produce more because the country and the Empire need more.

The farmer looks upon the whole matter as a business proposition and asks: "Will it pay?" That is the way the makers of munitions and of army boots and clothing look at the work they are doing for the army. Before starting they are first assured that the enterprise will be profitable. Can the producer of foodstuffs be blamed if he wants the same assurance?

There are, however, many farmers who are quite wrong-headed regarding the situation, or who do not appear to appreciate the opportunity which this year presents. We have heard of a man who said that he certainly would not produce more, and that if all farmers would cut down on production they would get more for what they did produce. That idea, of course, will be acted upon by only a few, and they will lose by it.

Others may be lacking in enterprise and simply fail to "make hay while the sun shines". Such are in the same position as the manufacturer who stuck to his old lines and didn't bother going into the munition-making business. Such are not only losing the present opportunity, but they are very sure to have good reason to regret this want of enterprise in the lean years which are sure to follow the war.

Let such consider the facts of the present time and they will see that any expansion they can make by hiring more help at higher wages or by extra effort on their own part is sure to be well rewarded.

It is estimated that forty million men are engaged in the actual fighting in the war, while twenty million men and women are producing munitions and clothing for the soldiers. Many of these play millions were formerly producers of food. From that line of work they are now withdrawn leaving great regions idle.

[Not only that, but in our own country there has been in the past few years a great falling off in the amounts of food stuffs produced. The acreage of wheat, oats, barley and potatoes was nearly 365,000 less in 1916 than in 1915, and the yield declined by more than 73 million bushels. Between 1914 and 1916 the yield of potatoes fell from 26,717,567 bushels to 7,468,439 bushels.

In the face of these facts, what likelihood is there of low prices, or an over production? There is no prospect whatever.

Some complain that help is scarce and wages high But if wages are high, prices also are high. The hired man who helps to produce a bushel of wheat worth $200 or a bushel of oats worth 70c., a two-hundred-pound hog worth $30 or a cow worth $120, is entitled to higher pay than when his work resulted in only half these returns. In spite of higher pay to hired help and increased general expenses, production of food stuffs never before was as profitable as it is now.

There is no use in saying that the prosperity is more apparent than real. Bank deposits and the number of automobiles and victrolas being bought by farmers tell a different story.—Lucknow Sentinal.

RHEUMATISM WAS MOST SEVERE

Dreadful Pains All The Time Until He Took "FRUIT-A-TIVES".

MR. LAMPSON

Verona, Ont., Nov. 11th., 1915.

"I suffered for a number of years with *Rheumatism and severe Pains in Side and Back*, from strains and heavy lifting.

When I had given up hope of ever being well again, a friend recommended "Fruit-a-tives" to me and *after using the first box I felt so much better* that I continued to take them, and now I am enjoying the best of health, thanks to your remedy".

W. M. LAMPSON.

If you—who are reading this—have any Kidney or Bladder Trouble, or suffer with Rheumatism or Pain In The Back or Stomach Trouble—give "Fruit-a-tives" a fair trial. This wonderful fruit medicine will do you a world of good, as it cures when everything else fails.

50c. a box, 6 for $2.50, trial size, 25c. At dealers or sent postpaid on receipt of price by Fruit-a-tives Limited, Ottawa.

LOCAL AND DISTRICT NEWS

Expensive Drain Repairs

The council again has to spend a lot of good money for opening up the drain that carries off the surface water from lots on corner of Queen and Church Sts. This drain is an old wooden one put in by the township of Elderslie years before this village was incorporated. When it caves in and ceases to work a small lake forms behind P C Kennedy's shop, which becomes a pestilent pool in summer, and a menace to the health of the community. The drainage must be provided and it is the general opinion that new drain would be less expensive in the end than continual repairing of the old one. The break in the drain has been located, and found to be caused by a large telephone pole being planted on top of the box.

Appreciates the Socks

From "Somewhere in France" the following note was received by Mrs John McInnes, 10th Bruce: DEAR MADAM—Just a few lines to thank you for the socks I have just received through our quarter-master. They are just what us Tommies need, for if we do not have lots of good socks our feet will not stand the rough going. I thought it would be no more than fair to let you know how much we appreciate things like that. You ladies have the hardest part, for when we do anything worth while we get some credit for it, but you have to watch the boys go away and then do your bit on the quiet, with never a one paying any attention to you at all. But believe me, the boys are all more than grateful to you for what you are doing for us here, for we are all glad to get something to remind us of our homes far away, and a good pair of home knit socks is about as good as anything I know of. Thanking you again for your kind interest in us boys.—832,420 SPR A D HARTT.

Ox-cart Rides

The Kinardine Review tells of a span of oxen pulling a lumber wagon through the streets of that town a few days ago. The owner, Mr Ed Forrester, had as his chauffeur Mr R A Pollock, who for the time being was the cynosure of every eye, also incurring the envious glances of erstwhile shoppers, who might be mere possessors of a Reo or a Ford. This reminds The Advocate scribe of perhaps the most exciting road adventure of his life, when as a small boy pleasure rider on a cart load of wood drawn by a yoke of steers, the bovines set out to break the speed limit on the 5th sideroad, Elderslie. The young joy rider was dropped squarely in the middle of a water puddle on the pure mud road, making quite an impression upon the earth. There were no bones broken, nor even flesh bruised, but that boy's condition could best be described as being "of the earth earthy," and we've never been able to shake off that baptism. We've never yet had a spin in a modern gas wagon that gave us the thrills of that ox-cart ride.

Sergt. Babcock In Blighty

Writing from London on April 9th, Sergt A E Babcock says: "Have arrived in Blighty at last. Left France on April 3rd and came to London via Boulogne. I couldn't call the journey pleasant by any means, as it is always a long tedious ride through France. It is beyond expression the amount of traffic on the lines of railway running into Boulogne. Well, I arrived in old London the next day, stopped over night, and in the morning took the train for Bramshott camp. Arrived about 10 p m. I met a number of the old 18th boys, including Stewart Daniels and Alex Bine. They are looking well and were rather surprised to see me. I stayed one day at Bramshott, then my leave came through, so I left there on the 7th, with passage booked for Edinburg. Arrived in London at 4 p m. The next morning I went by underground to King's Cross station, only to find the time had been shifted ahead one hour (daylight saving scheme) so will have to wait till 8.30 p m to-night. When I arrived in London this time I met Norman Allen. He has grown since I saw him last. He is sergt in the dental corps at Witley. I understand the 160th are there yet. Will look them up when I get back to camp again, as we are only seven miles from there."

Make Sure of your "Chevrolet" by Ordering Now

Factory Away Behind with Orders---Price May Advance Any Time, Owing to Scarcity of Steel, Materials and Labor

The unprecedented demand this spring for CHEVROLET cars has already placed the factory away behind with orders, compelling us to ask our patrons to order NOW to ensure immediate delivery.

The CHEVROLET car is the lowest price motor car in Canada with complete Electrical Equipment.

When you buy a CHEVROLET you do not require to put on extras. You get everything—Electric Starter—Electric Lights—Speedometer—Ammeter—Rain Vision Ventilating Wind Shield—all the comforts and advantages to be found in any car—yet the price is the lowest in Canada.

The demand for CHEVROLETS this year is due to their splendid record last year. They have made good under all conditions. They stand up. They give their owners a perfect, uninterrupted, economical service. They can be operated at the lowest possible cost and are practically free from repairs. No car in the world has the "pep"—the "get away," that the CHEVROLET has. In traffic they are handled with ease by lady drivers and when speed and power is wanted you have it in abundance. No other car is so easy on tires.

YOU WANT A CHEVROLET—MAKE SURE OF IT—ORDER IT NOW. HAVE THE FULL SUMMER'S ENJOYMENT OUT OF IT. NOTHING WILL GIVE YOU AS MUCH PLEASURE FOR SO LITTLE COST.

W. H. BAKER, Paisley

DEATH OF MRS. SAUNDERS

Sometimes a visitation of the grey messenger of death is more merciful than relentless, and so it appears in the case of our aged and most respected postmistress Mrs Saunders, who passed away on Thursday morning last after a long period of helpless invalidism. The deceased was stricken with paralysis a number of years ago, and gradually sank to a condition of total prostration. Throughout the years of her helplessness, she was most tenderly and attentively waited upon and comforted by the members of her family. Mrs Saunders was the eldest daughter of the late S T Rowe (the first settler on the site of Paisley) by his first marriage. She was born at Dunham, and being left motherless at birth, she lived with her grandmother at Durham until she was thirteen years of age, and then came to her father's home in Paisley. In 1863 she was married to Mr James Saunders, then principal of Paisley school, who a few years later was appointed postmaster. At his death in 1883 Mrs Saunders was made postmistress, and held the office ever since, the service given mainly by the assistance of her daughters (and of late years by her son-in-law, Mr J R Laidlaw) being so efficient and satisfactory that the people of the community at no time were disposed to deprive her of the position by having another appointment made. While her home and family were the objects of her greatest love and devotion in life, Mrs Saunders' sympathy was all embracing, and many in dire need in the trying early days in this community were given ready help at her hands. She was from girlhood connected with the Church of the Ascension. Of her family of nine children, four daughters survive her—Mrs S A St Geo Simons, of Toronto; Mrs J Sutherland, of Guelph; Mrs S M Hutcheson, of Unionville, Mrs F N Allen, of London—all of whom were here for the funeral, with their husbands, except Mr and Mrs Hutcheson, who could not be present, but their daughter, Miss Ada, came. The funeral on Sunday was very largely attended. Service was held at the home of her son-in-law, Mr J R Laidlaw, and was conducted by Rev L W Diehl, assisted by Rev Mr Crighton. Interment was made in the Paisley cemetery. The pallbearers were—P Carter, C Briggs, M Daniel, A B J Simons, R J Nelson and S Ballachey.

THE CRITIC IN THE CONGREGATION

(Christian Guardian)

We wonder if there is a congregation anywhere which has not from one to half-a-dozen vigorous, voluble and effective trouble producers of this kind! It is so easy to sit in the pew and pick flaws in the preacher. There is always something wrong either with what he says or the way he says it. Either he is no student or he is too much of a student; either he is not an eloquent speaker or he is too fluent; he speaks too low or he shouts too much; he stands too still or he moves about too much; he is too solemn or he smiles too much; yes, there is always plenty of room to find fault with the preacher.

But suppose the preacher is really perfect there is still the choir, and it sorely vexes some of us. Sometimes the voices do not blend, or the music does not suit the voices, or the lack of practice is very evident, or while the technique is perfect the soul is lacking. And then the choir is always smiling, or whispering, or passing papers, or doing something it ought not to do, and the critic sees it all and does not fail to mention it.

And when the critic gets tired of dilating upon the preacher's shortcomings and the choir's manifold defects, there is always the sexton and the church member to pick to pieces. The church is usually too hot or too cold, there is too much ventilation or there is none at all, the light isn't just right, or the church acoustics are defective, or the color scheme is an artistic atrocity. And then the people are the most frigid souls you ever met, or else they pester you with their unwelcome attentions; they are too aristocratic and too dressy, or they they are altogether too common and too dowdy; they have no spirituality and are woefully worldly, or else they have too much religion and are altogether too pious.

If a man has the critic's eye and ear, the critic's heart and tongue, there is no preacher living or dead, and no church of this generation, or of any other, concerning which he cannot utter disparaging criticisms, and possibly truthful ones. Sometimes, of course, the criticism is wholly unjust, and wholly uncalled for, but in many cases it may be strictly true, and yet, whether true or not, its effect may be largely evil and wholly foolish.

The farmer who ploughs does not quit ploughing because one horse naturally walks a little faster than the other, nor because the horses occasionally show symptoms of ill-temper, nor because the team tires out too quickly. He knows that he has to plow with that very team, and he makes the best of it. And the man who runs a factory does not give up in despair because he finds that his foremen are not as competent as they should be, or his workmen not as reliable as he could wish. He simply makes the best of the material which is available. There is no perfect horse, there is no perfect factory, and there is no perfect church, and constant fault-finding, instead of improving matters, usually aggravates the evil complained of.

And yet it is well to bear in mind that improvement depends upon criticism, or at least upon recognition of imperfections, and there should be on the part of everyone a constant struggle to get rid of defects and to increase efficiency. But this criticism must be well-timed, sympathetic, and not too often-repeated if it is to be effective, and as a rule the man who is really busy improving himself has not much time to spend on his neighbor's shortcomings. Usually work—hard, earnest work—is the best cure for criticism. The busy man forgets to find fault. If you feel like criticizing, you had better take hold and work, and before undertaking to turn the world upside down you had better have a thorough house-cleaning at home.

Always bears the Signature of *Chas. H. Fletcher*

—Orillia Packet: Great news! The Paisley shawl—dear old grandmother's shawl!—is coming back. What a sensible, serviceable, comfortable wrap it was, to be sure. Too sensible, one might almost have feared, to be revived in these degenerate days. Even yet this page admits a measure of skepticism. If the dear ladies do re-adopt the Paisley, they will probably bundle the whole of it around the neck, while their legs are left all but bare nearly up to the knees; or they will carelessly throw it in a sort of rope over the left shoulder and trail one end behind them on the walk.

BORN

NICHOL—In Eldersl ie, on April 21st, to Mr and Mrs Thos. Nichol, a son.

MARRIED

RODY—QUAST—In Chesley, on April 4th by Rev V L Schantz, Mr. Ben Rody and Miss Hilda Quast, both of Brant.

DIED

SAUNDERS—At Paisley, on April 20th, Mary A Saunders, widow of the late James Saunders, in her 73rd year.

JOHNSON—At Paisley, on April 21th Isaac L Johnson, aged 69 years 10 months and 21 days.

Overland Motor Cars

Light Four **$975**

Roadster - - $950

Country Club $1110

f. o. b. Toronto

Subject to change without notice

Built to Rigid Standards

Every Overland Light Four is built to a rigid standard of performance, comfort and appearance.

It has good style—built low with harmonious and sweeping lines. It is a beautiful car in every sense of the word.

The motor is powerful, quiet and of sturdy construction. The turning radius is short. The car has quick acceleration, is built to tour safely and comfortably.

With all these good qualities it rides beautifully. The soft cushions, the long, resilient cantilever rear springs, the large tires (31 x 4) and the proper balance in construction, absorb all types of jolts—over all kinds of roads.

Call and inspect this splendid value.

Had Terrible Pains in Kidneys and Back.

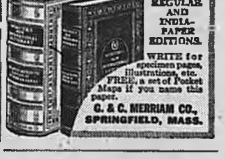
Dear Mr. Editor—I want to write you about "Anuric." I was very sick, could hardly be up; I was in bed most of the time. Had terrible pains in my kidneys and back, so much so that I had to scream sometimes when I was sitting down and wanted to get up, the pain was so great. I had tried a well-known kidney medicine but it didn't help me. I heard of Dr. Pierce's Anuric Tablets so I thought I would try them. I took only one box of the Tablets, and my back is now free from pain and I can work and take care of my family. I feel I cannot say enough for this medicine. Sincerely, Mrs. WM. KELLER.

NOTE: This "Anuric" is adapted especially for kidney complaints and diseases arising from disorders of the kidneys and bladder, such as backache, weak back, rheumatism, dropsy, congestion of the kidneys, inflammation of the bladder, scalding urine and urinary troubles. The physicians and specialists at Dr. Pierce's great Institution, at Buffalo, N.Y., have thoroughly tested this prescription and have been with one accord successful in eradicating these troubles, and in most cases absolutely curing the diseased kidneys.

Patients having once used "Anuric" at Dr. Pierce's Invalids' Hotel, have repeatedly sent back for more. Such a demand has been created that Dr. Pierce has decided to put "Anuric" in the drug stores of this country, in a ready-to-use form. If not obtainable send one dime by mail to Dr. Pierce for trial package or 50 cents for full treatment.

Dr. Pierce's Golden Medical Discovery is a blood cleanser and alterative that starts the liver and stomach into vigorous action. It thus assists the body to make rich, red blood, which feeds the heart, nerves, brain and organs of the body. You feel clean, strong and strenuous.

Why



not give your boy and girl an opportunity to make their home study easy and effective? Give them the same chances to win promotion and success as the lad having the advantage of

WEBSTER'S NEW INTERNATIONAL

Dictionary in his home. This new creation answers with final authority all kinds of puzzling questions in history, geography, biography, spelling, pronunciation, sports, arts, and sciences.

ORKNEY ISLES HELD IN PAWN

HOW ORKNEY AND SHETLAND BELONG TO BRITAIN.

Giving an Interesting Bit of History Which Is Not Generally Known.

It is not generally known that the Orkney Islands, though supposed to be part and parcel of the British Empire, are in reality held by us exactly as the pawnbroker holds the watch of the impecunious individual who has temporarily parted with that useful article. These islands are only held by us in pawn, and Norway, as it were, holds the ticket.

Long ago Orkney, together with the Hebrides on the west coast of Scotland, belonged to Norway. After the battle of Largs, Norway ceded the latter to Scotland for a cash payment of 4,000 marks and an annual tribute 100 marks. This tribute, known in history as the Annual of Norway, has to be paid regularly under a penalty.

Payment Refused.

In 1397 Norway, Sweden and Denmark were united under one crown, and when Christian became king of the united realms Scotland had neglected the annual payment for forty years, incurring a penalty of over 40,000 marks. King Christian promptly sent in his account for the whole sum, with a request for immediate payment.

Scotland declined to pay, and as King Christian insisted a rupture between the two countries seemed inevitable. The King of France, however, who happened to have alliances with both countries, used his influence and suggested a marriage between Prince James of Scotland, afterwards King James the Third, and Margaret, King Christian's daughter, trusting that such a union would lead to a friendly settlement.

Marriage Arranged.

After much haggling the marriage treaty was arranged and the princess' dowry fixed at 50,000 florins; 10,000 to be paid within the year and the Islands of Orkney to be pledged for the other 40,000.

Only 2000 florins was paid, the Shetland Islands being pledged for the remaining 8000—and there the payments stopped. Though unable to pay, King Christian would on no account accede to the permanent cession of the islands, and it is quite certain that he intended to redeem them, as he was quite entitled to do, for so late as 1668 the plenipotentiaries of Europe declared that the islands were still redeemable. However, neither he nor any of his successors have been able to do so, and that is how Orkney and Shetland belong to Britain.

But supposing that the present ruler of Norway produced the ticket along with the money due and demanded back these islands, it would be interesting to know what would happen.

DEATH RATE IN BRUSSELS.

Twelve in Every Thousand Die Each Month in Spite of Relief Efforts.

Appalling figures have just been received pointing out the situation in occupied Belgium, with more convincing details, perhaps, than has been given before. In the city of Brussels twelve people out of every thousand die each month, and practically every death is traceable to starvation.

This is the condition that obtains in spite of the two and a half years of ceaseless efforts on the part of the Belgian Relief Committee.

And to make matters worse, it is women and children, aged men and women, cripples and the helpless who are the victims. It is those whom the soldiers of Belgium had to leave behind when they went out to fight the battles of humanity.

These are the conditions that the Belgian Relief Committee is asking the people of Canada to help better. The Belgian Relief Committee—the same committee that has its work to do in Belgium—has its offices at 59 St. Peter Street, Montreal, and in practically every town in Canada where contributions to this great relief cause may be sent.

NEW RUSSIAN GOVERNMENT

Former Royal Family Are Virtually Prisoners Under Constant Guard.

The Imperial Winter Palace in Petrograd, one of the most gorgeous buildings in the world, where formerly were held the brilliant affairs of the autocratic Russian court, is to be the scene of the first great decisive step toward the liberation of Russia from the shackles of political bondage. The palace has been seized by the Russian revolutionists and will be put to Government uses. Instead of the imperial standard the red flag of the revolution now floats above the edifice which was once the home of the ex-Czar.

Russian women are to get the ballot. Announcement is made that it has been settled that women shall vote for members of the Constituent (National) Assembly.

Among the precious jewels in the crown jewel room of the Winter Palace is a diamond-studded scepter that cost $1,200,000. The Orloff diamond, formerly the property of Empress Catherine II, 185 karats fine, is valued at $225,000, not to mention the priceless quality of its historic associations. A crown ordered by Empress Catherine I is valued at $550,000.

In addition there are millions of dollars' worth of diamonds, emeralds, rubies and pearls, gathered from all parts of the world in the course of the last century and a half.

The Winter Palace was completed in 1764, but part of it was destroyed by fire in 1837. It was restored during the next two years and made finer than ever. The building is 500 feet long, 385 feet wide and 95 feet high. The grand ambassandorial staircase, constructed of Carrara marble, is one of the architectural wonders of the world.

The last of the Romanoffs was under detention at Tsarskoe-Selo, literally "Village of the Czar," a town situated about forty miles from Petrograd, and containing a Royal residence. The former Czar, the Czarina, the royal couple's only son and their four daughters are now housed in the palace. Every deference has been shown all these members of the former royal family.

The ex-Emperor is under constant guard and no one is allowed to communicate with him except on permission by the provisional Government. The former Czar's dagger was taken away from him when he was interned. The one-time ruler of all the Russians is described as "pale, haggard and nervously restless." He frequently bursts into tears and bemoans the fate of himself and family.

Pumping Out Holland.

Holland has called electricity to its aid in its never-ending fight against the encroachments of the sea. In January, 1916, tremendous storms from the west drove the North Sea into the narrow bottle neck of the Zuider Zee. Because of a simultaneous windstorm from the north, the pressure became so great that the dikes gave way and the Waterland region of Holland was flooded. Only the elaborate system of inland dikes and drainage canals and hastily built coffer dam kept the flood from the larger cities. As it was, the flooded area reached almost to Amsterdam. According to the Edison Monthly, three and one-half billion gallons of water covered the land. The existing pumping stations had a capacity of twenty-eight thousand cubic feet a minute—one quarter, perhaps, of what was needed. In the emergency the Dutch decided to use electrically driven centrifugal pumps stationed at many points throughout the flooded area. The floods occurred on January 14. By March 31 the pumps had been built, the motors delivered and installed, the cross-country electric cable had been stretched from Amsterdam and the work of drainage had begun. By the end of April all the polders had been drained, and in another month the lower lakes were emptied. Thus modern pumps and electric motors did all the work in four and one half months, whereas it took a year and a half to clear the land of the flood of 1825, which covered a smaller area.

The bayonet was so called because it was first made at Bayonne in France. The modern bayonet is a short sword (about one foot in length) which fits on to the barrel of the rifle. When not in use it is carried in a scabbard hanging on the left of the soldier's belt.

A New Photo of Prince of Wales at the Front.

The heir to the British throne joined the army four days after the war began, August 8, 1914, as a second lieutenant of the Grenadier Guards. In the following November he went to France as A.D.C. to Sir John French, and on the 18th of the month was promoted to lieutenant. In March, 1916, H.R.H. was temporarily transferred to Egypt as a staff-captain to the commander-in-chief of the Mediterranean Expeditionary Force. On being promoted to his regimental captaincy, he was, last October, posted as a general staff officer, second grade, at army headquarters in France. The Prince of Wales, who has been under fire in the trenches, as published soldiers' letters relate, has twice been mentioned in despatches. Sir John French "mentioned" him for special work as a liaison officer at Neuve Chapelle, for zeal and thoroughness in the performance of duty, and his deep interest in the men's welfare. Sir Douglas Haig "mentioned" him more recently "for gallant and distinguished conduct in the field."

Fur Production in Canada.

Canada's rich resources in fur-bearing animals formed her earliest commercial attraction, and, through generations of energetic exploitation, the fur industry has occupied an important position in primary production. Of recent years it has become increasingly evident that the permanent preservation of this source of wealth demands the much more rigorous protection of fur-bearers. One of the essential requirements is the collection of accurate statistical data of fur production from year to year, as a reliable index to the increase or depletion of our resources. Such a system is already enforced in several provinces, where trappers and fur dealers are licensed and compelled to make annual returns as to their operations. Similar measures should apply to every important fur producing region of the Dominion.

Post Office Deficit Accounted For.

Helen was the little daughter of a thrifty woman, who always took advantage of bargin sales.

One day the little girl rushed home from the post office, and said to her mother:

"Mammu, you can get a five-dollar money order at the post office for five cents."

WHEN THE MOOSE CHARGED.

Thrilling Incident of a Hunting Trip in Quebec Province.

In a Book-Lover's Holidays in the Open, Col. Theodore Roosevelt takes his readers into the less familiar corners of both North and South American. Many of his experiences were exciting, but perhaps the most thrilling was his encounter with a bull moose when on a recent hunting trip in Quebec.

When we were half a mile from the landing, he says, we saw a big moose on the edge of the shore ahead of us. He looked bigger than the one I had shot that morning, and his antlers were rather more palmated. We paddled up to within a hundred yards of him, laughing and talking, and remarking how eager we should have been if we had got already got our moose.

At first he did not seem to notice us. Then he looked at us, but paid no further heed. We were surprised, but paddled on past him; we supposed that he did not realize what we were. But another hundred yards put us to windward. Instead of turning into the forest when he got our wind, the moose merely bristled up the hair on his withers, shook his head and walked along the shore after us. Plainly he meant mischief. So we turned the canoe round and paddled on our back track. But the moose promptly turned and followed us along the shore. We yelled at him, and Odilon struck the canoe with his paddle, but with no effect.

For more than an hour he thus kept us from the shore, running to meet us wherever we tried to go. The afternoon was waning, and a cold wind began to blow. He was not a pleasant-looking beast to meet in the woods in the dusk. We were at our wit's ends to know what to do. At last he turned, shook his head and, with a flourish of his hoofs, galloped—not trotted—for fifty yards up along the little river that paralleled the portage trail. I called Arthur's attention to that, as he had been telling me that a big bull never galloped. Then the moose disappeared at a trot round the bend. We waited a few minutes, cautiously landed and started along the trail, watching to see if the bull were lying in wait for us. Arthur told me that if he now attacked us I must shoot him at once or he would kill some one.

A couple of hundred yards on, the trail led within a few yards of the little river. As we reached that point a smashing in the brush beyond the opposite bank caused us to wheel; and the great bull came headlong for us. Arthur called to me to shoot. With a last hope of frightening him I fired over his head, without the slightest effect. At a slashing trot he crossed the river, shaking his head, with his ears laid back and the hair on his withers bristling.

"Tirez, m'sieu', tirez; vite, vite!" called Arthur, and when the bull was not thirty feet away I put a bullet into his chest, in the sticking point. It was a mortal wound, and stopped him short.

I was sorry to have to kill him: but there was no alternative. As it was, I only stopped him in the nick of time, and had I not shot straight at least one of us would have paid forfeit with his life. Even in Africa I have never known anything except a rogue elephant or buffalo, or an occasional rhinoceros, to attack so viciously or with such premeditation when he was neither wounded nor threatened.

Work.

Let me but do my work from day to day,
In field or forest, at the desk or loom,
In the roaring market-place or tranquil room;
Let me but find it in my heart to say,
When vagrant wishes beckon me astray,
"This is my work: my blessing, not my doom;
Of all who live, I am the one by whom
This work can best be done in the right way."

Then shall I see it not too great, nor small,
To suit my spirit and to prove my powers;
Then shall I cheerful greet the laboring hours,
And cheerful turn, when the long shadows fall
At eventide, to play and love and rest,
Because I know for me my work is best.

—Henry Van Dyke.

WAR DOGS DOING THEIR BIT.

Remarkable Feats That Trained Dogs Are Doing on Battlefront.

The Germans entered the war with hundreds of dogs trained to perform various services. They had the dogs that did what the St. Bernards used to do, namely, hunt out perishing man, and bring their friends to them. They had also scouting dogs, and dogs that would growl or bristle at the approach of a stranger. They had dogs that would recognize an enemy, by what means we do not know, but maybe by his uniform, and seize him if the opportunity arose.

In the matter of training their dogs for war the Germans, as usual, led. France, however, copied very quickly. The Belgians, always animal-lovers, had made use for years of the dogs that dragged their rapid-fire guns in time of war as they dragged their milk wagons in time of peace. It was not long before both Belgians and French had established a dog service in the army quite equal to that of the Germans.

Some of the things the dogs have been taught to do remain almost miraculous even to those who are not altogether ignorant of the brain-power that may be developed in a dog. For instance, a dog at a listening post, whose business it is to give warning of the approach of an enemy, has been taught to do so not by barking or even by growling, but merely by pricking his ears or scratching on the ground.

He has been taught to cross ground that is being swept by shell and bullet carrying despatches, to continue even after he has been wounded. He has been taught, in some cases, to distinguish between an offensive and a defensive, to know when to hurl himself upon an enemy patrol, and when to lie close to the ground to let the Boche pass.

In one authenticated instance an English Airedale, at his master's bidding, seized a bomb that had fallen in a trench and rushed with it into the open. The dog was blown to pieces, but the lives of a dozen men were saved. They are taught to work sometimes for two days and two nights without rest. They are taught to ignore the trench rats, a particularly hard job to teach a terrier, and to make no sign whatever unless a German approaches.

They can see and hear further than a man, and at night they have frustrated scores of surprise attacks. Their services in the past couple of years of trench warfare have been invaluable, and we are glad to learn that on more than one occasion particular dogs have been mentioned in official French despatches, and have even been decorated.

GERMAN FRIGHTFULNESS.

Some of the Means Employed by the Enemy to Injure Civilians.

Tempting French children with poisoned candy is the accusation made against the Germans again, as it was in Serbia and Rumania. The candy drops from the skies, so to say, which appeals the more to childhood. The police of Barle-le-Duc, where the American flying corps was stationed formerly, and of Besancon, have warned the people to forbid children from eating candy from boxes of sweetmeats which they may find. The packages of bon-bons are dropped by German aviators, it is alleged, and the sweets contain arsenic and other poisons. Moreover, it is charged that packets filled with tubes containing the germs of contagious diseases are being sown by Teuton flyers. The curious and incautious open such a packet and the germs, if the report is to be credited, infect all those near.

The French troops easily defeat the Germans' attempts to poison them by tampering with drinking water. Medical officers, keeping pace with the advanced troops, examine all springs and wells and mark poisoned water "drinking forbidden."

Meantime fresh water is piped along just behind the advance guards. The Germans usually throw dead horses into the wells, but sometimes they use arsenic.

Too Much Water.

George was hampered by a mother whose idea of godliness was cleanliness. Notwithstanding the frequent baths to which he was condemned George thrived exceedingly. One day a neighbor remarked on his rapid growth. "Yes," said George; "that's ma's fault. She waters me so much!"

ODD MENTION.

Selection of good seed won't help you if you let the hoe rust.

To keep the good dinners coming the cook must have plenty of raw material. See that she has them.

When wood is dry is the time to store it in the shed. Your wife can not hurry dinner with wet wood.

Have you made the last payment on the farm mortgage? Then get a release and have it recorded.

All Frenchmen can cook and are not ashamed of it. How many Canadian farmers can say the same?

Condemn no man unheard, for illness or lost courage may bear the likeness of laziness. Put hope in the man.

Life's success is not measured by acres or dollars in the bank, but by the comforts that you have every day.

If the robins do police duty over your orchard don't object to the cherries they take. They have earned them. Set more trees.

50 per cent. more than the May hatch, and the May hatch is worth 100 per cent. more than the June hatch.

Be ready at all times to drop everything and run when an animal or fowl is hurt, and apply "first aid to the injured"; and be sure to learn what to do beforehand.

A word to the young man with the big ambition: Put a little money in the bank or invest it somewhere so that it will bring in a regular return. It goes better than the clock. You don't have to wind it up—it runs on night and day and always works for its owner's good.

Wood and Water.

The destruction which the war has wrought in British forests has caused many an artist to shed unpatriotic tears. Yet the scarring of beauty spots is merely one objection to tree-felling on a large scale.

The rains which refresh the earth, and which are essential to its productivity, are largely influenced by the effect of forests on the upper atmosphere, and—to carry the danger of tree-felling to its fantastic limit—if every tree in the world were felled the earth would indeed be a parched planet!

Many ideas have been held in regard to rain, and many experiments worked out. People used to ring church bells during dry seasons, hoping the concussion would bring rain. The effect of gunfire upon weather is still a debated point. Not long ago the wine-growers of Italy and Austria feared for their crops, and induced their Governments to try "weather shooting" on a big scale. The results were unsatisfactory, though they did not shake everybody's belief in gunfire as a rain producer.

The Fruits of Perfection.

"Be good," observed the wrinkled philosopher, "and you will be happy."

"Prove it!" challenged the young man of the world.

"Why, that is quite simple! If you hate you will be hated. If you are greedy your appetite will grow beyond your capacity to feed it. If you steal you will never enjoy possession. If you sneer at others be sure they will sneer at you. Then, thousands of dilgestions are ruined by irritability, and more people have died from fear of cholera than from the disease itself."

"Tush!" retorted the young man of the world. "You hate your master and sneer at him. You are a perfect pig at meals; and I saw you once stealing an apple from your neighbor's garden. As for irritability, didn't you snap at me just now when I slammed the door, and aren't you for ever coddling yourself for fear of pneumonia?"

"Quite true," said the philosopher. "I have never spent a really happy day in my life."

And the young man went, pondering, on his way.

Bird of Sweetest Song.

It is said the larks of Scotland are the sweetest singing birds of earth. No piece of mechanism that man has ever made has the soft, sweet, glorious music in it that the lark's throat has. When the farmers of Scotland walk out early in the morning they flush the larks from the grass, and as they rise they sing, and as they sing they circle and higher and higher they go, circling as they sing, until at last the notes of their voices die out in the sweetest strains that earth ever listened to.

The Doings of the Duffs.

Farm Crop Queries

Conducted by Professor Henry G. Bell.

The object of this department is to place at the service of our farm readers the advice of an acknowledged authority on all subjects pertaining to soils and crops.

Address all questions to Professor Henry G. Bell, in care of The Wilson Publishing Company, Limited, Toronto, and answers will appear in this column in the order in which they are received. As space is limited it is advisable where immediate reply is necessary that a stamped and addressed envelope be enclosed with the question, when the answer will be mailed direct.

Henry G. Bell.

Question—G. H.:—If I plow in a full crop of clover, would I have to do this in the summer to get the full benefit of it, or would it be as good if I let it grow on till the fall? Or, on the other hand, would it be as good if I took a crop and plowed in the aftermath? I have no stock except fowls and two horses, therefore little stable manure. However, I intend to use a lot of phosphate.

Answer:—At the present price of food and its universal scarcity in most sections, I would advise G. H. to feed the first crop of clover and plow in the aftermath. If he does not have enough stock to consume the clover it will pay him to make the hay and sell it, and to buy feed and plantfood in the form of fertilizers. Since he has little manure I would advise him to use a fertilizer containing 2 to 4% ammonia, 8 to 12% phosphoric acid, and if he intends to plant potatoes, truck or root crops, from 1 to 3% potash. This will supplement the plantfood in the soil and that turned under by his clover. It is very questionable, and especially at the present price of practically all farm feed and produce, if anyone can plow under a full crop of clover or any other cover crop, for that matter. Apply the fertilizer at the rate of 200 to 400 lbs. per acre.

Question—H. B.:—What distance apart should the rows of Indian corn be planted and what distance in the rows? How many kernels should be put in a hill? I wish to get as much ripened corn as possible.

Answer:—The farther south we go the farther apart the rows of corn and the greater the distance between the hills. For instance, in the Southern part of the United States the rows are frequently five feet apart and four feet between the hills. As we come North this is reduced to at least 36 inches and some men even plant closer.

The number of kernels to the hill and the distance apart depends very largely on the type of corn and the fertility of the soil; ordinarily the richer the soil the closer the corn can be planted.

H. B. says he wishes to get as much ripened corn as possible. If he does not care for the size of ears he can plant much closer than if it is large ears that he desires. The Nebraska Experiment Station, U. S. A., found that 3, 4 or 5 stalks to a hill gave practically the same yield but the weight of ears was less with four than with three and still less with five than with four. One plant to the hill gave but two-thirds as much corn as did three plants. Two plants gave 10 bushels less to the acre than did 3, 4 or 5. The corn was planted in hills three feet eight inches apart each way.

I would recommend that H. B. plant his corn 36 inches apart each way, unless the soil is extremely fertile when he might plant a little closer, and plant three to four kernels to the hill. If he wishes to drill it, the stalks should be ten to twelve inches apart in the row, unless the soil is exceptionally fertile, when this distance may be reduced to 8 to 10 inches.

RENNIE'S
QUICK-GROWING SEEDS

Early Valentine Bush Beans, ready to pick in 35 days, 4 ozs. 15c, lb. 40c	
Early Model Blood-red Table Beet	Pkg. 10c, oz. 20c, 4 ozs. 60c
First and Best Cabbage, solid heads	Pkg. 10c, oz. 30c, 4 ozs. 90c
Early Gem Red Table Carrot	Pkg. 5c, oz. 25c, 4 ozs. 65c
Citron for Preserving, red seeded	Pkg. 5c, oz. 15c, 4 ozs. 40c
Early Malcolm Sweet Table Corn	Pkg. 10c, lb. 40c, 5 lbs. $1.90
Prize Pickling Cucumber (great cropper)	Pkg. 5c, oz. 20c, 4 ozs. 50c
Earliest Wayahead Head Lettuce	Pkg. 10c, oz. 30c, 4 ozs. 90c
Early Hackensack (Sugar) Musk Melon	Pkg. 5c, oz. 20c
Richard Seddon Bush Garden Peas	4 ozs. 15c, lb. 40c, 6 lbs. $1.75
Select Yellow Dutch Onion Sets	lb. 25c, 5 lbs. $1.70
Earliest Scarlet Olive Radish	Pkg. 5c, oz. 10c, 4 ozs. 30c
Extra Early Milan Turnip (earliest grown)	Pkg. 5c, oz. 20c, 4 ozs. 50c
Giant White Feeding Sugar Beet, for cattle	4 ozs. 15c, ½ lb. 25c, lb. 45c
Rennie's Giant Yellow Intermediate Mangel	½ lb. 25c, lb. 45c
Rennie's Derby Swede Turnip, for stock feed	½ lb. 37c, lb. 70c
Improved Jumbo Swede Turnip (Elephant)	½ lb. 37c, lb. 70
Rennie's Kangaroo Swede Turnip (very hardy)	½ lb. 35c, lb. 65c
High Grade Compton's Early Yellow Flint Seed Corn	Bus. $3.25 8 bus. for $16.00.
High Grade White Cap Yellow Dent Seed Corn	Bus. $2.75
Earliest Six Weeks Seed Potatoes	Pack $1.00, bus. $3.50
Extra Early Eureka Seed Potatoes	Pack $1.00, bus. $3.50

Seed Corn and Potato Prices do NOT include freight charges.

Pakro Seedtape. "You plant it by the yard."

Your Problems

Conducted by Mrs Helen Law

Mothers and daughters of all ages are cordially invited to write to this department. Initials only will be published with each question and its answer as a means of identification, but full name and address must be given in each letter. Write on one side of paper only. Answers will be mailed direct if stamped and addressed envelope is enclosed.

Address all correspondence for this department to Mrs. Helen Law, 235 Woodbine Ave., Toronto.

A. M. S.:—1. In the vacant spots in your flower border plant perennial phlox in white, pink and yellow. They like the sun. It is always wisest to buy large plants. 2. Spraying is the best way to water plants. This not only keeps them clean, but, as you know, plants absorb moisture through the pores of their leaves, and they are therefore much benefitted by spraying. 3. Dahlia roots should not be put into the ground until the weather is settled and the ground warm. They are very liable to rot in wet and cold ground. 4. Did you ever try cannas for the large bed in the centre of your lawn? Cannas being large plants need space to show up to the best advantage, and require very rich loamy soil and heat. The flowers are very showy, but are not suitable for cutting as they are so tender and easily bruised. If the bed is eight or ten feet in diameter, place a ricinus (castor oil plant) in the centre, surround with two circles of cannas, say, the inner circle King Humbert, outer Alphonse Bouvier; and geraniums for the base or outside circle. As the canna is a tender plant it cannot be transferred to the permanent bed before June 1st. It flowers during July, August and September. Be careful to cut out all dried blooms and seed pods. It encourages freer blooming.

K. McL.:—1. Here is a remedy for brittle nails which I hope you will find effective: Oil of pistache, ½ ounce; refined table salt, ½ dram; powdered resin, ½ dram; powdered alum, ½ dram; white wax, 1½ drams; carmine, 1½ drams. Rub well into the nails at bedtime, also after bathing the hands. 2. Lotion for red, oily nose: Sulphur precipitate, 1 dram; spirits of camphor, 1 dram; glycerine, 1 dram; rose water, 4 ounces. After bathing the nose in very hot water, mop the lotion on with absorbent cotton. 3. The amount of water required by the body daily is sufficient to balance the loss through the skin, kidneys, lungs and other excretory organs. This has been shown to be about two and one-half quarts, the amount depending much upon the temperature of the air and the amount of work done. Part of this water is derived from the food. 4. A good ointment for dry skin is made of lanolin, two ounces; boroglyceride, one ounce; cold cream, six ounces. 5. Whether one should drink hot or cold water before breakfast depends upon whether the gastric juice is too acid or not sufficiently acid. If one's stomach does not make enough hydrochloric acid, she should drink a little cold water half an hour before meals, because this will stimulate the gastric glands. If one has too much acid she should take a glassful of hot water half an hour before eating.

H. M.:—If your little girl's school reports are not so good as you would like, the reason may lie in her physical condition. It is not at all likely that she is wilfully lazy and inattentive. The first step would be to have the family physician make an examination for eye defects, adenoid growths, dental diseases, and things of that kind. If she is free from these, it will be necessary to look elsewhere for the cause of her failure to do well at her studies. In the first place, is she properly nourished? Does she take just the right quantity of food at meals and of the kind suited to her age? She should not be permitted to nibble between meals or to have too much candy. Too much food causes poisoning of the brain, while too little or of unsuitable variety causes the brain to function freely owing to lack of nourishment. In the second place, are you allowing her to have too much "fun" out of school? If she remains up late at night, and does not get sufficient sleep in a well-ventilated room she will be unfit for school work because of physical exhaustion. As to automobile rides, it is true that they furnish plenty of fresh air which is good, of course, but long and frequent rides keep the child in a state of nervous tension and excitement, which is the reverse of good. In short, the manner in which you are bringing up the child must be scrutinized to discover the cause of her backwardness at school.

The Sunday School

INTERNATIONAL LESSON
APRIL 29.

Lesson V. Jesus Welcomed As King —John 12. 12-26. Golden Text—John 12. 13.

Verse 12. The common people (margin)—John is sharply distinguishing the masses from the "classes."

13. The branches—Specially associated with Tamernacles, the most joyous of the Feasts. Hosanna—"Save!" (Psa. 118. 25), a prayer addressed to God. It had come to be used rather like our "Hurrah!" but with a religious tone like "God bless you!" He that cometh—The Messianic name. In the name—Join with Blessed.

14. Found—Mark tells us how. This was a case of deliberate fulfilment of prophecy: he would claim before the people the peaceful royalty that the animal suggested. The horse being the symbol of war—it was used for nothing else—the ass represented peace: there is no suggestion of lowliness about it, however true it is that he came in humility (Matt. 21. 5).

15. See Zech. 9. 9. The context is all concerned with the abolition of war. Is not this the kind of "Second Coming" that we are called to think and pray and work for? It is an intensely practical ideal—which is more than can be said for some "Second Advent" dreams.

16. Glorified—For John this "glory," or complete self-revelation, culminates on Calvary.

17. The crowd that saw the great Sign is busy telling those who had not seen it.

19. Here is the turning point of the story. The Pharisees are everywhere the Lord's real enemies, who won their purposes by making the powerful but apathetic hierarchy do their foul work for them (John 11. 47-53). Here they are pictured as in despair. No more vivid evidence could be given of the completeness of his triumph. They little knew that the appalling deed they contemplated was to be the Divine way of truly enthroning him over the world—a vaster world than they could see!

The Dairy

That one source of sediment in milk does obtain even under the most rigid conditions possible in a cow stable is evident from an examination of any sediment disk through which the average milk has been passed, and there is no doubt that thorough straining will add to the cleanliness of the product even after all possible precautions have been taken. The presence of slime in the separator bowl after skimming is another sign that some dirt has found its way into the milk between the time of its secretion and its arrival in the machine, provided the receiving or supply can has been clean up to the time when separating started.

The separator no doubt removes a great deal of the foreign matter that occurs, but is incapable of throwing out much of the undesirable bacteria that accompanies the dirt which enters the milk at milking time, so the importance of cleanliness in caring for the cow and for the milking utensils is very great indeed.

The assurance that milk delivered at the dairy, where pasturization takes place, is free, or reasonably free, of sediment, should be worthy of consideration by the wholesale purchaser who, in his turn, should reap a benefit from the ultimate consumer to whom he can guarantee this milk as having been clean, and thus safe from the time it leaves the cow's udder until it arrives at the consumer's residence.

The farmer's part of the undertaking to supply pure, wholesome milk must start with the taking of precautions previous, even to the secretion, of the milk. He should satisfy himself fully that his cows are entirely healthy; and in order that the small amount of dust that will inevitably get into the milk pail may be as harmless as possible, he must provide for a plentiful supply of sunlight in his stables. Then if the cattle are always kept as clean (or a little cleaner) all the year round, as they would keep themselves on a good, well-drained pasture field, and the milkers obliged to wear well-washed clothes, and take a bath frequently, the chances of the milk being satisfactory are pretty good. Of course, aeration of the milk and thorough cooling must also be attended to.

Mother's Method.

The bright boy in khaki was dilating on the woes of Army life.

"Yes," he said to his old mother, "we don't get much in the way of fancy foods, or anything like that. Our camp cook's all right on stews and soup, but he can't go beyond them. The other day, you know, when I went back, I took a cutumber with me, that I was going to share with one or two of the boys. I give it to the cook, and asked him to get it ready for us, and what d'you think he did with it? Put it in the oven and baked it."

"Oh, poor boy!" said the fond mother. "A pity I couldn't have been there to look after you, I'd have belled it lovely for you!"

Poultry

Sell off all hens in their third year, as soon as the rush of laying is over.

The last call for hatching is now on. Chicks hatched after the first week in May cannot be expected to prove good winter layers.

Brood chicks that are closely housed and fed too heavily are very likely to develop weight too fast in proportion to their strength.

It will cost the farmer no more money to raise pure-bred poultry than it will to grow scrubs.

Turkeys do best when kept separate from chickens. If the two are kept together the turkeys are likely to take chicken diseases.

Dampness, lice and filth are deadly foes to poultry of any kind.

Since hens on range produce more eggs at a lower cost and fewer young hens die than do those kept in confinement, poultrymen are urged to provide outside yards with plenty of green feed for laying hens. Hens on range produce 15 to 44 per cent. more eggs at a feed cost of 15 to 30 per cent. less per dozen than hens kept in confinement.

In Spring fowls require more careful attention than at any time in the year. All the accumulated debris of winter lies on the surface. Then comes a warm spell, and the surface of the ground gets muddy, while the filth of winter sticks to everything that touches it. This is the time to keep the hens dry and to give them straw to stand on and to work in during the day.

Horse Sense

There are two forms of strangles or distemper, viz., regular and irregular strangles. The symptoms of regular form are: cough, unthriftiness, fever, difficulty in swallowing, nasal discharge, spellings between jaws or about throat, which form into abscesses. In irregular form the same symptoms occur, with less difficult breathing, and the abscesses may form any place, externally or internally.

Attend to comfort, apply poultices of antiphlogistine to throat, lance abscesses as soon as ready, give 2 or 3 drams hyposulphite of soda out of a spoon 3 times daily, do not drench. If breathing becomes very difficult send for veterinarian.

Go easy with the horses at the start and see that collars fit.

Mares in foal should be given regular work but not overwork.

Farm horses usually could haul larger loads on the country roads if waggon tires were wider, and less damage is done to roads by wide tires.

Different horses require different kinds of foods, the same as different people; study each horse and see what kinds of food he does best on.

It is a lot better and cheaper to feed and care for stock so that they will be in good health, than to pay doctor to get them back to the standard after they once get down.

Hogs

The man who keeps cows is well fixed for raising hogs.

Hogs will eat alfalfa hay, and pay well for it. That was proved the past winter on many farms where economy was practised by substituting hay for part of the corn and tankage or other millfeed which it was customary to feed.

It is essential that the brood sow be fed a well balanced, succulent, nutritious, milk-producing ration while suckling the litter. Dairy by-products, such as skim-milk, buttermilk or whey together with meals such as shorts, ground oats, barley, oil cake and the like, are all highly suitable for the feeding of the sow at this season. These are also splendid feeds for the litter at weaning time. If dairy by-products are not available, digester tankage may to some extent supplement these feeds.

Kitchen slops, ground barley and shorts formed the greater part of the ration of a pig which took first prize at a recent show. The pig had the run of an alfalfa pasture, with a stream at the foot of the hill in the same lot.

A nation which does not realize and does not fulfil its duty of service to the world has not reached the highest conception of national life.

SWEET CHERRIES: SOILS AND VARIETIES

G. A. Robertson, St. Catharines.

Sweet cherries are yearly increasing in popular favor; and this popular favor will increase or diminish only as the product put on the market is good, thereby increasing the demand; or poor, thereby decreasing the consumption. Not many years ago the sweet and so-called sour varieties were marketed at practically the same price per basket; the sweets are much more difficult to produce and to market than the common or sour varieties; and an impetus was given to planting the sour cherry at the expense of the sweet; since then the sour cherries have decreased steadily in price and the sweet have increased until now a sweet cherry orchard in full bearing is a decided asset to any farm.

Location: Sweet cherries should be planted on a deep, dry, well drained soil. No other tree fruit will respond any better to good treatment, but planting on an unsuitable soil is disastrous, and a wet subsoil will prove fatal. Therefore, when choosing a location, a high, dry, sandy, or gravelly knoll is best, and a proper system of underdrainage will prove beneficial. Close proximity to a town where a requisite number of good pickers may be had, and frequent and rapid shipping facilities is desirable.

Sweet cherries bloom very early, varying in the last few years from say as early as the 23rd of April, and sometimes as late as the 10th of May. Most of our popular varieties bloom heavily and set freely; when in full bloom a few hours of hot sunshine assisted by the presence of myriads of bees will set a fair crop. This may be followed by a week or ten days of cold wet weather, with perhaps a few degrees of frost, but if properly set the calyx of the blossom forms a little blanket to protect the tender fruit, and this drops only as the cherry swells or as the stem of the improperly fertilized fruit shrivels and drops; hence planting an orchard near a body of water which will modify the temperature, will often insure a crop when a few miles inland a few degrees difference in temperature may shorten it materially, if not destroying it entirely for the season.

Varieties: In choosing the varieties from a commercial standpoint, annual bearing is the most desirable, and couples with this a fruit that is good size, color and flavor and also good in shipping quality. The tree should be a rapid grower, strong and hardy. The varieties that so far I have tried that conform to this standard named in the order of ripening are: Black Tartarian, Napoleon Bigarreau (white), Elkhorn and Windsor. I have also fruited Lambert which ripens after the Windsor, and is promising, being of good size and flavor, and I may also add Bing, both of these being grown in the west, the latter ripening about the same time as Elkhorn, and is an excellently flavored cherry.

Bedtime Stories

The Rainy Day.

I want the sun to shine again,
I want the rain to stop.
It marches like the feet of men—
Drop-drop, drop-drop, drop-drop!

I do not like the rain a bit,
I do not like the mud.
The cows all turn their backs to it,
And sadly chew their cud.

I press my nose against the pane
Until my nose is flat,
But all I see is just the rain—
Pat-pat, pat-pat, pat-pat!

I want the children out again,
I want the weather fine.
I don't know how to wait till then—
I want the sun to shine.

When I Spank My Dolls.

From my dolls I have chosen three (whom I consider sisters) of whom I am going to write a story. Emmeline, who is the oldest, is a lovely girl with long, dark curls. Unfortunately she has a high temper. The next in size is Winifred, who is quite different from Emmeline. She has short light curls that shine in the sun like gold. Winifred has a very loving disposition. The youngest daughter, Laura, has short, brown curls. She is a sweet, mischievous little girl.

One Wednesday we had planned to go on a picnic. Wednesday dawned bright and clear. We were all dressed, the lunch was packed, when Winifred suddenly exclaimed:

"Where is Laura?"

Where was she? The naughty girl! I will tell you.

Little Laura had been told by her mother never to go near the flypaper. Now Laura had not meant to disobey. She just thought she would like to count the flies on the flypaper before she went on the picnic.

She knew where a sheet of flypaper was, so she went into the parlor, which was dark at that time. Little Laura tumbled over a cushion on the floor and she fell. Her head went into something sticky. Now she knew!

Laura was frightened. She ran upstairs and hid in a closet—her pretty brown curls one sticky mass.

They hunted everywhere. At last Emmeline looked in the closet where poor Laura was hidden.

"Laura Brownel You're a nice mess! What has happened?" she cried. With that she pulled Laura out and was shaking her in a high temper, when I, their mother, came in.

Emmeline turned and when she saw me she let go Laura and looked very much ashamed. Laura was frightened and asked me if she was going to be spanked, but I said, "No, Laura, you do not deserve to be spanked. Emmeline does."

I then took Emmeline, who was crying, and spanked her and put her to bed.

Laura came and told me the story. Then I took her and Winifred to the barber shop, where Laura's curls were cut off. When I returned, Emmeline said:

"Mother, aren't you going to punish Laura?"

"Look at her, Emmeline, and tell me if you do not think she is punished enough," I answered.

Emmeline looked at Laura, who was standing there feeling the head which the barber had robbed of its curls. She was crying. Emmeline really felt sorry for Laura and promised that she would not have "temper" again and she didn't. Laura was never mischievous again. We all missed the picnic that day!

Care of Orchards This Year.

The British embargo placed upon apples and canned fruits containing sugar may be a serious blow to our Ontario growers. If this year a good average crop is harvested in all parts of the continent, as appears reasonable to expect, our local markets will have to dispose of all of the fruit that ordinarily goes overseas and a vigorous advertising scheme will be necessary to again introduce our quality fruit to the Canadian consumer. Low grades and poor varieties are bound to be at a decided discount this fall. On account of the great prevalence of scab in 1915, it would be poor economy to leave all the spraying out. If the grower of necessity has to cut down labor, and has no San Jose scale or very few oyster shell bark lice, the dormant would be the best spray to leave out.—Fruit Branch, Ontario Department of Agriculture.

Mollifying a Creditor.

One of Hawkins' principal creditors was a man named Joy, and one morning the impecunious undergraduate awoke to find this worthy tradesman seated in his bedroom.

He was rather taken aback, but not in the least nonplussed, and he greeted the intruder with a smile, saying cheerily:

"This is indeed a pleasant surprise. Sorrow may endure for a night, but joy cometh in the morning!"

The creditor looked at him blankly for a moment, then his face was illuminated with a beaming smile, and, slapping his thigh, he cried delightedly:

"Why, that's very good, very good indeed, sir. And now I'll say good-day to you, sir, and leave it to your consideration to settle my little bill as soon as you can."

GLAMIS

Mrs McDermid received the sad news on Thursday last of the serious wounding of her son Dan. This is the third time he was wounded.

Mr Hector McLean and his mother spent Sunday at Mr C McDougall's, of Underwood.

We were pleased to see Mr Currie out on Sunday, after being laid up with lumbago.

Mr Jim McCormick who was attached to the Royal Navy and went overseas the beginning of the year, returned last week and will go on to Edmonton. Jim's health prevents him from remaining overseas.

Miss Jennie McKeeman, who was in Toronto, returned last week.

Miss Sarah McKenzie of Markdale, is keeping house here for her brother, Mr John McKenzie.

Mr Neil McFadyen of the boundary has brought home a small boy from the home to raise.

Children Cry
FOR FLETCHER'S
CASTORIA

GRESHAM

Capt (Rev Dr) Minnifie delivered a lecture in the church here on Sunday last well worthy of note. He was accompanied by his wife and Mr and Mrs McKee of Kincardine.

Miss May Nelson returned home last week after a long vacation with friends in the west.

Jack Rose and L McLean Young went sucker fishing this week. They reported the fishing poor but they managed to get a succor on the road.

Quite a number took in the box social at Underwood on Tuesday evening and all report a good time.

The teacher, Miss McLennan, made a business trip to Port Elgin last week.

Mr and Mrs Geo Fullerton, of Paisley, motored out to Mr and Mrs Wm Parker's this week with their new car.

Mr Jack Irwin purchased a fine young team last week.

Our teacher, Miss Megraw, spent the week end under the parental roof at Paisley.

Mr Lachie McPhail is having a carload of cattle shipped up from Toronto this week.

Miss Agnes Brown and Miss Cruickshank and other friends spent Sunday at the home of Mr and Mrs J G McKay.

Mrs J R Aitchisin, of Clifford, returned home after visiting her sister, Mrs A Wood.

The wife of Capt Minnifie was drowned at Kincardine on Monday, and Capt Minnifie was injured in trying to save her. Consequently the meeting at Underwood on Tuesday night had to be cancelled.

PINKERTON

A banquet in honor of Russel Birrel who last week enlisted in the Divisional Signalling Corps and who will proceed overseas almost immediately was tendered on Tuesday evening by the Red Cross Society. The Red Cross presented him with a pair of socks and the gentlemen of Pickerton with $5. Mr W D Cargill, M. P. P., acted as chairman.

Lieut. Harold Pinkerton spent Sunday at his home here.

Miss Cora Cleghorn, who has been visiting her cousin Miss Hattie Gale, returned to her home in Kitchener.

A large number from here attended the V P Social at Mr Harvey Clark's and report an enjoyable time.

Mr Jos Gale left on Friday for Alma where he will work on a farm during the summer.

Mrs Rev Walker of Owen Sound is visiting friends in the village.

Mr Dave Johnston of Montana and Mr Alex Johnston of Meriotta returned to their homes on Saturday.

TWELFTH OF BRUCE

Some of the farmers are ploughing again. The nice rain has started the grass to grow, and the flowers to bloom again.

Mrs McLeod, sr., is under the weather with a bad cold. We hope to see her round soon again.

Mrs. D Walks, of Hiderale, and son Jas. were calling at Mr. Alex H. McGillivary's while on their way to Tiverton to attend the funeral of her sister Mrs. P. J. Brown.

We are pleased to hear that little Eddie Howe is improving nicely after undergoing a slight operation last week.

Messrs. Alex Mc Gillivary, and Jno. A. Howe were sawing wood with the buzz-saw last week.

CARRIED BEETS THROUGH DROUGHT

ALFRED KOSE, Belle River, Ontario, says:

"I bought several tons of Homestead Fertilizer last Spring and used some on Spring wheat. It did exceptionally well—yielded beyond everybody's expectations. I also used a ton on twelve acres of sugar beets sown with a beet drill with a fertilizer attachment. It was remarkable how it helped the growth, and during the dry spell of weather my beets remained green and thrifty while my neighbor's beets that had no fertilizer became yellow.

I find Homestead Bone Black fertilizer does even more good than claimed for it."

Write Michigan Carbon Works, Detroit, for free book and particulars about their Homestead Bone Black Fertilizer.

GREENOCK COUNCIL

McNab's Hotel, Chepstowe, April 16th, 1917

Council met as per adjournment, all the members present, the reeve in the chair. The minutes of last meeting were read and adopted.

The following accounts were presented for payment: J Corbett, Kincardine town line account, $190 49; W H Davison, 60 ice spikes for Stark's bridge, $1 75; Jas Symon, cutting ice at Symon's bridge, $2 50; Jos Huffman, 2 days breaking road and shovelling snow, $2 50; Thos O'Hagan, breaking road on 8 1 35, $2; John Cameron, postage for treasurer, $3; J J Cassidy, part salary as assessor, $50; D McNab, room for council meeting, $2; Rody Cooper, repairing culvert, $1.

Sawyer—Campbell—That the foregoing accounts being found correct, be paid and that the reeve sign checks for the same—Carried.

Paisley town line account was read and laid over till next meeting.

Communication was read from Mabel Nelson, sec'y of the Red Cross workers of U S S No 10 Bruce & Greenock, to grant to assist in their work. The clerk was asked to write for further particulars.

A report was read from W Megraw re condition of road at foot of Stark's hill. The reeve and G W Gilchrist were instructed to examine and if necessary repair the same.

Communication was read from the Ontario branch of the Dominion Alliance, asking the council to petition the House of Commons and Senate of the Dominion of Canada to pass as a war measure an act prohibiting the manufacture in and the importation into the Dominion of Canada of intoxicating liquors for beverage purposes, and the sending or carrying of any such liquors into, and the delivery or receiving of any such liquors in any province or area in which the sale of such liquors for beverage purposes is prohibited.—Ordered to be filed.

Campbell — Sawyer — That By-law No 545, known as the Keake Drain By-law, be now read and finally passed, with assessment as per Judge Grieg's order attached.—Carried.

By-law No 545 was duly read and finally passed.

Gilchrist—Symon—That this Council do now adjourn to meet at Pinkerton on Monday the 28th day of May as a Court of Revision and for general business.—Carried.

THOS. H PERDY Clerk.

$265 Fines for Whiskey at a Dance

Gordon Gregg, a young farmer near Wiarton played the jolly good fellow with whiskey he took to a dance in Amabel township on the night of March 24th. He got the boys by express, and took a few flasks along to the dance. The sequel was that some of the boys got fu'. Inspector White got wind of breaking the prohibition law up north, and went after the fellows who had been liquoring up. He had them up before Magistrate Miller of Wiarton. Gregg and two others pleaded guilty to the charge laid, Gregg being fined $250 and costs for taking liquor to a public place and for giving it to a minor. The others got $10 and costs for imbibing the moisture.

Steele's Ice

Horse Collars, Sweat Pads, Rubber Lap Rugs, Whips, Auto Plush Rugs, Star Harness Soap, Bickmore's Gall Cure, Axle Grease

Our Harness includes quality, durability, appearance and high-class workmanship found in no other make of Harness.

Baggage Trunks, Suit Cases, Club Bags, Grips. Good assortment and close prices.

Harness parts and Repairing our Specialty

J. H. STEELE

It Pays to Get the Best

ELLIOTT Business College

Yonge and Charles Sts., Toronto

Should not be compared with a great many business colleges of this country. It occupies a far higher level and does far better work. This is one reason for the enormous demand from business firms for our graduates. Many business colleges apply to us for teachers. Right now is an excellent time to enter. Open all year. Catalogue free.

W. J. ELLIOTT, Prin.

Notice to Creditors

In the matter of Samuel Amos Babcock, of the Township of Greenock, in the County of Bruce, laborer, insolvent.

NOTICE is hereby given that the above named insolvent, Samuel Amos Babcock, laborer, has made an assignment of his estate to me for the general benefit of his creditors under the Revised Statutes of Ontario, 1914, chap 151.

A meeting of creditors will be held in my office, Town Hall, Paisley, on Friday, the 4th day of May, 1917, at 10 o'clock in the forenoon, to receive a statement of affairs, to appoint inspectors and for the ordering of the estate generally. All persons claiming to rank on the estate must file their claims with me on or before the 12th day of May, 1917, after which date I will proceed to distribute the assets thereof having regard to those claims only of which I shall then have received notice.

DAVID FOURESTER, Assignee,
Paisley, Ont

Dated April 23rd, 1917

Bruce Women Stand for Independence

Chesley, April 23—The Bruce County women have declared their independence of party politics. Pending a meeting of the provincial organization, the sub-executive of the W C T U of this county, at a meeting held in this town, pledged itself to support only those candidates who will support advanced legislation for the safeguarding of the home. They will demand of the candidates that they work to secure amendments that will prohibit the marriage of the feeble-minded, that will provide for the appointment of women judges to deal with juvenile offenders, and for the appointment of public health nurses to the provincial board of health.

Taking "To Arms"

The States since entering this great European war is being hard hit by Cupid. Thousands of young men, fearing compulsory enlistment, it is said, are securing marriage licenses and springing that old one "Don't Let us Old Maid, Molly" to such good effect that the American ministry is working overtime uniting this "Sweet bunch of daises" in holy wedlock. Rather than sign a service card and take up arms in defence of this country, these yellow backs are slapping their signatures onto the matrimonial register and taking to arms somebody's darling, who should worry like a fly on a tanglefoot oasis when she considers what she's annexed to for life. One sad-faced ex-Walkerton boy whose name we withhold in respect to his relatives here, has become gun-shy and enlisted with Cupid instead of joining the ranks of Hun destroyers, his name appearing in the matrimonial columns of an American journal which reached this office this week.—Herald and Times.

Explanation of Lunar Display

Barrie Examiner: A most unusual lunar display was seen for a couple of hours on Saturday night and attracted a great deal of attention. Around the moon was a huge circle, in which were set at right and left sides in direct line with the moon large spots of light somewhat like "sun dogs" only much brighter. From the moon itself four distinct bars of light radiated, so that the lunar orb seemed to be set in the middle of a big cross. People wondered what the portent of these strange signs might be. A street preacher warned his hearers that it meant the end of the world, while several others saw in it bad storms, severe cold and other conditions undesired at this season of the year. W H Buttery, the weatherman says that these spots on either side of the moon are called "parasheneal" and are caused by the presence of very fine particles of snow or frozen vapor in the upper atmosphere. These are very seldom seen in this latitude and he had never noticed a display of this kind at all approaching that of Saturday night.

Some London Sights

Pte Dick Mills, of the 166th in a letter to his parents, tells something of his fortnight's visit to London. He and his chums boarded at the Marble Arch, which is a swell place run mostly by Canadian girls, one of whom is from London, Ont. The building is a very large one, all built of marble. It was the home of Lady Allan, who gave the house and the servants for the use of the soldiers. Westminister Abbey, the Parliament Buildings, the King's horse stables, London Tower, St. Paul's Cathedral were among the places visited. St Paul's is where Lord Roberts Nelson, Florence Nightingale and other notables are entombed. They still have the vacant spot in which Lord Kitchener was to be buried, but all they have on the place is his sword. Saw the King and Queen, and all the royal family driving through the street. There is some class to their carriage, which is mostly all gold. It weighs 14 tons and is drawn by eight bay and right cream horses. The King lifted his hat to all the soldiers as he passed, and they cheered him. Also were at the Zoological gardens and every place else we could think of going. Judging from the extent of the underground railway system Pte Mills formed the idea that half the city must be below the surface. Some places the railways are nearly one hundred feet down in the earth, going under the Thames river. These roads are nice to travel on.

Stylish Models for Spring

H. PFAFF & SON

The Wizard who put Music into millions of homes

As you sit in your own home and listen to the stirring strains of a military band—or the liquid, luscious notes of a far famed singer—do you realize the thanks that you, and all other music lovers, owe to Thomas A. Edison? As you know, Mr. Edison invented sound-recording and sound-reproducing instruments. It was due to his genius that millions of homes are able to enjoy everything in music.

It was due to Mr. Edison's efforts that you—no matter where you live—may have the great artists, the famous bands, the cleverest entertainers, the brightest public speakers, right in your home.

For more than thirty-six years, Mr. Edison has developed and improved the Edison Phonograph and Edison Records.

The NEW EDISON
DIAMOND AMBEROLA

—the latest development of his phonograph—with its diamond reproducing point (requiring no needles)—has a softness, a richness, a velvety smoothness, a wealth of delicate overtones, that cannot be obtained with any instrument using metal needles, which must be changed with every record.

You really must hear the Edison to appreciate it to the full. Won't you come in and let us play some of your favorite pieces for you? 58

PETER McKINNON, - - PAISLEY, Ont.

Here's help in decorating your home inside and outside

People judge you by your home. A beautiful home, well decorated outside and inside is not only a pleasant place to live—but commands the respect and admiration of your friends and neighbors.

Good decorating results require good taste plus good finishes, plus proper skill in applying. You can get expert advice on all three if you consult us about

Lowe Brothers

Paints, Varnishes, Enamels, Stains

In the selection of paint for the exterior it is economy to use **Lowe Brothers "High Standard" Liquid Paint.** It is scientifically-made paint that gives perfect protection with lasting beauty. "High Standard" Paint spreads and goes" farther than cheap paint—sets in a close tight coat—resists years of wind, sun and wet—fails only by gradual wear—leaves a good surface for repainting.

You will always get good paint where you see this sign.

For the walls and ceilings, use **Lowe Brothers**

"High Standard" Mellotone. Its rich colors rest as well as delight the eyes. It is fadeless and washable—not easily scratched or marred—and decidedly economical.

For refinishing furniture, floors and woodwork, **Lowe Brothers Varnicol** comes in colors to match usual finishes. Easy to use—economical.

For varnish that wears, retains its brilliancy and depth of lustre, choose **Lowe Brothers "Little Blue Flag" Varnish**—one for every purpose.

For solid colors on old floors use **Lowe Brothers Hard Drying Floor Paint.**

If you have a decorating problem we'll be glad to help you.

SOLVING THE EASTERN RIDDLE

SUCCESS IN MESOPOTAMIA BEGINS A NEW ERA.

Real Significance of the Bagdad Victory and Its Vital Bearing On End of War.

The capture of Bagdad has not aroused the attention it deserves. It means much more than people imagine. It means the collapse of the colossal aims for the achievement of which Germany went to war.

Germany aspired to world-dominion. The attainment of that end involved the destruction of the British Empire, says an English writer. That result could only be encompassed by command over the routes to the East. Bagdad was the key to one route; Alexandria the key to another route. With Turkey as an ally, or, rather, as a complaisant vassal, Bagdad automatically passed into German hands; and with Serbia overrun, and Austria-Hungary and Bulgaria subject to the will of Berlin, the great highway from Hamburg to the legendry capital city of the Caliphs flew the German Eagle.

Dreams and Desires.

From Syria our possession of Egypt could be disputed, and the alternative route to the East, via the Suez Canal, menaced.

The public have heard a great deal about Pan-Germanism, the dream of those who conceived Germany entering upon a world empire, compared to which the visions of Alexander the Great, Cæsar, and Napoleon were but modest aspirations. The first step in that dream was to secure control of the road from Hamburg to Bagdad. Given that control, the seventy million Germans commanded the services of another hundred million Austrians, Hungarians, Turks, and Balkan peasants, generally.

The Bubble Pricked.

With a base at Bagdad, the strongest military Power in Europe could look across Persia into India, for through Persia, the Kaiser's military chiefs have argued, lies the most convenient road for the invasion of our Eastern Empire.

If, then, to hold Bagdad was all-vital to Germany's schemes, its loss must represent a crushing disaster. The dream-fabric of world-dominion has dissolved into thin air, our route to the East is once more secure, and we need have no fear for the safety of India.

It is because these conclusions are clear to the educated German mind that their newspapers to-day mourn the fact that the city around which so many centuries of history have clustered has passed from the soldiers of the Padishah into the hands of Feringhis.

End of Turkish Rule.

The knowledge that the British Flag waves over Bagdad surges through all the whispering galleries of the East, proclaiming the restoration of British prestige, and our triumph over the German challenge. To the Mohammedan world it is a signal that British might after nearly three years of war is undiminished, and to the Arabs—ever unwilling servitors of the Turks—it is the promise of release and emancipation.

The Turkish Empire is dealt a mortal blow. And what destroys the Empire of the Turks also destroys the ambitions of the Germans, for the success of all their projects has hinged on the preservation of the crazy Turkish autocracy.

With Bagdad in our possession, we remove the gravest menace to the great route between East and West. In the old and famous city we protect India just as much as in the 120 miles of front we hold in France we protect the British Isles.

Forty Years' Scheming.

In a military as well as in a political sense no gain could have been more striking than the capture of Bagdad by General Maude's British and Indian troops.

We do not defeat Germany at Bagdad, for the issue as between the great army of the belligerents must be, decided mainly in France; but we defeat the plot, organization, and preparations which have occupied the Germans for forty years.

Had we listened to her peace proposals at the end of the year, Germany—even without retaining one single inch of territory in France, Belgium or Russia—would have won the war and realized her aims, seeing that if she had not conquered her enemies she had conquered her allies, and so passed the great highway from Hamburg to Bagdad under her control.

To wrest the Eastern links of that highway from her control it was necessary that the war should go on, and three months after the German peace proposals were jubilantly announced in the Reichstag the terminal of the great highway from West to East stands under the British Flag.

All the trade that swarms over the caravan routes of Persia will assemble at Bagdad, and British organization should make the road from Bagdad to Teheran one of the greatest arteries of commerce in the East.

The wealth of Mesopotamia and Persia is at present largely unexploited. In these regions there is untold mineral wealth. British engineers will make the untapped mines yield up their treasures.

Our Greatest Coup.

With a proper irrigation scheme Mesopotamia could become one of the world's chief granaries. Just as British rule has brought smiling prosperity to Egypt, so British rule will transform Mesopotamia for the benefit of the Arab population. Intimate relations with India will be established to the mutual benefit of either.

The capture of Bagdad is, with the exception of the German colonies, the first definite military result accomplished by the British.

It is a result which stands in the minds of the public for something tangible. They have read for thirty-two months of the capture of this trench and that trench, of a village here and a village there; but, looking at the map in the West, they have seen that, despite these means, the German line has only inappreciably moved.

A New Era Beginning.

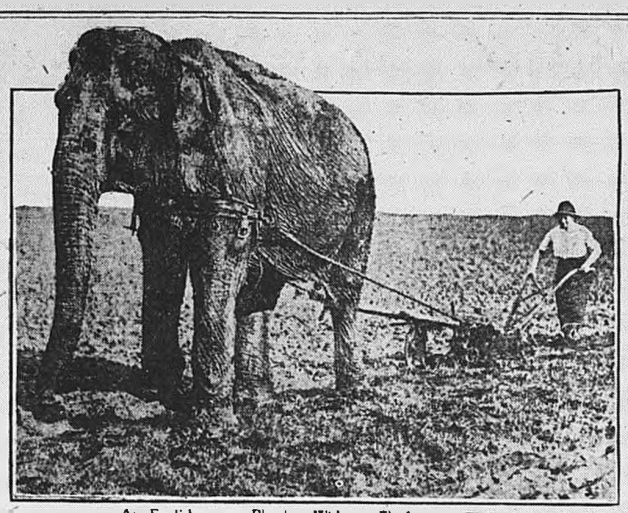
But in the capture of Bagdad no question of the mere seizure of trenches has entered. Here was a city, one of the most renowned in history, standing on the threshold of two Empires—one the Persian, only the shadow of its former self; the other reeling under the shock of five years' constant war, but still strong, the occupation of which the Kaiser and his military advisers for years have preached was necessary to German ambitions, and the strenuous fight for which plainly indicated its importance. If we could win that city, argued the man in the street, obviously we should win the equivalent of a great and far-reaching victory.

And to-day Bagdad is ours, and by all the signs it is destined to remain ours for ever, along all the country connecting the city with the Persian Gulf.

When the war is over the development of Bagdad should grow apace, and in all the bazaars of the East they should speak of its progress. Its Arab and Jewish population may confidently look forward to a new era of prosperity, recalling Bagdad in its palmiest days, nor should the time be far distant when Bagdad, rightly occupying the importance it deserves in the British Empire as one of the great key-positions in the East, may justly be spoken of as a second Cairo.

THE SUBMARINE "AT HOME."

Station Where Undersea Boats May Be Repaired and Supplied.



What is a "submarine base"?

Well, such a base is, in a word, a supply and repair station for undersea boats. Craft of this kind are very elaborate and exceedingly delicate pieces of mechanism; they are liable to need tinkering at frequent intervals.

Hence there must be a machine shop on shore at the service of the boats when at intervals they return from cruises. There must also be a storehouse containing all kinds of supplies and spare parts for the submarines. Most important of all, there must be tanks of fuel oil.

Usually there is attached to the base a "mother ship"—a good-sized steamer, with machinery aboard for making emergency repairs. The steamer also carries dynamos, which may be used for charging the batteries of the boats—though at sea the charging is accomplished by the oil engines that propel the submarine when on the surface.

When it is not practicable to establish such a shore station, the "mother ship" may be utilized temporarily as a floating base.

An Englishwoman Plowing With an Elephant in England

THE SEVEN MEN WHO MATTER

SEPTETTE WHO DIRECT THE WORLD-WAR.

Personalities and Responsibilities of the British War Executive.

Just now, in this country, there are Seven Men who Matter. Those seven men are more important to every man, woman and child in the United Kingdom than anybody else.

They are the seven who direct the war. They throw armies of millions where they like, says London Answers. They can call our gigantic fleets off the enemy, or they can use our great Dreadnoughts and our wasplish destroyers and submarines to keep the stranglehold upon Germany until she gives in.

The Seven Men Who Matter are the Prime Minister, Mr. Lloyd George; the Money Minister, Mr. Bonar Law; the Labor Minister, Mr. Arthur Henderson; the two Empire Ministers, Lord Curzon and Lord Milner; and two fighting chiefs, Sir John Jellicoe and Sir William Robertson.

The Centre of Our Hopes.

They sit in a plain room, behind a rather dingy front, in one of the shortest and greyest little streets in England. In a room at No. 10 Downing Street, the brain of the British War Executive is constantly at work.

There is the war brain of the Russian troops over in Petrograd; there is the war brain of France in Paris; there is the army direction of the mountain-fighters of Italy in Rome, the city of the seven hills; but there is one war-direction brain that is more important than all—it is the brain of the Seven Men who Matter!

Absolute Authority.

The Seven sit nearly every day in conference; the Five sit every day. In both cases they are able to call in men who know various sections of all the various departments connected with fighting on the sea, on the land, or in the air. Suppose for a moment that the British War Cabinet has to consider the striking of a terrible blow at the enemy in some new theatre of war. The Five meet at No. 10 Downing Street. Admiral Jellicoe hurries across from the Admiralty, in naval uniform and peak-cap, and carrying despatch-boxes. General Robertson hurries across Whitehall from the War Office. The British War Council is complete.

The Prime Minister, seated at the head of the table, says:

"We want to do so and so in such and such a region of the vast theatres of war."

Doing It Now.

General Robertson replies that he can spare so many hundreds of thousands of troops to carry out this new phase of the war.

Can they be fed? Instantly, with the ease of a man reaching down a hat from a peg, a profound expert on the rationing of great armies is brought in.

"In how many days can you provide the food for, say, a quarter of a million of men at such and such a place, so many hundred miles from any big source of food supply?"

Clearly and quickly the answer is given.

Can that number of men be transported to that place by sea? Admiral Jellicoe looks after that. With his fellow-experts at his beck and call, he informs the War Cabinet, with marvellous speed, how many transport-ships there are available, how many of the German submarines have been destroyed by us in that particular region, and what measures we have ready to make the voyage of great armies of men across the waters almost as safe as a trip on a penny-steamer to Kew Gardens on a summer afternoon.

Behind the Scenes.

Are there rifles, ammunition, field guns, heavy artillery, shells, hand grenades, steel rails, Tanks, trench timber, leather, iron, copper, explosives and other engines and instruments of war ready in sufficient quantity for the equipment of such a force? Instantly great experts who have spent a lifetime in equipping armies, and great masters in the science of ordnance, and heads of vast munition factories are called into council.

Thus, the new blow at the enemy is decided upon, and all is got ready in smoothness and silence behind the scenes.

Sometimes it is a matter upon which it would be desirable to call into conference Sir Douglas Haig, the Commander-in-Chief of the British Army on the Western Front. Sometimes it would be well to consult the knowledge and experience of General Nivelle, the head of the great French Army, which is fighting shoulder to shoulder with our British heroes in France. Silently, without the world or the people of London knowing a word about it, these two great Army Chiefs are brought over to Downing Street. They consult with the Seven who Matter.

Their Records.

Sir Douglas Haig can be in the neighborhood of the trenches in the face of the enemy at six o'clock in the morning, and in secret conclave with the British War Cabinet at three o'clock the same afternoon. Not until he has gone back, and has arrived safely at the headquarters in France, does the Government announce in the daily papers that he has been here.

Who are these seven men?

The Prime Minister has been about a quarter of a century in Parliament, and held one great office after another in British Cabinets. Mr. Bonar Law is the most gifted debater in Parliament, and is now Leader of the House of Commons. Lord Curzon has been Viceroy of India, ruler of two or three hundred million people. Lord Milner was a big expert on taxation and Inland revenue before he went out to do great Imperial work which led to the establishment of the enormous Union of South Africa under British rule. Mr. Arthur Henderson became Labor Adviser to the Government under Mr. Asquith; now he is the Labor member of the War Cabinet.

Responsible to Posterity.

There is little need to say much about Admiral Jellicoe. He commanded the fleet which secured the safe transport of seven millions by sea.

General Sir William Robertson, Chief of the Imperial Staff, has risen from the lowest rank in the British Army to the high position he now holds.

The public knows much of the careers of the Seven Men who Matter, but, until now, practically no light has been thrown upon their daily silent work. It is the work that is crushing the enemy. On their secret decisions depends the safety of the Empire. On their wisdom depends the very food we eat. Without the forces marshalled by these seven men the work of our gallant and powerful Allies would be in vain, and the British Empire would go down in ruins.

WHY CANADA MUST GIVE TO BELGIANS.

All Belgium to-day is divided into two parts, a field of battle and a refugees' camp. The photograph shows where most of the able-bodied men of Belgium are to-day. They are sacrificing their all in the name of their country and of liberty by resisting the invader who has destroyed so much of the beauty of their land. And with their allies they have stopped the enemy. These soldiers of Belgium are shown receiving the decoration of the Order of Merit for their bravery.

But in the meantime what has become of the wives, the children and the aged parents of these heroes? A glance at the photograph shows that a wide range of ages is represented. Yet there are besides the Belgian women thousands, nay, hundreds of thousands of Belgians who are too old or too young to fight. Bereft by their men folk they have been left hopeless, saved from starvation and death only by the loving care of their friends abroad.

And this work is never ended, will never be finished until the last German is driven from Belgian soil. Until the day of victorious peace the women and the children and the aged of Belgium, must be fed by Britain and Canada with the United States through the relief workers who are devoting their entire time and energy to the cause. Contributions are needed daily and whatever their size they will be gratefully received by the Central Belgian Relief Committee, 59 St. Peter Street, Montreal, or the local committees.

THE TREES OF FRANCE.

Hush, little leaves, your springtime dance,
Sigh for the murdered trees of France,

Rooted deep were their sturdy forms,
Joying both in the sun and storms.

Friends were they of the peasant folk,
Friends whom the birds and kine bespoke.

Ever they gave while slow years wheeled
Shade and shelter and fruitful yield.

Spoil are they of destroying lust,
Not of the battle stroke or thrust.

Prone they lie on the Hun's black path,
Done to death by his thwarted wrath.

They are a garden still to see,
They are the world's Gethsemane!

Hush, little leaves, your springtime dance,
Sigh for the murdered trees of France.

Free Milk Record Forms.

Two five-year-old cows in a dairy herd where cow testing is practiced made two widely divergent records in 1916. One gave 6,616 pounds of milk and 264 pounds of fat, the other gave 8,370 pounds of milk and 288 pounds of fat. This means twenty-seven dollars difference in income between the two. The owner did not expect to find such a difference. Yet who but the man among his cows all the time should best know their possibilities? Is there as much difference as that between two cows in your herd? Cow testing will help you to know, and will help you to save time, labor and feed. For if you retain only the best cows, you keep those that you are sure will repay you handsomely for all you expend on them. A request to the Dairy Commissioner, Ottawa, for milk record forms should state whether you want those for daily or three days' weights per month; they are free for asking.

A GLIMPSE AT GAZA.

1917 Will See Britain in Control of Cradle of Christianity.

Here is a vivid idea of the importance of Gaza reached by our victorious British troops:

"Gaza is the southern counterpart of Damascus. It is a site of abundant fertility on the edge of a great desert—a harbor for the wilderness, and a market for the nomads; once, as Damascus is still, the rendezvous of a great pilgrimage; and as Damascus was the first great Syrian station across the desert from Assyria, so Gaza is the natural outpost across the desert from Egypt.

The Bedouin from a hundred miles away come into the bazaars for their cloth, weapons and pottery. The inhabitants were characterized as 'lovers of pilgrims,' whom, no doubt, like the Damascenes, they found profitable. As from Damascus, so from Gaza, great trade routes travelled in all directions—to Egypt, to South Arabia, and, in times of the Nabatean Kingdom, to Petra and Palmyra. Amos curses Gaza for trafficking in slaves from Edom."

No man or woman has a right to look on while others are struggling for what is equally important to them.—The Prime Minister.

The Doings of the Duffs.

THE EARL'S SECRET

Or, a Martyr to Circumstances.

CHAPTER XXIX.—(Cont'd.)

"Young man, just get into my gig, will you, and follow on after."

When they got near the village he stopped the horse and unfastened Job's bonds.

"Now you get home, Mr. Job," he said, quietly, and fixing a significant glance upon Job's face. "You go on as usual, and keep your eyes open and your mouth shut. See. I trust you, because I know you know me. I'm Detective Dockett of her majesty's police, Scotland Yard, and when I trust a man and find him false, I go for him, and put my hand on him if he's at the other end of the world—I've such a long arm—and when I've got him I don't led him go till he's had a taste of her majesty's jail and skilly. But there, I needn't tell you what I can do, for you know me."

Job nodded suddenly, and looked up at Leicester.

"I don't want no threats," he said. "I'll do my duty by Measter Leicester there if I swing for it."

And, with an affectionate glance, he hurried off.

"Now, gentlemen," said Mr. Dockett, pleasantly, "we must break up the party. I think you had better get back to town, sir; we shall want a lawyer directly."

"Very well," said Mr. Thaxton.

"As for you, sir, of course, you're under arrest! I've got your word for that."

Leicester nodded.

"Then I think, sir, you and your man will go to Sanderson's—where you were before, you know—and wait till the evening. I'll come to you. By the way, I haven't had the pleasure of your man's acquaintance."

Mr. Dockett looked hard at him and turned aside.

"Ah!" he said. "I don't know him, I think, but I may some day, and very good friends we shall be."

Stumpy suppressed a groan, then suddenly tore off his wig and with a desperate recklessness exclaimed:

"'Tain't no use. I know it ain't! You'd find it out some day, sooner or later! Here I am, sir!"

"Eh?" said Mr. Dockett, with genuine astonishment. "Why, hang me, if this isn't a regular pantomime! You're the man who was split upon by the general and got it for life?"

Stumpy nodded his head desperately.

"Right you are," he said. "Put 'em on," and he held out his hands for the handcuffs.

Mr. Dockett, however, seemed to enjoy the joke so much as to be incapable of doing his duty.

"Well, this isn't a pantomime," he chuckled. "No, no; I don't want you yet, go with that gentleman, if he'll have you——"

"That I will!" said Leicester, laying his hand upon Stumpy's hand. "He has been faithful and honest to me, let the rest of the world say what it will."

"Go there with him then, sir," said Mr. Dockett, and he turned, with a cheerful nod, to the village.

Stumpy, however, ran after him and, laying one hand upon the side of the cart, whispered a few words in the detective's ear.

"Eh?" said Mr. Dockett. "The general's not dead! Is it true? Come!" and his eyes sparkled. "Where is he?"

But Stumny, having succeeded in exciting the hitherto calm officer into something like eagerness, ran back and joined Leicester, leaving Mr. Dockett driving toward the village and muttering:

"Not dead! Is it true, I wonder? Heaven! if he isn't how I should like to have the collaring of him. So the general's not dead! It's too good to be true!"

CHAPTER XXX.

From the moment Mr. Dockett, the detective, discovered our hero things took a clearer and more promising aspect.

While Leicester and Stumpy were left at Penruddie Mr. Dockett repaired to London and set about his task with a zeal and cunning highly commendable.

In the first place he appeared one morning in the city, dressed after the fashion of a simple and wealthy country squire.

He made his way to the offices of one of the companies over which Howard Murpoint was director, and inquired for that gentleman.

The clerk told him that Mr. Murpoint was not in the city at that early hour, and would probably not arrive until one o'clock.

Mr. Dockett waited patiently, and at last the great man arrived.

Mr. Dockett was shown into the great man's parlor and announced his business.

"I am," he said, "in search of a good investment. My name is Squirrel, and I've had a large sum of money left me, which I don't quite know what to do with. My lawyers tell me I must put it in the three-per-cents, but I thought that you, being a great city man, would be able to show me a better investment than that. So I made bold to come and ask you."

The captain had often been applied to for advice as to investments, and, after the first slight surprise, saw nothing suspicious in the country squire, and in his pleasant way informed him that he certainly could assist him.

Then he told Mr. Dockett that he could not do better than put his money in this and that company, and concluded by mentioning all the financial schemes in which he was interested.

Mr. Dockett listened attentively and jotted down the names of the companies in which the captain was concerned, and then, thanking him gratefully, took his leave.

From the offices he repaired to a small room in Scotland Yard and rang a little hand-bell.

It was answered by another detective, very much like Mr. Dockett, but with more of the city air about him.

Mr. Dockett and he shook hands, then Mr. Dockett said:

"Gilles, I've got a city job on. Look here, do you know anything of that gentleman?" and he passed a slip of paper upon which Mr. Howard Murpoint's name was written.

Mr. Giles smiled.

"Everybody knows him, Mr. Dockett," he said.

"Ah, but do you know anything of him in the way I mean?"

"Well," hesitated Mr. Giles, "perhaps I may have my suspicions."

"Exactly; and perhaps I have mine. He's got too much business; too many wires a-pulling; when I see one chap with so many concerns all running on I begin to think that it's shaky."

"Exactly," said Mr. Giles. "I don't know anything against Mr. H. M.; he's a great and powerful man, but I dare say I can find out if you set me to it."

"That's just what I want," said Mr. Dockett. "You get at it at once; I'll take him at the West End, you watch him at the city, and directly you find anything that even looks wrong let me know. You needn't spare the money; this is a job that will afford a thou or two."

"I understand," said Mr. Giles, and almost without another word he took his departure.

From that hour there was a bloodhound upon Howard Murpoint's track, a ferret ever worming and prying and nosing into his business. There was always a thin, quiet-looking man mixing with his clerks, getting hold of his private letters, holding open his carriage door, catching his visitors as they entered his office, and dogging him through every hour he spent at office or at chambers.

Mr. Giles was at work, and no bloodhound could be thirstier and more eager, no ferret more restless, and no lynx more watchful.

At home at the West End another bloodhound was watching him there.

When the great man came home to his palatial residence that bloodhound would watch him enter, and then, in the guise of a porter or a policeman, drop into his kitchen and chatter with his servants. If Mr. Howard Murpoint walked the room all night the bloodhound learned it from the chambermaid.

Every scrap of paper which fell into his waste-paper basket found its way into the hands of Mr. Dockett, and Mr. Howard Murpoint never gave a party or attended one without Mr. Dockett's knowing it, and sometimes being present.

(To be continued.)

Too Much Dessert.

In the average family the dessert problem takes up more time than the more substantial courses.

Traveling through a farm district recently, the writer found that the particular branch of cooking in which women were most interested was the making of cakes and desserts. At a demonstration lecture at a western university before 600 women the whole time was devoted to serving afternoon tea and showing how the cakes and ices and other desserts should be made.

Now I do not wish to disparage the arts of confectionery and the making of delicious sweets, but I do think that perhaps our women over-emphasize the need and time for making desserts. Many girls proudly boast that they can make cake and fudge and concoct delicious, if overly rich, salads, but can these girls make equally good bread, prepare meats so that they are luscious and tempting and stew the plainer fruits so that they are wholesome and attractive?

I have said often that meats and vegetables are more poorly cooked in this than in any other country, and this statement is based on extensive travels abroad. On the other hand, we seem to emphasize the need of puddings, pie, cake and wrongfully stimulate too great an appetite for them in our families.

If we want to classify the family according to taste, we might well begin with father, who feels the meal is incomplete unless he has a hearty triangle of pie at the end. Now, there is nothing about a good pie to be criticized, but it is the one dessert which must be well made in order to be wholesome, and, second, it does take a considerable amount of time.

Just by it should be a staple dessert in many a home cannot be fathomed, since all dietitians agree that the crust is not wholesome if eaten frequently or on top of an already generous meal. Then there is the child who will not eat the rest of his meal because he is so anxious for dessert, and whose taste has been educated beyond simple desserts like rice pudding, cornstarch or fruit and who desires more elaborate puddings with sauces and, worst of all, whipped cream.

Whipped cream in itself is unobjectionable, but when added to another food which is sweet and fat the combination often proves disastrous to one's liver! The cream itself is practically all fat, so that it should never be used with desserts which contain a large amount of fat or sugar in some other form.

It is the exceptional dinner among middle class families across the Atlantic which has anything for dessert except fresh fruit, cheese and crackers. Or stewed fruits which are called "compotes" may be served with a small offering of tiny cakes. There is much in favor of this simple type of dessert which would mean so much less work for the housemaker and fewer overburdened digestions. Fruit, either fresh or canned, without much sugar, is the dessert which could be served every day and which would be by far the most wholesome for children and old people, who particularly need the salts and mineral values that food offers.

Another more wholesome plan is to make a combination salad dessert at the end of a hearty meal. So many delightful salads can be made even in winter or between seasons, that one often wonders why another course is passed after the salad. A sweet dressing may be used, especially with fruits, and if accompanied by crackers or wafers and the cup of coffee or tea the stomach really should not crave or need anything else.

Menus For The School Children's Dinner.

1. Eggs, boiled, coddled, poached or scrambled; bread and butter; spinach or other greens; cake.

2. Beef stew with vegetables; milk; crisp, thin tea biscuits; honey.

3. Dried bean or pea puree; toast; baked apple; cookies.

4. Vegetable-milk soup; rice with maple sugar and butter or with milk or cream.

5. Potato chowder; crackers; jelly sandwiches.

6. Cold meat; creamed potatoes; peas, bread and butter; frozen custard or plain ice cream and plain cake.

7. Lamb chops; baked potatoes; bread and butter; sliced mixed fruits; cookies.

8. Baked omelet with spinach, kale or other greens; bread and butter; apple sauce; cake.

9. Milk toast; string beans; stewed fruit; cake.

10. Boiled potatoes; codfish gravy; bread and butter; lettuce; custard.

Casters for the Kitchen Table.

The most convenient thing in my well-equipped kitchen, says a good housekeeper, is the table, which is movable. We bought four ordinary casters, which we fitted in the legs of the table, so it can easily be rolled to the sink to receive the dried dishes, then to the pantry, where they can all be "placed" with a single effort (thus saving much walking back and forth), or to the stove when canning fruit, etc. You will find such a movable table a great source of help in the conservation of energy and valuable as a time saver.

The Right Way.

To give your blouses and handkerchiefs an exquisite, subtle, fresh and flowery odor, put a small piece of orris root in the rinsing water when washing them.

To cool a fevered patient, add a little bicarbonate of soda to bathing water.

To keep moths away and to give to it a wholesome and pleasant odor, put branches of arbor vitae in your winter clothing before storing it away.

To prevent green vegetables from boiling over drop a piece of dripping the size of a walnut into the center of them just as they commence to boil.

To make a tight shoe more easy try laying a cloth wrung out of hot water across the place where it pinches. This should be renewed several times till the moist heat has caused the leather to mold itself to the foot of the wearer.

MOTHER
SEIGEL'S
SYRUP

The proof of Mother Seigel's Syrup is in the taking. That is why former sufferers, whose vitality was being sapped by Indigestion, say it is *just excellent* for stomach, liver and bowel troubles. Thanks to Mother Seigel's Syrup, they are now strong and well.

IS EXCELLENT FOR

If you are afflicted by Indigestion or other disorders of the stomach, liver and bowels take Mother Seigel's Syrup regularly for a few days; long enough to give it a fair chance to make its beneficial influence felt. Then note the improvement in your appetite, your strength, your general condition. 2015

HEADACHES, BILIOUSNESS
CONSTIPATION
INDIGESTION.

That nebottle of Syrup contains three times as much as the 50c size.

To make your farm more profitable

The Paisley Advocate

PAISLEY, MAY 9th, 1917

—The Advocate has for a couple of decades back consistently been doing its little bit towards establishing in its own constituency a political and economic sentiment in favor of state ownership of all public utilities. We are therefore ready to hold up both hands for the recommendation to nationalize three of our great company owned railways and consolidate them with the National Transcontinental and the Intercolonial. In July last a royal commission of three men was appointed to inquire into the general problem of transportation in Canada. The revolutionary recommendation that the whole Grand Trunk Railway, also the Grand Trunk Pacific and the Canadian Northern should all be taken over by the Dominion Government and made part of a great publicly owned system along with the National Transcontinental and the Intercolonial, was made by two members of the commission. They propose that the system be operated by an independent board of five commissioners on a strictly business and economic basis, free from the danger of all political interference. The report was presented to Parliament on May 2nd and only awaits the return of Premier Borden to be dealt with. Canada has according to this Commission's report, given aid to railways to the extent of nearly one billion dollars. Now there are these mentioned corporations in need of more assistance. The old Grand Trunk has been paying dividends to its stockholders when the money should have been expended on the railway, and today the whole system would require an expenditure of thirty millions to put in good running shape. The Toronto News, after reviewing the subject, says:

The inevitable conclusion is that with so much at stake in all the roads the Government should take over the Grand Trunk, Grand Trunk Pacific and Canadian Northern railways and link them up under Commission management with the National Transcontinental, Intercolonial and Prince Edward Island railways. This departure would give the Canadian Government a larger unified transportation system than the Canadian Pacific Railway, and in fact the largest in the world outside of Germany. The project can apparently be financed without any fresh issue of Government securities by the simple expedient of mortgaging the unencumbered Intercolonial and Prince Edward Island railways. Sir Henry Drayton and his colleagues insist on the absolute divorce of the system from politics and on its management by an independent non-self-perpetuating Board of five, including three railway experts, a representative of the employes, and a business man. If we accept the conclusion of the Commission the proposed Government system will, under capable direction, begin to pay its own way within a few years. The Daily News believes that with reasonable public support for this great enterprise the Government will undertake it without delay. Early action is necessary to avoid the recurrence of a grave breakdown in transportation during next autumn and winter. It is probable that the solution of the transportation problem only awaits the Prime Minister's return.

—The prices of wheat on Winnipeg grain exchange are no real indication of those being paid to the farmers in the west, says a despatch from Moosejaw. A farmer brought a load of No 2 Northern into that town on Friday, and he had to accept $1.22 a bushel or take it home as the elevators had stopped buying. The price of flour, however seems to be boosting on the basis of Winnipeg wheat quotations. This is where the millionaire milling companies win both coming and going and the producing farmer loses both going and coming. Government food control is what is required in this country right now. Wheat is now dancing around the three dollar mark in the speculative market, although every elevator in the west is reported to be full of the real stuff. The making of bread is becoming such a precarious proposition that many Ontario bakers are shutting down their ovens. Canada has a real food problem, and it's about time the politicians either get down to business or get off their seats in the House of Commons and allow some good business men to take the job. If there's any country in the world that's in a more impotent political condition than Canada at the present time we don't want to know anything about it.

—Million of bushels of grain have been saved for food purposes by the enactment of prohibition in Ontario. The Ottawa Government have the opportunity before them of doing their bit in solving the food problem by making prohibition Dominion wide.

Municipality of the Village of Paisley

PARL NOTICE that by statute fowl are not permitted to run at large. Further take notice that all manure piles must be removed at a thorough clean up of premises made by the 15th day of May. Transgressors will be prosecuted. By order of council and Board of Health. J GIBSON, Town Clerk.

LOCAL AND DISTRICT NEWS

Unused Paisley Streets for Gardening

The Paisley council have decided to offer unused streets to those who desire to do their share in the production campaign. See the Property Committee about it, if you feel like working as a food soldier.

Women's Institute Officers

At the annual meeting of the Women's Institute on Thursday afternoon, Mrs Chas Briggs was re-elected President; Mrs D McGregor, 1st Vice Pres; Mrs John McLean, 2nd Vice-Pres; Mrs Robt Coan, Sec'y-Treas.

The 160th on Coast Guard in Scotland

Although it was reported that the 160th had gone to France, all the latest letters from boys of the battalion at Witley Camp say that our battalion is likely to be placed on guard duty on the coast of Scotland. There would be something really romantic about the men of Bruce defending old Scotia.

Seriously Wounded

Mr and Mrs Colin McGillivray, 12th Brnr, received official intimation on Saturday by wire that their only son, Pte Alex McGillivray, had been seriously wounded in action in France, and was seriously ill at No 5 Casualty Clearing Station. He had received gunshot wounds in face and hands. Pte McGillivray enlisted with the Mounted Rifles in the west, and had been in France only a few weeks.

"The Young Village Doctor" Coming

The dramatic club of S S No 14, Bruce, who have so acceptably entertained very large audiences at several places, will give their play "The Young Village Doctor," in Paisley town hall about May 24th under the auspices of the Women's Patriotic League. The dramatic club provides almost the entire programme for the entertainment, free of cost, the proceeds to go for Red Cross supplies.

Once Lived in Paisley

Mr W B Clement, who died in Walkerton hospital on April 26th, was somewhere between 78 and 80 a hotelkeeper in Paisley, also at Ellengowan. He was born at Brampton, came to Bruce Tp as a child, and was the first apprentice to the printing in Walkerton. Part of his life was occupied as a sailor, and for about 25 years farmed in the west. After retiring he came back to Walkerton, and a few years ago he married Miss Elizabeth Armstrong of Paisley, who survives him.

A Stalwart Family

Three members of the Briggs family had a reunion at Paisley last week. They were:—County Constable R Briggs of Walkerton, his nephew, Mr W P Briggs, travelling passenger and freight agent of the G T R of Charlotte, Mich. and another relative, Mr Chas Briggs of Paisley. When the three of them stood at the street corner they looked big enough to "lick" any police force on the map. W P Briggs weighs 310 lbs, but is so tall that he is not more than ordinarily stout. The combined weight of the three men was no less than 740 lbs. Broad shoulders and big frames seem to be a common heritage of the Briggs family who are all big men.—Telescope.

Patriotic and Hospital Givings

The sock shower rolled for by the Women's Patriotic League on Saturday brought in 84 pairs of socks, besides donations of cash, towels, pillow cases, shirts, etc.—The W P L last week sent 28 parcels to the Paisley boys in France, containing socks and other comforts, services of the four different churches contributing.—The Elora Road North Patriotic League shipped 54 pairs of socks, all knit in April. Along with these was sent a large quantity of cake, maple syrup and other dainties for the boys at the front.—Knox Church Patriotic Society sent this week to Walkerton Hospital 18 feather pillows with cases. The feathers were contributed by Mrs H S Petrie and Miss Petrie.

To Train and Recruit at Walkerton

A big recruiting campaign to obtain reinforcements for the 160th Battalion, which has now crossed over to France, has been launched in the counties of Bruce Huron and North Wellington, with headquarters at Walkerton, where the men will be sent and trained as fast as they can be enrolled. Walkerton will therefore soon assume a decided military aspect again, and the marshalling and training of troops will once more be staged here. The recruiting campaign over this big territory has been placed under the direction of Major Geo Nelson of Elsinore, a former officer of the 32nd Battalion, and who has returned after being wounded at the front. Lieut Harold Pinkerton, and other returned Bruce soldier, will have charge of the campaign in the Walkerton district.—Herald and Times.

Address by Honan Missionary

Rev Mr Luttrell, missionary from Honan, China, occupied the pulpit of Knox church on Sunday evening, and delivered a strong appeal on behalf of Christian mission work among the people of that great oriental nation which is just becoming alive to its place in the world. The speaker said in the course of his address that China is yet far from being a republic in the real sense, but it cannot resist the great world movement towards democracy. One reason why the Chinese have never become a warring nation is that Confucious taught that a soldier belongs to a lower grade of society and had a debasing influence upon a nation. But to-day the standing of the soldier is rising in the social scale. German officers and instructors have been teaching there not only the German military code with the high-action gone-by, but also the German ideals, and conscription is already on the statute books of China. It may be that civilization depends upon sending missionaries to teach Christianity. It is a country of wonderful agricultural and other natural resources. The mineral deposits are immense, and there is a great industrial development ahead. The Chinese would make the best soldiers in the world if properly led. It is of vital importance to the rest of the world that the changing character of the people should be moulded to conform to the highest ideals. The greatness of the Chinese nation is best indicated in the fact that it has maintained its integrity for 4,000 years, which is longer than any other nation of the earth. The work of converting this people to Christianity is not a petty one, but a glorious privilege, and one that requires the best powers of the men who are sent as missionaries.

—Southampton council will prepare five acres of the park and allot it free to citizens for potato ground. The seed potatoes are to be paid for in the fall. Mr C M Bowman, M P P, meantime is financing the purchase of seed, and has already procured 125 bags.

THE BLESSING OF A HEALTHY BODY

Has Not Had An Hour's Sickness Since Taking "FRUIT-A-TIVES".

MR. MARRIOTT

78 Lees Ave., Ottawa, Ont., August 9th, 1915.

"I think it my duty to tell you what "Fruit-a-tives" has done for me. Three years ago, I began to feel run-down and tired, and suffered very much from *Liver and Kidney Trouble*. Having read of "Fruit-a-tives", I thought I would try them. The result was surprising. During the 3½ years past, I have taken them regularly and would not change for anything. *I have not had an hour's sickness* since I commenced using "Fruit-a-tives", and I know now what I haven't known for a good many years—that is, the blessing of a healthy body and clear thinking brain".

WALTER J. MARRIOTT.

50c. a box, 6 for $2.50, trial size, 25c. At dealers or sent postpaid on receipt of price by Fruit-a-tives Limited, Ottawa.

Shoes Must "Make Good"

The same as men.

There is a competition among shoes—or rather the manufacturers — that is pretty good for you people.

It shoes you and your family with the best shoes in the world without it costing you a cent more than it has to.

Of course you expect us retailers to gather these shoes that are the winners in this war of competition, and **that is what this store is constantly doing.**

Our claim is that every time you have a shoe need you ought in justice to yourself let us supply it.

Our stock exemplifies all the prevalent shoe newness. It contains the latest shoe thought of the leading manufacturers.

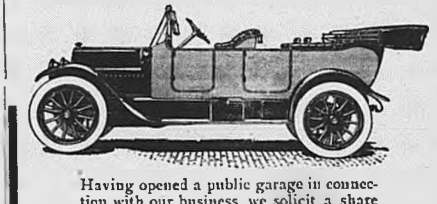
WHY SUFFER WITH BACKACHE, KIDNEYS OR RHEUMATISM NOW?

Letter Tells of Long-looked-for Prescription.

Dear Readers—If I can do any good in the world for others, I wish to do it, and I feel that it is my duty to write about the wonderful results I received from the use of "Anuric." I was suffering from kidney and bladder troubles, scalding urine, backache and rheumatism, and feet and ankles swelled so that at times I could not walk without assistance. Had taken several different kinds of kidney remedies but all failed. I sent for a box of Dr. Pierce's newest discovery, "Anuric," which I received by mail in tablet form. I soon got better and am convinced that this popular new medicine is good. I wish to recommend it to my neighbors and everybody suffering from kidney troubles.



MRS. M. J. SARGENT.

NOTE: You've all undoubtedly heard of the famous Dr. Pierce and his well-known medicines. Well, this prescription is one that has been successfully used for many years by the physicians and specialists at Dr. Pierce's Invalids' Hotel and Surgical Institute, of Buffalo, N. Y., for kidney complaints, and diseases arising from disorders of the kidneys and bladder, such as backache, weak back, rheumatism, dropsy, congestion of the kidneys, inflammation of the bladder, scalding urine, and urinary troubles.

Up to this time, "Anuric" has not been on sale to the public, but by the persuasion of many patients and the increased demand for this wonderful healing Tablet, Doctor Pierce has finally decided to put it into the stores, or send 50 cents for large trial package or $2.50 cents for full treatment.

Simply ask for Doctor Pierce's Anuric Tablets. There can be no imitation. Every package of "Anuric" is sure to be Dr. Pierce's. You will find the signature on the package just as you do on Dr. Pierce's Favorite Prescription, the ever-famous friend to ailing women, and Dr. Pierce's Golden Medical Discovery, proven by years to be the greatest general tonic and reconstructor for any one, besides being the best blood-maker known.

A Typical Policy Result
— OF THE —
DOMINION LIFE
are unexcelled.

A Typical Case

The holder of Policy No. 21 was assured on the Ordinary Life, reduction of premium plan. His premium was reduced by 12 per cent. in each of the years 6-10, by 28 per cent. in each of the years 11-15, by 40 per cent. in each of the years 16-20, and a reduction of 50 per cent. in the years 21-22. In the 22nd year we found that there was sufficient surplus to the credit of the policy to cancel all premiums. The assured was notified and at his request a paid-up policy, but STILL PARTICIPATING, was delivered to him.

FARMERS SHOULD HAVE PRICE FIXED LIKE SHELL MAKER

How Government Could Guarantee Great Production

"If the Government would guarantee the farmers prices for their wheat, potatoes and other crops, like it does the munition factories, production would be greatly increased," stated Archie Limon, a prominent farmer from the Strathroy district. "I have talked to a number of farmers, and they all have the same story, that they cannot afford to take a chance and pay sky high prices for help that is in the majority of cases inexperienced, and then get but a small price for the crop.

"I know a number of farmers who are predicting that potatoes will be 50 cents a bag this fall, and declare that there is no money in it for them to pay high wages and a high price for seed.

"Take wheat for instance, If the Government came out with a guarantee that it would pay $2 per bushel for wheat, you would be astounded at the acreage put in, even though the season was a poor one. And why shouldn't the famers be guaranteed a price on their crops? At the present time wheat is just as much munitions as shells are. If the farmer is to compete with the shell makers for help, he must know just what he can get for his production. The shell makers do not take chances on their money, but the farmers do."

Mr Limon went on to state that as far as could be ascertained from 700 to 900 acres in Caradoc Township would be planted out with "spuds," although the farmers were going to have some difficulty in harvesting them. One farmer, Herb Davidson of Mount Brydges, who did not grow a potato last year, has bought enough seed for twelve acres. A number of the farmers are putting in five acres at least.

A farmer at Mount Bridges stated that if the Government would guarantee him $2 per bag for potatoes he would put in his whole farm of 200 acres into the Irishman's delight.

"The trouble with the farmers," concluded Mr Limon, "is that they have been fooled so often with help that they have come to the conclusion that the best thing to do is to get in what crop they can without outside aid. It is disheartening to get eight or ten acres torn up for potatoes and in the middle of getting them in have your man pick up for town and the munition factory. If the Government wants greater production let it guarantee the farmers a certain price and it will get the crops."—Advertiser.

Failure of Voluntaryism

Col John A Cooper

"We have tried the voluntary system. We tried it in the best form it could be tried, and we found it a failure, uncertain, unreliable and inadequate. It puts a burden on the patriotic citizen and lets the unpatriotic citizen go free. It takes four sons from one man's home and leaves four sons in another man's home. We find it expensive because it brings married men in when single men should be doing the work. It is wasteful because it takes men from industry who should not be taken, and leaves men who might better be on the firing line."

VILLAGE COUNCIL

Council met Thursday, 3rd May, at 8 p m, all present. Minutes of last meeting read and signed.

Communications read: From Hydro Electric Power Commission of Ontario, stating that a man would be sent to Paisley and report on our present condition of electric lighting as to its efficiency free of expense to the municipality; from Frick Coal & Coke Co of Buffalo, and from C F Dunn of Detroit, quoting coal prices; from the Salvation Army, requesting monetary assistance; from military district, London, Ont, requesting co-operation in procuring recruits for home defence.

Logie—Sparrow—That this council request the Hydro Electric Power Commission of Ontario to furnish this council with an estimate on the delivery of 50 h p, more or less, and what the cost would be of installing a distribution system to furnish house, commercial and street lighting and power.—Carried.

Houston—Pearce—That this council at the request of military district No 1 assist in every possible way in recruiting for the Canadian Defence Force now being made in this district.—Carried.

Houston — Logie — That this council consider it necessary on account of the extra gardening this year that the law governing the running at large of fowl be rigidly enforced, also the law regarding general cleaning up of premises.—Carried.

Pearce—Logie—That the clerk order a carload of coal for use at the pumping station from the Frick Coal & Coke Co at their price quoted—$4 per ton at the mines.—Carried.

Houston—Sparrow—That this council meet as a Court of Revision on Monday, 4th June next, at 10 a m.—Carried.

Houston—Pearce—That payments be made as follows: Murdoch Leitch $45, C E Wilkins $8 90, Weighmaster $61 18, Paisley Electric Light Co $41 28, C E Wilkins 54c, Thos Irving $2, W Sparrow $20 35, Thos Sparrow $21, Wm Pearce $9 60, Oscar Stoddart $5 80, John Stoddart $4, John Munn $3 80, Can Consol Rubber Co $13 85, D Sutherland $4 62, David Eason $1 35, Mrs Rolston $1 50, Mrs Graham $10.

ARE YOU GOING WEST THIS SPRING

Advertisements of Strayed, Farms for Sale or to Rent, and similar, $1 for first three weeks and 25c for each subsequent insertion.

Advertisements without specific directions will be inserted till forbidden and charged accordingly. Transient display advs. charged by the inch. Rates on application.

Advertisements in the local columns are charged 10c per line for first insertion, and 5c per line for each subsequent insertion. This includes announcements for church or school entertainments, garden parties &c. No notice less than 25c. Regular advertisers 5c per line, no adv. less than 15. Set in black-faced type, price and one-half.

Who Got hit by that Brick?

Timothy O'Brien, while passing down Main street one morning, was hit on the head by a brick which fell from a building in process of construction. He was taken to the hospital in an unconscious condition, but was soon survived sufficiently to send for a lawyer. Some days later he received a call from his lawyer, who informed him that he had settled the case, whereupon he peeled off seven crisp, new one hundred dollars bills. "How much did you get?" questioned Tim feebly. "Twenty-five hundred dollers," replied the lawyer, complacently. "Twenty-five hundred dollars, an' you give me sivin hundred!" screamed Tim. "Say, who got hit by that brick, you or me?"

WHAT AMERICA STANDS FOR

Two vaudeville artists appeared on the stage of a California theatre. Said one to the other, producing a French flag, "What does that stand for?"

Answer: "It stands for liberty, politeness and kindness."

Then producing a British flag, asked, "What does that stand for?"

Answer: "It stands for justice, liberty and equal rights to all"

Then producing an American flag, asked, "What does that stand for?"

Answer: "I do not know, but I do know it has stood for a good deal this last two years."

Prices 25 Years Ago

The Shelburne Free Press quotes from its fyles the following prices, which prevailed there a quarter of a century ago. The prices are: Flour $4 50 per bbl, fall wheat 80c per bus, spring wheat 76c, barley 35c to 37c, oats 26c and 27c, peas 56c, hay $6 to $8 per ton, butter 15c per lb, eggs 9c doz, potatoes 20c bag, dressed hogs $5.50 to $6, turkeys 9c lb, geese 6c, ducks 7c, chickens 6c, lard 10c.

—The Hydro-Electric Commission engineers have mapped out a scheme for supplying power in this section of Ontario, which includes not only the towns on the Saugeen, but municipalities as far west as Wingham and Kincardine. It is understood that Chesley will be taken off the Hugenia system, the power for all towns of this district to be supplied from three power plants on the Saugeen.

—The number of blacksmith shops in Ontario decreased from 4000 to 2500 in five years was the statement at a horseshoers' convention in Toronto recently. The decrease has been largely made up by improved machinery.

(OVER)

Famine and World-Hunger Are On Our Threshold

ONTARIO

"— in the nation's honour, heed! Acquit yourselves like men. As workers on the land, do your duty with all your strength!"
—Lloyd George.

THE CRISIS

France, England and Italy in peace times did not depend upon America but on Russia, Roumania and Bulgaria for most of their breadstuffs. With these sources closed the crisis of the hour demands that we see that our soldiers and the Motherland are fed.

Everyone in Great Britain has been put on limited rations: meat is prohibited one day a week and the making of cakes and pastry has been stopped. Further restrictions are anticipated.

Bread has gone to 28c per four-pound loaf in England, for the first time since the Crimean War.

Lord Devonport, British Food Comptroller, proposes taking authority to search the houses of Great Britain to prevent food hoarding.

Forty million men, less the casualties, are now on active service.

Twenty million men and women are supporting them by service in other war activities.

In the last analysis, the land is bearing this burden.

One million tons of food-carrying ships have been torpedoed since February 1st, 1917.

Germany's hope for victory is in the starvation of Britain through the submarine.

Canada's sons will have died in vain if hunger compels the Motherland's surrender.

The land is waiting—the plough is ready—will we make the plough mightier than the sword?

Will we help the acres to save the flag?

World-Hunger Stares Us in the Face

David Lubin, representative of the United States to the International Institute of Agriculture—maintained by forty Governments—reports officially to Washington that the food grains of the world on March 31st, 1917, showed a shortage of 150,000,000 bushels below the amount necessary to feed the world until August, 1917. He declares it is beyond question that unless a greater acreage is put to crop in 1917 there will be WORLD-HUNGER before the 1918 crop is harvested.

The failure of the grain crop in the Argentine Republic, which is ordinarily a great grain-exporting nation, resulted in an embargo being placed, in March, 1917, upon the export of grains from that country to avert local famine.

The United States Department of Agriculture, in its official report, announces the condition of the fall wheat crop (which is two-thirds of their total wheat crop) on April 1st, 1917, to be the poorest ever recorded and predicts a yield of 244,000,000 bushels below the crop of 1915. The 1916 crop was poor. Even with favorable weather, the wheat crop of the United States is likely to be the smallest in thirty-five years, not more than 64% of the normal crop.

Under date of April 10th, Ogden Armour, executive head of Armour & Company, one of the world's largest dealers in food products, stated that unless the United States wishes to walk deliberately into a catastrophe, the best brains of the country, under Government supervision, must immediately devise means of increasing and conserving food supplies. Armour urged the cultivation of every available acre. The food shortage, he said, is world-wide. European production is cut in half, the Argentine Republic has suffered droughts. Canada and the United States must wake up!

Hunger Tightening His Grip
—New York Evening Mail

People are starving to-day in Belgium, in Serbia, in Poland, in Armenia, in many quarters of the globe.

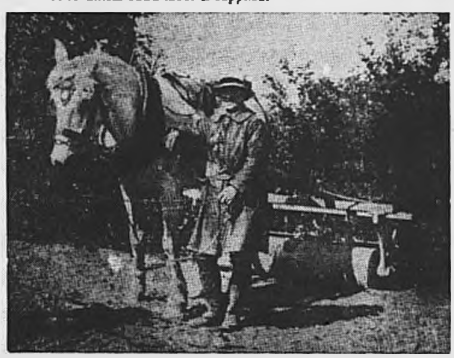
Famine conditions are becoming more wide-spread every day.

On these alarming food conditions becoming known, President Wilson immediately appointed a Food Comptroller for the United States. He selected Herbert C. Hoover, to whom the world is indebted as Chairman of the International Belgium Relief Commission for his personal direction of the distribution of food among the starving Belgians.

Mr. Hoover is already urging sacrifice and food restrictions, for, as he states, "The war will probably last another year and we shall have all we can do to supply the necessary food to carry our Allies through with their full fighting stamina."

The Problem for Ontario

The land under cultivation in Ontario in 1916 was 365,000 acres less than in 1915.



Consider how much LESS Ontario produced in 1916 than she raised in 1915:

	Year	Acres	Bushels	1916 DECREASE Acres	1916 DECREASE Bushels
Fall Wheat	1916	704,867	11,942,050	105,315	2,704,941
"	1915	811,182	14,647,011		
Barley and Oats	1916	529,886	12,258,960	24,432	7,504,160
" "	1915	562,318	19,863,120		
Peas and Beans	1916	95,513	1,243,979	31,461	799,070
" "	1915	126,913	2,043,049		
Corn	1916	258,338	12,747,072	51,441	9,043,424
"	1915	309,779	21,790,496		
Potatoes and Carrots	1916	139,523	7,408,189	34,411	5,858,594
" "	1915	173,934	13,267,023		
Mangel-Wurzels and Turnips	1916	42,792	9,756,045	8,006	15,600,308
	1915	50,798	25,356,353		

Other crops show as critical decline.

Reports from Ontario on the condition of fall wheat for 1917 are decidedly discouraging.

As there is an average of not more than one man on each hundred acres of farm land in Ontario, the prospects indicate even a still smaller acreage under cultivation in 1917 unless extra labor is supplied.

Food Production is the Greatest Problem the World Faces To-day

Owing to destruction by submarines, ocean ships are scarce.

It is much easier to protect shipping between Canada and England than on the longer voyages from India or Australia.

One vessel can make twice as many trips from Canada to Britain as from India, and four times as many as from Australia.

Therefore, every ton of food stuffs grown in Canada is worth to the Motherland two tons grown in India or four tons grown in Australia.

Why the Call to Canada is So Urgent

If this country does not raise a big crop this year, not only will the people of Canada suffer but the Motherland and her Allies will suffer and their military power will be weakened if not paralyzed. Therefore, the right solution of the present war problem comes back to the farm, as to a foundation upon which our whole national and international structure must be built and maintained.

The Second-Line Trenches
—McCay in The New York American.

The farmers know that they are the last reserve, and that the soil on which crops are grown is the strategic ground on which wars are decided. To their care is entrusted the base of supplies.

To enable the farm to do the work two factors are essential. The *first* is Time. Whatever we are to do must be done at once. Nature waits for no man. The *second* is Labor. Many farmers cannot plant the acres they would because they cannot get the necessary help. Many are afraid to increase their acreage because they fear they would not be able to cultivate and harvest an unusual crop after they have raised it. If they are to do the work that is essential for them to do, the last man in each city, town and village must be mobilized at once.

Every man not on Active Service can help. In every city, town and village are men who, by their training on the farm, or by their present occupation, can readily adapt themselves to farm work. These can render no greater service to the Empire at the present time than by answering the call of the farm. Capable men and boys willing to learn should not allow their lack of farm experience to stand in the way.

Can the employer render a more signal service in this crisis than by encouraging these men to help the farmer to cultivate every available acre, and by making it easy for them to go?

Ontario's farm lands are waiting—the implements are ready—the equipment is complete—the farmer is willing—all he needs is labor.

So short is the world's food supply that without increased production many in Canada must go hungry, and even with enormously increased production we cannot expect cheap food. The world is waiting for our harvest.

If peace should be declared within a year, the food conditions will be no better, for the accumulated hunger of the Central Empires must be met. This will absorb a large part of the world's supply.

We do not know when this war shall cease. It is endless—its lengthening out has paralyzed the thought and conception of all men who thought about it and its possible time of conclusion. Three months—six months, we said; nine months, a year, we said; and yet two years and eight months have passed their long dreary and sanguinary length and there is no man who can tell how long this gigantic struggle may yet last.

Lloyd George, in a letter addressed to farmers throughout the Empire, said:

"The line which the British Empire holds "against the Germans is held by those who WORK "ON THE LAND as well as by those who fight "on land and sea. If it breaks at any point it "breaks everywhere. In the face of the enemy the "seamen of our Royal naval and mercantile marine "and the soldiers gathered from every part of our "Empire hold our line firstly. You workers on land "must hold your part of our line as strongly. Every "fall day's labor you do helps to shorten the struggle and brings us nearer victory. Every idle day, "all loitering, lengthens the struggle and makes de-"feat more possible. Therefore, in the nation's "honour, heed! Acquit yourselves like men, and as "workers on land do your duty with all your "strength!"

So, for the honor of Canada's soldiers in France—and for the glory of our New-born Nationhood—let it be said of Ontario's citizens that, in the hour of our greatest need, their response was worthy of their sons.

We owe a great debt to those who are fighting for us.

Organization of Resources Committee, Parliament Buildings, Toronto.

Chairman: His Honour, Sir John S. Hendrie, K.C.M.G., C.V.O., Lieutenant-Governor of Ontario; Vice-Chairman: Honourable Sir William H. Hearst, K.C.M.G., Prime Minister of Ontario; N. W. Rowell, Esq., K.C., Leader of the Opposition; Secretary: Albert H. Abbott, Esq., B.D.

We Must Produce More Food

Farm Crop Queries

Henry G. Bell.

Conducted by Professor Henry G. Bell.

The object of this department is to place at the service of our farm readers the advice of an acknowledged authority on all subjects pertaining to soils and crops.

Address all questions to Professor Henry G. Bell, in care of The Wilson Publishing Company, Limited, Toronto, and answers will appear in this column in the order in which they are received. As space is limited it is advisable where immediate reply is necessary that a stamped and addressed envelope be enclosed with the question, when the answer will be mailed direct.

Question—W. E. A.:—**Have a piece of land I do not wish to work this season except to summer fallow. Can I plow it about June to kill weeds, and sow it to oats or anything else good for pasture? By not pasturing it too close and turning it under in the fall, will land be in good shape for next year?**

Answer:—If you intend to summer fallow the land, I would advise you to plow it sooner than June, probably early in May, and keep it harrowed and disked about once in two or three weeks, so as to root up the young sprouting weeds and to preserve a dust mulch which will prevent the escape of the water from the soil. If you wish to establish a temporary pasture I cannot advise you better than to try the mixture advised by Prof. Zavitz of Ontario Agricultural College. He advises sowing 88 lbs. per acre of a mixture composed of 51 lbs. of oats, 30 lbs. of Early Amber sugar cane and 7 lbs. of common red clover. Professor Zavitz says to sow this early in May. The oats and the Early Amber sugar cane can be drilled in through the regular grain drill and the clover seed through the grass and clover seeder attachment of the grain drill. At Guelph this mixture has been found to be ready to carry cattle the late in June. This pasture has carried more than one steer to the acre and in 1911 was successfully used to maintain milk cows. If this material is not pastured down too close it will form a valuable addition of humus to the soil if turned down late in the fall. Land under such management as outlined should be in good shape for next spring, if plowed fairly deeply in the fall.

Question—M. C.:—**Kindly tell me how I can get rid of thistles and quack grass.**

Answer:—The killing of thistles and quack grass requires heroic methods. Plenty of muscle, horse flesh or gasoline used through a tractor will kill them. The top of the plant serves much the same purpose as the lungs of animals, so that if the plant is deprived of that vital part it must soon die. If this principle is kept in mind both thistles and quack grass can be killed.

No one method will work in all soils, and in all locations. If the thistles are cut down and not a single spear allowed to come above the surface, they must soon die from lack of power to breath in air and ability to digest food. Usually some form of clean cultivation is the best method either with a crop or by bare fallowing. The thing to do is to outline a systematic plan of attack and to keep in mind at all times the fact that you must keep every leaf cut off.

The same persistent methods apply to the killing of quack grass. However, if the quack grass is in sod it is best to plow the ground shallow during the summer, say about three inches deep. For this it is advisable to use a special type of plow with a Scotch bottom having a real long gradually sloping mold board. This permits the easily turning of the sod. The next thing to do is, within a week or ten days, go on the land with a disc and thoroughly cut up the land. You should disc this every ten days or two weeks until fall when the quack grass will be completely killed out. Don't count the number of times you go over the land. Keep on going, going, going, until every spear of the grass is killed out.

Question—J. G.:—**What is the comparative food value of oats cut while green and cured and fed in the winter as hay, especially as a milk producer?**

Answer: — The following is the analysis of oats cut in the milk stage:

Oats cut in milk stage and fed as hay in winter.

	Water	Ash	Crude Protein	Crude Fibre	Nitrogen Free Extract	Fat
Oats in Milk	14.0	6.7	9.9	27.4	41.3	2.8
Oats in the Grain	10.4	2.2	11.4	10.4	63.4	4.4

It is seen from the above analysis that oats cut in the green stage make a very good feed for all classes of livestock. They should not be fed alone to milk cows but supplemented with alfalfa hay and concentrates in the form of bran, cottonseed or oil meal. The chances are that better results will be secured and perhaps a larger quantity of food can be harvested if the oats instead of being sown alone are seeded with Canada field peas.

Question—A. S. L.:—**I am thinking of planting a few acres in strawberries for the market. What is the best soil, fertilizer, and variety of plant and the best time to begin? A detailed answer will oblige.**

Answer:—Strawberries are not overly particular as regards the soil in which they grow; however, they will usually do best on soil that is suitable for potatoes. They should be grown in a rich, friable seedbed well supplied with humus in order that there may be a reasonably good supply of moisture held in the soil. Strawberries are not very hard on the soil. A ton of strawberries is worth say $200 and only takes from the soil about 85 cents worth of plantfood, yet because their growing season is so short, the soil must be well supplied with available plantfood. This is best done by getting the ground ready a year ahead of time. Pick out the place where you expect to plant the strawberries and cultivate it to a hoed crop covering the ground before this crop is put in with anywhere from 20 to 40 loads of manure to the acre. Absolutely clean cultivation is necessary in order to free the land of weeds. If manure is available that is well decayed and free of weed seeds, ten to twelve tons to the acre may be applied before planting the berries and re-enforced with from 1,000 to 2,000 pounds of commercial fertilizer to the acre. A good fertilizer for strawberries should analyze about 2 to 3 percent. ammonia, 8 to 12 percent. phosphoric acid and 4 to 6 percent. potash, if it can be purchased. This analysis is suitable for a good sandy loam soil. If the ground is extra thin and manure is not available a little more ammonia should be used in the fertilizer and more pounds to the acre applied.

The ground should be plowed late in the fall if possible and allowed to lie over the winter and preferably plowed again early in the spring and thoroughly worked down to prepare a fine, firm seed bed and to eradicate all the weeds possible.

In the choice of varieties, the soil, climate and market must be considered. Varieties, that under certain conditions of soil, climate and market, may prove profitable, may under changed conditions prove worthless. In selecting varieties the beginner should be guided more by the advice of progressive growers in his community than by what catalogs say. If his land is early he may find profitable plants from the early varieties such as Crescent, Parton's Eclipse, used in Dunlap, Warfield's and Beder Wood. If his land is late he will find it more profitable to plant some of the later varieties such as Sample, William Belt, Commonwealth and Brandywine. Just as soon as the planting is finished cultivation should begin. The first two or three cultivations should be rather deep so as to remellow the soil trodden down in planting. All later cultivations should be shallow. The land should be cultivated at least every ten days and after each rain.

If you will write and get the Annual Report of the Secretary for Agriculture, Halifax, Nova Scotia, for the year 1910, you will find therein two splendid articles on strawberry culture that go quite a good deal into detail regarding best methods of handling this crop.

May Flowers.

The people talk of windy March
And of the April showers.
And how these two are sure to bring
The welcome Maytime flowers.

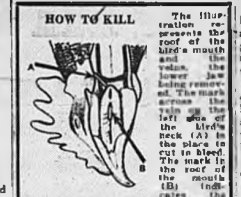
But I am sure that both these months
Are failures as to weather,
For every year they seem to get
Most sadly mixed together.

There's rain in March and April wind;
The snowstorms get all twisted,
Which makes it clear that Maytime flowers
Come forth quite unassisted.

Use Fertilizers Freely.

It costs time, labor or money to plough or spade up a garden and to get the best return for the labor or expense it is absolutely necessary to purchase seeds of the very best quality. These can be had from seedsmen with established reputations. To sow cheap seeds or seeds of doubtful quality is to invite failure.

After the seeds begin to grow labor must be expended in cultivating and keeping the weeds down.



It is very gratifying after a season's hard work to harvest a large crop of flowers or vegetables of superior quality and contemplate how well the work has paid.

The starting point of success is first to get the soil well pulverized and as deeply as possible; second, to sow good seeds; third, to use fertilizers liberally. Using fertilizer is similar to depositing money in a savings bank. All the original deposit or investment is returned and the liberal use of fertilizers pays many times better interest than any savings bank. It is folly to try to make good gardens without the liberal use of fertilizers and the hoe or some similar implement.

PREPARING POULTRY FOR MARKET

It Pays in Dollars and Cents To Add The Finishing Touches To Produce Intended For Table Use.

(By F. G. Elford, Dominion Poultry Husbandman.)

From the original drawing by Dr. A. R. Wickware.

Putting the finishing touches on a product before offering it for sale yields the greatest proportionate return of any labor done on the average farm. This lack of "finish" is nowhere so clearly seen as in our poultry products as shipped to market.

To prove that producers do not put the care they should on their poultry products before offering them for sale, one may visit any market and he will find that a large proportion of the poultry exposed for sale exhibits a carelessness that no other business could stand. Good farmers who follow a systematic crop rotation, who conserve all the available moisture in the soil, who never market a bullock except in a finished condition, seem to forget all their business principles when poultry is being disposed of, and think only of getting rid of them in the quickest and easiest way possible.

There are comparatively few exclusive poultry plants, and experience in Canada, as a rule, has not been encouraging to that system. But farmers could make considerably more revenue from poultry if they would take even ordinary care in the preparation.

Preparation—Its Value.

The time it takes to prepare produce before it is shipped from the farm is time well spent. No matter what is being sold, it should never be sent from the farm until it is in the best possible condition. Especially is this true when produce is intended for table use.

Well-finished broilers or roasters cost less per pound to the producer than those that are poorly fleshed, and they are much more palatable to the consumer. Though he may have to pay from 25 to 50 per cent. more per pound for such, as a rule the edible portion really costs less.

The Old System of Marketing Dressed Poultry—Its Defects.

Possibly nine-tenths of all the dressed poultry produced has found its way to market through what is sometimes called "the system," the outstanding feature of which has been the lack of system. The peddler or country store was the first handler; there was no encouragement to be careful, for the same price was paid for all, good and bad. In some cases the producer broke away from the system and shipped direct to the dealer but did not prepare his birds as he should. In many cases the birds were bought by a middleman on a commission basis, and too often the quality was not good and there was absolutely no grading. This system, or rather lack of system, in selling meant, and still means, a lower net return to the shipper, because of lack of uniformity, poorer quality and numerous commissions.

Fortunately such producers are becoming fewer every year, but they have been responsible to a large extent for the condition in which produce arrived on the market and for the state in which it has been exposed for sale, even in some of our larger cities.

On one of these markets visited by the writer there was hardly a bird young or old that could not, by a very little attention, have been improved, at least in appearance. Chickens were there in dirty crates, chickens of all colors and sizes. There were old hens that were lousy, hens with scaly legs and some that looked as if they might die before the axe came. There was not one live bird in the lot that one could relish on the table after seeing it as it was. Nor were the dressed birds much better. They lacked that neatness and finish that makes one wish he were carving one for his dinner. Many were thin and those that were fairly well fleshed were poorly plucked. The skin was torn or blotched from scalding, some were bled, some had lost their heads, and some had their necks dislocated.

If all the dressed poultry that goes into the market was of an appetising appearance and of good quality, the producer would get a better price, and the consumer would be willing to pay for something he could enjoy eating. It is a good object lesson for the producer to see what his produce looks like just before it goes into the consumer's hands. If he saw it, he would sometimes wonder how it brings as big a price as it does.

Warm weather and long hauls, coupled with rough handling in transit all have a share in depreciating the quality, but it must be borne in mind that produce never arrives on the market in better shape than it leaves the shipper.

Why intelligent farmers will persist in selling their poultry in anything but the best of condition is hard to explain. Possibly present-day conditions could not help but create a carelessness that has left the trade in its present state.

There is, however, no reason for letting it remain there. The careful producer should get a higher price for his good quality products than does his neighbor who cares nothing about how his are produced or where they are marketed.

Inferior Produce—Who Loses Thereby?

There is less reason every year why producers should put up with this state of affairs. By more care in production, through co-operation or direct communication with better markets, better prices may be received by the producer and more satisfaction given to the consumer, but the first step is for the producer to produce a higher and more uniform quality, for all producers, whether their product is good or bad, lose on any bad produce that goes on to the market.

The producer loses on this because the dealer loses on the poor quality and he cannot pay as much for the good, for on it he has to make good his loss on the poor; the bad produce has already cost for transportation which comes out of the producer; these poor quality birds are retailed and the producer again loses by the decreased consumption. Not a package of dressed poultry is offered for sale but either helps or hurts the selling.

It is quite probable that many a chicken dinner has been changed to beef because of the way these products are exposed for sale and the producer is first responsible for this and is the heaviest loser.

Inferior Produce—Who is to Blame?

Though it has been pointed out that the producer might improve his product and his methods of selling, it must not be imagined that he alone is guilty. Each person who handles the product even to the consumer is sometimes at fault. Though it is possible to improve the quality delivered by the producer, it too often happens that stuff that is good when it leaves the farm is spoiled before it is eaten.

It might therefore be noted that all, from the producer to the consumer, are more or less to blame for the condition of the poultry market and every link of the chain should be strengthened, though the wholesaler and the producer are the two most important. However, as it is the producer that we are writing this information for, it is his responsibility that we are emphasizing.

The Improved System—Its Methods and Advantages.

Thanks to demonstrational work and to co-operation among the producers, better business methods are being adopted. Conditions in some sections are greatly improved but the work has only started and this improvement must become more general if producers are to get the returns they ought. The demand for good stuff is steadily increasing and with it the price. Fifteen years ago farmers occasionally sold poultry for 6 to 8 cents a pound. Now dressed poultry sells for 12 to 20 cents a pound and in some cases much higher. There seem to be few industries that promise brighter prospects to the farmer than poultry managed on a business basis.

In some sections farmers are co-operating, thus putting on the market a more uniform product in better condition and at less expense; more care is being taken in the production and finishing, and consumers are discriminating more in the quality they purchase. Some of the middlemen's commissions are being eliminated and the producer and the consumer are coming closer together.

A CASE OF CRATE FED, WELL PACKED CHICKENS.

Fourteen in this box but they are well fleshed, uniform in size and packed tight.

Mothers and daughters of all ages are cordially invited to write to this department. Initials only will be published with each question and its answer as a means of identification, but full name and address must be given in each letter. Write on one side of paper only. Answers will be mailed direct if stamped and addressed envelope is enclosed.

Address all correspondence for this department to Mrs. Helen Law, 235 Woodbine Ave., Toronto.

M. M.:—1. For a home wedding the bridal party should enter the room in the following manner: The clergyman leads, followed by the bridegroom and best man. When he reaches the place before which the bride and bridegroom are to stand for the ceremony he turns and faces the people and the bridegroom and the best man stands at his left hand, also facing the guests. When they have taken their places the bridesmaid enters the room, followed by the bride, who rests her arm on the left arm of her father. As she advances and reaches the place where the bridegroom stands he steps forward and offers her his left arm. Her father steps to one side and the bride and steps to the side of the bridegroom. All five now face the clergyman, who performs the ceremony. After the father has given his daughter in marriage, which he does by a simple nod of acquiescence when the clergyman asks who gives her in marriage, he steps back and joins his wife, who is standing near. After the clergyman has given the blessing he steps to one side and the bride and bridegroom turn and face the guests, the best man and bridesmaid taking their places, one on each side of the newly married pair. The family and friends then advance to offer their congratulations and after all have spoken to the bride and bridegroom the wedding breakfast is served, after which the happy pair, if in wedding clothes, change for travelling costumes and start amid a shower of friendly confetti and old shoes. 2. Displaying the presents is entirely a matter of personal taste. Some persons do not care to do so, but it has come to be considered quite the thing, and it is very pleasant for the guests to see them, when they have been well arranged. It is in perfectly good form, therefore, and is practised at most weddings. 3. The bride should acknowledge each present herself. If the donors are kind enough to think of you, you should be gracious enough to acknowledge them yourself.

INTERNATIONAL LESSON MAY 12.

Lesson VII.—Jesus The True Vine—John 15. 1-16. Golden Text—John 15. 5.

Verse 1. We have another instance here of John's habit of compressing parables by fusing the parable and the interpretation. Matthew would have omitted the references in these two verses to the Father and the Son, and added their exposition at the end. True vine—The adjective "true," or "real," becomes here practically "ideal"—that which alone answers to all the thoughts the eye of Jesus sees in the parable.

2. In me—This parable may possibly be the starting point of the highly concentrated phrase "in Christ," repeated in varying forms some seventy times in Paul's letters, and constituting the very kernel of his theology. Cleanseth—Not by pruning, which is in the first clause: it is a washing that is meant.

3. Clean, as in the Greek, recalls cleanseth in verse 2. The teaching which Jesus has given them throughout their discipleship has achieved its purpose for those eleven men: are clean. The whole vine, including the branches from blight and parasites, and prepared them for more abundant productiveness, which is their only reason for existence.

4. And I in you—Just as Paul is always setting by his great formula "in Christ" the complementary "Christ in me." It was no figure of speech, or pious phrase for him the Master was literally living his human life over again within his soul. And nothing less will ever give real life to any of us. Except ye abide—"There is this mysterious property in the branches of the spiritual vine, that they can cut themselves off, as Judas had done. Nature does something, and grace does more; but grace may be rejected" (The Cambridge Bible).

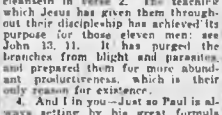
5, 6. The whole vine, including the branches. Paul has the thought with another figure when he calls the church the body of Christ, each Christian being a limb or organ of it. Bear much fruit—The verb is that of Matt. 3. 8, and quite possibly we should render "produce nothing," keeping up the figure.

6. This is the parable of John the Baptist (Matt. 3. 10). "A metaphorical description of the fate which awaits an unfaithful disciple. He is like a useless branch which is broken off and thrown away, and after it gets withered and dry is consumed as firewood."

7. Observe how this illuminates prayer, which is not mere petition, but a vital harmony with God. Such union with God in Christ will make it impossible to ask what is out of accord with the Will, except in the spirit of Jesus in Gethsemane. If a man thus blessed does ask something that God does not will, it shall be done unto him still, in that something better will come. The same interpretation of the tense is supported by the fact that it is used in John 13. 31, 32, where also the Lord speaks of his object as attained. And be my disciples—Again: A disciple who does not bear fruit is not entitled to the name.

9. Hath loved . . . have loved—Read loved: as throughout John 17, the Lord is speaking of his earthly life as prime in the past. Abide ye—This implies "even as must ye love me": his love for them must act and react. My love—"Primarily, the love which I have shown, and, in a secondary sense, the love with which I inspire you with his love in verse 10" (The New Century Bible).

10. Note how the idea of love as a mere emotion is put away. It is always a powerful motive. "To keep his commandments not only proves our love for him, but secures his love for us" (The Cambridge Bible). See especially Paul's description of its energies in 1 Cor. 13.



11. My joy—Jesus has already even before he "endured the cross" (Heb. 12. 2). They are invited to enter into the joy of their Lord." The words presume that they have enough of it already to long for more: to see a redeemed world have become a supreme ambition with them.

12. This takes up John 13. 34: its repetition recalls the story of John in his extreme old age carried into the church and never saying anything but "little children, love one another." The family love of the disciples of Christ is God's new way of meeting the hitherto unabidden command, "Thou shalt love thy neighbor as thyself": compare 2 Pet. 1. 7.

13. This great verse sweetens bereavement for multitudes of us in the horror of this war. In dying his own life to make a mode for their imitation, he intimates that he is about to give the highest possible proof of his love by laying down his life for them" (The New Century Bible). No man . . . a man—It is safer to render no one . . . one—the word man is not there.

14. Friends—So does James (2. 23) connect Abraham's great name "the friend of God" with his doing God's command.

15. Here again the case of Abraham comes in. "Shall I hide from Abraham that which I am doing?" says Jehovah (Gen. 18. 17). Even so here the Divine Friendship is marked by Christ's taking them into confidence. That he would no longer call them "bondmen" did not prevent them from claiming that title as a glory; thus James 1. 1, Phil. 1. 1, etc. Compare the phrase in a fine old prayer, cui servire regnare est, "whose slaves are kings."

The Foolish Hen.

"Please give me a piece of your bread," said the cat to the old hen that was trying her best to eat a loaf of bread that was almost as big as she was. It was far more than she needed for herself.

The old hen only ruffled up her feathers and clucked something that could not be understood, as the poor, hungry cat had to go without.

"Please give me a piece of your bread," granted the little pig. But the old hen only ruffled up her feathers, took her big loaf and turned off to one side where she thought she would not be bothered.

"Please give me a piece of your bread," said the pigeon, as it flew down from the fence right by her side. The old hen was getting very angry by this time. She flew at the pigeon, and scared the little thing out of the yard.

"Please give me a piece of your bread," said a big, old dog. The old hen only ruffled up her feathers, as usual, and started at the big dog; but he did not mind that. "If you will not give me a piece, I will take it all," he said, as he started toward the big loaf.

The old hen seized the loaf of bread in her mouth and started on a run, but the dog could outrun her. She saw that she would have to do something quick, so she spread her wings and tried to fly over the fence. But just as she got to the top of the fence a little bird perked at the loaf; and away it went tumbling back to the ground; and in her fright, instead of landing on the fence, she fell right into a barrel of water. Farmer Perkins happened along and took her out, almost dead.

The cat, the pig, the pigeon, the dog and the little bird all had a good feast off the old hen's loaf, and it was a long time before she was able to eat another crumb of bread.

NERVOUS DISEASES IN THE SPRING

Cured by Toning the Blood and Strengthening the Nerves.

It is the opinion of the best medical authorities, after long observation, that nervous diseases are more common and more serious in the spring than at any other time of the year. Vital changes in the system, after long winter months, may cause much more trouble than the familiar spring weakness and weariness from which most people suffer as the result of indoor life, in poorly ventilated and often overheated buildings. Official records prove that in April and May neuralgia, St. Vitus dance, epilepsy and other forms of nerve troubles are at their worst, and that then, more than any other time, a blood-making, nerve-restoring tonic is needed

The antiquated custom of taking purgatives in the spring is useless, for the system really needs strengthening, while purgatives only gallop through the bowels, leaving them weaker. Dr. Williams' Pink Pills are the best medicine, for they actually make the new, rich, red blood that feeds the starved nerves, and thus cure the many forms of nervous disorders. They cure also such other forms of spring troubles as headaches, poor appetite, weakness in the limbs, as well as remove unsightly pimples and eruptions. In fact they unfailingly bring new health and strength to weak, tired and depressed men, women and children.

Sold by all medicine dealers or by mail at 50 cents a box or six boxes for $2.50 from The Dr. Williams' Medicine Co., Brockville, Ont.

PULVERIZED FUEL.

A Means of Utilizing Western Coal on Railway Locomotives.

The Prairie Provinces have large reserves of coal, but much of it is unsuitable for railway fuel on account of its liability to cause fires by sparks from locomotives. During recent years experiments have been made respecting the use of pulverized fuel for locomotives. It has been used for several years in connection with certain metallurgical work and found to be of great economic importance. The tests made on locomotives show that the use of pulverized coal is more efficient than the ordinary method of burning coal and, in addition, does not cause smoke, cinders or sparks. Its use would not only be an economy, but would add largely to the comfort of the passengers.

The following shows the increased use of this kind of fuel on locomotive service during 1916:

The Chicago and Northwestern Railway has adapted, to the use of pulverized coal, an Atlantic-type passenger locomotive and is now operating it in its regular passenger-train service between Chicago and Milwaukee. The Delaware and Hudson Company has just put into freight service a new Consolidation locomotive (probably the largest of this type in the world), equipped to burn powdered coal. The Delaware and Hudson Company is also installing a complete fuel-drying, pulverizing, storage and disbursing plant, and equipping its stationary boilers at Olyphant, Pa., for burning the waste tailings from anthracite culm banks.

The Missouri, Kansas and Texas railway is installing a complete pulverized-fuel preparing plant at Parsons, Kan., and applying equipment for burning pulverized coal and lignite in its stationary boilers and locomotives.

Various other steam railways, including the Atcheson, Topeka and Santa Fe, Grand Trunk, Southern Pacific, Kansas City Southern, Chicago Junction, and Central Railway of Brazil, are now considering the use of pulverized fuel for locomotive service. The last named railway has already decided to adopt it, after an exhaustive three months investigation made in the United States.

The railway fuel problem in central and western Canada is an important one and, considering the rapid introduction of pulverized fuel on railways in the United States and the economy to be effected by its use, it will be only a short time before such locomotives will be used in Canada.

The answer to the Health Question often lies in a change of table drink

HEALTH FIRST — Drink POSTUM — There's a Reason

The New Modes

New Fancy Collars

While collarless styles are fashionable, dainty collars have by no means been discarded; on the contrary, this is an accessory made very much of. Some of the new shapes fall in rather long points over the shoulders, others are pointed in front and square at the back, and the familiar sailor collar is ever present. Fine voile, marquisette and handkerchief linen in white and colors are used for the new collars. Some are hemstitched by hand, others by machine, and on almost every one there is some touch of hand embroidery. Double collars are usually made with the upper one of some color and a white one, a little larger, under it.

The high stock collar is being worn by smart women as much for sports as for use with tailored costumes. Usually it is made of pongee or some heavy silk with ends that cross in front of striped or figured silk.

For sports wear a white silk blouse with one of these collars and a skirt matching the figured or striped silk in the collar, make a very attractive cos-

tume. This idea is also carried out in linens and the new figured cotton materials which are so smart for sport skirts. Instead of the high stock collar, some open-neck blouses are worn with graceful four-in-hand ties made of the skirt material.

The vogue of the one-piece dress means the vogue of the separate coat. The stunning model designed on the lines of the bowling pin, to correspond with the present silhouette, is particularly good style. Developed in lightweight sand-colored velour it will be practical for mountainside or seashore, while in dull-surfaced satin it will prove a splendid motor coat. McCall Pattern No. 7753, Ladies' and Misses' Coat, in 3 sizes; small, 34 to 36; medium, 38 to 40, and large, 42 to 44 bust. Price, 20 cents.

These patterns may be obtained from your local McCall dealer or from the McCall Co., 70 Bond St., Toronto, Dept. W.

BABY'S OWN TABLETS CURE CONSTIPATION

Childhood constipation can be promptly cured by Baby's Own Tablets. These Tablets never fail to regulate the bowels and stomach, thus curing constipation, colic, indigestion and the many other minor ills of little ones. Concerning them Mrs. Louis Morin, St. Paul du Buton, Que., writes: "My baby suffered from constipation but thanks to Baby's Own Tablets he is a fine healthy boy to-day. It gives me much pleasure in recommending the Tablets to other mothers." The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

DEMOCRACY EVOLVING.

This is Not a War of Nations, Races or Peoples, But of Principles.

None of us who watched, over in Europe, the rise of the world war, dreamed for one moment that it was merely a clash between racial ambitions and greeds. It was plain enough to any one who had studied his Europe that it was something darker and deeper—going to the root of organized life, writes V. Thompson.

German apologists kept insisting it was a trade war; that Germany was fighting for her life because she was fighting for her commerce and her trade routes.

Germany was indeed fighting for her life, but for her life as an autocratic, militaristic power, bent upon holding down her own people and upon mastering more than her share of the world.

What she fought for was Krupp rule—at home and abroad. And what rose against her, world over, was the tide of democracy.

I could never understand why this fact was not clear from the beginning. To one who knew the nations of Europe it was clear as the sun. This was not a war of nations, races, peoples. It was a war of principles. It was fought not to decide questions of territory, trade, spheres of influence. It was fought to decide whether the future is to belong to the weapon or the man—to Krupp or to humanity.

What is being proclaimed on the battlefields of Europe and Asia is this:

The future belongs to the book and not to the sword.

It belongs to life and not to death.

It belongs to the common man and not to any arrogant gang of war lords and parasitic kings.

Here is the meaning of it all:

Man has determined to be the master of his own civic destiny.

This is democracy's war.

The thrones are tumbling down. The age-old royalties buttressed up by tyranny and corruption are crumbling like bad mortar.

And the end of this war will be only the beginning of mightier revolutions, changes, upheavals.

For good or ill humanity is taking its destiny into its own hands, sweeping away the old props and subterfuges of king rule and Krupp rule, and advancing toward the most tremendous adventure in democracy the world has ever known.

The great war—that tumbling down of czars and kaisers and aristocracies—is merely part of the dark strategy of democratic evolution.

The common man is proclaiming his kingship.

TOURING ALASKA.

The C. P. R. Is Making Preparations for Record Traffic.

The Canadian Pacific Railway is preparing for a record tourist traffic to Alaska this summer, it has been announced.

The "Charlotte," one of the largest of the Pacific boats now operating between Vancouver and Seattle will be requisitioned for two extra trips.

The first real effort to attract tourists to Alaska was made by the Company last year. So successful was the initial effort that with the additional facilities completed by the railway, the tourist business to Alaska is expected to increase each season.

On account of the war, which has curtailed tourist traffic to Europe, American tourists welcome the opportunity to "tour Alaska," the passenger officials assert. Many points of interest are in pleasing contrast to European tourist centres.

Inquiries for information regarding the route to Alaska centre on Alert Bay, B.C., where American tourists desire to see the activities of the Indians. Here are many of the most elaborately carved totems in America. The Indian village of Bella Bella also is prominently mentioned in inquiries from tourists.

Alaska, during the tourist season, which extends from June 15 to Aug. 15, is not, as is generally believed, a bit of sea ice here, a snowy mountain there, a studded pine or a polar bear to relieve the monotony, but a combination of the fjords of Norway and the Alps of Switzerland.

Skagway, Alaska, is 1,000 miles from Vancouver. In addition to its novel and interesting attractions, Atlin, one of the places of call on the trip, the climate is such that it is believed it will became one of the world's greatest summer health resorts.

She Was Shopping.

A lady had been sitting in a furniture shop for nearly two hours inspecting the stock of linoleums. Roll after roll the perspiring assistant brought out, but still she seemed dissatisfied. From her dress he judged her to be a person of wealth, and thought it likely that she would have a good order to give. When at last he had shown her the last roll, he paused in despair.

"I'm very sorry, madam," he said apologetically, "but if you could wait I could get some more pieces from the factory. Can you call again?"

The prospective customer gathered her belongings together and rose from the chair.

"Yes, do," she said, with a gracious smile, "and ask them to send you some with very small designs, suitable for putting in the bottom of a canary's cage."

Spring Days are Joy Days for the man or woman who is wise enough to jump from the heavy foods of Winter to the cereals, fruits and green vegetables of Spring. Two or three **Shredded Wheat Biscuits** with berries and milk and some green vegetables make a delicious, nourishing meal. Puts the body in top-notch condition for the day's work.

Made in Canada.

FRENCH WAR BADGES.

Soldier Carries His Whole Military Record Upon His Uniform.

A correspondent who has just been in Paris gives some interesting gossip about the arm-badges worn by the French soldiers. In the British Army there is only one, the thin gold strip denoting that the wearer has been wounded. The French have many, and a man carries his whole military record open to the view of all. Indeed, said my friend, a uniform unadorned, and too spotlessly clean, often calls forth an ill-concealed gesture of disdain.

For instance, an inverted "V" high on the right sleeve means "wounded," and a new one is added for each wound. A "V" right side up on the same sleeve merely means "sent home on account of sickness." On the left sleeve the "V" indicates length of service, one for the first year and one for every succeeding six months. Recently there has been created a new distinction, which is very highly prized. This is a narrow horizontal band, and means "six months at Verdun."

In addition to these individual symbols and distinctions, there is a kind of collective emblem of which every Poilu is very proud. This is the twisted tassels of red and green—the colors of the War Cross—which all members of regiments "mentioned" for gallant service have the right to carry from the left shoulder. In addition to all these, of course, there are the individual medals and decorations, like those in our Army. But the French carry the badge idea much further than the British do.

CLOGS NEXT?

They May Become Common in England Through Scarcity of Leather.

Before long the sound of clogs may be as familiar in the South as in the North of England. The Army is using up so much leather that there is a big shortage for civilian footgear.

The Eastbourne Guardians have already recommended people to buy clogs, says an English writer. One member even went so far as to suggest that we ought to go barefoot!

In the average household the noise of clogs would be a novelty, but a number of people are already staunch devotes of the wooden sole. This is particularly the case in the North of England and South-West of Scotland. The clog is also worn largely by factory workers and servants in certain parts of France, Holland, and Ireland. In France they are called "sabots."

One advantage of clogs is that they are cheap; another, that they keep the feet dry in dirty weather. In London, however, they will take some getting used to, and we may ask Mary Ann to walk in her stockings until she hears us stirring!

LIFT YOUR CORNS OFF WITH FINGERS

How to loosen a tender corn or callus so it lifts out without pain.

Let folks step on your feet hereafter; wear shoes a size smaller if you like, for corns will never again send electric sparks of pain through you, according to this Cincinnati authority.

He says that a few drops of a drug called freezone, applied directly upon a tender, aching corn, instantly relieves soreness, and soon the entire corn, root and all, lifts right out.

This drug dries at once and simply shrivels up the corn or callus without even irritating the surrounding tissue.

A small bottle of freezone obtained at any drug store will cost very little but will positively remove every hard or soft corn or callus from one's feet.

If your druggist hasn't stocked this new drug yet, tell him to get a small bottle of freezone for you from his wholesale drug house.

Fish as a Farm Crop.

Among the new things in farming fish culture promises to prove a source of profit and to provide another food resource for the nation. In time every farm home should have its own fish pond stocked with bass, perch, sunfish or other of the warm water fishes, and where cold running water is available there may be pools in which rainbow or brook trout will thrive. Fish farming is a practical means of increasing the farmer's income and of adding variety and lower costs to the consumer's meals.

MOTHERS

REMEMBER! The ointment you put on your child's skin gets into the system just as surely as food the child eats. Don't let impure fats and mineral coloring matter (such as many of the cheap ointments contain) get into your child's blood! Zam-Buk is purely herbal. No poisonous coloring. Use it always.

50c. Box at All Druggists and Stores.

USE ONLY ZAM-BUK FOR CHILDREN

Ask for Minard's and take no other.

WARS FOUGHT BY BOYS.

More Efficient and Suffer Less From Hardships Than Elders.

Wars are fought by boys. It has been the case since the earliest fighting. In Europe, where the demand for men has been so great, older men have been forced into the armies, but the fact remains that wars, for the most part, are fought by boys.

One of the most pathetic things in connection with a war is the tender age of those engaged in it. It moves the heart of the hardest man to review a line of troops and to take note of their boyish appearance. And yet the boys are more efficient than the older men; they make better soldiers; they do not suffer from the hardships to the extent that do the older men; they have more endurance. So the only way to prevent the employment of boys in an army is to do away with war—which hasn't been done away with up to this time and which can't be done away with until Europe comes to the conclusion that war is useless and stop fighting.

She is Always Ready To Tell Reason Why

She is Recommending Dodd's Kidney Pills.

Miss E. Demers States They Cured Her of Sick Headache and Rheumatism From Which She Suffered for Six Months.

Hull, Que., April 20th (Special)—Cured of chronic indigestion, sick headache and rheumatism, from which she had suffered for six months, Miss E. Demers, of 190 Maisonneuve St., here, gives all the credit for her cure to Dodd's Kidney Pills. She is recommending them to all her friends who suffer from kidney troubles of any kind.

"I am always ready to tell what Dodd's Kidney Pills did for me," says Miss Demers. "I am never without them in the house. My case was one of the worst.

"I had tried several medicines from the doctor and was getting no better when I decided to try Dodd's Kidney Pills. I took seven boxes and all my rheumatism, sick headache and indigestion was gone.

"When my father saw how much good Dodd's Kidney Pills had done me he began to take them for kidney trouble. He is better now."

Dodd's Kidney Pills make healthy kidneys. Healthy kidneys strain all the impurities, all the poison, out of the blood. They are the greatest of all tonics.

"Going to plant potatoes in your garden this year?" "I thought I would, but when I looked up the way to do it I found that potatoes have to be planted in hills, and our yard is perfectly flat."

Keep Minard's Liniment in the house.

Great Tom, the chief bell of St. Paul's Cathedral, London, Eng., is only tolled on the death and the funeral of any of the royal family, of the bishop of London, the dean of St Paul's, or the lord mayor.

Minard's Liniment Co., Limited.

I was very sick with Quinsy and thought I would strangle. I used MINARD'S LINIMENT and it cured me at once. I am never without it now.

Yours gratefully,
MRS. C. D. PRINCE.
Nauwigewauk, Oct. 21st.

"Of all forms of productive capacity there is none more vital, indispensable and steadying than the application of human industry to the cultivation of the soil. And if there is one point at which order seems beginning to emerge from the present confusion of our political and social aims it is precisely with regard to this fundamental necessity of making a better use of the greatest of all natural resources."—Viscount Milner.

MONEY ORDERS

When ordering goods by mail, send a Dominion Express Money Order.

"I Fear No Foe!"

"We've come," said the chairman of the local committee, "to ask you to take this nomination. The city needs a man like you—strong, brave, self-reliant, owning no master, fearing no man."

The great man was visibly touched.

"I'll not deny," he said, "that your kind words have shaken my resolution. I trust that, if elected, I may justify your confidence and prove that I am indeed strong, brave, self-reliant; that I own no master and fear no man. Suppose you wait a minute till I see if my wife will let me accept."

Minard's Liniment used by Physicians.

PINKERTON

Miss Merlin, Masters Frank and Claro Donnelly of Toronto are holidaying at their home here.

Rev Mr Gale attended Synod meeting in Brantford last week.

Mrs N Garland and Mrs A Johnstone are visiting friends at Park Head.

Mr and Mrs R Trotter returned to Toronto on Wednesday, where they have secured a restaurant.

Mr Alf Fiddis is having a well drilled at his residence in the village.

Football is again in vogue on the village green this summer, a football having been procured this week.

Mr Tom Richardson has been laid off work owing to sickness.

Mr Wm Atkinson of Brant is engaged at ditching at Garland Bros'.

Lieut Harold Pinkerton of Walkerton spent Sunday at his home here.

We understand that Miss Sadie Colwell has given up her position at the store here.

The ladies of the Red Cross wish to thank Mrs J W Moffat for her kind donation of a beautiful cushion to the local society.

TWELFTH CON. BRUCE

This has been a very backward spring for seeding. Looks as if we are going to have snow flurries all summer.

Mrs Herron was visiting at Mr Cottrill Morris's last week.

Mr Duncan Beaton has erected a new windmill on his artesian well.

Mr and Mrs Colin McGillivray received a cable on Saturday last informing them that their son Alex had been seriously wounded in France

Mr and Mrs Mac McArthur of Paisley spent Sunday at the home of his mother on this line.

Mr and Mrs Eby autoed out from Port Elgin to Mr Geo Scott's on Sunday.

Children Cry
FOR FLETCHER'S
CASTORIA

ELORA ROAD NORTH

Mr J S Campbell has gone to the west on a business trip.

Miss Edna Sparrow is home from Owen Sound.

Our local drover, Mr Harry McTavish turned out a bunch of cattle, on the Adams farm last week.

Mr John Brown had one of his hands badly injured last week, the result of a kick from a horse.

Mr David Bryce sold one thousand dollars' worth of cattle to Mr Wm Calhoun, of Dobbinton.

Mr Richard Pearce, the faithful green hauler, and his patient team, are making their trips again.

GLAMIS

Mrs Robert McFadyen of Toronto arrived on Saturday and is staying with friends on the boundary.

We are sorry to report the serious illness of Mrs Jannet McFadyen.

Miss Rae, of Lindsay, is visiting at Mr William Graham's.

Miss Flossie McLennan spent Saturday in Walkerton.

Pte Wilber McNally is home from London.

Several auto loads of Oddfellows took in the service at Tverton on Sunday.

The school children enjoyed Arbor day. They spent the afternoon in the woods and had a little picnic.

The many friends of Gnr Edward Pyke whose name appeared in the casualty list a few days ago, were sorry to see that he was seriously wounded in the arms and chest. Gnr Pyke, whose home is in Toronto, spent some months around here three years ago and made a good many friends.

Mrs McDermaid received a card from her son Dan saying that he was improving.

(Intended for last week)

Mrs W H Gilchrist had a trip to Guelph last week.

Mrs Neil Gilchrist has returned from Detroit, where she had been visiting her son Dougald for several months.

Miss Abbie Symons, who spent the winter in Philadelphia, returned home last week.

Clyde McKeeman took a number from the Lodge here in his car on Sunday morning to attend the Oddfellows parade in Paisley.

Mr Schwass has sold the saw mill here to Mr Brownscombe of Lorat, who intends to move it away.

Christopher Young and Mr McCauley motored to Tara on Sunday afternoon to see the latter's mother, who is very ill.

Mr Jim McCormick who has been visiting his sister Mrs Griffith, of Bervie, returned on Sunday.

A B A Cunningham, M L A, of Melville, Sask. has been appointed sheriff of that district, and commenced his duties recently. He is a son of Mr and Mrs Jos Cunningham of this village.

Mr Dan McLean had a business trip to Detroit recently.

Miss Annie McLeod has returned from Detroit.

Mr Wilson Carr is again working in Paisley with Mr Dewar.

The mail carrier on the Tiverton Glamis routes, Mr D A McIntosh, has invested in a motor car, which will facilitate a more rapid service over his territory.

BRUCE TP

On Wednesday evening, May 2nd, a meeting was held in the Methodist church at Underwood to organize the Sunday Schools of the Township of Bruce and elect officers who will complete arrangements for the coming convention. This association shall be known as the Bruce Township Sunday School Association, Auxiliary to the Bruce County Sunday School Association. The object of this association shall be to promote the growth and efficiency of the Sunday Schools of the township by means of Conventions and Institutes and such other special agencies as may from time to time be adopted. The following officers were elected: President, W J Blair; 1st Vice-President, A E Jones; 2nd Vice-President, Wellington Avis; Secretary-Treasurer, Milton E Dalmer. This convention will be held on or about the 15th of June and Underwood will likely be the place.

At the Liberal convention to be held at Tara next week there will be at least one man from Bruce Tp nominated as North Bruce standard bearer for the party at the next Dominion election, ex-Warden Mewhinney, our former representative at the County Council. Mr Mewhinney is one of the clear going politicians of this riding, a well-informed man, a good speaker and a man of the people. The Liberals cannot well do better than select a farmer such as Mr Mewhinney to represent them in Parliament. There are too few men of the soil occupying seats in the legislative halls of this agricultural country. If Bruce county does not send farmers to Parliament who should?

Mrs Wm Park, of Chesley, is at Mrs A Colwell's for a few weeks.

Miss Mary Jane Nelson has returned from the west, where she has been visiting for some time.

Mr Jas McKinnon lost a fine steer recently, which died from bleeding after being dehorned.

Mrs P McCaw, of Vesta, has been visiting her sister, Mrs Geo Brown.

Mrs Dave. McKinnon is visiting her former home at Kincardine.

130 BUSHELS CORN PER ACRE

ARCHIE DICK, Chatham, Ontario says, "I have used Homestead Bone Black Fertilizer and can recommend it very highly. I put one ton on eleven acres for corn and although the ground was poor from the field I realized 130 bushels to the acre.

There were other kinds of fertilizer used in our neighborhood, but they didn't prove as satisfactory as the Homestead."

Write Michigan Carbon Works, Detroit, for free book and particulars about their Homestead Bone Black Fertilizer.

SECOND CON ELDERSLIE

Seeding is in full swing at last. All the farmers are busy now.

Hughie Campbell visited friends here on Sunday.

Mrs W McIlraith was a visitor at Robt Jefkins' last week.

Mrs A Dawson is confined to her room suffering from heart trouble.

Mr C and Miss M Allen visited Saugeen friends recently.

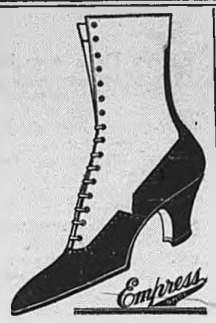
Alex Campbell expects to commence building operations on his new residence next week.

Mrs W J Allen is laid up with a severe cold.

CANTIRE

(Intended for last week)

Seeding operations are being held up by the break in the weather of Tuesday. Most farmers had just commenced to sow.



A goodly number from this vicinity who belong to the Gillies Hill congregation, attended the ordination and induction services at Salem on Wednesday last. The new pastor, Mr A H Wilson, seems to have got off to a good start.

The Cantire Sunday school commences next Sunday. It is to be hoped the day will be fine and the attendance good.

A report has been in circulation for some time that a Clydesdale stallion shipped from this section by Mr John Ewing, of Alberta, had been lost in transit. Mr Ewing purchased the horse when he was here last winter and shipped it to Lacombe in March, by C P R from Teeswater. We are glad to learn that the report has been a mistake, as Mr Ewing's horse has arrived at his destination after being on the road about two months. The horse had lost over two hundred pounds in weight, but was otherwise in good condition.

Mr Russell Muir has purchased a fine new Chevrolet car and is now trying his prentice hand at running it.

Patrons on this route are having their mail delivered by auto this summer, and farmers will have their daily papers almost as soon as the people in town. Telephone and rural mail and automobile - verily, Elderslie has progressed since the day the editor took that joy ride in the ox cart on the 5 sideroad.

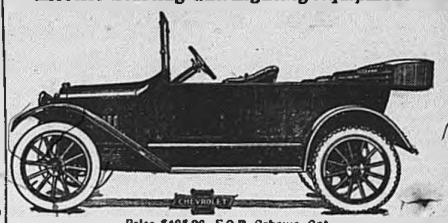
H. PFAFF & SON

GinPills
FOR THE KIDNEYS
MARTYR TO PAINS IN THE BACK



Halifax, N.S., Jan. 15, 1916.
About eight months ago I read your advertisement in one of the Halifax papers offering a free sample of Gin Pills for the Kidneys. I had been a martyr for years to intense pains across the back and decided to try Gin Pills. Before I had finished the third box I found myself for the first time in years perfectly free from pain.

Yours sincerely,
Mrs. (Jabe) Percy.

All druggists sell Gin Pills at 50c. a box, or 6 boxes for $2.50. Sample free if you write to

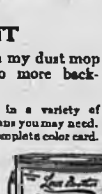
Wounded at Vimy Ridge

Sergt Neil McGillivray writes home after being wounded April 10th: Just a line to let you know all is well. The big drive came off Easter Monday at 5.30 a m. We were in the trenches all night waiting, as we were in the first line. It was a great night, but awful. I got several wounds, sixteen in all, but none serious. My right leg is quite stiff, having ten holes in it. I was hit three different times, but made my way to dressing station 2 miles to the rear, and then was sent out on a stretcher case. LATER—Am now in the examination hall of the University of Oxford in England, all of which is used for a hospital and accommodates thousands of patients. You have doubtless read of last Monday's doings. It was certainly a great day. We won our objectives easily though Vimy Ridge was his strongest point on the western front, and one Britcouldn't well afford to lose. Our artillery, which at last outnumbers that of Fritz in three to one, did great work. There were 800 guns from 3 in. to 15 in. support ing the Canadian sector. Every square yard back of the enemy's lines was turned over. At 5.30 a m we left our front line trench, the signal for advance being the barrage which our light artillery put on the enemy's front line. This was the most concentrated fire we ever had. Each gun had six yards of front and fired at the rate of fifteen rounds per minute. It is fairly safe to advance to within fifty yards of the barrage from the rear. After three minutes it gradually raised to a point 150 yards ahead. The order was to get into Fritz's trench and clean it up. We advanced in like manner till we gained our objective, a distance of one mile, when the 1st Brigade following up, carried it on. Unfortunately for it may be (fortunately) I was hit early in the day, so did not go the whole way, but it was a great sight. It was just dark enough for the lights to show up well, and as far as we could see on both sides was the twinkling of shrapnel shells and that great wave of men following it up, for about 400,000 men were moving that morning. I do not know the extent of our losses, but they were less than on the Somme, while the advance that morning was as great as the whole Somme advance had fall, and should go a long way towards settling things on this front. The much-talked of Hindenburg line is broken, if it ever existed outside of the railway line, and it runs back into Germany. The only other line is defined by the range of Haig's guns. The wounded are well looked after. The poor fellows who were seriously wounded had to stand some hard jolting over the rough roads. This is visiting day at this hospital, and I've seen more old ladies to-day than I've seen the past twelve months. They are very much interested, and we are glad to see them.



"My housework is lots easier since hubby painted this old kitchen floor with

Lowe Brothers
Hard Drying
FLOOR PAINT

All I need to do is go over it with my dust mop and it looks clean as a pin. No more back-breaking scrubbing for me."

HARD DRYING FLOOR PAINT is made in a variety of attractive colors. Sold in whatever size cans you may need. Easy to apply and dries quickly. Ask for complete color card.

Motor Cars

Light Four $975
Roadster - - $950
Country Club $1110
f. o. b. Toronto
Subject to change without notice

Style—Comfort—Power—Economy

There are definite advantages in the Overland Light Four which make this car stand out conspicuously above other cars in its price class.

In appearance this car represents the highest perfection of modern streamline design—full sweeping lines and low hung stylish design.

It is equally pleasing in performance with an abundance of power delivered by a smooth-running motor that has been thoroughly tested before assembly.

In comfort nothing is lacking. Generous wheelbase, large tires and long, shock-absorbing cantilever springs, all make for easy riding.

You get all these advantages in the Overland Light Four at a price that is possible only because it shares in the economies of the enormous Willys-Overland production. Call and inspect this car at our sales rooms.

—Acknowledgements continue to reach ladies of Paisley and vicinity for socks sent to soldiers overseas. The work of the knitting brigade is especially appreciated by the boys in the trenches. Mrs D McArthur and Mrs Buchanan, Inkerman St., recently received letters from France.

—A ball shaped ornament 4½ ft. in diameter, was made at Davison's tinshop last week for the R C church at Formosa, the steeple of which was burned last year. The ball goes on the top of the steeple, and was a nice piece of tinsmith's work.

—Rev Dr I H MacDonald, of Kintore, a former pastor of St Paul's Presbyterian church, Glamis, has left for France to serve as a chaplain with the imperial army. Dr Macdonald has been keen to get overseas ever since the war broke out, but was unsuccessful in obtaining an appointment with The Canadian forces.

Dropped Dead

Mrs McTaggart, of Burgoyne, one of the most respected and best known old residents of that locality, dropped dead at her home on Sunday last. The funeral will take place on Friday afternoon.

Soldier Wounded

Mr and Mrs H Reed, have received word that their son, Pte Norman Reed, was recently wounded, and has been in hospital, but expects soon to be discharged. The news came by a post card from himself to his brother in Winnipeg.

Bruce Tp S S Convention

—On June 12, the Sunday School convention for Bruce Tp will be held in the Presbyterian church, Underwood. Rev T H Wing, of Toronto, superintendent of Rural Work, is expected to be present, also Rev W W Peridham, of Wiarton, sec'y of Bruce Co Ass'n.

May 30th, "The Young Village Doctor" Comes

This very entertaining play will be given in the town hall, Paisley, on May 30th by the dramatic Club of S S No 14 Bruce, who have presented it in several other towns to large audiences. The entertainers give their services free, and the whole proceeds go to Red Cross or Patriotic purposes. The play is given under the auspices of the Women's Patriotic League. Particulars next week.

Patriotic Picnic

A patriotic picnic will be held on the afternoon of May 24th in Mr John McDougall's bush under the auspices of Elora Rd North Patriotic League. Proceeds to be devoted to Red Cross purposes. A good program of sports, races, &c, will be provided, baseball match. Everybody come and bring a basket. Admission 25c, children 15c.

Important Notice As to Coal

I have been notified by the D L & W Scranton Coal Co., for whom I am proud to be sole agent, to make everything plain regarding summer prices of coal. Owing to advances made at the mines without notice, at present I can only state that I will sell from invoices shipped at the very best and lowest cash price I can. This includes those who already have their supply in as well as those that are to get it. Anthracite coal is sure to be two or three dollars per ton dearer as the fall and winter months approach, so don't let warm weather let you forget your coal. It is your fault if you don't look after it this year. I am receiving shipments right along, and as stated above will do the best I can for all until a definite price can be named. Also all outstanding accounts are due now. Think it over and pay up to help the situation as I have to pay cash at the mines. All orders, as far as can, will be filled as received.

Yours truly,
D A LYON,
The Old Reliable Coal Dealer.

Seed Potatoes

A carload of Delaware potatoes from New Brunswick will be at Paisley station this week. Farmers and others requiring seed may obtain them direct from car at $4.25 per bag. Apply at once. N C McKay, Dept of Agriculture, Walkerton.

WALL PAPERS

At the Same Old Prices!

We are sacrificing a percentage of profit to make up for the increase in cost of goods.

We have a wide range of fascinating designs with winsome colorings, new foliage and floral tapestries and new shadow effects with ready cut borders.

—Township Sunday School conventions for Elderslie, Bruce, Saugeen, Arran and Amabel will be held in the order named, from June 11th to 15th.

SUBMARINES ARE 300 YEARS OLD

DUTCH SCIENTIST MADE A SUBMARINE BOAT IN 1620.

Interesting History of Experiments on Undersea Craft—Used in War in 1776.

When history is making itself as swiftly as to-day, past conditions retreat like the shrinking track of a railroad from the rear platform of an express train. A few rushing years stretch rapidly into the perspective of an ordinary century. Take, for instance, the story of the submarine. Who can realize the actual nearness of its beginning? Germany did not begin to build those terrors of the sea until 1906, when U-1 was launched. Now they swarm like flies, bred in the fetid atmosphere of war, and their novelty is swallowed up in their progress.

The idea of the submarine is by no means new. To say nothing of Jonah's unsought adventure, it is at least, 300 years old.

Dutchman and Yankee.

"A Dutch scientist, Cornelius Van Drebbel, who amazed King James I. of England with many exhibitions of natural magic, made a submarine boat, covered with a skin of greased leather, in 1620, and King James took a ride in it. In 1776 a Connecticut Yankee, David Bushnell, made another submarine boat, intended to blow up the British warships in New York harbor. His boat was of wood in the form of a turtle, moved by hand power, through propellers screw-shaped propellers. It had attached to it a box containing 150 pounds of powder, to be exploded by a time machine, after being fastened to the bottom of a vessel by a screw worked from inside the boat. When the box was securely fastened, and the time device set going, the boat could cut loose and get away.

Escape of the Eagle.

The Turtle, as the boat was called, undertook to blow up the British frigate Eagle, anchored off Staten Island. Unfortunately Bushnell was not physically strong enough to manage the craft himself, and General Putnam selected a soldier named Ezra Lee to take his place. Lee started out on a dark night in the Turtle, and got under the Eagle and tried to attach the explosive box, but he neglected to detach the ballast, the removal of which would have held the Turtle firmly against the ship's bottom, and in consequence, he could not force the screw into the planking. He cut loose and got safely away, and some time later the box exploded, but it had floated off with the tide, and the explosion occurred at a considerable distance from the ship.

Bushnell's Submarine.

Bushnell's device contained all the essential elements of a submarine. It enclosed sufficient air to furnish, without renewal, good breathing for half an hour. It had a compass, a pressure gauge, water ballast, impervious valves, and tubes for discharging foul air and taking in fresh. But mechanical science was not sufficiently developed to take advantage of this Yankee invention, and the submarine idea remained awaiting its time.

Perfection Came Recently.

From 1863 onward various nations began to experiment, but it is only within the last three years that the submarine has found all "the conditions ripe to make it one of the most fearful of war machines. The internal combustion engine for driving the boat when awash, or afloat, and electric induction motors, supplied with power from accumulators, for driving it when submerged, are among the chief keys to present success.

But inventors are continually searching for motive power which can be used indifferently for both purposes. Compressed air, sufficient to provide for the respiration of a crew of many men during a period of two or three days, if necessary, can now be provided, and submarines are made stout enough to go to depths of 150 or 200 feet without any danger of having their walls crushed in by the water pressure. The ordinary working depth is said never to exceed about fifty feet. At that depth the pressure is over a ton and a half per square foot. At 200 feet it would be at least six tons.

Under Water Many Hours.

They can remain under water for many hours, and if they can but get the periscope and conning tower out for a while, they can at least renew the air supply. Still, according to all accounts, the hardships of underwater navigation are extreme, and very exhausting to the nerves. The air is oppressive, and so damp, owing to "sweating," that the interior has to be lined with cork, or other absorbing substances. An overpowering tendency to sleep seizes upon the men, and the confinement and constant anxiety are terribly wearing.

Groping in the Gloom.

One great boon for the submarine is the gyroscopic compass. This enables the steersman to set his course and to pursue it for a long period without correction by surface observation. The ordinary magnetic compass cannot be used because of the disturbances to which it is subjected from the metal of the vessel and the electric machinery. A great disadvantage is the gloom prevailing under the sea surface. The submarine must feel its way about as best it can, guided by indications gathered from above. But if it can keep its periscope out of the water, to a height of three feet, it can command a view around it to a distance of more than two miles. Of a neutral color and only three or four inches in diameter, a periscope projecting out of a gray sea is a difficult thing to sight at such a distance.

KING EDWARD AND THE KAISER

Cause of German Emperor's Hatred for English Sovereigns.

An astounding story of King Edward knocking down the Kaiser at Windsor Castle is related by Edward Legge in a new book, "King Edward, the Kaiser, and the War."

Here is Mr. Legge's account of the incident as described to him:

"During one of his visits to Windsor Castle the Kaiser and King Edward had an altercation resulting from something said by the former. So exasperated was the King by his nephew's grossly insulting words that, losing all control over himself, he sprang to his feet and knocked the Kaiser down!"

The Kaiser's antipathy to England, Mr. Legge thinks, undoubtedly had its genesis in the "bad blood" between himself and King Edward:

"The Kaiser's envy and hatred of his uncle led him to long for the time when an opportunity should arise for humbling the 'Peacemaker' and haughty Albion. In King Edward's successor the Kaiser imagined he saw a sovereign "infirm of purpose by comparison with his father —one who would be willing to 'knuckle down' to Germany at a time of crisis in European destinies, throw his influence into the Teutonic scale, and, so to say, range himself alongside his Imperial cousin.

"To the amazement of William II., King George, when the fateful moment arrived—Sunday afternoon, August 2, 1914—gave proof that the British Empire was ruled by a veritable counterpart of Edward VII.

"The Cabinet met twice on that Sabbath day; informal Ministerial conferences succeeded each other; at 4.30 the King held a Council, and as soon as possible afterwards the country learnt that the Government had taken control of all wireless telegraphy, while the Admiralty called out the Naval Reserve, including pensioners under the age of 55, and the Royal Volunteer Reserve."

Two days later Great Britain was at war with Germany.

"Thenceforward the Kaiser's incessate envy of Edward VII. was transferred to George V., worthy son of a worthy sire," says Mr. Legge. "Never had the head of the House of Hohenzollern been so humiliated. His hatred of England now knew no bounds. He had expected to find in George V. little more than a roi fainéant—a wooden lath painted to look like iron; the merest shadow of Great Edward. He saw opposed to him a Man."

What He Wanted.

Henry, aged five, had been sent to a store to purchase a pair of stockings. "How long do you want them?" asked the clerk. "I don't want to borrow them," replied Henry. "I want 'em to keep."

A broad-minded man never loses any sleep because another man's opinions fail to agree with his own.

PRODUCE MORE POULTRY PRODUCTS

ADVICE OF F. C. ELFORD, DOMINION POULTRY HUSBANDMAN.

Expert Information on the Selection and Care of Fowls to Increase Egg Production.

There never was a time when egg production and increased egg production was as necessary as at present. The demand was never as good, and prospects indicate that this demand will continue for some time to come. With the scarcity of meat, Canadians are eating more eggs and Great Britain needs all the eggs that we can supply. Therefore, as a business proposition, increased production of poultry products should appeal to more than usual.

A Slight Export.

For two years Canada has been producing a surplus. During the calendar year 1915, 7,161,031 dozens of eggs, valued at $2,037,294, were shipped to Great Britain. In 1916 the amount exported was 5,481,058 dozens with a value of $1,892,843, and there is no reason why the surplus for 1917 should not be from five to ten times what it was in 1916. In normal times Great Britain eats a million eggs a day; she would probably eat more now if she could get them. Canadian eggs are at a premium in England; the prices paid for them have been several cents a dozen higher than that paid for eggs from some other countries.

Increase the Export.

Canada should be able to supply a great many more than she has done. Canadian eggs are good eggs, but we want more of them. We have the climate, we have the feed, and though labor for other lines of work is scarce there is plenty of labor suitable for poultry-keeping, for those who are comparatively old or the younger members of the family are quite satisfactory for this line of production.

Mating and Breeding.

It is the early-hatched pullets that make the best winter layers, and it is the winter layers that give the best returns; therefore, the breeding pen should be mated as soon after the first of February as circumstances will permit.

Hatch as many chicks in March and April as possible, so that you will not have to depend on late pullets for your next winter layers.

Breeding Females.—Yearling hens make the best breeders. These should not be forced for heavy production through the winter, but should be kept active. If possible, allow them the run of a sheltered barnyard. Keep them not too fat, but in good vigorous condition. If there are not enough yearlings, early-hatched well-matured pullets may be used.

Selecting the breeding females. Breed from those that were the best layers as pullets. When the pullets are put into their winter quarters in the fall they should all be carefully banded, trap-nested, and records kept of their laying for the four winter months, that is, November, December, January and February. It is from the pullets that lay best during that period that the breeders should be selected, as experience has shown that those are the birds that will make the best yearly records and will return the greatest p[illegible]. It is not possible to trap-nest [illegible] mate should be made of the time of starting to lay of each pullet, and those that show early maturity used.

The birds that pass the test of early maturity and the trap-nest should be carefully examined for vigor, and only those that are in perfect health and of fair size for the breed of which they are representatives should be reserved for breeders.

The breeding males.—The first requisite in a breeding male is that he should have the proper breeding back of him. He should be the son of a heavy winter-laying hen and his sisters should also have shown their ability to lay well in winter.

Besides this he should be carefully selected for vigor. He should be of good size, with a head broad between the eyes and well filled in in front, ending in a stout well-curved beak. He should have a bright, piercing eye, and should stand on legs that are straight, not too long, and that are set wide apart, with no inclination to knock knees. If there is a line of red pigment down the outside of the shanks all the better. With males and females such as described, the results should be satisfactory provided they are housed and fed properly.

Age of males.—A well-matured vigorous cockerel is usually best. He gives better fertility than an older bird. More hens can be mated to a cockerel than to a cock bird. He should be well grown and matured.

Number of females.—From ten to twenty-five females, depending on breed and condition. Heavy breeds, fewer; lighter breeds, more. The more free range and exercise the more females.

Time of mating.—An egg laid two days after actual mating takes place will be fertile, but to be on the safe side it is advisable to put the male in the breeding pen about ten days before eggs are wanted for incubation. Use some selection, trap-nest if possible, and hatch early.

Incubation.

Incubation or hens, which?—It all depends how many chicks you want and whether they are wanted at the one time or not. One hundred chicks or less scattered through the season will be just as well hatched under hens. If more than one hundred, the incubator is the better proposition.

How to buy an incubator.—In buying an incubator buy a good standard make and pay a fair price. The first price of a good incubator is nothing compared with the cost of keeping a poor one supplied with eggs.

Get the incubator ready.—Don't wait until you are ready to set the eggs before you think of looking at the incubator. See that it is perfectly cleaned, disinfected, have all repairs ready and get a new burner. Run it several days before you put any eggs inside.

Where to place the incubator.—A moist, well-ventilated basement is best. Earth or cement floor is better than board. A room in the house may do, but more moisture will be required.

Prepare proper sitting nests.—Trouble and annoyance with broody hens will be overcome by providing suitable nests. These nests may be built in sections large enough to hold three sitting hens. Set that many hens at once.

Put sitting hens by themselves.—Don't allow the sitters in the same compartment as the other hens. Put the sitting hoses in a place by themselves, if it is only a box stall in the stable. On the floor keep water, feed, and a dust bath, allowing the hens out once a day for a few minutes.

Select good eggs.—Use no eggs that are abnormal in shape or size. Discard eggs that have rough shells or that have wrinkles in the shell; also those that are long and thin, or extremely round.

Don't chill the eggs.—The fertility of many eggs is spoiled because of being chilled. The strongest germs will be spoiled if eggs are left in freezing temperature for many minutes. Don't leave them in the nests to chill or standing around in a cold room after you have gathered them.

Test all eggs.—Whether eggs are under hens or in an incubator, test the eggs for fertility on the seventh or eight day. White-shelled eggs can be tested on the fourth or fifth day.

Brooding.

Artificial or natural.—As a rule, the kind of incubation determines the nature of the brooding. No matter what kind of brooding is adopted, bear in mind that the brooding is even more important than the incubation in that in the brooding so many losses occur.

Artificial brooding.—Have plenty of brooding space. Do not crowd the brooders. Fifty chicks is plenty in the small brooders on the market. Indoor brooders give better results than outdoor brooders. Make sure brooders are clean. Clean and disinfect after every brood. Keep the heat at 95 to 100 degrees. Heat, cleanliness and fresh air are three important factors in artificial brooding.

Natural brooding.—Provide broody coops for the hens with the chicks. Put them in a sheltered and convenient place. Change the coop to new ground every day. Have the coop large enough so that when the chicks are weaned, they can make the coop their own during the rearing period.

Feeding.

No set rule can be laid down for feeding, feeds and conditions vary so. The following suggestions are given and may be adopted or altered to suit:

Chicks should not be fed until they show positive signs of hunger, which will be between two and three days after hatching. They should then be fed a little at a time and often—say five times daily.

First feed, bread crumbs moistened with milk, just what the chicks will clean up on a little clean sand or chick grit; second, finely cracked mixed grains; third, rolled oats; fourth, moistened bread crumbs; fifth, finely cracked mixed grains. If too early to get the chicks on grass, green feed is supplied in the form of young lettuce, sprouted grains, or any other tender succulent feed that is acceptable. After the chicks are ten days to two weeks old, coarser feeds are allowed. All changes are made gradually. The infertile eggs are boiled with mash feed and the bread and milk discontinued. Hoppers in which are placed grains and dry mash or rolled oats should be put where they can have free access to them. As soon as they become accustomed to the hoppers the hand feeding is reduced to the mash feeds, and if the chicks are on good range it will be found that after a time they will get careless about coming when called. The mash may then be dropped, and dependence placed entirely on the hopper feeding. Place grit, water and, if possible, a dish of sour milk where the chicks will have free access to it.

The mash may consist of equal parts bran, middlings, and cornmeal, and half part beef scrap, but the composition is more or less dependent on the feeds that are most available.

Grit, oyster shell, charcoal, and dry mash are kept in hoppers constantly before the flock. Fresh water and when possible a dish of sour milk is also supplied. In the morning a light feed and in the evening a full feed of mixed grain is given in the litter; at noon, green feed, and if desired a feed of moist mash. When sour milk is not available, green cut bone may be fed alternately with the moist mash, or coarse beef scrap may be supplied in the hoppers.

The mash mixture is equal parts corn, bran, and middlings, half part gluten and half part blood flour or beef scrap. For old hens, either bran is used in place of the regular mash or the hopper is kept closed except at certain times of the day.

TO FIRE TORPEDOES.

Method Employed by Submarines at Their Deadly Work.

The torpedo is discharged under water, leaving on a calm surface a white streak of foam. The depth varies, but is never very great because the target to be hit is not deep in the water. If a battleship, the target lies between her water line and keel, a distance of maybe thirty feet. If a destroyer, drawing only nine feet or so of water, the target is very difficult; the torpedo is likely to pass clean under the hull of the ship or else, being aimed at a point between the surface and the keel, nine feet below the surface, it is likely to broach to the surface and pursue an erratic course. Of course the torpedo may strike any part of the ship's hull or may miss entirely. Torpedoes can be discharged on the surface and sometimes are, when the submarine has nothing to fear from the target ship.

The business is difficult. With the periscope fully above water the submarine may sight a battleship five miles away. The next step is to determine the course the battleship is taking and her speed so that the submarine can tell whether it is possible to overtake her and if so where. The submarine usually travels at moderate speed submerged toward the target, rising occasionally to get the range. The last observation should be taken within 1,000 yards of the battleship, a place of high danger for the underwater boat. Then there is nothing to do but to sink once for all, crowd on all speed, run a couple of hundred yards nearer if possible and fire the carefully aimed torpedo, trusting to the accuracy of the calculations already made.

New Altiscope Rifle.

The altiscope rifle, a design which enables the marksman to fire without exposing any part of his body, is one of the newest inventions to be offered the American army. The sighting is done with a periscope.

Tommy (trench digging)—I'm about fed up with this. Won't it be grand when it's all over and we can get back to work!

Canada's aggregate trade is now well over the $2,000,000,000 level, more than double that of two years ago. Canada ranks third among all nations for the output of silver.

PATHETIC SCENES ON SINKING SHIPS

NEW METHOD OF SUBMARINE TELEGRAPHY.

Hundreds of Horses Swim to German Raider and Beat Hoofs Against Her.

What happens when a German sea-raider is scouring the Atlantic, sinking merchant vessels, is graphically portrayed in the story of the destruction of shipping by the German commerce destroyer Puyme, as related by Capt. A. Anderson, of the Norwegian steamer, Hallbjorg, which was sunk by the raider while on her way from New York to a French port.

It was the Puyme, according to Capt. Anderson, which sank the British steamer Voltaire, Georgic and Mount Temple and accumulated her prisoners on the Yarrowdale, on which vessel they were taken to Germany. Among them were many Americans, since released.

Sacrifice of Animal Life.

Pathetic scenes attended the sinking of the Mount Temple and the Georgic, both of which carried hundreds of horses and dogs.

"The Mount Temple," said the Captain, "had on board 760 horses and a number of dogs. When she was sunk it was painful to see and hear many hundreds of horses and dogs struggling and swimming about, a confused mass in the foaming sea.

"Another appalling sacrifice of animal life took place with the sinking of the Georgic which carried as part of her cargo, 1,200 horses. The horses were maddened by the explosion of the torpedo which heeled the Georgic over, wrenched themselves loose and, uttering terrifying sounds, plunged into the sea. Some of them reached the Puyme and beat with their forefeet on the vessel's side in a frantic attempt to climb to safety. At last the crew were ordered to shoot the horses with their revolvers. This shooting continued for half an hour.

System of Telegraphy.

Describing the appearance of the German raider when she sank the Hallbjorg, Capt. Anderson said:

"The rail of the Puyme suddenly dropped and the vessel which we had taken for a harmless English merchantman revealed herself now as a modern German warship with several guns pointed at us. We saw several torpedo tubes. There were two 6-inch guns, fore and aft, and two of the same kind on a lower deck. Later we found that the cover over the Puyme's emergency steering gear concealed another big gun."

After Capt. Anderson and the other prisoners of the sunken vessel had been placed on board the Yarrowdale, the Germans went cruising with the Puyme, and the captured British steamer St. Theodore.

"We noticed," said the captain, "that on the following morning strange apparatus with long wires attached was cast overboard at different places and the wires connected with the Yarrowdale's chart cabin. This was a system of submarine telegraphy which would transmit and receive orders at a distance of 150 miles. We were connected with the Puyme all the time. If anything suspicious appeared on the horizon the news was immediately forwarded to the captain of the Puyme."

A Gallant Airman.

Commander Samson, who has been awarded a bar to his D.S.O., and whose engagement to Miss Honor Storey was recently announced, may justly be termed the father of naval flying. He and Mr. Winston Churchill between them got the Naval Air Service fairly started, and brought it to such efficiency that it was far the better half of our "overhead arm" when war broke out. That event took Samson to the western front, where his skill and daring soon made him famous with our troops. The Kaiser offered £5,000 reward to anyone who could take him dead or alive. The All-Highest had seen what Samson could do in the air, and had been impressed by it. On the last occasion that the Kaiser visited England the intrepid airman performed wonderful feats above the Hohenzollern. Doubtless he would give much to get the Kaiser as well within bomb range again.

The Doings of the Duffs.

Farm Crop Queries

Conducted by Professor Henry G. Bell.

Henry G. Bell.

The object of this department is to place at the service of our farm readers the advice of an acknowledged authority on all subjects pertaining to soils and crops.

Address all questions to Professor Henry G. Bell, in care of The Wilson Publishing Company, Limited, Toronto, and answers will appear in this column in the order in which they are received. As space is limited it is advisable where immediate reply is necessary that a stamped and addressed envelope be enclosed with the question, when the answer will be mailed direct.

Question—F. L. S.—I have a piece of sandy land which is practically unproductive. Would it be wise to sow it to sweet clover this spring with a cover crop of rye? I want to build it up, but do not know the most practical and quick method.

Answer:—Sweet clover would be a good crop to put on this thin soil. Under normal conditions it can be sown with rye, however. I question if the rye has not grown too rank for this spring's sowing, unless you are seeding it with spring rye. If so, you should prepare the seed-bed well as in preparing it for wheat, and before harrowing the ground spread one to two tons of ground limestone or a ton of air-slaked burnt lime over the ground. Work this in thoroughly in order to sweeten the ground. This should be done, if possible, a week before the seed is sown. At the time of seeding, sow about three-quarters of a bushel of unhulled seed to the acre, or if hulled seed is obtained, about twenty pounds to the acre. In order to make sure of a catch, I would advise the application of 200 to 300 pounds per acre of fertilizer, in order to give the young crop quickly available plantfood, which will cause it to make an early vigorous start. If you are sowing this seed on top of fall sown rye, follow the seeding by harrowing the rye, being sure that the harrows run with the rows and not across them. This harrowing will bury the sweet clover seed and should give it a good start. If you are fertilizing the rye at the time of seeding sweet clover, I would advise drilling or broadcasting the fertilizer before you harrow the crop. The second year's growth of sweet clover should be plowed under as soon as it has made maximum growth in early spring. Sweet clover will add considerable organic matter and some nitrogen, since it has on its roots, nodules where the sweet clover bacteria live. These bacteria have the power of taking nitrogen out of the soil air and of incorporating it in the roots of the sweet clover plants so that the soil is richer in nitrogen after growing sweet clover than it was before.

Question—S. J.:—I would like to know how to get a sure catch of clover and how to test seed. I sow 20 acres, keep two horses and two cows. I sowed four acres of rye on wheat stubble last fall and pastured it. Good stand of rye, and now I want to seed this rye with clover and a little alsike. How would you do it to get best results? Would you harrow it a little and seed and then go over it with a weeder? I also want to know how to seed in barley. Which is the best barley? Which is the best barley to sow, and where can I get it?

Answer:—The answer to question No. 1 covers the answer to the first part of question No. 2 granted that your rye crop has not made too great a growth. If it has made too great a growth already to allow harrowing, do not attempt clover seeding until next season. Clover seed should be sown on top the winter wheat or rye as soon as the frost is out of the ground in the spring. It should be immediately harrowed in.

Barley is sown in the same way as wheat or oats; that is, if you have a grain drill suited to the sowing of wheat or oats, it is also adjustable to the seeding of barley. If not, prepare the seed-bed well and then scatter evenly broadcast a bushel and a half to a bushel and three pecks to the acre of good barley seed. A variety that has given the best results in Ontario is Mandscheuri. This is a variety developed by Prof. C. A. Zavitz of Ontario Agricultural College. In recent years a selection has been made from this barley under the name of O. A.C. No. 21. This is superior in strength of straw and is a little heavier yielder than the average barley in Ontario. You can locate seed of it by addressing Prof. C. A. Zavitz, Ontario Agricultural College, Guelph.

Question—C. D.:—Could you give me information concerning the seeding of sweet clover with fall wheat. Would the clover be all right sown in the spring the same as June clover? How would you sow it? Would you drill it in, or would a drill cut the wheat roots too much? How much would you sow per acre?

Answer:—Sweet clover can be seeded with fall wheat and rye, as described in answer to question No. 1. The best time to seed it is early in spring. If you have machinery for drilling the seed, you can get a little evener distribution and the seed will be planted at an even depth. Be sure and do not get it planted too deep. As a rule an inch to an inch and a half is deep enough for clover seed.

Question—J. R. M.:—(1) I have a piece of old meadow in which I want to plant potatoes. Have plenty of manure for same. I want to plow potatoes in. Would you advise putting manure on sod, plow potatoes in, and disc-harrow after plowing?

(2) How deep should sod be plowed for potatoes?

(3) When is the best time to plant potatoes to get the best yielding crops?

(4) Does rye cut green make good horse feed for winter feeding?

Answer:—In preparing your old meadow for a potato patch, I would advise plowing down the sod, about five or six inches deep. If the manure is well rotted, apply about five loads to the acre, and then disk and harrow it into the soil thoroughly. If it is fresh manure, do not put it on your potato patch, since it tends to harbor potato scab spores. In order to get largest yields of best quality potatoes, you will do well to add, in addition to the manure that you put on the soil, about 50 lbs. of a fertilizer carrying 3 to 4% ammonia and from 8 to 10% available phosphoric acid, and possibly 1% potash. Scatter 200 lbs. of this fertilizer per acre over the ground before the last harrowing, which will work it into the soil. At the time you are planting your potatoes strike the plow furrows and then scatter a light dusting of fertilizer all up the furrow. Follow this by putting in a light covering of soil over the fertilizer, then drop the potatoes and cover as usual. Potatoes should not be planted until there is reasonable certainty of the early sprouting tubers escaping frost. In the central part of Ontario, this would delay the planting until early in May.

Rye cut green makes a fair quality hay. If allowed to grow until it is thoroughly ripened, the straw is relatively poor and lacks nourishment. Henry, in his "Feeds and Feeding" says, "Cereal hay (which includes rye) may often be advantageously employed for horse feeding. However, rye should be used in moderation. In actually practice we have found it to give horses indigestion if they are allowed to feed too freely upon it.

CONCRETE ON THE FARM

Its Low First and Its Durability Make Concrete An Economical Material

The use of concrete by the farmer has become quite general throughout the country, a condition undoubtedly brought about by reason of the economy which attends the use of concrete. It is usually a simple matter for a farmer to obtain sand and gravel and the only other material needed is the cement, which can now be obtained at a price easily within the reach of all.

Probably the first use to which concrete was put on the farm was for the building of foundations for houses, barns and other buildings.

The concrete root cellar is a farm structure which has found great popularity. Vegetables, and particularly potatoes, must be protected from cold. A concrete root cellar, built into the ground on a side hill, not only makes freezing impossible but in addition affords protection from water and from burrowing animals, such as rats, mice and squirrels, and is easily kept clean. A six-inch layer of gravel or cinders is first placed and well tamped and on top of this is laid a six-inch concrete floor. The following day the walls, which should be 8 inches thick, are erected. The earth bank can be used for the outside wall forms and it is only necessary to erect inside forms, which consist of 1 inch sheeting with 2" x 4" studding spaced 18 inches centre to centre and braced across between walls. The roof should be 6 inches thick rising to a peak, reinforced with 3-8 inch rods, spaced 6 inches apart, running from eave to peak and 3-8 inch rods spaced 18 inches apart running from end to end. A ventilator can be provided by the simple process of embedding a six-inch tile drain on end in the concrete.

Perhaps nothing is a more decided improvement to the farm than the replacing of the old style cow stable by one having a concrete floor with a drop gutter, pipe stanchions and pipe stall partitions. At a step one goes from the rotting timbers, the germs and the foul smells of a stable which it is impossible to clean, to one which is the last word in cleanliness and hygienic construction. This too is an improvement which is very easily accomplished. A five-inch concrete floor is laid on six inches of well-tamped cinders or gravel, the floor consisting, in cross section, of an alley 4' 6" wide, a drop gutter 1' 4" wide, 6 inches below the alley level, a stall 4' 8" deep raised 2 inches above the level of the alleyway, a manger wall 7 inches high and 6 inches thick, a manger 1' 6" wide sloping to a feedway 4 feet wide, 8 inches above the stall floor. If two rows of cows are to be kept in the stable this cross-section may be repeated on the other side of the building. In such a manner that the cattle either face each other or are placed back to back, as may be preferred.

There are many other ways in which concrete can be employed with great advantage on the farm, such as fence posts, dairy houses, ice houses, poultry houses and piggeries, springs, walls, cisterns and watering troughs, drains and septic tanks, bee cellars, bridges and culverts, chimneys, fireplaces, dipping vats, engine bases, feed troughs, porches and retaining walls.

CANADIAN GRAINS.

Varieties Recommended For Use In Ontario.

It is not the policy of the Experimental Farms to advise the cultivation of new varieties of grain which have not yet been sufficiently tested in Canada, or which when tried have shown no superiority over older and better known sorts.

The varieties here recommended have been thoroughly tested and have shown excellent qualities. While they may not be adapted to every condition of soil and climate, they have demonstrated their suitability for large areas in the provinces for which they are recommended.

Other very good sorts, almost or quite equal to those mentioned, could have been added to the list, but it appears undesirable to recommend an unnecessarily large number of varieties.

Spring Wheat.—Red Fife and White Fife are good standard sorts but rather late in ripening in northern localities.

Huron, Marquis and Early Red Fife are earlier in ripening.

All the varieties mentioned are good for bread-making, but Huron is not equal in this respect to the others. It is, however, particularly vigorous and productive and is highly recommended.

In extreme northern districts, Preludo will be found valuable if the soil is fairly rich and the rainfall sufficient.

In Southern Ontario, the very late variety, Blue Stem, gives good results. It is rather more resistant to drought than most sorts. Goose wheat is useful in extremely dry localities, though the price of this variety is often quite low, as it is not used for bread-making. Kubanka, closely resembling Goose, makes excellent bread, but it is no different from ordinary wheats that millers object to grinding it. Goose is usually more productive than Kubanka.

Oats.—Banner and Ligowo are two of the best sorts. Ligowo is slightly the earlier in ripening, but generally produces a smaller crop. Daubeney may be used where extreme earliness is desired. O.A.C. No. 72, (a selection from Siberian), is a very productive, late-maturing variety.

Barley.—Manchurian and Ontario Agricultural College No. 21 are recommended among the six-row sorts.

Duckbill, and the best strains of Chevalier are recommended among the two-row sorts.

No varieties of beardless or hulless barley can be recommended. Success (beardless) is of very early ripening habit.

Peas.—Among yellow peas, Arthur is most highly recommended for earliness and productiveness, Golden Vine, Chancellor and White Marrowfat are also good sorts.

Prussian Blue, Wisconsin Blue and English Grey are good colored peas.—Experimental Farms Note.

Only one thing better than a good sheep—a better one.

Housecleaning is in order. Have you had your spring stable cleaning? Clean out, scrape out, wash out, sweep out. No animal on the farm is more worthy of a clean stall than a good horse.

FOOD SHORTAGE SUGGESTIONS

Beans Contain a Large Amount of Protein and Their Food Value Is Therefore High.

By Henry G. Bell, Agronomist.

Beans.

Crop reports indicate what may amount to a desperate shortage in food next winter. What this country needs more than anything else is high food value crops in as small bulk as possible; four that will keep; food of minimum bulk which can be readily stored and shipped.

An acre of beans, yielding 28 bushels, produces as much heat and energy producing food as an acre of wheat yielding 20 bushels. A 28-bushel-to-the-acre crop of beans produces over 2½ times as much flesh-producing food as a 20-bushel-to-the-acre crop of wheat.

Ontario produces over 800,000 bushels of beans on 51,000 acres. The average yield is 16.3 bushels per acre.

An acre of beans produces from 13 to 30 bushels of dried beans.

Beans are being contracted for at $8 to $9 a bushel.

One bushel of small navy beans, or 1½ bushels of kidney beans plants an acre, in rows or drills 28 inches apart.

Beans should not be planted till danger from frost is past. They mature in 90 to 100 days. Planting dates vary from May 15th to June 15th.

Beans are suited to soils that will grow corn and wheat. In wheat growing sections they would be a splendid substitute where winter wheat has killed out.

Bean Seed-bed Points.

1. Beans thrive best on well-drained soil.

2. If a soil is sour, apply 1 ton ground limestone or ½ ton air-slaked lime to the acre.

3. Prepare medium deep, fairly firm seed-bed by plowing, disking and harrowing.

4. For best results, fertilize the crop with 200 to 600 lbs. to the acre of fertilizer carrying 1 to 2% ammonia, 8 to 10% phosphoric acid, and 1 to 3% potash.

This fertilizer is best applied by drilling it into the seed-bed through the fertilizer dropper of a grain drill. If you do not have a drill, scatter the fertilizer evenly over the bean ground and work it into the soil by disking and harrowing before the beans are planted. The available plantfood will increase bean yields and hasten the ripening of the crop.

In cultivating the crop, be careful to work the soil shallower each cultivation. Do not cultivate after the beans begin to flower.

Buy healthy seed if possible. Some growers claim that spraying bean crops with Bordeaux mixture (6 lbs. copper sulphate, 6 lbs. quick lime and 50 gallons water) controls bean diseases.

Do not work among beans on a damp day or before the dew is gone. The spores of bean diseases are carried on tools and shoes. Disinfect these by dipping them in a wash of one part formalin to 20 gallons of water.

Beans may be more effective than bullets.

A large crop of beans will supply the most non-perishable food material in smallest bulk for our armies, our allies and ourselves. High prices are almost certain.

Your Problems

Conducted by Mrs Helen Law

Mothers and daughters of all ages are cordially invited to write to this department. Initials only will be published with each question and its answer as a means of identification, but full name and address must be given in each letter. Write on one side of paper only. Answers will be mailed direct if stamped and addressed envelope is enclosed.

Address all correspondence for this department to Mrs. Helen Law, 239 Woodbine Ave., Toronto.

H. S. S.:—1. An almost every one from fifteen to fifty is wearing her skirt short, you need have no fear of not being in the mode if your skirts are within an inch or two of your boot-tops. 2. As to the important matter of wearing your hair up, you will be so much more sensible to wear it hanging, clasped at the back with a barrette or ribbon-bow, which is the most suitable style for a girl of sixteen. Of course, you have probably been told this before, but it is true. Remember, in a year or two you will be putting it up, and must wear it so for the remainder of your life.

D. K.:—1. Yes, a pacifier for the baby is most injurious and should on no account be permitted. Continuous sucking on any nipple is likely to cause adenoids, enlarged tonsils, protruding teeth, and misshapen jaws. 2. Headache is not a disease, it is a symptom which your head pains you, look for the cause. And by all means do not merely try to stop the headache. This can be done in a good many ways without correcting the cause of the pain. But no real cure is made; you have only destroyed the danger signal which has been trying to tell you that something is the matter with you—that you are not a healthy person. See a doctor.

N. M.:—It is usually advisable to allow children to have candy in moderation. Candy is largely sugar, and sugar has a high food value, as it supplies heat and energy. Most children ever two or three years of age may usually be given candy in small amounts with one of their daily meals. It should be pure, hard candy that can be sucked, preferably homemade; not of the chocolate cream order that is usually macerated in the mouth and hastily swallowed.

M. B.:—1. All linen and silver is marked with the bride's initials. In your case "M. B." should be embroidered on the linen and engraved on the silver. 2. A corsage bouquet of roses would be entirely suitable when married in a travelling dress. 3. A bride should write personal letters of thanks to all those who have sent presents to her. 4. It is not good form to address a wedding invitation "Mr. and Mrs. John Smith and family." Send one invitation to Mr. and Mrs. John Smith with the name of the daughter written underneath that of her parents, while another invitation should be addressed to the Misses Smith (the sons).

C. T. J.:—1. If white silk waists after being washed in warm water are rinsed in warm bluing water they will not turn yellow. 2. One should never use the phrase "respectfully yours" unless writing a business letter. 3. Needles will not rust if they are kept in waxed paper. 4. Stale or otherwise unpleasant odors in the cellar can be eliminated by sprinkling the cellar floor with unslacked lime. 5. When soot falls on a carpet throw salt on it to prevent it marking the carpet when being swept up.

L. L. T.:—1. A thorough sun bath is the best thing for mattresses. Pillows should be hung in the shade as the heat of the sun brings out the oil in the feathers and will cause them to stick together. 2. The reason custard and pumpkin pies raise in the centre is because of air under the crust. Grease the tin and lay crust on and begin at one side and smooth to outer edge leaving no air bubbles in, then pierce crust in bottom and sides with a small fork. Press the crust off with your hands instead of a knife.

The Sunday School

INTERNATIONAL LESSON MAY 20

Lesson VIII. (Temperance Lesson)—The Importance of Self-control

Isaiah 28, 1-13. Golden Text—1. Cor. 9. 25.

Verse 1. Woe—The Hebrew word thus translated is a simple interjection indicating distress. Crown of pride—Samaria, the capital of the northern kingdom, crowned the summit of a low hill, the sides of which were terraced with vineyards and gardens and about which lay a fertile valley. Drunkards of Ephraim—The dissolute aristocracy of the capital city. The fading flower of his glorious beauty—Elements of social decay and disintegration were already evident on every hand.

2. A mighty and strong one—Referring to the Assyrian power which was to be instrument in Jehovah's hand for inflicting chastisement on his apostate people.

3. Trodden under foot—By the invading army of the enemy at the time of the fulfilment of Jehovah's judgment against the nation.

4. The first-ripe fig before the summer—It is a familiar fact that in Palestine, as in other fig-producing countries, the main crop of figs is preceded by a few scattered first fruits. These "first-ripe figs" are still esteemed a great delicacy. Hosea, Micah, Nahum, and Jeremiah, as well as Isaiah, refer to this early fruit (compare Hos. 9. 10; Mic. 7. 1; Nah. 3. 12; Jer. 24. 2).

5. In that day—The day of judgment and execution. Will Jehovah of hosts become a crown of glory—A beautiful promise in figurative language to the remnant or residue of the faithful whom Jehovah shall redeem and to whom he himself will become a source of beauty, strength, and joy.

7. And even these—The men at Jerusalem among whom the priest and the prophet are especially referred to because of their being the spiritual leaders of the people. It was they who opposed Isaiah in the name of Jehovah, and claimed to have the authority of divine revelation back of them in this opposition and in the support of the politicians. Reel with strong drink—Judah, on the whole, still contrasts favourably with Israel, but even here the besetting sin had for a long time been drunkenness. Swallowed up of wine—Perhaps better, "confused with wine," or "wholly absorbed in their carousings." Err in vision—Deceive themselves with regard to revelations which they claim to have received.

8. Full of vomit and filthiness—Literally so, these words of the prophet reflecting vividly the awful state of things existing in aristocratic social circles of the capital city. We are reminded, as we read these words, of the similar state of affairs in Rome shortly before the downfall of the empire.

9. Whom will he teach knowledge? The prophet is here quoting the mocking retort of the nobles and priests whom he has thus severely rebuked, and who apparently interrupt him with their scoffing replies. The quotation continues through the next verse.

10. Precept upon precept; line upon line—The Hebrew of this verse gives a series of repeated monosyllables, the exact sense of which is not entirely certain. They are intended to imitate the mocking, stammering words of drunken men as these mock the wearisome repetition of the prophet's warning speech. The meaning of the whole retort is: "Who are we that we should be lectured by this man? Are we newly born infants? Is it necessary to repeat over and over again to us this message as one would teach a child?"

11. Nay, but by men of strange lips and with another tongue—Or, "For with stammering lips." The quotation has ended and the prophet replies to the mocking interruption of his hearers by pointing out that his unwelcome and oft-repeated message will be followed by a far more severe spoken by Jehovah himself to this people in a still more uncouth language, namely, the harsh and barbarous accents of the Assyrian invaders.

12. This—The course of action advocated previously by the prophet, is the rest, the only means of averting the impending disasters; and this alone is the one possible means of bringing refreshing to the exhausted nation.

13. Fall backward—Retreat from their haughty position and be cast down. Broken, and snared, and taken—Defeat and capture and utter desolation will be the inevitable outcome of the conflict which their apostasy from Jehovah will in the end bring them.

Sheep Notes

It is a hard tug on ewes to suckle lamba almost as big as themselves Separate them before the lambs are too big.

Set your mind on having a nice wether for your own meat. No finer meat in the world.

The sweetest mutton ever made was from feeding barley with plenty of grass and hay.

The finer clover is in leaf and stem, the better sheep like it. That is why alfalfa and alsike are in such favor.

The wool a sheep bears will pay its way on the farm.

Get the sheep out on the pasture while the bite is short.

Give a good feeding of hay in the morning before turning to pasture.

When the flock has been eating roots, the change to the fresh grass is not so relishing.

Any change in feed, even from dry hay to grass, should be made with care.

The Dairy

The cream from different breeds of cows does not churn alike.

The fat globules in the milk of a Jersey or a Guernsey cow are larger than those of other breeds, and consequently break more easily.

If the milk and cream containing large fat globules and milk containing small fat globules are mixed, there will be a loss in the churning.

It is all right to divide the calves with the boys, but don't forget to divide the proceeds of the sales, too.

Health and wealth in stables with pure air everywhere.

The cheapest winter feed that can be produced for the dairy cow is a combination of alfalfa and ensilage.

The one safe guide in ascertaining any cow's annual production of milk and fat is the constant use of the scales and test.

Hogs

There is a theory that the way to keep a hog well is to keep him and his food and surroundings clean. Worth trying.

The sooner the pigs are all out on pasture the better. It is natural for hogs to eat grass.

A good hog pasture cuts the cost of growing pigs and hogs in two.

Many men seem to ignore the need and craving for grass that is as natural to a pig as it is to a cow.

A young farmer grew a lot of pigs last year on clover and alfalfa pasture. He fitted them for the butcher on sugar beets and corn grown on the farm.

That pork was surely healthy, and cost less than it would have done under less intelligent management.

The feeding period of the hog is short, and the more quickly it is grown the greater the profit.

The pigs need shade in the pasture. There should be trees as well as shelter.

Do not let the little pigs hang over a high trough—or they will grow crooked in the backs.

The early hatched goslings must be protected from severe cold at first.

Poultry

Hints on Goose Culture.

While geese live to a great age, the ganders are usually unreliable as breeders after about nine years old. Females, however, have been bred at from fifteen to eighteen years of age. An indication of advanced years is an abdominal pouch of considerable size.

Geese do not reach maturity until their second or third year, and their eggs do not show strong fertility.

Being naturally a grazing animal, the goose is provided with a bill that has sharp interlocking serrated edges, designed to cut and divide vegetable tissues easily, and the tongue at the tip is covered with hard hair-like projections pointing toward the throat, which serve to convey the bits of grass and leaves into the throat quickly and surely.

For a start, a gander and two geese are sufficient. Their eggs being very fertile, as a rule, quite a number can be hatched each year.

It requires a full month to hatch a goose egg, and incubation is performed by either a hen or a goose. A good-sized hen will cover five eggs, and a goose can take care of as many as fifteen. It is seldom that any of the goslings are lost, except through accident or exposure to hard storms while still very young.

The Paisley Advocate

PAISLEY, MAY 16th, 1917

LADIES' LIBERAL CLUBS

The Women's Liberal Association of Ontario is active in organizing local branches throughout Ontario, and no doubt many will be interested in this extension of the sphere of women's work. At a meeting held in Owen Sound a few days ago it was decided that a branch be formed there. Several prominent lady speakers were present, including Mrs. J. A. MacDonald, wife of Rev. J. A. MacDonald of Toronto, and President of the Ontario organization. The Advertiser says that Mrs. MacDonald spoke of the radical change in the political situation of our province in the last few weeks, due to the granting of the franchise to women. Already the difference it has made in the women themselves, has been discerned. They seem to have a broader outlook and to feel a new responsibility in this opportunity for service. Women need to be educated along political lines. They should not feel it necessary to vote the same as their fathers or husbands; they must find out for themselves—study the subject impartially, sift the views of both parties and then vote irrespective of party. Speaking of the advisability of forming a Liberal Club in preference to an Independent Association, Mrs. MacDonald said that all realize that correction or advice is better effected within the precincts of the family, rather than by calling in the neighbors to advise, whether they be neutral or prejudiced. So political subjects could best be studied by Liberals in a Liberal Association—studying as a family—when the standpoint of both Liberals and Conservatives could be discussed with much more freedom than were members of the opposing party present. Then if Liberal women should find that the Liberal party was supporting measures unworthy, they could and would show their strength by demanding a reform. Henceforth in all conventions for the selection of candidates, women as delegates will have a purifying influence on the government in seeing that only fit men are nominated.

Speaking before the Ontario Women's Liberal Association in Toronto on Friday last, Dr. Michael Clark, M.P., of Red Deer, Alberta, termed it providential that women are entering politics at this critical time. He emphasized the need for action by women in Liberalism, stressing that they would not be "prejudiced by what they had heard from husbands, brothers or fathers," but judge for themselves. He thought that women could bring into politics just what was most wanted in Canadian political life—a better conception of the right methods. "Hold your right to the ballot as sacred as your womanhood. Let no candidate get it except for what, before God and your conscience, you can vote is for the benefit of the country."

At the same meeting Mr. N. W. Rowell stated that the extension of the franchise to women has more than doubled the fighting force in favor of social reform.

—The address of R. Viviani, ex-Premier and present Minister of Justice of France, delivered in the House of Commons at Ottawa on Saturday, will long live in the annals of Canadians. It is said by old members of the House who heard the distinguished visitor to have been the most powerful message ever delivered in Canada's parliament, and was the masterpiece of a great public man. In the following words he paid tribute to the courage of our soldiers:

"Canadians, fighting beside the British and French troops, have shown supreme courage. At Ypres, in the north of France, in a country devastated by floods, the Germans, following a cloud of asphyxiating gas, delivered a terrific assault. That day Germany had to meet your soldiers, who, rising to their might, saved the battle for the Allies. And in many battles they have won victories. They are the men who stood up. At this moment we have before our eyes your boys, so alert, so athletic, so brave; the first to storm victoriously the heights of Vimy, which were reported to be impregnable. Hail to all these soldiers! Let us bow our heads reverently before those who fight, those who suffer and those who have laid down their lives for their country. When they left this country they had clear perception of what their action meant. They were well aware that it was not only Great Britain they were called upon to defend; that it was not only France that they were going to protect against attacks of the invaders; no, their clear vision detected the higher object: they were well aware that it was the sacred cause of humanity, of democracy and of justice they were defending."

In closing his address Viviani—with arms outstretched—made a direct appeal to Canadians:

"Ye Canadians who listen to me," he cried in quivering tones: "ye freemen the elf in the Parliament, pray mark my words. I realize that you are farther away than are we from the battlefields. The roar of guns does not reach your ears. You do not see the return of boats of wounded men. But, morally speaking, you are just as close as are we to the fray. Confronting one another, you and us, we have autocracy and democracy in a life and death struggle. Should it perchance, the freemen fail to win, despotocracy and universal prussianism will go down to defeat at the same time. It was in the cause of justice that, at all epochs, we drew the sword. It was in the cause of justice that Britain and France, together with their noble allies, entered the war. It is to enable the children of men to enjoy well assured and prolonged peace that we are fighting."

Looking up to the crowded galleries, peopled by many women, Viviani again stretched forth his arms. "Mothers," he pleaded, "now listen to me. It is for your children's freedom, to secure peace and liberty for mankind, that a whole generation is giving its life, it to-day making the supreme sacrifice. Let pious thoughts accompany those who go to the front. All laudatory epithets have been exhausted. There is nothing left to say but in praise other than that many have given their lives for a sacred cause, and the others are still fighting for the salvation of all mankind—fighting for justice, fighting for right. Their fame and their courage must ever be an immortal example to all men."

"One begins to wonder if there are any capable men at the head of affairs at all these days. The question of agriculture is not being handled as it ought to be at the present time, but can we wonder at it when we look at the number of professional men other than farmers who adorn the benches in Parliament? And yet the farmer is to blame partly for helping to send many of those men there.

The foregoing lines were written to a daily paper by a farmer. One hears and reads a good many similar expressions these days. The agricultural end of Canada's parliamentary business is a big item to handle, and it appears reasonable to wish for men of the soil to devote their attention to it. On June 7th North Bruce Liberals will hold a convention at Tara to nominate a candidate for the House of Commons (the date has been changed from May 15th). The farmers of that riding will then have the opportunity of selecting one of their own class to represent them, should they desire to do so. The list of those from whom a choice is likely to be made includes Messrs. J. E. Campbell of Hepworth, G. Kastner of Wiarton, Jas. Malcolm and P. A. Malcolmson of Kincardine, Alex. McCannel of Saugeen, Alex. McMurchy of Bruce Tp., Dr. Hacking of Lion's Head, and Dr. Clough of Wiarton. Among these are two farmers—McMurchy and McCannel—both of whom are residents of the county. The other are business or professional men of high standing, exclusive of whom, no doubt, will have a considerable number of supporters. While it seems desirable to have a rural constituency like North Bruce send a farmer to Parliament, there are a great many of the farmers themselves who believe the country's interests will be as well served by electing a town man of requisite ability. This is one of the times they have to make a discrimination in favor of their own class.

—Flour is still soaring in price, and is now between $15 and $17 a barrel. All kinds of advice as to economizing in the use of flour is being handed out. Whole wheat flour is recommended by some to be cheaper food, and pronounced by others as not, because it is less nutritious. Meanwhile there is very little wheat being actually bought or sold, yet the big milling companies, with millions of bushels purchased when prices were much lower, seem to be reaping a harvest of profit. People must have flour at any price. Grain and its milled products are bound to be high-priced under such conditions as prevail at present, but if the grain exchange gambling were suppressed wheat might be one dollar cheaper to-day. What right has anyone to sell what he hasn't got nor never expects to have? He has no right that is entitled to respect. The manipulation of the grain market should be stopped, and the most effective way is for the Government to take over the wheat and the milling business during the war.

—Farmers of Alberta are receiving government loans to go into live stock. Hon A G McKay, formerly of North Grey, recently put a bill through the Legislature known as the Livestock Encouragement Act, for which he is receiving a great deal of praise. The bill provides that five or more persons engaged in practical farming in the Province may jointly receive from the Live Stock Commissioner a loan, not to exceed five hundred dollars each, for the purpose of buying cows and heifers. Any person who has obtained a homestead entry under the provisions of the Dominion Lands Act is eligible as a member. Already a great many applications have been received and Hon Duncan Marshall, Minister of Agriculture for Alberta, declares that a bill will be the means of making Alberta the greatest live stock country in America.

—Port Elgin business places are closed every Thursday afternoon during the summer.

FELT LIKE A NEW PERSON

After Taking Only One Box Of "Fruit-a-tives"

EAST SHUBENACADIE, N. S.

"It is with great pleasure that I write to tell you of the *wonderful benefits* I have received from taking "Fruit-a-tives". For years, I was a dreadful sufferer from *Constipation and Headaches*, and I was miserable in every way. Nothing in the way of medicines seemed to help me. Then I finally tried "Fruit-a-tives" and the effect was splendid. After taking one box, I feel like a new person, to have relief from those sickening Headaches".

MRS. MARTHA DEWOLFE.

50c. a box, 6 for $2.50, trial size, 25c. At all dealers or sent postpaid by Fruit-a-tives Limited, Ottawa.

LOCAL AND DISTRICT NEWS

Streets for Gardening

The impression has got abroad that only a few streets at the south end of the village are being offered by the council for gardening, but this is not so, all streets not much used for traffic to be plowed and worked on the sides, leaving room for wagon roadway. This gives many a chance to obtain the use of a good piece of land free of rent.

Died from Wounds

The sad news was received on Tuesday by Mr and Mrs Colin McGillivray, of 12th Bruce, that their son, Pte Alex McGillivray, reported last week as seriously wounded, had died from his wounds on May 12th at No 2 General Hospital Havre, France. As we mentioned last week, the deceased soldier was the only son of Mr and Mrs McGillivray, was enlisted in the west, and had been at the front in France only a few weeks. Particulars as to the engagement he was in when he fell wounded have not yet been received. The bereaved parents and family have the sympathy of all in the great loss they have sustained by the death of their brave soldier son and brother.

The Late Maurice Crawford

The sudden passing away of Maurice Crawford called forth many expressions of sorrow and regret. The death was due to blood poisoning. He was married 21 years ago to Melinda Miller, who predeceased him some 12 years ago. Deceased is survived by seven children, and two daughters, Mrs J A McIntyre, of Arran Tp. and Vera at home, also two brothers, Jas A of Arran, and Robt H, Alberta. He was born on the farm on which he died, and was the eldest son of the late Wm and Isabella Crawford, both natives of Ireland. He was a member of Arkwright Methodist church, being a steward and a member of the finance board when he died. In politics he was a life long Conservative. The funeral was one of the largest ever seen in this community. The Orangemen conducted the service at the grave, he being a member of Arkwright Lodge No 612.—Leader.

The Late Mrs. Gray

We are called upon to chronicle the death of one of the oldest and most highly esteemed residents of the 10th con Elderslie—Mrs Helen Gray, widow of the late John Gray, who predeceased her thirty-five years ago. The late Mrs Gray was born in the parish of Huntley, Aberdeenshire, Scotland, in the year 1824, and came to Canada when sixteen years of age. On July 5th, 1839, she was married, and she and her husband resided in the Toronto Gore for five years. They then purchased a 200 acre farm in Normanby township and drove all the way from Toronto to there, only to find that squatters were already on their lots. After their brief stay they continued their journey on to the present home of the family, upon which only five acres were cleared. There all the privations and hardships of early pioneer life were happily lived through. The deceased always had a cheerful smile and warm welcome for everyone who called upon her. A friend alike of both old and young she will be much missed. After a brief illness of only a few hours she died on Sunday morning, May 6th, the cause of death being internal perforation of the stomach. She leaves to mourn her loss a family of six children: Mrs R Reier, of Rimwood; Mrs E Reier, of Young, Sask; Fred, Allan, Sarah and Minnie at home; also three sisters, Mrs Rogers, of Weston; Mrs Ruby, of Thornbury; and Mrs Smith, of Aberdeen, Scotland. Mrs Gray was a lifelong Presbyterian, and the funeral service on Tuesday was conducted by Rev Mr Wilson, of Salem, at the home, after which interment was made in the family plot at Salem.

Flour and Feed
Lumber
Coal and Wood

Having decided to add Coal to our Lumber and Wood yards, we are now ready to receive orders for Coal. Send in or telephone your orders at once as we would like to have all orders in, so that we can send them in by 1st May, as prices advance on that date.

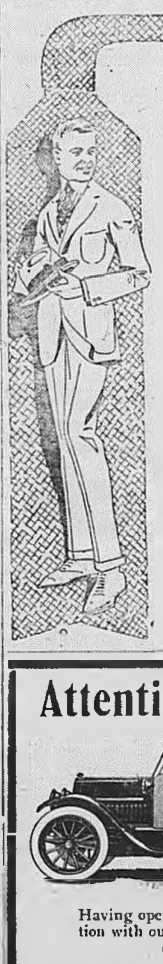
Jeweler and Optician

PERSONAL.

St. Catharines, Ont.—"Two years ago I was in a very nervous, generally run-down condition, so that I awoke in the morning more tired than when I retired. The doctors thought I had heart trouble and treated me for it but I got no benefit. I heard of Dr. Pierce's remedies through a friend who had been to your Invalids' Hotel for an operation (which proved entirely successful) and I at once got the 'Favorite Prescription.' I took three bottles altogether and at the end of three weeks I felt entirely cured and have been well and strong since, without a single bad spell. I stopped taking it about three months ago and am glad to tell any one how splendidly your medicine has healed me."—MRS. JOHN LEWIN, 53 Niagara St., St. Catharines, Ont.



The mighty restorative power of Dr. Pierce's Favorite Prescription speedily causes all womanly troubles to disappear and brings back health and strength to nervous, irritable and exhausted women. It is a wonderful prescription prepared only from nature's roots and herbs with no alcohol to falsely stimulate and no narcotic to wreck the nerves. It banishes pain, headache, backache, low spirits, hot flashes, worry and sleeplessness surely and without loss of time.

Get it now! All druggists.

Potato Production

The average yield of potatoes per acre in Ontario in 1916 was 53 bushels. The next lowest yield in the last thirty-five years was 76 and the average annual yield for the whole period was 114 bushels per acre. Comparing both yields and prices of seventeen different farm crops, those which gave the greatest returns per acre in 1916 were as follows: Potatoes, $78; turnips and other field roots, $76; beans, $63; husking corn, $59; and fall wheat, $53. It will be seen that the highest returns were obtained from the cultivated crops.

In normal years, it is economy to cut good sized potatoes in varying from one ounce to two ounces each. In the average of ten tests conducted at Guelph in five years the following annual average yields per acre were obtained from good sized potatoes cut into pieces of different weight as here indicated: two ounces, 150 bushels; one ounce, 130 bushels; one-half ounce, 109 bushs; one-quarter ounce, 79 bushels, and one-sixteenth ounce, 37 bushels. Small potatoes are frequently produced from scrubs or diseased tubers. The potatoes produced in Ontario in 1916, however, were exceptionally free from rot and were unusually small owing to the growth being arrested by unfavorable weather conditions. Potatoes did not mature thoroughly last fall, and immature potatoes are inferior for table use but make excellent seed. At this particular time, therefore, potatoes, the size of hens' eggs, or even smaller, might be used for seed to good advantage. These could be cut in two pieces even as small as one-quarter ounce each, and could be planted in rows 25 inches apart with pieces 12 to 15 inches apart in the rows. They should be planted the same day that they are cut. Where good seed is unobtainable whole potatoes not more than one-quarter to one-half ounce in size might be planted with the prospect of receiving moderate returns. It would be an advantage to spread out the small potatoes in a warm light room for two or three weeks to allow them to sprout before planting.

The usual time for planting potatoes for best results is from the 15th to the 25th of May. Potatoes do well on any land. It is impossible to get the land ready before the time mentioned, the soil might be plowed to a depth of about four inches and the potatoes planted in every third furrow; after which the land could be rolled immediately and then harrowed to press the soil around the potatoes and to conserve the moisture.

According to present indications, the acreage of potatoes will be less than usual this year.

With the possibility of a famine in food materials great care should be exercised by both the farmers and the city gardeners in growing the crops of highest value, in using the best seed obtainable and in economizing labor.

For the second year Rod and Gun magazine, published by W. J. Taylor, Woodstock, Ont., for May has much that is of interest to offer. Bonnycastle Dale, the Canadian naturalist, gives the result of a fortnight's study of the wild duck in the feeding effect. "The Terror that Passeth in night," A. A. Dunlop in the Rockies is the story of a fishing trip and outing in the vicinity of Waterton Lakes, Alberta. Some Canadian Vacation Camps, gives an idea of some Northern Ontario camps where young lads can get more for their money than in any other way enjoying many unique experiences at a moderate expense. Fishing Experiences of an Old Country Angler tells of fishing in the wonderful Georgian Bay region. There are other stories of equal interest and a treasure trove for the fishermen in this month's installment of Fishing Notes by Robert Page Lincoln. Gun-room ammunition is equally attractive to the gun lover, while Kennel men will find the report of the Toronto Kennel Club Spring Show in this issue and a list of the winners, and trap-shooters, the full results of the scores at the Hamilton Tournament on April 6th and 7th, as well as other trap notes of interest.

—By a vote of 3,793 for and 2,327 against the city of Hull, Quebec, carried prohibition. Hull is just across the river from Ottawa, and was the shipping point from which a great amount of booze came into Ontario since prohibition time. Voting was commenced in Hull on April 20th and according to the law there was continued automatically until half an hour had passed without a vote being recorded. The liquor interests are supposed to have arranged the voting so as to keep up long enough to ensure them victory for another year, and a half hour without a vote did not come until 12.50 p.m. on May 3rd when the polls had been open continuously for thirteen days.

—Ross has had three years' experience in street oiling, to keep down the dust, and notwithstanding an advance in the price of oil they have purchased 5,000 gallons for this year's use. The price is 9.15 cents per gallon. Last year the price was 7 cents.

HISTORY OF MATCHES

Three million Matches Used Every Minute

The first Lucifer or friction match dates back to 1528. They were made and dipped by hand, and sold for a little over two dollars per hundred.

To-day the same quantity may be bought for a couple of cents, or even less. This cheapness is due to the fact that all matches are made, and most of them are dipped by machinery. In making matches by one process, a cylinder of pine wood the length of seven matches, which has been soaked in water to make it tough, is placed in a sort of lathe and as it revolves the circumference comes in contact with a sharp blade which cuts off a continuous shaving the thickness of a match. As this shaving comes away from the log it is cut into seven strips, each as wide as a match is long. These ribbons are cut into lengths of about eight feet, and one hundred and twenty or so are piled on top of each other, and fed into a cutting machine, which cuts as many splints at each stroke as there are ribbons in the pile. Rapid as this process of making splints is, it has been displaced in America by another method in which very little hard work is required. In this case the raw material is received at the factory in the shape of a two-inch white pine plank. This is sawed into blocks the length of the match.

The blocks are then fastened by means of clamps, to the bed of the machine, and cutters groove out a set of splints from the surface. The cutters do not turn the entire surface into splints at one impact, but cut from cut one-fourth of an inch apart, the ridges left between the places from which the first set of splints was cut, are then worked up, and so on until the whole block is consumed.

As soon as the splints are separated from the block they are seized in iron clamp plates, which form an endless chain. The endless chain carries the splints across a steam-heated drum, which warms them nearly to the temperature of the paraffin, into which they are next dipped. From the paraffin bath the splints move on continuously to the rollers that carry the "heading mixture"—phosphorous, chlorate of potash, etc.—and, as the matches are carried past the rollers each one receives a red or blue head, as the case may be. From the rollers they continue on through a room swept by a blast of cold dry air.

The splints move on until, just before they reach the starting point again, an automatic punch thrusts the matches out and places them side by side in a box, put in the right, at the right time, by another endless belt. It is estimated that the nations of the civilized world use, in round numbers, three million matches a minute. Fifteen hundred billion is the enormous number for the entire year.

FORESTS OF GREAT BRITAIN

Many Canadians who have not visited Great Britain suppose that there is little woodland in the old country, and it is natural to think of the United Kingdom as cleared of timber and cultivated like a garden. In England and Wales there are nearly 2,000,000 acres of forest, and large areas of uncultivated land on which it is the intention to cultivate a growth of timber. There are, it is estimated, 2,500,000 acres of afforestable land in England and Wales. Of course most of the British forests are held for park and estate purposes. The area of Crown forests in England and Wales is only 65,766 acres, made up mostly of the historical estates of the Crown. —Canadian Forestry Journal.

ALLIES' CUSTOMS UNION

Sir George Foster on Results of Paris Conference

A gigantic customs union including nearly one-half of the world's population, was outlined by Sir George Foster in his address before the Toronto Canadian Club Monday upon the "economic conference of the allies at Paris." Sir George represented Canada at the conference. "Premier Hughes and I," he said, "were the only delegates who could not speak and understand French perfectly, and I was not specially proud of my ignorance. If I had my life to live over again, I would certainly master the French language."

Following is Sir George's eloquent summary of the results and probable effects of the Economic Conference: "Something new has come to the world through this war. There has come on aggregation of some of the most powerful nations of the world, which, by blood compact on the field of battle, have accentuated their oneness of purpose. The fundamental thing is this union of wisely distributed powers along lines of defence on the field, and along lines of co-operation in economic, industrial and commercial progress. There is the "hunch"—the combination which shall round the world and make it impossible for a man like the Kaiser, or any aggregation of men like the Kaiser, to throw this whole world into a war. And the world has made up its mind that if it is possible to police the robbers of the world they shall be policed."

Weird Kinds of Bread

Although the Germans are making war bread out of all kinds of materials they will have to go a long way before they invent an entirely new kind of bread. Beans, peas, maize, and other substances have been mixed with wheat or rye in the past. Mashed potatoes, mixed with wheat or maize flour, were used by poor people on the continent years before the war broke out. Rice flour makes fine yellow bread, while the chestnut bread that forms the chief food of the Corsican mountaineers is very digestible, palatable to taste, and keeps fresh and fortnight.

PREPARING THE SOIL

First Things to Do in Getting the Garden Ready.

FEW TOOLS ARE NECESSARY

Information on Digging, Planting, and Transplanting Which Will Help the Amateur to Get Started Right.

(By S. C. JOHNSTON, Vegetable Specialist, Ontario Department of Agriculture, Toronto.)

The soil is the workshop in which is found many of the constituents which go to make up plant food. These foods must be so treated that they will be in such a condition that they may be readily taken up by the slender rootlets of the plant so that the plant will thrive and mature.

If possible add some manure to your soil and work it up well before planting time. This manure may be obtained possibly from various sources close to your home; livery stables or farms dealing entirely with manure would be willing to supply it at a reasonable rate. On heavy soils it is particularly necessary that heavy applications be made in order that the soil will be of a much finer condition so that it will retain a large quantity of plant food. Many of the garden soils will be benefited by the application of lime. This may be secured from various sources such as the contractor and builder, lime and cement dealers, and may be in the form of fresh burnt or even slaked lime. This lime should be scattered over the surface of the soil after the digging has taken place, and a sufficient amount should be applied to make the surface of the ground fairly white. This should be easily raked into the soil just previous to the planting of the seed.

DIGGING. It is necessary in all soils that they are to be worked once or more time or another during the early spring in order that it may be made dry and fine. We find that many of the troubles of the backyard gardens are caused by digging the soil too early in the spring. One of the greatest aids to a soil when it is ready for digging is to rather a beautiful and fine appearance over it. If the soil is the least wet in a manner but compact ram the time is not far enough advanced for cultivating it again. If, however, the soil falls apart into several small parts we may rest assured that it is properly safe to dig.

TOOLS. It is unnecessary for the backyard gardener to purchase many tools for his little garden. Those who have been growing vegetables in their backyard for a number of years gradually add to their supply until after three or four years they have accumulated many special tools which are suited for particular operations in the garden. Complaints are sometimes heard that the expense of securing to commence a backyard garden is very great. Many very good backyard gardens have been made and excellent harvests obtained with very few and comparatively inexpensive tools. A digging fork or spade, a rake, and a hoe are about all the tools that are necessary at the outset, and these are inexpensive.

PLANTING OF SEEDS. When it has been determined that the soil is suitable for digging and the weather is mild and warm, it is necessary that the seeds be planted in the garden. As large a variety as possible should be secured, so that the little seeds will quickly germinate and grow. To sow the seeds quickly, evenly, and plainly requires considerable practice and care. The row may be made straight by stretching fairly tight a piece of string from one portion of the garden to another and using this as a guide for making the trenches or drills for placing the seeds in. After the seeds have been dropped in they should at once be covered with soil by gently drawing some of the loose surface soil in over the seeds with a piece of stick or with the hands. This soil should, however, not be heaped up over the row but should be placed evenly with the rest of the garden soil and packed down.

THINNING. Backyard gardeners should not attempt to grow immense quantities at first. It is necessary to plant sufficient seed to secure a good crop of plants, the more slender plants being thinned out soon after they are above ground so as to assure reasonable room for a good crop of healthier plants. The thinning should be commenced when the plants are from one to two inches in height and should not be left until the plants have become long and slender, because if they are left one plant simply tries to smother another and quite often whereas, if they are thinned to the proper distance they will have room to grow to their required size of maturity.

TRANSPLANTING. The city dweller will find it almost impossible to grow plants of first-class quality of such vegetables as tomatoes, celery, or cabbages unless he has other appliances such as a hot-bed, which enables him to start the seeds early in the spring and some time before they could have been planted out in the garden, in order that he may secure early crops. It is good practice for him to purchase plants which have been grown in the backyard garden and transplanted or set out in the garden at a required distance and good healthy crops grown from them, and in all cases when purchasing plants only sturdy and vigorous growing plants should be accepted. Tomato plants to give the best results should be eight inches high, and the stalk should be at least as thick as a lead pencil and thicker if possible. If the plants already are in bloom this may be considered a very good feature. The root system of the plants should be large and having fine rootlets. When transplanting individual plants care should be taken to make sure that quite a good deal of soil is left around the root of each plant.

Shoes Must "Make Good"

The same as men.

There is a competition among shoes—or rather the manufacturers — that is pretty good for you people.

It shoes you and your family with the best shoes in the world without it costing you a cent more than it has to.

Of course you expect us retailers to gather these shoes that are the winners in this war of competition, and that is what this store is constantly doing.

Our claim is that every time you have a shoe need you ought in justice to yourself let us supply it.

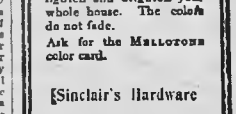
Our stock exemplifies all the prevalent shoe newness. It contains the latest shoe thought of the leading manufacturers.

F. CARTER & SON

You can wash Mellotone walls

You will not need to re-decorate every year if you tint your walls with

Lowe Brothers High Standard Mellotone



Simply wash the walls with water and a good oil soap, and they look bright as new.

MELLOTONE is more beautiful than wall paper—and far more durable. It is not easily scratched or marred. The rich delicate colors will lighten and brighten your whole house. The colors do not fade.

Ask for the MELLOTONE color card.

Elderslie Court of Revision

NOTICE is hereby given that Elderslie Council will meet as a Court of Revision at the Township Hall, Dublin Hill, on Tuesday, May 29th, at 1 o'clock p.m. when all complaints against the assessment roll for current year will be heard. ROBT. PEARCE, Township Clerk.

—Lucknow Presbyterian congregation has extended a call to Rev Robt McCallum, of Tara.

THE EARL'S SECRET

Or, a Martyr to Circumstances.

CHAPTER XXX.—(Cont'd.)

Gentle, noble-hearted Violet came in for a portion of this lynx-bloodhound's consideration.

Often when he was leaning against the rail of the Row, exquisitely dressed, and the Mildmay carriage passed him with its claret liveries and high-stepping horses, with Mrs. Mildmay, Violet and Howard Murpoint inside, Mr. Dockett would slightly scratch his head and mutter:

"I can't make that young lady out! What'on earth made her promise to marry him? I'm sure she was in love with that unlucky young gentleman with the false beard. Perhaps she's got a wrong idea of duty; and there's no doubt that Mr. H. M. is a wonderful, smooth-tongued gentleman!"

Then he'd leave the Row and return to his watch on the Murpoint mansion and in quite another costume gather all he could from the servants and tradespeople. But what he learned was not much in itself.

Howard Murpoint was no foolhardy villain.

All he did was done with circumspection and care, and he baffled Mr. Dockett. That gentleman ran down with his usual suddenness to Pemrudlie.

He went to Sanderson's cottage, and found Jamie, the lame boy, seated at the door with a book in his hand, with his large, melancholy eyes fixed upon the sea.

"Well, my lad," said Mr. Dockett, stealing upon him quietly. "How are you?"

Jamie started, flushed and answered, in his nervous way:

"I'm very well, sir. Do you want Willie?"

"No; I want the Spanish gentleman who lodges here!"

"He's on the cliffs," said Jamie.

Mr. Dockett stayed a few minutes, then repaired to the cliffs.

He found Leicester walking up and down moodily with his hands locked behind him and his head bent upon his breast.

"Ah!" said Leicester, with a sullen and feverish eagerness. "You have just come in time. I was about to take the train for London. I am tired out beyond endurance of stopping here inactive and idle. I cannot endure the suspense, and I am determined to push everything to an issue now—at once!"

"Hem!" said Mr. Dockett. "In a hurry to get to Newgate, sir, I suppose."

"I care not," and Leicester. "I have considered the pain of such a position, and I do not think it would be more terrible than that which suspense and uncertainty now produce. Newgate, if it must be so. I cannot stay here long—"

Mr. Dockett nodded.

"You don't trust me then?"

"I do. But I cannot wait longer. It is impossible. I shall go mad! What have you been doing? What have you discovered?"

"Very little as yet," said the detective, cautiously. "But you excite yourself unnecessarily. Why don't you stay indoors quietly and rest? That lad tells me you are always here, pacing up and down and fretting."

"I am," said Leicester. "I cannot tear myself away from this spot. It was here that the murder was done—just here, where I stand. From here I can see my old home and the spot where I first saw her. You cannot understand what a fascination this place has for me."

"Perhaps I can't; perhaps I can," said the detective. "And so you won't stay here?"

"No," said Leicester. "There is danger in it if there was no other reason. That lad has sharp eyes, and some day he will recognize me."

"Hem!" said Mr. Dockett. "That's the lad who behaves so strangely. I suppose—"

Then he paused as if an idea had struck him.

"Will you come back with me?" he said. "I don't mind confessing that I have as good as failed in London myself. Whether a mate of mine finds anything or not I can't say. He's at work, and he's a sharp fellow. I'm inclined, however, seeing the state of mind you are in to push matters on, and I've hit on an idea."

"I'll come," said Leicester, and together they returned to the cottage.

On the way Mr. Dockett said:

"Where is your friend, Stewart—rather, Mr. Stumpy?"

"Down on the beach," said Leicester. "The faithful fellow thought it best to keep a watch on Job, and I don't think he let him out of his sight night or day."

"Quite right," said Mr. Dockett. "He'd make a good detective. Ah, here's the lad. Now I want you to sit beside me inside the cottage, and when I give the signal take off that beard and wig."

Leicester nodded wearily.

"What plan have you?"

"Never mind," said Mr. Dockett. They entered the cottage, and sat down in the little parlor.

Then Mr. Dockett called to Jamie, and asked him if he could bring a glass of water.

The lad rose and hobbled in with it.

"Sit down," said Mr. Dockett. "Sit down, my lad. What are you reading?" and he took a book out of Jamie's hand. "Ah! the 'Lives of Celebrated Assassins.' That's a strange book for a young lad!"

Jamie turned pale.

"It is, sir?" he said. "I—I—like it."

"Don't much look like a murderer yourself," said Mr. Dockett. "Never saw one done, eh?"

"Heaven forbid!" said Jamie.

"Heard of one though," said the detective, "that murder on the cliffs, I suppose? You knew Mr. Leicester, didn't you?"

"Yes, sir," faltered the lad.

"Liked him too?" asked the detective.

"He was a good friend to me, sir," said Jamie. "A very good, kind friend."

"Ah!" said Mr. Dockett. "Do you think if he was to come to life now that you would know him again?"

"Know him!" said the lad. "Ah, in a moment."

"Of course you would," said the detective. Then he rose and wishing Leicester, "good day," left the room.

He paused outside, and looking in at the window made a signal to Leicester. Leicester looked over at Jamie Sanderson and prepared him.

"Jamie," he said, "Don't be startled. Do you know me?"

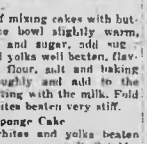
The lad, at the sound of Leicester's natural voice, turned pale and trembled, but said nothing.

"Don't be frightened, Jamie," said Leicester, and very slowly he removed the wig and beard.

Jamie uttered a cry of joy, which rapidly changed to fear.

"Master Leicester!" he cried, stretching out his thin hand in an agony of terror, "put them on again, and fly! Fly, this moment! You are in danger! All is known, all know it beside me! Oh, fly, for Heaven's sake!"

"Jamie," said Leicester, "be calm! What is known, my lad?"



"That you did the—the murder! Oh, I know you didn't mean it, but they'll hang you, they'll hang you! And they'll make me witness against you! Oh, oh!" And he wrung his hands. "Why didn't I throw it away? Why didn't I bury it?"

"Bury it? What?" asked Leicester, puzzled.

The lad hobbled near him and laid a trembling hand upon his arm.

(To be continued.)

About the House

On Cake-Making.

The mixing and baking of cake requires more care and judgment than any other branch of cooking, notwithstanding the fact that it is the one most frequently attempted by the beginner.

Always mix your cake in an earthen bowl.

The order in which ingredients are combined is most important.

Measure dry ingredients and mix and sift baking powder and spices, if used, with flour.

Flour is always measured after being sifted.

Fruit, when added to cake, is usually floured to prevent settling to the bottom. This is not necessary if it is added directly after the sugar, which is desirable in all dark cakes.

When baking cake arrange to have nothing else in the oven, and place as near the centre of oven as possible so it will cook uniformly.

Remove cake from pans as soon as it comes from oven.

Cakes are classified as follows:

1. Cakes without butter, sponge cake, etc.

2. Cakes with butter, pound cake, cup cakes, etc.

1. Method of mixing cakes without butter.—Separate yolks from whites (if both are used). beat yolks until thick, add sugar gradually, continue beating, add flavoring. Beat whites until stiff and dry. Fold into first mixture. Cut and fold in the flour in which the salt has been sifted. Do not stir or beat after the flour has been folded in.

2. Method of mixing cakes with butter.—Have the bowl slightly warm, cream butter and sugar, add sugar gradually, and yolks well beaten, flavoring. Sift flour, salt and baking powder thoroughly and add to the batter alternating with the milk. Fold in the egg whites beaten very stiff.

Sponge Cake.

2 Eggs (whites and yolks beaten separate), 1 cup sugar, salt, 3 tablespoons cold water, 1 cup flour and 1 teaspoon baking powder sifted together.

Beat yolks of eggs and add sugar, water, flour, and lastly the whites beaten stiff. Bake in a moderate oven about ½-hour.

Mocha Cake.

2 Tablespoons butter, ¾ cup milk, ¼ teaspoon salt, 1 cup flour, 2 squares chocolate, ¾ cup sugar, 1 egg, ½ teaspoon vanilla, 1 teaspoon baking powder.

Cream butter and sugar, add yolk of egg, beat well. Then add milk, salt, vanilla and flour, alternately. Add melted chocolate, mix well, fold in beaten white of egg. May be cooked in one layer or two, as desired.

Filling.

1 Cup confectioners' sugar, 1 tablespoon soft butter, 2 teaspoons cocoa, ½ teaspoon vanilla, 2 or 3 teaspoons strong coffee.

Chop almonds fine and sprinkle on top of mocha icing.

Soft Ginger Bread.

¾ Cup molasses, 1 cup brown sugar, ½ cup butter, 1 cup sour milk, 3 eggs, 3 cups flour, 1 tablespoon ginger, 1 teaspoon cinnamon, 1 teaspoon soda.

Cream theb utter and sugar, and add the molasses. Then add the eggs, one at a time, and beat thoroughly. Melt the soda in the sour milk, mixing well. Sift the flour and spices and add to the other mixture, alternating with the milk. Bake either in gem pans or in a ginger cake tin. This will make 24 gems or 1 large cake.

Excellent Layer Cake.

1½ Cups white sugar, 2-3 cup butter, 2 cups flour, 2 teaspoons baking powder, ½ cup milk, 3 eggs.

Cream butter and sugar, add beaten egg yolks, then the beaten whites, milk, and mix thoroughly. Then add flour in which baking powder has been sifted. Bake in a moderate oven about 20 minutes. Ice with chocolate or any well-flavored icing.

Hermits.

2-3 Cup sugar, ½ cup butter, salt, 1 egg, 1 teaspoon cream of tartar, 3 tablespoons milk, ½ teaspoon soda, 1 teaspoon cinnamon, pinch of nutmeg and cloves, ½ cup seeded raisins cut fine, few chopped walnuts, 2 cups flour.

Roll about ¼-inch thick. Bake in moderately hot oven.

Eliminate Waste.

Some of the ways to reduce waste are: Bring the market trimmings home and use them in cooking; save all trimmings of beef and mutton, drippings from roasts, bacon fat, fresh pork fat, sausage fat and chicken fat, which may be combined or used singly in cooking in place of butter or lard, use the cracklings from tried out suet for shortening in corn cakes or suet puddings.

Good cooking and attractive appearance of dishes do much to reduce table waste and promote good digestion. Waste can be reduced by judicious serving. Small portions should be served at first and second helpings given if necessary. Skin, bone, gristle and fat, which will not be eaten, should not be served, because if not served they can be used for soup and the like.

This is not a time for hysterical thinking or action. For immediate relief every individual and community should consider earnestly the matter of food conservation and the limitation of waste.

As a nation we have a disdain of economizing. There is an annual food waste of thousands of dollars in families of moderate and ample means. This waste is the result of bad preparation and bad cooking; improper care and handling; from serving too many courses; and from failure to utilize the food not consumed. For example, in preparing potatoes it is asserted that 20 per cent. of the edible portion may be discarded.

With food at present high prices it behooves every housewife to see that all food is properly prepared and cooked to eliminate waste.

Cleaning the Cellar.

The cellar as a storehouse for canned goods and vegetables should be kept scrupulously clean, as authorities state that disease may occur because of the impure air which gathers in some cellars. The cellar that contains impure odors should be thoroughly aired on a mild winter day. The floor should be swept and mopped and all cobwebs brushed down from the walls and ceiling.

One method of removing odors in a cellar is to fill a bowl with lumps of quicklime over which a few grains of dry copperas have been scattered. Slacl. the lime thoroughly and the steam arising from the mixture will remove bad odors in the cellar. Powdered borax in a good disinfectant to scatter around the floor and corners of a damp cellar. Chloride of lime is an excellent deodorizer and an inexpensive substance to use for purifying the air in damp, ill-smelling places. Charcoal has great powers of absorption and a few bags hung up in the cellar will act as a deodorizer and absorb moisture. Powdered slack lime will also prevent the musty and mouldy odors which are prevalent in many damp cellars.

Because of the cellar being out of sight the conditions there may become very bad before demanding attention. Such conditions should not be tolerated, especially when the room is used as a place for storing food products. A few hours time can be very profitably used in protecting the food stored in the cellar as it undoubtedly bears a great influence on the general health of the family.

Any service which involves the ease of human beings, even though they may be men and women who as the world says has sunk far, is a responsible and honorable service.

YOUTH AND AGE.

He is not young, although his years be few,
Who is not glad when skies grow clear and blue;
When from the south the winsome Spring returns
And earth is clothed with verdure soft and new.

He is not young, who with unheeding eye,
Sees the procession of fair days move by,
Passing in golden glory down the west,
Nor feels his heart with happiness beat high.

Nor is he old, though slow his step, once free,
Who finds a temple in each stately tree;
Whose soul rejoices in the scented hours
With bird and flower and honey seeking bee.

He is not young who can in earth behold
Only a stage where he wins place and gold;
But he who feels its wonder day by day—
Whate'er his years, he never can be old.

—Ninette M. Lowater, in N.Y. Sun.

LIFE-SAVING DOGS.

Intelligent Animals Trained to Search For Wounded.

If there is any gratitude in mankind we shall treat our dogs with even greater affection after the war than we have bestowed upon them in the past. Thousands of lives have been saved on the battlefield by our canine friends.

The French and the Germans in particular have used dogs in connection with ambulance work. The Germans claim, indeed, that over 8,000 wounded men owe their lives to these four-footed searchers. The dogs are so knowing that they can easily tell the difference between a dead man and a man who merely looks dead. They waste no time over the former, but immediately raise the alarm over the latter.

Sometimes they bring back a cap to indicate their discovery, after which they lead the ambulance men to the spot. But a more effective method is employed by means of a small, sausage-shaped piece of leather attached to the dogs' collars. When a dog finds a wounded soldier it takes the leather piece in its mouth and returns to its trainer. If, on the other hand, the dog comes back with the piece of leather still depending from the collar this is a signal that it has sought in vain.

And some people still believe that dogs have scant intelligence!

Ottawa Boy's Wit.

During the last heavy thaw that caused quite a number of puddles on Hank st., Ottawa, one afternoon a smartly dressed young man was trying his best to avoid wetting his new tan boots. As he came to a rather large puddle he hesitated a few moments before crossing.

Two boys were walking behind him, and one said to the other: "Gee, Ted, look at that guy, he's afraid of getting his feet wet." To which the other replied: "You bet, Bill, that's why he hasn't enlisted, he's afraid of crossing the water."

Doctor Tells How To Strengthen Eyesight 50 per cent In One Week's Time In Many Instances

A Free Prescription You Can Have Filled and Use at Home.

London—Do you wear glasses? Are you a victim of eye strain or other eye weaknesses? If so, you will be glad to know that according to Dr. Lewis there is real hope for you. Many whose eyes were failing say they have had their eyes restored through the principle of this wonderful free prescription. One man says, after trying it: "I was almost blind; could not see to read at all. Now I can read everything without any glasses and my eyes do not water any more. At night they would pain dreadfully; now they feel fine all the time. It was like a miracle to me." A lady who used it says: "The atmosphere seemed hazy with or without glasses, but after using this prescription for fifteen days everything seems clear. I can even read fine print without glasses." It is believed that thousands who wear glasses can now discard them in a reasonable time and multitudes more will be able to strengthen their eyes so as to be spared the trouble and expense of ever getting glasses. Eye troubles of many descriptions may be wonderfully benefited by following the simple rules. Here is the prescription: Go to any active drug store and get a bottle of Bon-Opto tablets. Drop one Bon-Opto tablet in a fourth of a glass of water and allow to dissolve. With this liquid bathe the eyes two to four times daily. You should notice your eyes clear up perceptibly right from the start and inflammation will quickly disappear. If your eyes are bothering you, even a little, take steps to save them now before it is too late. Many hopelessly blind might have been saved if they had cared for their eyes in time.

Note: Another prominent Physician to whom the above article was submitted, said: "Bon-Opto is a very remarkable remedy. Its constituent ingredients are well known to eminent eye specialists and widely prescribed by them. The manufacturers guarantee to strengthen eyesight 50 per cent in one week's time in many instances, or refund the money. It can be obtained from any good druggist and is one of the very few preparations I feel should be kept on hand by people, as in almost every family one cause or another for eyes needing attention arises. The manufacturers, Bon-Opto Co., Toronto, will fill your orders if your druggist cannot.

Do your SHOES hurt your FEET?

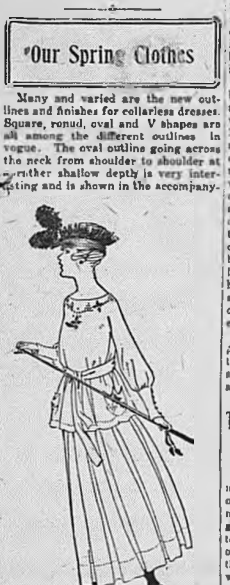
BANISH PIMPLES AND ERUPTIONS



In the Spring Most People Need a Tonic Medicine.

One of the surest signs that the blood is out of order is the pimples, unsightly eruptions and eczema that come frequently with the change from winter to spring. These prove that the long indoor life of winter has had its effect upon the blood, and that a tonic medicine is needed to put it right. Indeed there are few people who do not need a tonic at this season. Bad blood does not merely show itself in disfiguring eruptions. To this same condition is due attacks of rheumatism and lumbago; the sharp stabbing pains of sciatica and neuralgia, poor appetite and a desire to avoid exertion. You cannot cure these troubles by the use of purgative medicines—you need a tonic, and a tonic only, and among all medicines there is none can equal Dr. Williams' Pink Pills for their tonic, life-giving, nerve-restoring powers. Every dose of this medicine makes new, rich blood which drives out impurities, stimulates every organ and brings a feeling of new health and energy to weak, tired, ailing men, women and children. If you are out of sorts give this medicine a trial and see how quickly it will restore the appetite, revive drooping spirits, and fill your veins with new, health giving blood.

You can get these Pills from any medicine dealer or by mail at 50 cents a box or six boxes for $2.50 from The Dr. Williams' Medicine Co., Brockville, Ont.

Our Spring Clothes

Many and varied are the new outlines and finishes for collarless dresses. Square, round, oval and V shapes are all among the different outlines in vogue. The oval outline going across the neck from shoulder to shoulder at rather shallow depth is very interesting and is shown in the accompanying sketch. In this model the neck is finished with a cross-stitch embroidery design, one of the newest forms of embroidery, or rather, one of the oldest forms of embroidery recently revived. The cross-stitch of generations back has returned, now that embroidery of every description enjoys so strong a vogue. It is fascinating work for those who like needlework, and so simple to do that many spring and summer frocks will be adorned with it, worked out in the attractive colors used for embroideries.

7675—7683

Peplum Blouse with Pleated Skirt

The peplum blouse illustrated is the kind that is worn with the new loose-hanging skirts, an example of which is shown in the sketch. This skirt is attached to a skeleton lining, the lining so called, hanging from the shoulders and cut on straight, loosely-fitted lines. The lining is made of some soft or thin material such as net, China silk or fine lawn. The object of this type of skirt is to preserve the straight-line silhouette. It makes an excellent foundation for the peplum, or outside blouses as they are called.

The blouse that buttons straight down the back is making it way surely but slowly into the fashionable world. Crocheted and decorative fancy buttons make these back closings rather attractive. Some novelty buttons are made of colored beads bunched together in ball shape. These are generally used on waists that button in front.

These patterns may be obtained from your local McCall dealer or from The McCall Co., 70 Bond St., Toronto, Dept. W.

WOMEN WORKING TRACTORS.

Two in England Plough From Four to Five Acres a Day.

Two English ladies began last January to drive a tractor plough, which was lying idle because the ironmonger to whom it belonged had no men to spare to send out with it. They had experience in motor driving, but none in ploughing. One day last month a letter was received from one of them in which she said:

"We have just done 33 acres, and have come to do 20 acres, and this morning there is an inch of snow, but we mean to go out and try to work. Now either of us can work the tractor and plough, and can turn into and out of the furrow without slowing up very much. Screws and bolts are always working loose, and pliers and wire are often needed. It is very dirty work, as the engine has to be filled twice a day, and paraffin lifted to the top of the tank. We pull a ten-gallon drum of paraffin up in afew stages. The final bit is done by one being on top and lifting while the other pushes with her head! The mixture of oil, paraffin and soil is very adhesive, and our drill overalls must be a sore trial to washerwomen."

These two women, we are told, now plough from 4 to 5 acres a day with a three-furrow plough. They have a school for training drivers, and have already taught twelve other girls.

THE BEST MEDICINE FOR LITTLE ONES

Baby's Own Tablets are the best medicine a mother can give her little ones. They are a gentle laxative—mild but thorough in action—and are guaranteed by a government analyst to be absolutely free from opiates and other injurious drugs. Concerning them Mrs. Auguste, St. Brieux, Sask., writes: "Enclosed find twenty-five cents for another box of Baby's Own Tablets. I find them the very best medicine a mother can give her little ones." The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

BRITISH WOMEN WORKERS.

All Class Distinction Levelled by the War.

Walking up the Strand recently I saw a young woman dressed in a khaki Russian blouse, long khaki trousers and a khaki turban, writes a visitor in London. She was perched on a ladder, busily washing windows. Hundreds passed the spot every minute but few even raised their eyes to look at her.

Women in trousers have long ceased to be a novelty here. Three years ago this one would have blocked traffic in the Strand. To-day she is simply a woman "doing her bit" in a great army of women workers mobilized "to keep the home fires burning."

The war found British men unprepared and confused, but unafraid. It found women almost entirely ignored, though their patriotism ran just as high as that of their brothers, fathers and sons. After three years of strife there are still no quitters among the women, and few pacifists or "conscientious objectors."

In the first days every woman wanted to be a nurse. It made no difference that she probably had never even bandaged a frostbitten toe or extracted a splinter from her finger. She declared she was fully qualified to nurse the wounded Tommies who were coming home in hundreds in those confused days.

The romance of nursing appealed to the lady in Belgravia, the cotton spinner in Manchester, and the typist in Whitehall. And nine times out of ten the Manchester miss and Lady Belgravia were equally willing to tackle the job of scrubbing the hospital floors and doing the rest of the strenuous labor incident to a nurse's novitiate.

Roughly, the British army of women is divided into three parts: First, the munition workers, who comprise a force running into hundreds of thousands; second, a civil force whose duty it is to carry on the work necessary for the financial and economic continuation of the nation's life; third, a military auxiliary composed of nurses, makers of soldiers' comforts, escorts for convalescent soldiers, motor car drivers, and departmental messengers.

Your Wife's "Allowance" may not expand to meet the increasing cost of foods, but it will buy a sufficient quantity of Shredded Wheat to nourish every member of the family. Two **Shredded Wheat Biscuits** with milk make a good, nourishing breakfast at a cost of a few cents. All the body-building material in the whole wheat grain. For breakfast or dinner with berries or other fruits.

Made in Canada

A CONCRETE SILO.

Advantages of Cement in the Construction of the Silo.

The many advantages of a silo to the progressive farmer are well known and need not be mentioned here. A consideration of concrete in relation to the silo, however, very quickly demonstrates the reason for the popularity it has already attained. Few other materials can be made as airtight as concrete and just as a preserve can must be air-tight to prevent fruit from working so must the silo be air-tight to prevent the silage moulding. The concrete silo is water-tight, which is of great importance, for the moisture which goes in with the silage must be kept in to prevent the process known as "dry-firing." An even temperature in the silo is necessary if the silage is to be properly preserved and a concrete silo will more nearly preserve an even temperature than a silo built of any other material. The acids formed by the slight fermentation in silage have no effect on concrete which is rot-proof. Concrete also is fireproof and the farmer whose silo is built of concrete does not live in fear of losing not only his silo but also the crop stored, which is even more difficult and expensive to replace.

The two most popular types of concrete silos are the Monolithic, or Solid Wall Silo, and the Concrete Block Silo. The former is poured in sectional moulds, the concrete being suitably reinforced with steel rods, and the latter is built with concrete blocks, which may be purchased from a manufacturer or made by the farmer himself during the slack season, these blocks being set up in mortar in the same manner as ordinary masonry.

World's Tallest Women.

The average height of the French women is five feet one inch. The American women measure two inches taller, or five feet three inches. The English women touch the tape at a half inch higher than that, or at five feet three and a half inches. The women of the other countries measure from one to five inches less than the French.

No man ever lost his self-respect by acting on the square.

Somebody is patterning after you. What kind of a copy are you setting him?

Minard's Liniment Co., Limited.

Dear Sirs,—Your MINARD'S LINIMENT is our remedy for sore throat, colds and all ordinary ailments.

It never fails to relieve and cure promptly.

CHAS. WHOOTEN.

Port Mulgrave.

What Might Happen.

Pat was a witty young recruit, who was taking instruction in marksmanship. The squad had finished firing. Pat was brought to task for his poor shooting, and told that he must do better at the next distance; there were to be seven rounds of quick firing.

"Now, Pat," the sergeant told him, "fire at target No. 5."

Pat banged away, and hit target No. 4 seven times in succession.

"What target did you aim at?" asked the irate officer.

"No. 5, sor," answered Pat.

"And you have hit No. 4 every time."

"Bedad, sor," retorted Pat, "that would be a grand thing in war. Sure I might aim at a private and hit a gin'ral!"

Ask for Minard's and take no other.

One-fourth of Denmark's export egg trade is handled on a co-operative basis.

FRENCH BABIES FOR SALE.

War Orphans Cared For By New York Women.

Babies for sale brought a number of eager bidders to the New York Exchange for Women's Work, when forty-two French orphans were put up for sale to the highest bidders. The top price was sixty dollars and the lowest twenty-five dollars and seven babies were "sold" to foster parents. The sale was under the auspices of the American Ouvrier Fund, which provided an album with the photograph and history of each child to be adopted, and the selection was made from these. The sale will be continued until all the 42 babies have found American mothers.

Alphonse Felix Parquet, seven years of age, whose father was killed in the battle of the Marne, will have a composite mother in the Exchange for Women's Work.

Regine Chiquet, aged three, living near Paris, will be the especial care of the employees of the Exchange, who will provide the finances necessary for the child's support.

There is a Message In This Lady's Story

She Tells What Dodd's Kidney Pills Do For Women

She Was Troubled With Weakness and Her Daughter Had Nervous Trouble. Dodd's Kidney Pills Proved the Remedy They Both Needed.

Hamilton, Ont., May 7th (Special)—To Tom Street, this city, carries a message of hope to every suffering woman in Canada.

"After my baby was born," Mrs. Dickens states, "I used to suffer with my back and had no heart to do my work around the home. But I read about Dodd's Kidney Pills and what they have done for others, so I thought I would get a box and see what they would do for me.

"I am pleased to say that after taking two boxes I found such great relief I would not be without them in the house.

"My daughter, too, had been very sick on and off for a long time. Her nerves got so bad we were afraid we would see her in the hospital. But I am pleased to say she is better through taking Dodd's Kidney Pills.

"I never thought Dodd's Kidney Pills could have done such good work and I am telling all my friends about them."

Women's troubles, or nearly all of them, come from sick kidneys. The cure for them is the old established remedy for sick kidneys, Dodd's Kidney Pills.

Pins.

What becomes of the millions on millions of pins turned out annually by the factories? If they merely "got lost" our floors and streets would be littered with them. They not only "got lost," but they vanish by rusting away to dust. Doctor Xavier, a Paris scientist, kept observation on individual specimens. He found that an ordinary hairpin took only 154 days to blow away in dust. A steel pen nib lasted just under fifteen months. A common pin took eighteen months, while a polished steel needle took two and a half years to disappear.

WITH THE FINGERS!

SAYS CORNS LIFT OUT

WITHOUT ANY PAIN

Sore corns, hard corns, soft corns or any kind of a corn can shortly be lifted right out with the fingers if you will apply on the corn a few drops of freezone, says a Cincinnati authority.

A little cost one can get a small bottle of freezone at any drug store, which will positively rid one's feet of every corn or callus without pain or soreness or the danger of infection.

This new drug is an ether compound, and dries the moment it is applied and does not inflame or even irritate the surrounding tissue. Just think! You can lift off your corns and calluses now without a bit of pain or soreness. If your druggist hasn't freezone he can easily get a small bottle for you from his wholesale drug house.

Out of Step.

The squad of recruits were marching along when suddenly there rang out a sharp order: "Halt!" At once the soldiers came to a stop. The officer in command glared around angrily. "Who gave that order?" he snapped.

"Patta, sir!" came half a dozen voices in reply, and all eyes were turned towards the offender.

"You, Jotts, or whatever your name is, sir," roared the infuriated officer, "what do you mean by giving orders?"

"Well, sir," replied Potts calmly, "I've been trying hard to get the rest of the company to keep step with me and they couldn't, so I thought I'd just stop them and start 'em over again!"

In England To-day.

The four-year-old: "Mummy, do tell me another lovely fairy story like the one you told me yesterday, about when there were bootiful lights in the streets at nights, and when little boys used to eat lump sugar."

Keep Minard's Liniment in the house.

Running water in the farm home is more necessary than a water supply in the stables, only it has not appealed with such force to the farmer because his wife has done the housework without complaining, while he had the chores to do himself, and saw the labor-saving possibilities of running water in his cow barns and hog pens.

Minard's Liniment used by Physicians.

The war is producing a great school for the people, and the lesson we are learning in that school is liberality.

It is with words as with sunbeams, the more they are condensed, the deeper they burn.—Southey.

GILLETT'S LYE

MADE IN CANADA

For making soap. For softening water. For removing paint. For disinfecting refrigerators, sinks, closets, drains and for 500 other purposes.

REFUSE SUBSTITUTES.

Shaving Single Handed in a Military Hospital

Only those who have been there can realize what the Gillette Safety Razor is doing for the wounded!

Clean shaving on the firing line, possible only with a Gillette, has saved endless trouble in dressing face wounds. In the hands of orderly or nurse it shortens by precious minutes the preparations for operating. Later, in the hands of the patients, it is a blessing indeed!

As soon as their strength begins to return, they get the Gillette into action, and fairly revel in the finishing touch which it gives to the welcome cleanliness of hospital life. For though he can use but one hand—and that one shaky—a man can shave himself safely and comfortably with a Gillette Safety Razor.

It may seem a little thing to you to send a Gillette to that lad you know Overseas, but to him it will mean so much! It will bring a touch of home comfort to his life on active service, and be even more appreciated if he gets "Blighty"

TENTH CON BRUCE

Seeding operations are about completed on this line, but owing to the cold winds and heavy frosts at night there is not much growth. It doesn't look as if the grass crop for 1917 was setting out to break any records.

Mr Alex McDonald is at present nursing a very sore arm, the result of a kick from a ditching plow which he was operating one day last week.

Master Norman Annes met with a very nasty accident while returning from school on Friday evening of last week. One of his little playmates quite accidentally happened to strike him on the face with the edge of his dinner pail, splitting his upper lip to such an extent that it took five stitches to close the wound. The plucky little fellow allowed the attending doctor to complete the operation without anything to allay the pain.

Mr and Mrs Angus Atkinson, Mr and Mrs Burt Atkinson and their families spent the week end with friends on the 10th.

Mrs M Leitch and Master David spent the week end at Mr S Heney's.

Mr John Caldwell is reported to have purchased an auto. Charley McDonald says he would not own one, as they are getting too common.

The editor of the Farmers' Advocate is after the farmers to put in more potatoes this year. This advice is certainly alright, but in the name of common sense, where is a man to get the seed? You could not even steal them, for they are not in the country.

PINKERTON

The well-drillers who have been working at Mr Al Biddis' struck an over-flowing well. They are now engaged at Mr David Pinkerton's.

Mr and Mrs J Thompson, Miss Susie and Mr T Thompson of Glamis spent Sunday in the village.

Lieut Harold Pinkerton of Walkerton spent Sunday at his home here.

A baseball team is being organized by the fair sex of the village and on Saturday night had their first work out.

Misses Jennie Pinkerton and Hattie Gole spent Sunday at Mr H G Clark's.

Mr Wilmer Donnelly, G T R mail clerk, spent a few days at his home here.

Children Cry
FOR FLETCHER'S
CASTORIA

TWELFTH CON BRUCE

Some of the farmers are through seeding, but it is keeping so cold that there isn't much growth yet.

Sunday School reopened last Sunday for the summer months. There was a fair attendance for the first Sunday.

Mr and Mrs Howe from Port Elgin were calling on their sons on this line one day last week.

Mrs Archie Roltson spent last week visiting at Duncan Beaton's.

GLAMIS

Rev H E Stillwell, of Toronto, who spent fifteen years in India as a missionary, gave a very interesting and instructive address in the Baptist Church on Monday evening.

The Free Methodists held their Quarterly meetings last week. District Elder Allen of Hamilton conducted the services.

Mr and Mrs Jas Begg spent Sunday at Mr Jos Cunningham's.

Mrs R J Nesbit and Miss Dorothy went to Markdale on Friday to visit her parents.

Mr and Mrs William Woods and two children Sundayed at the Misses Howsou's.

Miss Reta McKinnon spent the week end in Lucknow at her sister's.

Mrs J C MacIntyre is spending a few days with her friend Mrs Fitzsimmons in Pinkerton.

Pte Wilber McNally returned to London on Monday.

Mr J K McLennan, who is renovating and adding to his barn will have the raising on Wednesday.

Another young soldier has made his appearance in Glamis in the person of a young son to Corp. and Mrs Kitchen on Thursday last.

ELDERSLIE COUNCIL

Gillies Hill, May 7th, 1917.

The arbitrators appointed to consider the alteration of the boundaries of U S S No 7 & 8 Saugeen and Elderslie, having recommended that lot 3, con 10 to be taken from No 8 and placed in No 7 and 8 Saugeen and Elderslie, and lot 30, con B, be taken from U S S No 7 and 8 Saugeen and Elderslie, and placed in No 8 Elderslie, a by-law was read providing for same, and on motion of Messrs Fraser and Lewis, read a second and third time and finally passed.

Thomson—Lewis—That the following accounts be paid.—Carried:

D McArthur, postage for clerk.....	$3 00
Alex Fraser, insurance Tp hall.....	2 68
John McAllister, repairing culvert, 15 s r.....	2 00
Geo Grant, building culvert, town line Arran and Elderslie.....	4 00
Jas Bliss, repairing culvert, 15 s r.	
filling washout con 4.....	3 00
Chas Sparrow, repairing culvert 5 s r, con 13	1 50

Allen—Thomson—That this Board do now adjourn to meet again at one o'clock p m on May 29th, as a Court of Revision and for general business.—Carried.

R C PEARCE, Tp Clerk.

Opportunities of the Farmer Boy

Charles Dubley Warner has said: "that every body ought to be born in a little red farmhouse with a stone wall around it." Now we don't believe it makes any difference whether or not that farmhouse has a stone wall around it, or whether its color be red or white or green, but we do say that the boy born on the farm is born in the realm of opportunity. Josiah Strong also said that "Were he to be born again, and were Providence to permit him the choice of a place of birth, he would say, by all means let it be on the farm. More opportunities offer themselves to the young people on the farm than to any other class of young people. Our city cousins may laugh at us, but let them laugh; it is only because they do not know a good thing when they see it."

WALKERTON

License Inspector White and his legal counsel, Lawyer Klein journeyed on Saturday last to Ripley, a burg that has been pronounced as the worst stenching hooch consumer on the Bruce map, and in a lively police court proceeding landing the scalp of Jos Wylie, the veteran hostler of the Commercial Hotel there, who was found to have had booze shipped into him and which he illegally kept on tap as a private thirst quencher in the hotel. Although it is said he would have been able to finance the $200 fine for which he was mulcted for the offence, he preferred serving time to liquidating the cash assessment, and the court, as a consequence, sent him over on Saturday to do a five month's passence in the Walkerton punishment plant for his grievous sin against the booze law. Although this is the third conviction for liquor infractions that has been recorded in Ripley within a fortnight, yet the Inspector is said to have only touched the fringe of the drink evil that exists in that thirst centre.

Mr J A McGill who completed his assessment of Walkerton and returned his roll to the clerk last week, reports the population of the town as below the three thousand mark, a fact that is probably accounted for by the brisk recruiting that has been done here, it being estimated that upwards of two hundred have enlisted in the 166th Battalion and other arms of the service since the previous assessment roll was returned. As Walkerton in the present crisis prefers seeing its sons on the service roll of their country than on the census roll of the town, the decline of population, to those who know the cause, is something to point at with pride rather than to apologize for. The Capital of the County that enrolled the biggest battalion in the shortest time of any rural municipality in Canada would be ashamed to acquire a fat census by keeping its manhood at home. As Assessor McGill said he little thought that Walkerton had so splendidly responded to the call of duty, as when he went around and noted the absent ones.

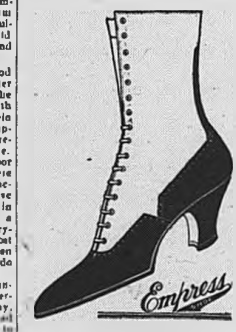
The adage of "Much wants more and loses all," was exemplified last week in the case of a Brant farmer who drove with a load of potatoes to Cargill, but on being offered $1 50 per bag for the murphies and wanting $1 65 returned home again with the inherent hopes of getting the "bold up" price the next day in Walkerton. But the people here never saw the color of his potatoes nor he the sight of our coin, for during the night a light fingered artist visited the home of the Tobacco King and under cover of the darkness "lifted" the entire load. Although the loser has an idea who the visitor is, it would cost him more to prove the deed on him than the potatoes are worth, hence he will bear his anguish in silence, and comfort himself in the fond hopes that after the thief's course is run and the emblazoning flames have been pumped into him that the Supreme Judge will put the culprit and hand him "his" for his sordid visit to the Brant farm.—Herald and Times.

Judge and Mrs Klein, Beatrice and Betty, arrived home Thursday night after a three months' sojourn in Florida. The Judge is somewhat improved in health but is not entirely recovered. Judge Klein says he found the climate of Florida superior to that of California, but in other respects he preferred the Pacific State. Florida is largely populated by a poor class of people and as tourist traffic there is a comparatively new development, accommodation is mostly of a primitive kind. Grape fruit and potatoes grow in large quantities but the soil requires a great deal of fertilizer. Prices of everything are very high and since the frost that partly destroyed the fruit crop, even oranges cost as much at Miami as they do at Walkerton.

The Township of Carrick had its unusual peace and quiet disturbed by several exciting events on Sunday and Monday. The landing of an aeroplane which had lost its way on the road from Toronto to Camp Borden on Sunday night caused a rush of sight-seers to a field on the Klora Road 2½ miles south of Hillsmay. One farmer, Reve Reuber, who was preparing to hurry to the scene in his car, rushed into his driving shed with his lantern to get some gasoline. The result was an explosion, the building being burned to the ground. The same day, the big barn of Jos Pfisinger, lot 13, con 4, was burned to the ground while the family was in bed. Twelve head of cattle, valued at over $100 each and two colts were burned. All that was saved out of the building was four horses. Mr Pfisinger had $1800 insurance in the Farmers Central of Walkerton. His loss will double the amount of the insurance. The origin of the fire is complete mystery and there is some suspicion of incendiary. An incendiary may also have caused the fire which occurred at John Renwick's townline Carrick and Huntick on Monday night, when his barn was completely destroyed by fire. Most of the contents except a few pigs, were got out of the building in time. Mr Renwick unfortunately carried no insurance. The aeroplane which visited the township was bound from Toronto to Camp Borden. Aviator Clark lost his way owing to a defective equipage and had to descend on account of lack of fuel. He procured a supply on Tuesday morning and floated gaily away.—Telescope.

DR McDOUGALL INDUCTED

Friday May 4th, 1917, was a day long to be remembered in the history of the Presbyterian church at North Bruce and St Andrew's, Saugeen. The day was pleasant and a representative congregation gathered to welcome their new Pastor, the Rev Dr John McDougall, late of Keady, County of Grey.



Owing to the absence of the moderator of the Presbytery of Bruce, Rev Mr McCallum of Tara, who had been appointed to preside at the induction, Rev Mr Mann of Port Elgin was appointed as substitute to his place.

Rev Mr Robinson of Tiverton, preached and conducted the devotional services. Rev Mr McNabb of Underwood addressed the newly inducted pastor, and the Rev. Mr Little of Paisley, addressed the people. During the devotional services a quartet rendered by Miss Lamont, Mrs I McVittie Chas Kelso and A Bell was very much appreciated.

At the close of the induction services the newly inducted pastor was introduced to and received a warm welcome from the members of the congregation.

Lunch was then served and a very pleasant hour spent in a social way.

Dr McDougall enters this field under very favorable circumstances. His interest in the Rural Problems of the day leads him to devote his time and talent to the country charge rather than to the city church. In North Bruce and St. Andrews we have a country congregation successfully struggling against the difficulties of a decreasing rural population. We hope their efforts may be still further crowned with success, and that under the leadership of their new pastor, the Lord's work may prosper even more abundantly. —Times.

"I Owe My Life To Gin Pills"

Every one who has suffered from Kidney and Bladder troubles should read this letter from a gentleman in Fort Midway:

"I was once a terrible sufferer with Kidney and Bladder trouble and at times got so bad that I would lose the use of my legs. I could not go away from home without someone with me. My son advised me to take Gin Pills and after taking the first two or three doses I got relief. I continued to take them until I got completely well. I owe my life to Gin Pills.

Yours very truly,
P. M. Kempton.

—Pte Dan McIntyre, formerly of 16th of Bruce was among the recent fatalities in France. He was reported at first as missing, but his body was found later. For a few years he had been in the west, where he enlisted. His mother is now living in Port Elgin. Three of his brothers are at the front.

Was Plowman Exorbitant ?

A citizen stopped THE ADVOCATE man on the street the other day to state that he had endeavored to follow our advice to plant something extra this spring. He complained however, that his plowman had charged him at the rate of $10 per acre for turning over a little bit of ground. There will be some expensive food bullets grown in this plot.

Nurses for Overseas

Miss Jessie Koss, trained nurse, who has been in New York city, leaves in a few days for overseas service with the Canadians. She was here this week on a visit to her home on the 16th of Bruce. Miss Ida Anstead, now in Bloomingdale, N Y, is going shortly with a U S corps of nurses. She is a daughter of Mr and Mrs W C Anstead, of Paisley.

Gets $1500 Alimony

The case of Mrs Ezekiel Greaves, of Greenock, who sued her husband for alimony and the custody of her three children, came up at the High Court sitting in Walkerton last week, and was settled after Mrs Greaves had given her testimony. Mrs Greaves gets her children, $1500, the piano for the use of the children, and some household furniture. Her husband pays his own costs and $250 of her costs.

John Hornell Dead

News sometimes takes a long time to travel a short distance, and comes by a very circuitous route. It was only last week that we learned by a letter from California of the death of John Hornell at Walkerton. The deceased was the son of the late Wm Hornell, who was one of the earliest business men of this village. He assisted his father in the baking business here for many years, but after the latter's death John was not able to follow any occupation owing to physical ailments, and went to make his home in the county House of Refuge, where he died on April 12th.

Date Changed to June 1st

That entertaining play, "The Young Village Doctor," will be given in the town hall, Paisley, on Friday, June 1st, by the Dramatic Club of S S No 14 Bruce. Several other towns have highly enjoyed this company's presentation of the play, and now Paisley people will come in for the treat. The entertainers give their services free, and the whole proceeds will be handed over to the Paisley Women's Patriotic League to be used for providing socks and comforts for the soldiers. Admission—Adults 25c, children 15c, no reserved seats.

Picnic Postponed

The patriotic picnic advertised for May 24th by the Elora Road north Patriotic League is postponed until further notice, on account of the weather.

W M S Presbyterial

The annual meeting of Bruce Presbyterial W M S will be held at Hanover on Thursday, May 31st. In addition to the usual programme of reports, election of officers etc, there will be a missionary address by Mrs Menzies, from Honan.

160th in France

We have not heard of any definite news as to whether the Bruce battalion is yet in France, but Premier Borden is reported to have said after his arrival from England on May 12th: "I am glad to learn that while I have been on the ocean the Fifth Division has gone over in command of Garnet Hughes, who was with me when I inspected the division in England." As the 160th formed part of the Fifth Division, it is quite probable that our boys are by this time lined up on the front.

WALL PAPERS

At the Same Old Prices!

We are sacrificing a percentage of profit to make up for the increase in cost of goods.

We have a wide range of fascinating designs with winsome colorings, new foliage and floral tapestries and new shadow effects with ready cut borders.

THE EARL'S SECRET

Or, a Martyr to Circumstances.

CHAPTER XXX.—(Cont'd.)

"Maester Leicester! I've got it. I found it on the cliff, among the bushes, and—oh! go away, sir, fly, for Heaven's sake!"

"Hush, my poor lad!" said Leicester, who was getting excited himself. "What did you find?"

The poor lad shuddered and put his lips to Leicester's ear.

"The knife! The knife you stabbed him with."

Leicester stared and the hot blood rushed up into his face.

There was a moment's pause, then, in a low, constrained voice, which trembled a little, he said:

"You found the knife, did you, Jamie? and you kept it?"

The lad nodded.

"Yes, fogive me, Maester Leicester. I tried to throw it away. I tried to bury it; but I couldn't. I thought the police would be sure to find it and that—that—it would tell against you!"

"I see," said Leicester. "You are a good lad, Jamie, a faithful lad. And where is the knife?"

"Up stairs," whispered the lad. "Up stairs in a box in my little room."

"Ah!" said Leicester, as the words made the strange conduct of the lad quite clear. "Go and fetch it."

Jamies walked out of the room, and as he did so Mr. Dockett, crept in.

"Hist!" said Leicester, and his eyes were all on fire.

"Have you heard anything?" said Mr. Dockett. "He has gone for the knife. I'll bide here," and he hid himself behind the curtain.

In a few minutes the lame boy's step could be heard upon the stairs, and he entered the room and cautiously locked the door.

"It's up my sleeve," he whispered. "Shut your eyes, Maester Leicester. You needn't look at the horrid thing, shut your eyes, and hide it away in your sleeve, then throw it out to sea! Oh! it is a horrid, horrid thing!"

"Give it to me," said Leicester, hoarsely; and to please the lad he shut his eyes. Jamie slipped the knife in his hands and instantly the detective slid from behind the curtain and grasped Leicester's hand.

Leicester offered no resistance, and hushed Jamie's cry of alarm.

"All right, Jamie, don't be frightened. This is a friend."

"Is it your knife?" said Mr. Dockett, quite cooly.

"Let me see," said Leicester, then as he looked at it he sprang to his feet. "By Heavens!" he exclaimed, with a shout of frenzy, "his sin has come home to him! Nemesis is on his track."

"Whose knife is it, I ask you?" exclaimed the detective, almost excited.

"Howard Murpoint's," replied Leicester.

At that moment the door opened, and Stumpy entered.

He had heard every word, and as he paused on the threshold he muttered to himself: "Jerusalem! things are working round bad for the general!"

CHAPTER XXXI.

Captain Howard Murpoint was working fast toward a completion of his plans; but others were working faster, and Mr. Giles, the city detective, had made his report to Mr. Dockett. That report contained enough of information to surprise one more up in the wiles of the wicked than Mr. Dockett, but as he read the story of Howard Murpoint's money dodges he merely raised his eyebrows and muttered:

"He's a rare, clever one—a rare, clever one; it's almost a pity to interfere with him."

So it came to pass that time slipped by, and Howard Murpoint, quite unconscious of the Nemesis upon his track, pressed Violet to name an early day for the wedding, for though preparations had for some time been in course, no actual day had been fixed.

Violet shrank a little, but she, in her gentle, dreamy way, agreed that the day should be postponed no longer, and, accordingly, the 24th of August was set down, the lawyers and the dressmakers bidding to hasten.

August the 20th came, and Violet, still dreamy and quietly calm, was seated in the drawing-room; some trifling piece of lady's work was in her hand, but the needle was still, and her hands were idle.

Mrs. Mildmay was seated at the open window, busily engaged in writing out a list of invitations for the wedding breakfast.

From time to time she glanced over at Violet and put some questions, which Violet always answered in her quiet, preoccupied way, and Mrs. Mildmay wrote on.

"Shall we have the candles, my dear?" she said, at last, as the twilight fell and compelled her to pause.

"If you like, auntie," said Violet. "Why do you not rest a while? I wish you would let me help you," and she crossed the room, bent over her aunt, and kissed her.

Mrs. Mildmay looked at her and drew her down to a footstool beside her.

"Violet," she said, "you do not seem much excited by—by the great event coming."

"No," said Violet, with a smile and a sigh, her face gradually growing abstracted and her eyes more fixed. "Aunt, am I wrong to take things so quietly? Some times I think it is wicked. Sometimes I fear that I am cold, indifferent, ungrateful for all Captain Murpoint's kindness."

"No," said Mrs. Mildmay. "I am sure you are not that; but—"

"I know," said Violet, "I know what you would say. But I cannot help it, auntie. I feel sometimes as if I were not myself—as if Violet Mildmay were dead and I were her shadow and wraith. Do you know what I mean? As if this were all a dream, and that I should in the end find myself dead! I am not dead, aunt. I know, and I strive to rouse myself. I do rouse sometimes, but only for a little while," she sighed. "The strange, numbed, unreal feeling comes over me again very soon, and this wedding seems to be that of some one else; but it is mine—mine—mine!"

She started suddenly, and looked up at her aunt with a look of horror.

"There, aunt, I am roused, and see! I am shuddering. I feel as if this were some dreadful crime I was about to commit. I hear Leicester's voice warning me! I feel his hand drawing me back! No—no, I will not be Howard Murpoint's wife!"

Mrs. Mildmay rose with alarm.

"Violet!"

"Hush, aunt!" said Violet. "It has gone! I am wicked and silly. It has gone, that dreadful horror and dread. I am dreaming again and numbed. Do not let us talk any more about it. Sit still, dear auntie, and talk of something else."

Mrs. Mildmay resumed her seat, and looked at her darling with a troubled heart.

"My dear Violet, you must struggle against such feelings, especially to-night. Howard is coming, you know, and Mr. and Mrs. Dodson. We are all to talk over your wedding trip."

"To-night are they coming?" said Violet.

"Yes. Captain Murpoint has to take a journey to Penruddle"—Violet shuddered—"to-morrow and may be away for all the time before the 24th. Think, my dear! You will be the wife of a great and good man. Perhaps—for they are all talking of it—you will be Lady Murpoint."

At that time a servant knocked at the door.

"A gentleman wishes to see Miss Violet, madam."

"It is very late," said Mrs. Mildmay. "What is his name?"

"He has given no name. He wishes to see her on business, I believe, madam."

"Will you see him here, Violet?" added Mrs. Mildmay. "I do not like to send him away."

(To be continued.)

Milk and Cheese Dishes.

Milk and cheese, at present prices, furnish nourishment at a much lower cost than meats. The housekeeper who knows their food value and how to prepare milk and cheese in a variety of appetizing dishes will use more of them. Secure the best milk at any price for the babies; their lives depend upon it. Whole milk, skimmed milk, butter-milk for the children, instead of so much meat, is both more wholesome and cheaper. If possible, buy skimmed milk for milk soups and puddings; it is a substitute for meat protein and costs about a quarter the money.

Milk Soups.

2 Tablespoons butter or dripping, 2 tablespoons flour, ½ teaspoon salt, 2 cups milk or 1 cup milk and 1 cup vegetable water, ¼ cup vegetable pulp or flaked fish.

The vegetable water is the water in which the vegetables have been cooked. (In the case of potatoes the water is not used.) The vegetable pulp is the cooked vegetable rubbed through a sieve. Since the vegetable is cooked before making into soup, any left-over vegetable from dinner can be used to make a hot soup for supper or lunch. Onions, carrots, celery, potatoes, canned corn, peas, or tomatoes, are generally well liked. In the case of tomatoes, a pinch of soda must be added to neutralize the acid or the milk will not curdle. Remnants of cold boiled fish, or canned salmon, or dried beef may be used in the same way as the vegetables.

Macaroni and Cheese.

1 Cup macaroni, 2 cups milk, 3 tablespoons butter, 4 tablespoons flour, 1 cup grated cheese, ½ teaspoon salt, few grains pepper, ¼ cup dry bread crumbs, 1 tablespoon butter.

Add 2 teaspoons salt to 2 quarts boiling water. Drop in the macaroni, broken into inch pieces, and boil hard for 20 minutes. Drain and pour cold water through to prevent the pieces sticking together. Melt the 3 tablespoons butter in a saucepan; add the flour and stir until frothy; add the milk and stir until it thickens. Season with salt and pepper, add the cheese and pour over the cooked macaroni. Melt 1 tablespoon butter in a baking dish, stir the crumbs in this, turn them out on a plate, put the macaroni in the baking-dish, and sprinkle the crumbs over the top. Bake until thoroughly heated and the crumbs brown. This may be served in a vegetable dish without the crumbs and baking, but the macaroni must then be re-heated in the sauce.

Cheese Fondue.

1 Cup scalded milk, 1 cup soft stale bread crumbs, 1 cup grated cheese, 1 tablespoon butter, ½ teaspoon salt, 2 eggs.

Mix first five ingredients. Add yolks of eggs well beaten and fold in the stiffly beaten whites. Pour into a buttered baking-dish and bake twenty minutes in a moderate oven.

Cheese Souffle.

3 Tablespoons butter, 4 tablespoons flour, 2-3 cup milk, 1 egg, 1 cup grated cheese, salt and pepper, few grains of cayenne, dry crumbs.

Melt the butter, add the cornstarch, and when well blended gradually stir in the cream and cook 2 minutes. Add the cheese and stir until cheese is melted. Season and serve on toasted crackers or on bread toasted on one side, the rarebit being poured over the untoasted side.

Standard Food is the Cheapest.

Important factors to life are air, water and food. We can live without air for only a short time, without water from one to four days and without food from thirty to fifty days. In composition the human body is three-quarters water, and of such a nature that a variety of foods is necessary, but not all are desirable.

The most important business of the housewife is to know and understand, with a working knowledge as a basis, this supremely interesting subject.

Good food is most necessary for good health, and even the best foods are often spoiled by incompetent housewives, who are not able or familiar with the necessary and important rules of cooking. These require intelligent and persevering work, sincere efforts and determination to have this important knowledge at their finger tips.

Many women fail in their undertakings because they have a wishbone in place of their backbone. Roll up your sleeves and determine that high grade will hold no terrors for you when you know that good standard brain food is the cheapest in the end. Do not permit a[illegible] but utilize every portion of t[illegible]rift is not stinginess, as so many people imagine, but it is carefulness in undertakings, that when used in the home, especially in the kitchen, nets to the persevering housewife wonderful result.

Housekeeping Helps.

Spinach is in a class by itself, because of its large amount of iron.

Cooked squash left over from a meal may be made a delicious soup.

Always have the board well floured before beginning to knead bread.

If you feel very tired and drowsy, dash very cold water in your face.

The empty baking powder can makes a good nut mincer.

Bacon dripping is excellent for frying hashed brown potatoes.

Prunes cooked without adding sugar are more wholesome and better flavored.

When the top of the kitchen range is red hot your fuel is being wasted.

Hot egg sandwiches make a good inexpensive dish for supper.

Tins for the baking of large round cakes may be partially lined with paper.

Fine linens and all pieces of handsome lingerie should be wrung out by hand and never through a wringer.

The young carrots pulled up when thinning the carrot bed can be scraped and cooked and served with cream sauce.

The sugar for jelly should always be heated in the oven before using. Stir frequently and do not allow it to brown.

ECONOMY TO PROTECT BIRDS.

Best Guard Against the Ravages of Insect Pests.

In an address on "Insect Life in Relation to Bird Life," a Toronto speaker, Dr. Cosens, recently told of the constant struggle going on in the world between plants and animals and insects for existance, and of the nice balance of nature. This has been destroyed by man, who is reaping the consequences of his destruction of the birds by suffering from the ravages of insect pests. Birds are the most important check on injurious insects. There are certain other checks, such as parasitic insects like the family of the Ichneumonidae. The Ichneumon fly lays its eggs either on the skin, under the skin, or near the larvae of the insect it preys upon. But the birds are our great helpers, and every stage of insect life, eggs, larvae, caterpillar and mature insect, furnishes food for some bird. Warblers and chickadees clean up the eggs, as do the creepers. A colony of warblers and chickadees will keep an orchard free from the dread San Jose scale. A number of orioles and yellow-billed and black-billed cuckoos will keep an orchard free from the tent caterpillar. Bank swallows feed on the adult mosquito, and should receive absolute protection. Dr. Cosens deplored the destruction of colonies of bank swallows every year by idle boys. This should be stopped. Every bank swallow is a public benefactor. The woodpeckers are the only check on boring beetles in the world, and are specially equipped with a beak and a tongue for digging under the bark and licking out the grubs. The bark beetle is the most destructive pest we have. The annual loss in forests in the United States alone is estimated at $100,000,000. Woodpeckers should be encouraged and protected. The sapsucker is more likely boring for a grub than for sap. The robins feed on the brown-tailed moth, which was imported to this continent from Holland in 1891 in nursery stock and became very destructive in the New England States. The gypsy moth has a caterpillar which weaves a silken mat and floats away on the wind to pastures new.

This most valuable of farm books costs you not one cent. It will, if properly used, mean hundreds of dollars in actual profits to you. It covers all the uses of Concrete on the farm from fence-post to silo.

STRENUOUS WORK SOON TELLS ON YOU

Business Men and Breadwinners the Victims of Nervous Exhaustion.

When worry is added to overwork men soon become the victims of nervous exhaustion — neurasthenia — the doctor calls it. Some have no reserve strength in their systems to bear the strain; others overtax what strength they have. If you find that you are nervous and not sure of yourself, that you sleep badly, and wake up tired and aching, your nerves are out of order. Other signs are inability to take proper interest in your work; your appetite is fickle; your back feels weak, and you are greatly depressed in spirits. One or more of these signs mean that you should take prompt steps to stop mischief by nourishing the nerves with the food they thrive on, namely the rich red blood made by Dr. Williams' Pink Pills. These pills have cured thousands of cases of nervous disorders, including nervous prostration, neuralgia, St. Vitus dance and partial paralysis. Here is an example: Mr. P. H. Callan, a well known business man in Coleman, P.E.I., says: "I owe my present health, if not life itself, to Dr. Williams' Pink Pills. I had always been an active man, and when I began to run down in health paid little attention to it as I thought it only a temporary weakness. As time passed, however, I found myself growing worse, and consulted a doctor, who said that I was not only badly run down, but that my nervous system was badly shattered. I lost flesh, my appetite was poor, I slept badly and notwithstanding the doctor's treatment grew so weak that I had to leave my business and was confined to the house. Time went on and I was steadily growing weaker and my friends were all greatly alarmed for my condition. In this condition I was strongly recommended to try Dr. Williams' Pink Pills, and as the doctor's medicine was not helping me I decided to do so. By the time I had used three boxes I could tell that they were helping me. When I had taken eight boxes of the pills I felt able to attend to my business again, and people were surprised to see me out. I continued the use of the pills until I had taken twelve boxes, by which time I was feeling as well as ever I did, and was being congratulated by all my friends on my full restoration to health. I feel now that if I had used Dr. Williams' Pink Pills at the outset I would not only have saved much money spent in doctor's bills, but would have had renewed health sooner. I cannot speak too highly of this medicine, and would recommend it to every man who feels weak, nervous or run down."

You can get these pills through any medicine dealer, or by mail at 50 cents a box, or six boxes for $2.50, from The Dr. Williams' Medicine Co., Brockville, Ont.

WHAT, NO BURGLARS!

How Criminals Have Won Distinction on the Battlefields.

It's an ill wind that brings good to no one. One unforeseen result of the long-drawn-out conflict has been a large drop in the population of our prisons. Only the other day Dartmoor, one of the most famous of our convict prisons, says an English writer, was converted to another use; and most gaols in all parts of Great Britain are experiencing an unusual dearth of guests.

This is not due to any wholesome reformation on the part of our burglars, pickpockets, and other criminals. One great cause is the fact that most able-bodied professional criminals are in the Army, where those opportunities for the exercise of their profession are restricted.

Police supervision has been so much simplified by National Registration and the Conscription Acts that even those criminals at large know how difficult a "get-away" would be. Also the Defence of the Realm Act has put a spoke in the wheel of those cosmopolitan thieves who in normal times find a happy hunting-ground in this country.

The Army has offered a career to many men who have drifted into a life of crime, and scores of them have "made good." One burglar won the V.C., and another man was awarded the Russian Cross of St. George.

CANADA IN FLANDERS

NOW READY Volume 2 NOW READY

This contemporary history of the Canadian Expeditionary Force

Issued by the Canadian Government, is official.

HODDER, STOUGHTON LONDON

UNIFORM WITH VOLUME 1 NOW IN THE 3.50 EDITION

PUBLISHERS

BY LORD BEAVERBROOK

CLOTH 35 NET

POSTAGE EXTRA

OBTAINABLE AT ALL BOOKSELLERS

TWO SERVICEABLE DESIGNS

Almost like a coat is the blouse of this costume with its tiny vest-like front and large side pockets. The development of the costume is in plain jersey cloth with trimming of checked jersey in green and white. It is a splendid model foo the all-important sports costume. McCall Patterns No. 7606, Ladies' Blouse, in 6 sizes; 34 to 42 bust; and No. 7781, Ladies' Four-Gored Skirt, 39-inch length, in 5 sizes; 22 to 30 waist. Prices, 20 cents each.

Serviceability for playtime and style for Sunday-school are happily combined in the designing of this little suit. White linen with dark blue collar and pocket laps will be a cool and practical development, smacking of the navy, while in khaki it will have quite a military air. McCall Pattern No. 7720, Boy's Suit., in 4 sizes; 2 to 8 years. Price, 15 cents.

These patterns may be obtained from your local McCall dealer, or from the McCall Co., 70 Bond St. Toronto, Dept. W.

THANKFUL MOTHERS

Mothers who have once used Baby's Own Tablets for their little ones are always strong in their praise of this medicine. Among them is Mrs. Marcelle Boudreau, Mizzenette, N.B., who writes: "Baby's Own Tablets are the best medicine I know of for little ones. I am very thankful for what they have done for my children." The Tablets regulate the bowels and stomach; cure constipation and indigestion; break up colds and simple fevers; in fact they cure all the minor ills of little ones. They are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

FLOWERS NOW OR FRUIT LATER

Every Fruit Blossom Should Be Left on the Trees to Develop.

In spite of careful husbanding of all our agricultural resources, some of them may go to waste through deplorable thoughtlessness. The selling of fruit blossoms on street corners may bring joy to winter-weary city dwellers; but it will also interfere with fruit production later on when we most need apples, pears and peaches for their food value.

The blossom season lasts but a few weeks each spring, and the flowers are exceedingly short-lived, so that they make but an evanescent decoration at best. There are plenty of other flowers, a host of joyous little folk of the spring woods, which are equal in charm to any florist's offering, and which may be plucked without harmful results. Provided that their roots are left in the ground they will come up another year with greater vim than ever. And for larger sprays and bank effects the dogwood and the lilac will grow all the better after selective cutting of their blooms. Having such a wealth to choose from, there is no excuse for marring the harvest by picking fruit blossoms now.

After all they can best be enjoyed by visiting the orchard itself and bringing back a memory of its perfection of color and perfume which will long outlive a few expatriated sprays of wilted blossoms.

Brighten The Corner where you are by eating a food that does not clog the liver or develop poisons in the colon. Cut out heavy meats and starchy potatoes and eat **Shredded Wheat Biscuit** with berries or other fruits. Try this diet for a few days and see how much better you feel. The whole wheat grain made digestible by steam-cooking, shredding and baking.

Made in Canada

MY ONLY REGRET.

To the Youth of My Native Land.

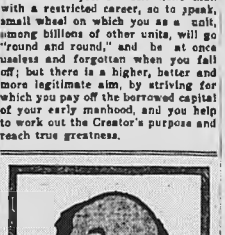
By Chas. M. Rice, Denver, Colo.

Age brings with it contentment and gladness, if the life has been well spent in doing good to others. That is what we are here for, and there can be no consciousness so high and exalted as that which prompts to self sacrifice in behalf of a superb principle, or to help our fellowmen, which is the same thing.

To-day democracy trembles in the balance, having been ruthlessly assailed by a half-civilized autocrat, bent on its extinction and the triumph of despotism in its place.

My only regret is that age prevents the immolation of all my physical powers upon the altar of my country in this supreme crisis.

The country needs you and me in this hour of her extreme peril. Would to God that the body was as young and vigorous as the mind to take up the burden of overthrowing insolent despotism.



* * *

I fear that many, far too many, do not realize the danger that menaces our liberties and threaten all that we hold dear and sacred in this world, otherwise there would be a more hearty response to the call for help than has yet been made.

Young men of Canada, what capital for a life career have you, and what is your aim? You have youth, health, ambition, and these are fine possessions, if not essentials. You get them from your Maker, and good home environments. They are borrowed capital which you can pay back only by devoting yourself to high ideals and giving the very best that is in you. You lack experience? You will get that as you live and work along. Sometimes, you will get it in tears, failures, disappointments and scars, but it will be the greatest part of your equipment if you take right advantage of it, as it comes to you, and you can borrow even this part of your life capital by studying and adopting the experience of others.

* * *

In asking your aim, we do not seek to know whether you are eager to become a banker, a merchant, a statesman or a tradesman, as these avocations appertain only to personal fortunes and caprices. The little man with a restricted career, so to speak, small wheel on which you as a unit, among billions of other units, will go "round and round," and be at once useless and forgotten when you fall off; but there is a higher, better and more legitimate aim, by striving for which you pay off the borrowed capital of your early manhood, and you help to work out the Creator's purpose and reach true greatness.

WHAT!

NO SLEEP LAST NIGHT?

If tea or coffee was the cause change to POSTUM and sleep!

"There's a Reason"

When youth is all gone, when the fires that move men to vocational success are banked by time and the monotonies of life, when deep wrinkles and white hairs notify the world that one is passing, the greatest of all happiness is the ability to honestly pray: "Father, I thank Thee, that after all my years in the harness I have still some little capacity and opportunity to serve my fellowmen."

* * *

The greatest of all aims is service. It is not thyself first, but thy brothers. It is not your career but the world's. Not for yourself alone should your youth, your energy, your ambition, be made to count, but for man everywhere, Service!

The great men of money, like Rockefeller and Carnegie, are anxious at the last moment to make their money serve mankind. The greater men, like Edison and Pasteur, labor night and day with thought that their helpfulness may mean world progress. The writers of things that live, the scientists and inventors, from whose restless brains spring great truths and designs that mean human comfort and happiness, work that humanity may move upward, Service.

* * *

Young man, never before in the world was the opportunity so great, so clear for the investment of your capital—youth, energy, high purpose—in human service. On one side is civilization: upon the other, barbarism with reversion to the beast. This is the issue. Shall public service be the living and working for liberty, equality and progress? Or, shall public service in the work of slaves that would fasten on humanity a reversion under which "might is right," liberty a silly dream, and equality doled out by the bloody sword of autocrats?

The only true Service is work for the Fatherhood of God and the Brotherhood of man!

* * *

The young Canadian who shoulders a rifle to-day, or takes his place behind a ship's gun, has writ before him high in the skies, Service for Humanity! It is his mission.

It is his chance for living worth while, for happiness and true nobility. It is doubtful if he will ever again find open to him such an investment, wherein the capital required is not money, nor power, nor pull, but solely genuine manhood.

Youth of free Canada! free born in martyr's blood and mother's sacrifice, shrivel not up in your personal affairs, but rally round the flag of your country.

Strike, that humanity shall, under God, have a new birth of freedom, and that government of the people shall not perish from the earth!

ANY CORN LIFTS OUT. DOESN'T HURT A BIT!

No foolishness! Lift your corns and calluses off with fingers —It's like magic!

Sure corns, hard corns, soft corns or any kind of a corn, can harmlessly be lifted right out with the fingers if you apply upon the corn a few drops of freezone, says a Cincinnati authority.

For little cost one can get a small bottle of freezone at any drug store, which will positively rid one's feet of every corn or callus without pain.

This simple drug dries the moment it is applied and does not even irritate the surrounding skin while applying it or afterwards.

This announcement will interest many of our readers. If your druggist hasn't any freezone tell him to surely get a small bottle for you from his wholesale drug house.

FARMS FOR SOLDIERS.

New Zealand Plan for Returned Soldiers Working Well.

Mr. W. F. Massey, the New Zealand Premier, reports that so far 258 returned soldiers had been settled on the land in New Zealand under the Government scheme to provide 5,000 of her fighting men with a new start in life.

"The men we are settling in this way," he said, "fall into six classes. First, the man who wants to breed sheep and requires a large area of country—perhaps up to 5,000 acres. Then comes the dairy farmer with, say, 200 acres for 50 cows, which we will even buy for him if necessary; the grower of wheat or another crop, 100 acres; the fruit grower, 20 acres; the poultry farmer, with ten acres, near a city; and, last, the incapacitated man, who wants an acre or two in the suburbs on which he can earn something to augment his pension.

"Of course we have not Crown land for all these people, and in some cases we have purchased land for them up to £30 an acre. They pay 5 per cent. interest for the money we advance, and in ten years' time they are given a 'free title' to the land, which they may then dispose of as they wish. The only condition we make is that the men must have been born in New Zealand and have served in either the British army or the navy. The scheme is not confined to men who have been fighting with the New Zealand forces."

I Wonder.

Do fishes use the liquid tones
The world so highly praises?
Could they speak dryly? And do bees
Converse in honeyed phrases?

THE NEW-BORN SOLDIER.

With Apologies to the Author of "Our Baby."

Where did you come from, soldier dear?
Out of a business house into here.

Where did you get your aim so true?
From a school of musketry I came through.

Where did you get your athlete's cheat?
Ask the drill-sergeant; he knows best.

How do you carry that hefty pack?
Expanding my chest, I broadened my back.

Why did you join the infantry?
I'm little more than a kid, you see.

And how did you get your cheerful air?
I'm British. No more to be said, is there?

Proved Once More In Southampton, Ont.

That Dodd's Kidney Pills Cure Rheumatism.

Harold D. Bertram Had Inflammatory Rheumatism and One Box of Dodd's Kidney Pills Cleared It Out of His System.

Southampton, Ont., May 14th (Special)—That rheumatism is caused by disordered kidneys and that Dodd's Kidney Pills will cure it is again proved by the case of Harold D. Bertram, a young man well and favorably known here. He had inflammatory rheumatism for two months. Dodd's Kidney Pills cured him.

"The doctor said my trouble started with the grippe," Mr. Bertram states. "My hands and feet were badly swollen and the doctor did not seem to be doing me any good. My grandmother, Mrs. G. Grasser, advised me to take Dodd's Kidney Pills. I took one box of them and I haven't been bothered since. I am clear of the rheumatism."

That Mr. Bertram's trouble came from his kidneys is shown by his other symptoms. He had stiffness in the joints, was tired and nervous, and there were flashes of light before his eyes. He had a dragging sensation across the loins, was always thirsty and felt heavy and sleepy after meals.

Rheumatism is caused by uric acid in the blood. Cured kidneys strain the uric acid out of the blood. Dodd's Kidney Pills cure the kidneys.

Freddy Is Right.

The teacher's last question was meant to be a scientific power.

"What is that which pervades all space?" she said, "which no wall or door or other substance can shut out?"

No one had an answer ready but Freddy Sharpe.

"The smell of onions, miss," he said promptly.

Minard's Liniment Lumberman's Friend.

He Always Had.

The "sporting" son of wealthy parents was offered a job by an old friend of his father.

"How much will you pay me?" he asked.

"All you are worth," said the friend.

To which he replied with business-like brevity:

"No, thank you. I can do better than that."

I cured a horse of the Mange with MINARD'S LINIMENT.
CHRISTOPHER SAUNDERS.
Dalhousie.

I cured a horse, badly torn by a pitch fork, with MINARD'S LINIMENT.
St. Peter's, C. B. EDW. LINLIEF.

I cured a Horse of a bad swelling by MINARD'S LINIMENT.
Bathurst, N. B. THOS. W. PAYNE.

Busy Idleness.

Doing things that are not worth while is a pernicious form of idleness.

Keep Minard's Liniment in the house.

Knew His Business.

Mrs. Smith hired a Chinese servant, and tried to teach him how to receive calling cards. She let herself out the front door, and when the new servant answered her ring she gave him her card.

The next day two ladies came to visit Mrs. Smith. When they presented their cards, the alert Chinaman hastily compared them with Mrs. Smith's card, and remarked as he closed the door:

"Tickets no good; you can't come in."

ZAM-BUK

Purely Herbal—No poisonous coloring
Antiseptic—Stops blood-poison
Soothing—Ends pain and smarting, etc.
Pure—Best for baby's rashes.
Heals all sores.

50c. box. All Druggists and Stores

MAGIC

BAKING POWDER

His Furrow.

Mr. W. Beach Thomas, in the London Daily Mail, writes: "I watched a single French farmer, who even at this hour was leading out his grey horse to plough a fallow well in front of our heavy guns and in sight of the enemy. The headland of his furrow was a barbed-wire barrier."

Sore Eyes Granulated Eyelids, Eyes inflamed by exposure to Sun, Dust and Wind quickly relieved by Murine Eye Remedy. No Smarting, just Eye Comfort. At Your Druggist's 50c per Bottle. Murine Eye Salve in Tubes 25c. For Book of the Eye free ask Druggists or Murine Eye Remedy Co., Chicago

Newspaper Legs.

In Belgium old newspapers are being worked up into a papier mache composition, from which artificial limbs are moulded.

Ask for Minard's and take no other.

Those Foolish Questions.

Old Lady—Conductor, why did the train stop before we came to the station?

Conductor—Ran over a pig, ma'am.

Old Lady—What! Was it on the track?

Conductor—no—oh, no; we chased it up the embankment.

MONEY ORDERS

THE safe way to send money by mail is by Dominion Express Money Order.

Chinese Flower.

A certain flower growing in China is white at night or in the shade, but displays a red color in the sunlight.

Minard's Liniment used by Physicians.

The tanning of ostrich skins is one of the new South African industries.

With the aid of motor trucks the picturesque circus caravan is to be revived. A circus has announced that this summer it will tour the country in motor cars.

Absorbine and Absorbine, Jr., are made in Canada.

The Paisley Advocate

PAISLEY, MAY 23rd, 1917

—We agree with those who protest against sending men under 20 years of age into this war.

—Now that we are likely to have conscription of men for war purposes there should also be conscription of wealth, if for no other purpose than to increase the pension rate for the warriors and their dependents.

—A despatch from Ottawa says that a food controller probably will be appointed this week. It is understood that the Ministers favor the appointment of one man to act in conjunction with the food director of the U.S. The Canadian Government has power under the War Measures Act to make the appointment without further legislation. A big man is required for the job, and he can't be put into action too soon.

—The railway magnates are now busy showing how much better railways can be managed by private owners than under public ownership. We see it stated that it would have been a good thing for Canada if the government had undertaken railway management at the time the C P R was built. Sure, it would. And thirty, forty or fifty years from now—if the Government does not follow the recommendation to take over the railways—it will be said that it was too bad the roads were not assumed at the time of the war. "Do it now" is the motto for Canada.

—Selective conscription is to be resorted to by the Dominion of Canada to provide fifty to a hundred thousand men as reinforcements to the Canadian forces in France. This announcement was made in the House of Commons on Friday by Premier Borden. The Prime Minister has just returned from England, and after his closer view of the war operations with the part the Canadians are playing at the front, he has become convinced that the recruiting system must be improved to raise more of an army. Conscription will be acceptable to a great majority of people, although objections are looked for from some sections. Apparently the first class to be drawn upon will be all men of between 18 and 30 years of age without dependents.

—That Ontario farmer, philosopher and writer, Peter McArthur, has been receiving a lot of letters from farmers on the subject of farm legislation, and these epistles he claims have cleared up one point that has always puzzled him.—why farmers so seldom rally to the support of another farmer who has been nominated to office. Judging from what is said in letters from farmers, the candidates are usually men who have prospered by taking advantage of their struggling neighbors in times like the present. They are, perhaps, like the prosperous father who said, when advising a young friend of mine: "It is always a good thing to have some money by you in hard times. When folks are hard up and have to meet notes and pay interest you can always pick up bargains." The most searching hymns of hate that came to Mr McArthur were written by farmers against other farmers of this type. And I want to assure disgruntled city men that when it comes to describing a mean farmer they had better leave the job to another farmer. He knows how to do it, and when he starts in to describe a gripping neighbor he doesn't stop until he has his hide nailed to the end of the stable with the rest of the winter's catch. When candidates for office are chosen from this type of "prominent farmers" his neighbors cannot be expected to support him with enthusiasm. They regard him as a traitor who would sacrifice their interests whenever he saw a chance to advance himself. Of course, all candidates are not of this kind, but too many of them have been in the past. No wonder the other farmers prefer to trust a lawyer or business man as their representative.

—Conscription in some form is what the most of people have been crying out for during the past year or two. At the first mention of such a method of raising our quota for the army of the Allies we were inclined to shudder and get gooseflesh all over. That feeling has passed away, however, after seeing how unfairly the voluntary system worked out when it was good going, and how, ultimately, it almost failed to work at all. Our Government is entitled to the support of the people in the decision to put in force a better than the voluntary system. As the Toronto Daily Star says:

"Sir Robert Borden has made the bold and right decision and will be upheld in it. The details for carrying out the policy decided upon will require reasonable discussion, but all this should be carried on in a right spirit of conference rather than of dispute. Where a relatively small number of men are to be derived by selection from a large population, it is evident that a method that is just and fair as is humanly possible must be established in each community for the selecting of the necessary quota. The Militia Act provides that the selecting shall be done by ballot, and that plan should be followed in every possible instance. But where exemptions have to be granted to men indispensibly engaged in essential industries, a reputable non-partizan, non-sectarian board ought to preside in determining such cases.

"Nor should the forces that will be raised by this selective process be called conscripts. We are democratic people, voluntarily adopting through our representative Government a just and equitable method of raising forces. Had the country known earlier what it knows now this method would have been adopted sooner, and there are thousands of young men who, perceiving the unfairness of the voluntary plan and foreseeing its inevitable failure, denounced the plan, and declared for the action that is now being taken. There must be in this thing the right spirit and a recognition of the fact that the selected men will give us an army that will do the country credit."

LOCAL AND DISTRICT NEWS

Has Been at the Front

Mr H Woodcock, owner of the Paisley pork factory building, writes THE ADVOCATE a short letter to tell us he is still in the land of the living after a term in the fighting zone. He met a couple of Paisley boys in the front line, one was Babcock, the other Crawford. He says, "We will soon have the Kaiser where we want him," and expresses the opinion that the war will end this summer. A number of souvenirs he picked upon a battlefield and sent THE ADVOCATE have been received, including a gas mask, a good razor, and a mirror. Mr Woodcock says if he comes through the war all right he will make his home in Paisley. His letter is from London.

Seeding Was Fine

The land never worked up better than it has done this season. Fields that have been worked could not be made to look smoother. The result is a seed bed that is about perfect. Plenty of rain has fallen since Monday to water everything sown. With warm weather following there will be a fine start for the spring crop. There has been perhaps more of a decrease than increase of acreage sown. Fall wheat is in poor condition generally, although there are some good fields. Hay, clover and pasture fields were badly winter killed. There will be no repetition of the 1916 visible of fodder. Roots and corn may balance up the stock rations, however, before the end of the year, so there is no need to feel gloomy yet. The growth of vegetation is not as far advanced as in the average season, but is coming on well, considering the cold and drouth of this month.

Memorial Service

A memorial service in honor of the late Pte Alexander McGillivray held in Knox Church on Sunday evening, was very largely attended by people of all denominations. Rev G C Little, B.A., preached an eloquent, sympathetic and forceful discourse. The ministers of the other churches were present and assisted in the services. The deceased soldier was the only son of Mr and Mrs Colin McGillivray of 12th Bruce and was aged 28 years, 4 months. He enlisted at Winnipeg with the Fort Garry Horse. His death occurred at No 2 General Hospital, Havre, France, about May 13th. Alex went west about ten years ago, and had a homestead proved up near Lloydminster, when he decided to respond to the call for men to fight for the cause of freedom. He was a sturdy young man, well spoken of by his old neighbors and friends in Bruce Tp.

Masonic Hall Dedicated

One of the largest gatherings of Masonic brethren that has been held in this district was that which took place on the occasion of the dedication of the hall of Bosvilen Lodge at Cargill on Wednesday evening last. About, twenty-five were present from Paisley, most of whom took a prominent part in the proceedings. The new hall is spacious and well furnished, and underneath is a large auditorium where a banquet was served at the close of the dedication, and the fourth degree was put on in splendid style with the assistance of a large number of the lady friends of Moravian members. The toast list was in charge of Bro R A Fowlie, W M. Excellent speeches were made by Bros F C Ryan, Dr Houston, H McKercher, J A Logie, J H Steele, of Paisley; Cooper, of Owen Sound; A Johnston, the D D G M, J H McBurnie, D McKercher, of Walkerton; C E Start, Tara, and others.

THE CHIEF CHARM OF LOVELY WOMAN

Soft, Clear, Smooth Skin Comes With The Use Of "FRUIT-A-TIVES".

NORAH WATSON
86 Drayton Ave., Toronto.
Nov. 10th, 1915.

A beautiful complexion is a handsome woman's chief glory and the envy of her less fortunate rivals. Yet a soft, clear skin—glowing with health—is only *the natural result of pure blood.*

"I was troubled for a considerable time with a very *unpleasant, disfiguring Rash*, which covered my face and for which I used applications and remedies without relief. After using "Fruit-a-tives" for one week, the rash is completely gone. I am deeply thankful for the relief and in the future, I will not be without "Fruit-a-tives".

NORAH WATSON.

50c. a box, 6 for $2.50, trial size, 25c. At dealers or sent postpaid on receipt of price by Fruit-a-tives Limited, Ottawa.

The Spring Clean-up

The production campaign has been in the front here this year, but now that planting time is about over, there should be a general clean-up of neglected spots in town, whether these be on private premises or public property. There should be a general desire to make our little burg a place of beauty and a joy forever. Every accumulation of filth, rubbish or refuse that can be seen has an unfavorable effect upon the observer. Should our boys come home this year after seeing the beauty spots of old England, they would more than ever loathe some of the landscape features of Paisley. Take that central spot, the town hall and its surroundings, for example. There never has been a real attempt made to improve it as it might be done. We don't wish to go into details, but would suggest that the ground be looked over by those in authority, with a view to reducing the roughness and combing out the dishevelled condition of the town property. Council and citizens might make a bee and clean up the whole corner in a few hours. This is not the only place that would stand retouching. Some property owners have very much neglected their duty in this respect, and should turn over a new leaf or two this spring, without waiting for the boils to open and make the turning easy. As we have before remarked, nature has done a great deal to make Paisley an attractive place, but man has not done his share to assist.

About Bean Growing

The Agricultural Department is advising farmers to grow beans more extensively. It is pointed out that it costs from $25 to $30 for seed to plant an acre of potatoes, which will not likely give a sufficient return in food values. The same money will provide seed for more than ten acres in beans, and there is every promise of a big demand for the crop at high prices. Land that is suitable for potatoes is generally suitable for beans. In Huron county we see there is a sensational development being made in the bean growing industry, especially on the lake shore section. Huron had a bean crop worth a million dollars last year, and in 1917 the crop should net them nearly two millions, the acreage being doubled and trebled in some sections. With favorable conditions it is stated that the Huron bean crop of 1917 will be equal in value to the entire bean crop of the province in 1914. The farmers of that county are growing less wheat and more beans, which are produced with very little extra labor. Much of the work is done with machinery. Mr Cook of Hensall, the "bean king of Huron county," estimates that the area sown to beans this year would be about eighteen thousand acres. The average yield is sixteen bushels to the acre, though some farms last year produced as much as twenty bushels to the acre. Sixteen bushels per acre means 288,000 bushels of beans on eighteen thousand acres, and at $5 per bushel, which is the probable price, the 1917 crop will be worth nearly one and three-quarter million dollars. That is twice as much as Huron's wheat crop realized in 1915, a fairly good year for wheat. Mr Cook told a Globe correspondent that Mr J J Merner, M P P, of Zurich, raised $10,000 worth of beans on one hundred acres of land last year, and that this year he is putting in two hundred acres of beans, while quite a number of the farmers are devoting one hundred acres to beans this year. The bulk of last year's crop was marketed at $6 per bushel. Some of the farmers had 700 bushels and got over $5000 for their crop. The value of the land raised last season was greater than the value of the land upon which they were raised, a good farm of 100 acres with improvements, buildings, etc, being worth from $8,000 to $10,000. Mortgages have been wiped out and the farmers are now buying automobiles, for it is only in the last few years they learned what a wonderful bean-growing section they have in the farms bordering on Lake Huron in the townships of Hay, Stephen and Stanley. In the townships around Paisley there is considerable land suitable for bean growing, and quite a number are going to plant a few acres this spring. If the experiment proves satisfactory, no doubt there will be more attention paid to this crop, at least so long as prices remain at the war level.

The Store with the Stock

Three Reasons Why You will Like Our Clothes

First—We can give you a very large assortment of patterns and prices to choose from.

Second—You can try on the whole suit and see if every part is a satisfactory fit before purchasing.

Third—Our values are dollars below present prices, as our stock was nearly all contracted for before the last great advances in woolens.

SUDDEN DEATH

Caused by Disease of the Kidneys.

The close connection which exists between the heart and the kidneys is well known nowadays. As soon as kidneys are diseased, arterial tension is increased and the heart functions are attacked. When the kidneys no longer pour forth waste, uremic poisoning occurs and the person dies, and the cause is often given as heart disease, or disease of brain or lungs.

It is a good insurance against such a risk to send 10 cents for a large trial package of "Anuric"—the latest discovery of Dr. Pierce. Also send a sample of your water. This will be examined without charge by expert chemists at Dr. Pierce's Invalids' Hotel, Buffalo, N. Y. When you suffer from backache, frequent or scanty urine, rheumatic pains here or there, or that constant tired, worn-out feeling, it's time to write Dr. Pierce, describe your symptoms and get his medical opinion without charge—absolutely free. This "Anuric" of Doctor Pierce's is found to be 37 times more active than lithia, for it dissolves uric acid in the system as hot water does sugar.

Simply ask for Dr. Pierce's Anuric Tablets. There can be no imitation. Every package of "Anuric" is sure to be Dr. Pierce's. You will find the signature on the package just as you do on Dr. Pierce's Golden Medical Discovery for blood and stomach.

WORRY, DESPONDENCY.

Kidney Disease is suspected by medical men when patients complain of backache or suffer with irregular urination, disturbed, too frequent, scanty or painful passage. The general symptoms are rheumatic pains or neuralgia, headaches, dizzy spells, irritability, despondency, weakness and general misery. Worry is a frequent cause and sometimes a symptom of kidney disease. Thousands have testified to immediate relief from these symptoms after using Dr. Pierce's Anuric Tablets.

Perfection in Tailoring

Is reached when Material, Fit, Style and Workmanship are satisfactory. All must be right.

We do not fail to please in a single particular—the choice of material rests with you, but the execution of your order rests with us. Let us prove to you how well we can do our part. You can also save money by having your suit from us. Call in and see.

WHERE DOES THE MONEY GO?

Mr W H Porter of The Farmers' Advocate, makes a spirited and logical defence of the farmer, much maligned these days by some people because of the high prices of foodstuffs. Potatoes, four, five and six dollars a barrel! Who wouldn't be a farmer? Wheat $2 a bushel; great day for the farmer! These are not uncommon expressions heard. While, undoubtedly a few farmers have he'd their supplies for high prices, most of them sold out last fall at much lower figures. In fact there are farmers in Middlesex County whose dinner tables have not seen potatoes for months and the farmer is paying the same price as the city man for flour.

Mr Porter points out that the grain growers of the west disposed of their wheat last fall at a price ranging from $1.35 to $1.50 a bushel. To-day wheat is selling at $2 a bushel. Who is pocketing this 100 per cent difference? In Ontario most of the potato crop sold at $1 a bag; in Nova Scotia farmers received 60c and 65c a bushel; in New Brunswick 65c; and in Prince Edward Island 40c. Potatoes are to-day selling at more than $4 per bag. Who is pocketing this 100 per cent difference?

There has been a "lifting" of prices somewhere. The farmers are not at fault the retail dealers state they are not at fault. The railways claim their transportation charges are so low that they cannot live yet in the course from the producer to the consumer 100 per cent had been added to prices.

This is a matter of much greater importance to the country than the spending of a billion dollars to buy railways which do not pay. When a famine is threatening the world it is much more urgent that a royal commission seek to prevent the Canadian people from being robbed of millions of dollars a year by unscrupulous speculators. The country is awakening to the need of action and will demand it. The producer as well as the consumer is interested in seeing that the country as a whole gets a square deal.

NONE TO SPARE

A negro I encountered down in Alabama last winter, writes Mr John Kendrick Bangs, in "From Pillar to Post," stands conspicuous in my memory for both his conscious wit and his unconscious humor. He plied me with questions as we stood on a railway platform waiting for my train and nearly drove me to despair. Part of the illuminating exchange of ideas ran this wise:

"Whar yo' come from?"

"Maine," said I.

"Got any children?" he inquired.

"Yes," said I. "I've got two sons in Detroit and—"

"Dee-troit, eh?" he interrupted. "Dee-troit's a nice state to have two sons at, Ah reckon. So yo' was born in Dee-troit, was yo?"

"No," I replied. "I wasn't born at Detroit; I was born at Yonkers—"

"O-o-oh! So yo' was born at Yonkers, was yuh? Yas-suh,—Yonkers! Ah don't know much erbout Yonkers but Ah guess Yonkers is a nice state too, ain't it?"

"Well," I said, "yes—Yonkers is a pretty nice state, too—what you might call a commonwealth; but—"

"Yaas, suh; Ah've heern tell dat Yonkers was one of dem cummytoc states and Ah guess dat's a pretty good kind ob a state to be born in. What yo' sellin'?" This was a hasty glance at my suit case.

"Brains," said I.

"Lawsy me! Sellin' brains, eh!" said he. "Wasl, suh, Ah'm sorry. Yo look so kind of set up. Ah thought yo was a-sellin seegyars. Yass, suh. Ah'd hoped yo' was." He gazed wistfully along the shining rails. "Dem seegyar drummahs is mighty free with deir samples suh," he continued, "and Ah been Ah-hopin' yo'd be able to spar'me a handful like the res' oh 'em does. But ef yo're dealin' in brains, hit aint likely yo' got enough to gib any away."

The Owen Sound Sun supports the suggestion of the councillor of that city that the assessment roll should be published. It points out that the rate-payers are partners in maintaining the municipal organization and it is only fair that each partner should have the satisfaction of knowing that he is not required to pay more than his share, or less through any inequality in the assessment.

—A curious accident occurred at the farm of Mr Frank, in Brant Tp., a couple of weeks ago. A 40-ft well near the house suddenly caved in, and away went the pump and platform out of sight, and the frame kitchen attached to the house near by followed. It seemed that the bottom had actually fallen out of the well, leaving a tremendous cavity, and the whole surface suddenly collapsed and went out of sight. Mr Frank worked nearly ten days to fill up the enormous hole.

CROP TO PLANT LATER

Provide for Winter as Well as Immediate Needs.

CABBAGE AND OTHER THINGS

Good Food Products Can Be Secured by the Amateur by a Little Labor and a Small Expenditure.

(By S. C. JOHNSTON, Vegetable Specialist, Ontario Department of Agriculture, Toronto.)

Besides growing many vegetables for immediate use the backyard garden should produce some vegetables which can be stored for consumption during winter months. Some, of course, do not need to be planted as early as the plants which were described last week. Possibly a week should elapse from the time the lettuce is planted before these should be sown.

BEETS, CARROTS, PARSNIPS, AND SALSIFY. These include the most important members of the root vegetables. They are usually grown for winter purposes, though beets and carrots are relished by many in their earlier stages of growth. All these demand practically the same attention. The seeds should be sown in straight rows at a depth of about three-quarters of an inch. When the plants have reached a height of two inches they should be carefully thinned out so that they stand, beets and parsnips three to four inches apart, carrots and salsify two or three inches apart. It will be found that the parsnips are very slow growers, and for this reason it is sometimes advisable to plant a few seeds of lettuce with the parsnip seeds so that they will serve as a marker. The young beet plants may be used as spring greens. It is necessary that the soil be cultivated at intervals during the summer months so that the crops may grow. They do not as a general rule require as heavy watering as some of the other vegetable crops. In the fall the beets should be pulled up and the tops twisted off close to the head, but cut off with a knife as in the case of carrots, parsnips, or salsify, which should have the tops cut about one-half inch from the roots preparatory to storing for winter use.

CORN. In planting corn holes about two or three inches deep should be made with a hoe. Five or six kernels of corn should be dropped in this and covered with soil, which should be gently firmed by trampling on it. When the shoots are about three inches high all accepting the three sturdiest should be pulled out. The soil should be drawn up around the stalks as they grow, to give them support. When the kernels on the cob appear full of milk they are ready to use. It is also a good practice to cultivate the soil often around the corn, for expert growers claim that the crops corn and cabbage faster and better when plenty of cultivation is given.

CABBAGE. Cabbage is one of the most widely grown vegetables. The cabbage plant requires a supply of moisture, and yet if the cabbage soil is too wet the plant will be injured. Cabbage does particularly well on new land, and some growers claim that the cabbage grows without an abundant supply of manure in the 1 better than many other vegetables. It is considered a good practice for backyard gardeners to purchase plants which have been grown in hot-beds or hot-houses and transplant them directly into the permanent bed. This saves considerable trouble. It is necessary when setting cabbage plants to set them fairly deep so that they will not be whipped about by the wind. They may be set eighteen inches apart, and there should be quite a good deal of soil around the roots. When they are ready to be set out a hole may be made with a dibber or a sharpened stick. The roots may be watered after they have been set. One of the most important features of growing cabbage consists in the attention given to cultivation of the soil. There may be some occasions when the head will split, this may be stopped or prevented if the head is taken in the hands and turned forcibly from one side to another.

CAULIFLOWER. The cauliflower is treated in much the same way as cabbage, the plants being grown and set out in the same manner outside. They are treated practically the same as cabbage until it is noticed that a little white flower has commenced to grow. The dry leaves of the plant should be brought together at the top and tied with a piece of string so that these little white flowers are protected from the rays of the sun and the rain. All cauliflower heads should be treated in this manner when they are about two inches in diameter.

BRUSSELS SPROUTS. Brussels sprouts are perhaps the most hardy of the cabbage family. If it is impossible to secure brussels sprouts plants a few seeds may be planted about May 15 at a depth of about one inch. These should be transplanted to the permanent bed about the 15th of June. They should be set eighteen inches in the row and two feet between the rows. It is well to keep the patch clean, and the surface soil should be stirred frequently. It is unnecessary to trim off the leaves as the plants grown in the garden.

SWISS CHARD. Swiss chard can be grown easily from seed, in rows twelve inches apart, the young plants being thinned to six or eight inches apart. The advantage of this plant is that the leaves may be pulled off close to the root and new leaves shoot up, which may be consumed during the season. The roots are used for greens and the stem of the leaf as asparagus. A few plants should be sufficient for a small family.

The Revelation

(By Robert W. Service)

The same old sprint in the morning, boys,
to the same old din and smut:
Chained all day to the same old desk
down in the same old rut;
Passing the same old greasy books, catching the same old train:
Oh, how will I manage to stick it all, if I ever get back again?

We've bidden good-bye to life in a cage,
we've finished with pushing a pen;
They're pumping us full of bellicose rage,
they're showing us how to be men.
We're only beginning to find ourselves,
we're wonders of brawn and thew;
But when we go back to our easy jobs,
oh, what are we going to do?

For shoulders curved with the counter stoop will be carried erect and square,
And faces white from the office light will be bronzed by the open air;
And we'll walk with the stride of a new-born pride, with a new-found joy in our eyes,
Scornful men who have dieed with death under the naked skies.

And when we get back to the dreary grind and the bald-headed boss's call,
Don't you think that the dingy window blind and the dingier office wall
Will suddenly melt to a vision of space, of violent flame-scarred night?
There . . oh, the joy of the danger-thrill, and oh, the roar of the fight.

Don't you think as we paddle a card of pins the counter will fade away,
And again we'll be seeing the sandbag rims, and the barb-wire's misty gray?
As a flat voice asks for a pound of tea don't you fancy we'll hear instead
The night wind moan and the soothing drone of the packet that's overhead?

Don't you guess that the things we're seeing now will haunt us through all the years,
Heaven and hell rolled into one, glory and blood and tears:
Life's pattern picked with a scarlet thread, a mere once we wove with a gray,
To remind us all how we played our part in the shock of an epic day?

Oh, we're booked for the Great Adventure now; we're pledged to the Real Romance,
We'll find ourselves or we'll lose ourselves somewhere in giddy old France.
We'll know the zest of the fighter's life; the best that we have we give;
We'll hunger and thirst; we'll die . . but first—we'll see men laugh and die;
We'll know such joy as we never dreamed; we'll fathom the deeps of pain;
But in the hardest bit of it all we'll be—when we come back home again.

For some of us smirk in a chiffon shop, and some of us teach in a school;
Some of us help with the rent of our pants to polish an office stool;
The merits of somebody's soap or jam some of us seek to explain,
But all of us wonder what we'll do when we have to go back again.

TUMBLED INTO FAME

Benny Leonard Fell Through Skylight and Then—

Benny Leonard, star in the light-weight firmament, fell into the boxing game through a skylight. Leonard was wild about prize fighting during his early kid days. He used to linger around the gymnasiums whenever he got a chance. On fight nights in his particular district of the Bronx, he and some of the other boys would crawl onto the roof of one of the clubs and gaze down upon the battlers through the skylights.

"One night the glass broke," said Leonard. "I tumbled into the ring. Billy Gibson, who was running the show, grabbed me and asked what in blazes I was doing in there. I told him I was on the roof and had wanted to see the fights. Gibson thought I said I wanted to fight. So Billy chased me into a dressing room, gave me a pair of swimming trunks and put me on. I'd never fought before. I was scared stiff. I knew nothing about the game except what I picked up in battles with the neighborhood bullies. But I sailed right into the other fellow and knocked him out. Billy gave me $5 and I nearly died of joy." Leonard has fought in eighty bouts since then.

Wear Chinese Hair

War or no war, American women must have their hair. And they are getting it, too, according to figures made public by the Department of Commerce, which show that during 1916 American women imported almost eighty tons of tresses from Hongkong, China, alone. The Department announced that 3,187 cases of 133 pounds each, were imported, or 187,871 pounds all told. Figuring a half-pound to the head, 375,742 women bought Chinese hair in 1916. The Department fortified itself with the following statement: "American imports are confined almost entirely to hair for the use of women."

—Kincardine ratepayers voted strong for the new furniture factory proposition of J B Watson. The vote was 229 for and 53 against.

A community of taste and beauty must necessarily be composed of refined and cultured people, and true culture leads to higher morality. There are about our village many things that commend it. There are things that are capable of improvement. Public sentiment will do much to add beautifying to our dwellings, our streets, and alleys. Neatness, taste and beauty will help us all. Our moral life would be higher and our social life purer.

—The Thornbury Herald has decided to accept Eaton's advertising because the home merchants are not giving it the patronage they should. This is what the editor says: "On and after June 7th Eaton's advertisement will appear on page 5 accepting the whole page. It is not our desire to advertise outside firms, but if our home merchants do not appreciate the home paper enough to give it support that it merits, and outside firms like our space well enough to buy it, we feel that it is good business to sell what the other fellow wants. This ad. will probably be followed by those of other outside but nearby advertisers, who have made enquiries but have never received any encouragement."

Shoes Must "Make Good"

The same as men.

There is a competition among shoes—or rather the manufacturers — that is pretty good for you people.

It shoes you and your family with the best shoes in the world without it costing you a cent more than it has to.

Of course you expect us retailers to gather these shoes that are the winners in this war of competition, and that is what this store is constantly doing.

Our claim is that every time you have a shoe need you ought in justice to yourself let us supply it.

Our stock exemplifies all the prevalent shoe newness. It contains the latest shoe thought of the leading manufacturers.

A Study In Alfalfa

Olga Svendson gazed moodily out of her back kitchen window at the rolling fields palpitating in the June sunlight. She stared unseeing, for Olga had no heart this morning to admire the landscape. Only a year ago Thorwald brought her here, a happy bride. She sang all the day long.

She did not sing this morning. Yesterday she visited the Olsens, and they set the ferment of unhappiness within her soul. They talked about Thorwald—her Thorwald. He was a hard worker, a pusher. Yes, but why did he not do more for his Olga? Thorwald was not doing right by her, said the Olsens. He was too stingy.

Olga crept home dazed. She did not sing in the evening. Her husband did not talk much when he came in. He had been harvesting the alfalfa, his first crop, and he was tired. The weather would break soon and the hay must be in stack.

"How are the Olsens?" asked Thorwald, when the late chores were done and he sat at the sitting-room table with his papers and books. Every evening it was like this, Olga with her sewing and Thorwald with his studies.

"They have a nice place," said Olga. "Their house is fixed up fine. They have even an organ in the parlor, Thorwald."

Her husband frowned. "Yes, but their barn roof is bad. I can see from the road. Their hay will spoil when the big rains come. They will have to pack water, too. Their cisterns need fixing up."

"Anyway, they are not stingy," said Olga contemptuously.

This made Thorwald angry.

"What is this you get from the Olsens, Olga?" he cried. "I wish you would not listen too much to them. They are always picking on the neighbors to start a quarrel. What do I care if they think I am stingy? I have found out they are no good. Their credit is not much at the Farmers' National."

The Olsens had done their work well. The quarrel started off promptly.

"Everybody knows you are making money, but you soak it all in the bank like a miser. If you would buy me an organ now it would show that you wanted to please me," and Olga sniffed a little.

"You are silly, now, Olga," said Thorwald slowly. "I think a lot of you, but I am trying to get a good credit in the bank. We have to go slow for a while. I want you to stay away from the Olsens. They are gossips."

"I think I will go to see the Olsens whenever I please, Thorwald," cried Olga obstinately. "It is not my fault if you are stingy. Why, Thorwald, you could easily sell a few tons of alfalfa to buy me an organ."

"You are getting more foolish all the time, Olga," cried her husband, his blue eyes snapping.

He slammed the screen door as he went out. It had been a bitter quarrel, their very first. It made them both very miserable.

Next morning it was plain that Thorwald was still angry, and Olga prudently kept the peace. Breakfast was a dismal affair, in contrast to what was usually their happiest meal. When at last it was over, Olga went about her morning's work half-heartedly. She loved Thorwald devotedly, and she was very unhappy. His slow harsh words pounded over and over in her head as she stared through her kitchen window, revolving in her mind all the details of the quarrel of the evening before. She could hear the men shouting at the horses down in the alfalfa meadow, where they were working on the last big rick. She could hear Thorwald's voice above the others. The air was very close and sounds traveled clearly across the fields. The sky seemed suddenly dark and forbidding, although it lacked yet an hour till noon. Outside the window the maple leaves quaked in the stifling air.

Olga stepped to the back door and trembled at what she saw. The sky was overcast, and the entire western horizon was a line of inky blackness. Even now she caught a faint zigzag of lightning in the distance. The clouds were rushing onward with the appalling speed of a sudden June storm. She had a clear view of the meadow and could see the men working furiously. The big rick was only up to the bulge, and it looked as though the hay weather was about over.

"Oh, the hay! Thorwald's beautiful hay!" gasped Olga, as she sped from the house, their quarrel forgotten.

"Quick, a fork for me, Thorwald!" she screamed. "I can pitch for you!"

"No, Olga!" cried Thorwald from the rick, as he looked over the field. The rick was a little past the bulge now, and he was beginning to draw in the sides.

As they brought in the last haycocks the horses were dripping with lather, and Thorwald's two men were gasping with the heat and strain.

"No, Olga!" boomed Thorwald. His voice was like a trumpet.

"We can make it, I think," shouted Thorwald. "We are topping out now, Olga!" He scanned the ominous clouds anxiously.

"It is going to be a big storm, Olga," he continued. "A windstorm, then a heavy rain. The wind will blow the top off our fine rick. The stack covers we will want, but they are in the barn. You'll have to hustle, Olga!"

Olga hustled. It was her man talking to her now. Back to the barn she ran, her flimsy dress flapping against her. She knew the stack covers were still in the peak of the barn where Thorwald always stored them.

With quick hands she lowered the canvas covers from the high peak where they had been hoisted by one of the ropes of the hay carrier. This took only a few seconds. But the big bundle of covers made a disconcerting load. Even when folded into the least possible compass the big canvases with their dangling tie ropes made a staggering bundle. Olga could not run with it. Against the stiff wind she could only go at a snail's pace. More than once she was forced to rest and readjust her bulky burden of canvas. But she reached the rick as the last cocks were going on the top. Even then it was sprinkling.

"Hand for you, Olga!" shouted Thorwald, as she flung the canvas down, gasping. "We will save our big rick yet!"

In the nick of time the big tarpaulins were thrown over the top and tied and weighted down. The men shouted exultantly as the rick stood out white-capped before the storm.

"Quick, Olaf, Bertel, the horses!" roared Thorwald. "They are hot. They will be chilled by the storm. To the barn, boys! Gallop!" The husky Scandinavians needed no second urging. Away they went on the excited horses, the dangling trace chains jingling madly as they dashed to the shelter of the barn.

Then the storm broke. The big cloud, heavy with the accumulations of a week of sultry weather, swooped down on Olga and Thorwald with a roar. Flash after flash of vivid lightning glared about them, followed by peal after peal of terrifying thunder, making the very earth tremble. Olga could see the maples in the dooryard reeling and twisting in the grasp of the tempest. Torrents of rain fell, pouring down the edge of the rick in streams. The two huddled under the lee of it as the furious elements raged about them, and the rick shook under the force of the gale. When the wind was at its highest it seemed the big rick would go over. Thorwald held his breath as the covers whipped and dragged at the tie ropes. But it was a good job and the tarpaulins held.

"You are so strong, Thorwald," said Olga, as they sat under the edge of the rick watching the rain pelt down. "I never saw such a strong man. You pitched the hay so fast, as fast as the boys could send it up to you."

"It would have been a joke on me, Olga, if I had lost this hay," answered Thorwald. "The neighbors would have joshed me good."

Olga put her wet arms around his neck.

"Look here, Thorwald, I don't care what the neighbors think. Such neighbors as the Olsens drive me crazy, I guess. They turn my head around. I only want you, Thorwald. It was not right to call you stingy."

"Pish! It doesn't matter to me, Olga," said her husband, peering out at the rain. "I know the Olsens talk too much."

He was silent for a minute, watching the drops trickle from the side of the rick.

"But you upset my great plans, Olga," he went on. "It was a secret."

"A secret, Thorwald?" echoed Olga, her eyes wide.

"Yes, for you it was," answered her husband. "How the Olsens did stuff you."

He halted solemnly, like a judge pronouncing sentence.

"It was to be a car for you, Olga," he finished, as if it were the seal of doom.

"Oh, Thorwald, a car!" cried Olga in an ecstasy. The Olsens had no car.

"But now, of course," said her husband, judicially, "it must be a fine organ for you, Olga."

"No, no, I am sick of the Olsens and their fine organ!" cried Olga furiously. "They make me spiteful and mean to you. You are too good for me." She bumbled herself before him.

"Well, then, it will be a car for you!" cried Thorwald joyously. "You can take the marketing into town very fast with it," he said, with a business-like air. "You help me make lots of money, why not have it? The organ you must have sometime, too," he concluded gallantly.

Olga's eyes gleamed. The spirit of the Vikings stirred in her.

"Has it a horn, Thorwald?" she demanded.

"Yes," he answered. "You push a button so. It is very simple."

Olga's blue eyes flashed dangerously. Oh, to dash past the Olsens with horn bellowing like a steamer's siren! What a revenge for their cruel words.

"It is too much," murmured Olga. "I am a poor wife, Thorwald. I pick quarrels."

Hush, Olga," said her husband. "You are a good girl. You saved the big rick for us. The car is bought, anyway. It will be here in two weeks. You will have a grand time."

Olga was overcome. In an agony of self-reproach she wept on Thorwald's broad shoulder.

"Such a husband you are, Thorwald!" she wailed, as he held her in his strong arms. The quarrel was over.

It was not raining much now and they were both wet anyway, so they started to the house together. The clouds were breaking away and a flicker of bright sunshine played over the soggy meadow. It was a good omen.

TELLS YOU HOW MUCH TO EAT.

Machine Measures the Energy Value of Each Dish.

Here is a machine that tells you what to eat, or, more accurately speaking, how much you are eating in the terms that the chemist uses to measure food values.

It is a calculating scales from the dial of which one reads the number of calories and the number of grams of protein in the portion of food on the scale pan. The principle is similar to that of the commercial computing scales, which, if the price per pound be known, shows by the indicator the retail price of the amount of merchandise being weighed.

From a dietetic standpoint it is meaningless to weigh food in pounds. The proper unit of the fuel value or energy yielding power of food is the calorie. Lettuce contains 65 calories per pound and olive oil contains 4,200 per pound.

Wide differences are also found in the protein or flesh building contents of foods. Pure oils, starches and sugar contain no protein at all and a Robinson Crusoe would starve to death if his desert island were one vast mountain of starch and sugar with fountains of purest olive oil, honey and maple syrup gushing from its side.

So the hungry man who wishes to eat scientifically sits down to dinner and places his soup plate on the scale pan. He first adjusts the tare weight to offset the weight of the plate. Then the soup is poured in, which causes the fan-shaped dial to swing sideways. The scientific diner now finds the word "soup" under the heading "Calories" and reads directly from the scales the number of calories he is to consume. Protein can be read separately on another portion of the dial. Each food must be weighed separately, for the machine can't think straight if one tries to weigh butter and bread together.

Such a calculating food scale should find practical use in the numerous investigations and demonstrations now being conducted to determine the cost of living.—Popular Science Monthly.

Community Breeding.

Unmistakable evidence of the trend toward the development of a community spirit strong enough to induce community action is furnished by a county in Indiana, where recently farmers met and after full discussion decided to adopt a given breed of hogs for production in that section. Naturally there were preconceived likes and pronounced preferences, but stronger than these differences was the agreement that any one of the popular breeds is better for all than that all the breeds should be produced in that region.

BOY AND GIRL SCOUTS.

In Every Possible Way They Come Valiantly to Country's Aid.

When the dreadful European War broke out the boy scouts came valiantly to the fore to render their countries any service excepting the bearing of arms. In many instances they took the places of men called to the colors, and the story of their patriotic service will not be forgotten when the final tale is told. In every country they showed themselves to be brave, loyal little citizens ready to do uncomplainingly and as efficiently as men any duty that the Government assigned to them.

An English woman, writing of a Zeppelin raid, tells of the horror and shock of the exploding bombs in the night, of rushing to the window, and though scarcely ten minutes had elapsed since the alarm, of seeing a boy scout at her gate, hand to cap and ready to lend a hand in whatever way he might be needed. They have a way of always being where they are needed, and it is this Johnny-on-the-spotness that inspires the respect and admiration of the whole world.

They help the families of men who are at the front, open up soup kitchens for refugees in their club houses, act as guides, assist the farmers at taking in the crops, watch bridges, telegraph lines and are the right and left hands, too, of the Red Cross workers, transporting beds and furniture to hospital buildings, helping with the first-aid cases and raising funds for the cause. Older scouts stationed along the coasts guide vessels in unbuoyed channels, carry out communications by means of dispatch riders, some run the car and bus lines; in fact there seems to be nothing that they are not doing to help.

And the finest thing about it is that in Canada the Scouts are the same Johnny-on-the-spot lads as those abroad, and we are proud of them! And we're proud of the girl scouts! The girl scouts have worked almost shoulder to shoulder with the boys in England. In London there is a hotel run entirely by girl scouts for the benefit of country women who have wounded boys in the London hospitals. They meet the trains and help the anxious women find their sons or husbands; they take them to the hospitals and guide them about the city, making their sorrowful visits just as comfortable as possible. And this is only one of the things they are doing, not to mention the sewing and Red Cross supplies they are endlessly working on, nor the visits to the hospitals to read to and entertain the wounded soldiers. They even helped take in the crops, and many a lonely fellow in the trenches is cheered up by their comforting surprise boxes. So three cheers for the boy and girl scouts in every country where they are lending a hand!

"EYES" FOR THE BLIND.

Invention of the Optophone Will Enable the Blind to Read.

It is beyond human aid to give our blinded heroes back their lost sight, but it is not beyond human aid to invent and perfect ideas by which they can almost forget their sightlessness.

By the aid of a wonderful instrument called the optophone, the blind will shortly be able to read the daily newspaper or their favorite magazine for themselves, at a uniform rate of twenty-five words a minute.

A musical box—that, perhaps, best describes the optophone. The box emits a code of sounds which, in turn, spells words to the trained ear. The alphabet takes a week to master thoroughly.

To work the machine, the page of printed matter to be read is passed across a luminous slot in a siren disc, and sounds are then communicated by telephonic aid, which the trained ear, accustomed to the alphabet, finds no difficulty in interpreting.

Braille books are expensive and rare, and the blind hate to be dependent on other people more than is absolutely necessary. This method should, therefore, revolutionize reading for the sightless.

One Hundred All Right.

Two Englishmen were one day walking along a road in Kerry when they met an Irishman.

"How many of us are here now?" they asked jokingly.

"I'm not such an omadhaun as all that," said Pat. "There's 100 of us."

"Oh," said the Englishman, "how do you make out that?"

"Well," said Pat, "I am the one and you are the two naughts."

TWO TREASURES.

In a trunk in the attic, hidden away
From the fading sun of the summer day—
From the spiders that spin invisible traps
Over the curtains and winter wraps;
Hidden away from the dust and grime
And the ravages of the speller, Time,
Two treasures lie, of the days of yore:
A pair of red shoes and a blue pinafore.

Little red shoes that blithely went
On errands for mother, wherever sent;
A hole in the heel and a hole in the toe
Long hours of loving service show.
The buttons are lost and the tassels frayed,
Long years in the attic they've useless stayed;
But the gold of the world could never induce
Barter or sale of the little red shoes.

The blue pinafore is sadly worn—
Here 'tis mended and there 'tis torn;
Here is a stain of "raspberry jell,"
And a black spot shows where the inkpot fell.
Pinafore blue, what memories rise
When a mother holds you before her eyes!
But where is the baby who one time wore
That relic of childhood, a blue pinafore?

Emerged from boyhood, a strong man grown,
He fights his way through the world alone,
Save for his mother; her baby yet
Is he,—but her smile is tinged with regret,
And her eyes are veiled with a mist of tears,
When her thoughts stray back through the vanished years;
And she softly sighs, as she fondly views
The blue pinafore and the little red shoes.

THE FRIENDLY COUNTRY

Dwellers on The Land Live Close To The Source of Things

"I confess that when I come back to London after a few days in the country I always feel a certain strangeness and loneliness," says a writer in the London Star.

"Here in the country everything seems familiar and part of the very texture of your life. The few people that you see are the people you have always seen, and they say just the thing they have always said.

"The birds are nearly as familiar and friendly. There is a thrush singing in a beech tree just outside as I write. He has been singing in the same tree all the evening and every morning and evening for weeks past. He is not a strange voice in a foreign land, as he seems in London. His song is not drowned by the roar of buses and cabs. He has the whole performance to himself, and in the pause of his song the silence of the little hamlet is unbroken.

"Everything has a personal meaning that gives a tang, a flavor, an individuality to life. You live nearer the source of things and see life more at first hand than the dwellers in towns. When you bring your water in pails from the village pump and know that it comes from the chalk under your feet you have a feeling about it that you cannot have about water that you get by simply turning on a tap in the kitchen. It is the labor of getting things that gives them their value. The milk we get in town comes from goodness knows where, but three fields away I see the cows that give us our milk.

"For in this fellowship of the countryside the dumb creation seems much more near the human plane. In the city street a horse is just a horse and a dog is just a dog, but here the animals belong to the household, as it were, and have a personality of their own.

"In this friendliness of the country, it is nature, more even than the people, that counts. Each field has its associations, and the beech woods are peopled with old and unchanging friends. You know the hollow where the first primroses are found, and the bank where the violets will bloom, and the haunt of the daffodils."

A pair of good shears is a handy thing to have down at the barn.

Manure piles are bad places for little chicks and good places for flies. Put the manure on the land and do good with it.

BRITISH TROOPS MARCH OFF TO WAR

SINGING THEY TRAMP DOWN LONDON STREETS.

Men Proudly Parade Through the City Confident of Victory on the Battlefield.

The movement of troops through London has become such a commonplace event that the man in the street hardly noticed the passing of a company or battalion, and up to a few weeks ago the men in khaki themselves marched through the streets quietly, almost morosely, writes a correspondent from London.

To-day there is a vast change in the spirit of the outgoing columns. The men are singing and the curbs are lined with people, who for the first time since the war began are taking a renewed interest in the fighting forces.

One thoroughfare which connects two of London's greatest railway terminals is used more extensively than any other for troop movements. As a rule the biggest detachments pass down this avenue in the early hours of the morning while the scrubwomen are polishing the door handles and the wheel traffic is just beginning its daily rumble.

Hotel Guests on Alert.

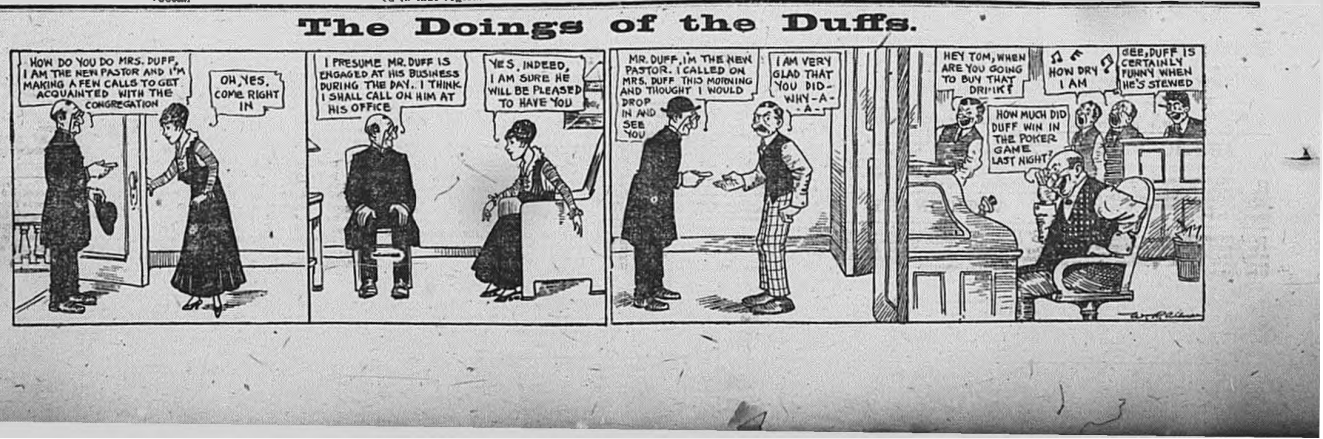
Owing to the fact that Londoners as a rule are late risers they miss these early morning troop movements, but there are many residents of hotels along the line of march who never fail to turn out no matter what the hour and watch the columns of men until they disappear in the distance. The men begin a song the minute they get out of the trains and keep it up until they break ranks for the outgoing trains.

The heavy tramp, tramp of the service boots can be heard far up the street. Windows go up with a bang and curtains are pulled aside as the voices of the men precede them, the rhythm of the song punctuated by the clump of the boots. Echoing through the quiet streets the volume of the song increases and the words become clear:

Keep the home fires burning,
While your heart is yearning.
Though the lads are far away
They dream of home.

A company of Royal Flying Corps mechanics, youthful looking, clear eyed boys, is the first to pass. They carry a lighter kit than the other branches of the service and march with a quicker stride, and their little caps, smaller even than the Scotch bonnet, give them a rockwere air. The words of their song are clearer and the harmony is more pronounced.

Canadians Join in Song.



Following them comes a battalion of Canadian artillerymen, apparently veterans going out for another go at the Huns. A sonorous bass voice that rises above the rest can be heard leading the singing of a song that was popular in Canada and the United States when the first troops left in 1915. It is a peculiar fact, but the troops usually stick to the songs that were popular when they joined up. This Canadian unit was singing "Way Down in Tennessee" with as much enthusiasm as when the ballad first became a hit.

At the foot of the street where a turn is made toward the Thames is an ancient, grimy looking church where a mass is said at an early hour. As the men swing past, the people going into or coming from the church stand at the curb and it is not at all unusual to see a score or more of women or old men remain with their heads bowed in prayer for the soldiers until the last one has passed.

There are never any tears shed along the line of march, nor do the soldiers ever show signs of any emotion, but confidence in their ability to win and happiness at the prospect of active service. During the early winter the troops didn't sing, but seemed to dread the thought of going to the trenches and the awful conditions of stationary warfare. To-day each company is just one vast smile. Even the sergeants at the rear of the columns grin at the people on the curb, as if they asked the civilians to excuse the exuberance of the Tommies.

Cover the horses with cloths or old blankets, when spraying. Put vaseline or lard on face, neck and hands, or wear gloves.

The Doings of the Duffs.

Farm Crop Queries

Conducted by Professor Henry G. Bell.

Henry G. Bell.

The object of this department is to place at the service of our farm readers the advice of an acknowledged authority on all subjects pertaining to soils and crops.

Address all questions to Professor Henry G. Bell, in care of The Wilson Publishing Company, Limited, Toronto, and answers will appear in this column in the order in which they are received. As space is limited it is advisable where immediate reply is necessary that a stamped and addressed envelope be enclosed with the question, when the answer will be mailed direct.

Question—T. A. L.:—What is the best way for putting fertilizer on for potatoes and how much fertilizer would you put on a quarter of an acre? Should the fertilizer be mixed with earth before the potatoes are put in or would it be all right put in the hills with the seed? I have just read it would burn seed.

Answer:—Two hundreds pounds of fertilizer to the quarter-acre is a moderate application for potatoes. This fertilizer should analyse 2% ammonia, 8 to 10% available phosphoric acid and 1 to 2% potash, if obtainable. In applying this, scatter 100 pounds over the quarter-acre when the ground has been dug or plowed. The harrowing or raking of the ground will work this available plantfood into the soil. When the holes or drills for the potatoes are made, scatter the remaining hundred pounds of fertilizer in a light dust along the potato furrows, or into the holes where the potatoes are to be dropped. Cover this with a light dusting of soil before dropping the potato pieces. There is no danger of fertilizers burning seed if care is taken to mix the soil and fertilizer as described. When the foregoing has been done, drop the seed and cover as usual. It is sometimes found highly advantageous to scatter another light application of fertilizers around the potato hills or along the rows when the plants are up two or three inches. This can be worked into the soil when the potatoes are cultivated.

Question—W. L.:—Please send me full particulars how to treat potatoes before planting to prevent top blight.

Answer:—No pre-planting treatment can be given to potatoes to prevent blight. If possible, make sure that the potatoes being used for seed were not produced on a field that has been infected with blight. The blight winters in the tubers, and sends its fine threads up through the stalks where they flower on the surface of the leaves of the plant. When the disease matures it sends out large quantities of tiny spores. When these spores light on other damp potato plants, they infect the other plants with late blight disease. To prevent this the potato grower should spray his crop with Bordeaux mixture five to seven times during the growing season. Begin as soon as potato plants are up three or four inches and spray at intervals of 10 days to two weeks.

Bordeaux mixture is composed of 5 lbs. of lime, 5 lbs. of copper sulphate and 50 gallons of water. Dissolve the lime and the copper sulphate separately, then mix and dilute with the water. Apply the Bordeaux mixture immediately, since the mixed material will not retain its strength if allowed to stand any length of time. The dissolved lime and dissolved copper sulphate may be stored un-mixed, and just sufficient for the spraying mixed up at the times desired. The proper quantities can easily be calculated from the mixture given above.

To prevent scab and to assist in control of the spores of other diseases, it is beneficial to dip potatoes in a mixture of corrosive sublimate, one part to a thousand by weight. Dissolve a tablet in a couple of water, or an ounce in 30 quarts of water, and soak the potatoes for one hours. This material is very poisonous and must be handled with great care. Potatoes which have been treated should never be used for human or animal food.

You can prevent potato scab by soaking the potatoes in a solution of one pint of formalin to 30 gallons of water. They should remain in the solution about 20 minutes. Formalin is a gas dissolved in water. It kills the spores on the surface of the potato but does not injure the food value.

Question—C. D. E.:—Is fertilizer that has been stored up in a dry shed for two years as good as fresh fertilizer?

Answer:—If the fertilizer has been stored in a dry place, it will not have lost plantfood through storage. However, before you use it, you should empty it out on a hard floor and break it up by pounding, after which it should be shoveled through a sand screen. This will put it in good condition for drilling.

Your Problems

Conducted by Mrs Helen Law

Mothers and daughters of all ages are cordially invited to write to this department. Initials only will be published with each question and the answer as a means of identification, but full name and address must be given in each letter. Write on one side of paper only. Answers will be mailed direct if stamped and addressed envelope is enclosed.

Address all correspondence for this department to Mrs. Helen Law, 235 Woodbine Ave., Toronto.

S. R.:—1. Between two and three weeks before the ceremony is the time for sending out invitations to a wedding. Announcements may be sent to those who do not attend the ceremony. 2. It is perfectly good form to have no attendants at a quiet home wedding. The bride may wear a veil with a simple white dress and it is not necessary to wear gloves when the sleeves are long. 3. Yes, have music very soft and sweet during the ceremony.

W. E. B.:—These are some of the most commonly known meanings attached to certain flowers: Oak, patriotism; myrtle, beauty; olive, peace; ivy, revelry; rose, love; apple blossom, preference; buttercup, riches; anemone, frailty, anticipation; dandelion, coquetry; daffodil, unrequited love; lilac, fastidiousness; narcissus, self-love; marigold, contempt; goldenrod, encouragement; lily, majesty, purity; calla, magnificent beauty; forget-me-not, true love; poppy, oblivion; amaranth, immortality; gentian, virgin pride; geranium, deceit; foxglove, insincerity; hyacinth, sorrow; honeysuckle, fidelity; pansy, thoughts; heliotrope, devotion; sweet William, gallantry; candytuft, indifference; cowslip, youthful beauty; white violet, modesty, and snowdrop, friendship in need.

M. K.:—It is not natural for your child to be afraid of the dark. He should never be allowed to believe that darkness holds special terrors. Permit no one to frighten him by playing "ghost." Permit no one to tell him stories of the gruesome or the supernatural. But in spite of all your precautions, if any one of the household shows a dread of the dark, this dread is likely to be noticed by the child, and you know example is stronger that precept.

T. H.:—1. It is not good form to use any ink except blue black for correspondence. Seals on letters are entirely proper if they are quite small and nicely applied. 2. No answer is required to a wedding announcement.

L. R.:—A vegetarian diet includes all the good grains, nuts, eggs, cheese, milk, cream and honey, besides all the fresh and dried fruits. This does not sound like starvation, does it? Rather like a generous plenty. Three meals a day with no "spicing" is the diet rule. Plenty of fresh, pure water, except with meals. Coffee and tea are allowed, but it is better to do without them.

R. P.:—The author of the poem "Green Things Growing" is Dinah Maria Mulock Craik (1826-1887). She was an English novelist, best known under the name of "Miss Mulock" and as the author of "John Halifax, Gentleman."

W. M.:—Here is a set of rules which every boy and girl would do well to follow, and which I hope will answer your requirements:

Be brave. Courage is the noblest of all gifts.

Be silent while your elders are speaking, and otherwise show them deference.

Obey. Obedience is the first duty of every boy and girl.

Be clean. Both yourself and the place you live in.

Understand and respect your body. It is the temple of the Spirit.

Be the friend of all harmless wild life. Conserve the woods and flowers, and especially be ready to fight wild fire in forest or in town.

Word of honor is sacred.

Play fair. Foul play is treachery.

Be reverent. Worship the Great Spirit and respect all worship of Him by others.

Be kind. Do at least one act of unbargaining service every day.

Be helpful. Do your share of the work.

Be Joyful. Seek the joy of being alive.

Music in the Home

The Educational Value of Music—The Power of Modern Musical Instruments to Reproduce and Intrepret the Old Masters.

That some knowledge of music is essential to a well-balanced life is now an almost established fact. Music, let it be noted, is the instinctive impulse of the human being from the cradle up, and it reverberates the world over. It is the adorable gift of God, which instinctively seeks to express itself in a manner more fundamentally natural, perhaps, than speech itself.

Who has not been attracted by the cooing music of the cradled babe long ere it sought to utter a word. Does it seem natural to instinctively crave to express one's every sense of feeling in speech? The claims of music for greater educational recognition are so manifold that one wonders that it is not given more prominence and taught more thoroughly in our public schools.

What magnificent opportunities there are for the pupils of to-day to enhance their musical education, as compared with the hard striving times of the old masters, who had to content themselves with such limited instruments as the old harpsich rd. Can you imagine how manifestly grateful Bach, Handel and other old masters would have been had they at their disposal such high grade pianos, as manufactured to-day, capable of responding to every emotion? It is difficult to conceive how it was possible for these old masters to give to the world such beautiful and immortal works, handicapped, we might say, with such inferior instruments. Were they in possession of such perfected instruments as we have to-day, who could conjecture what undiscovered form of music might have been handed down to us.

From the educational standpoint how potential would be the influence to-day if the wonderful mechanical, musical instruments, with their appliances, we now have, existed two hundred and fifty years ago, thus enabling Bach, Handel, Haydn, Mozart and other illustrious old masters to relegate to posterity faithful reproductions of their performances by means of the player-piano and phonographs.

Inasmuch as it would be of priceless value to have such recordings at this time, present-day pupils and teachers will find, and some have already found from experience, that the records made by some of our eminent artists of to-day afford possibly unequalled facilities for acquiring certain phases of musical knowledge. The teacher of musical history when reviewing epochs and events, giving biographical sketches of composers and classifying the different schools and forms of music, will find the player piano and phonograph, or either one, invaluable by demonstrating the record suitable for the occasion. When studying tonal effects of the different instruments, the phonograph record would indeed be very helpful and highly interesting.

While perhaps being efficient in the art of voice production there are many teachers who are far from being masters of interpretation, especially in some of the grand opera arias, for the reason that they have not had the opportunity of witnessing performances by artists of the highest rank. In many vocal studios is the phonograph finding itself useful as a coach, as also it is in the homes of many pupils.

It is questionable that the potentialities of the player-piano and phonograph have been fully realized. It was an extremely delicate and difficult matter to convince such artists as Patti, Melba, and other prominent artists of the possibilities of the phonograph, as likewise it was Paderewski, Greig, Moszkowski, etc., in regard to the player-piano. It is said that so highly are the master rolls and records of some of these masters valued that they are carefully stored away in specially constructed vaults in Paris and elsewhere for revelation to music students in years to come.

Music, the subtlest, the most powerful joy of life, that in which solace is found, lives within all. Within many it is dormant—it needs kindling.

The Sunday School

INTERNATIONAL LESSON MAY 27.

Lesson IX.—The Holy Spirit and His Work—John 15. 26 to 16. 14.

Golden Text—John 14. 26

Verse 26. Paraclete (margin)—We seem driven to borrow the Greek word (as in the case of baptize, and a few others) to express what no one English word will render. Comforter is grammatically wrong—the form is passive—and far too narrow. Advocate (margin) suits 1 John 2. 1 exactly, and comes nearer than other terms here, but is hardly wide enough. The central point is that the Paraclete, "called in" (this is what the word means), to help us, performs the same part as the other Paraclete, who has gone to be our Representative "with the Father." It is actually impossible to mention any function assigned in Scripture to the Holy Spirit which is not somewhere else assigned to the glorified Christ. Representative fairly joins this passage with that in the Epistle. I will send—That the Spirit "proceedeth from the Father and the Son" is one of the most palpable facts in New Testament theology. What the Eastern church meant when it insisted on dropping from the creed the Filioque, is an unsolved mystery.

27. Bear ye also witness (margin); this seems better. It is significant that men are bidden to perform the same function as the Divine Spirit, of course by his indwelling strength. There is a similar association in Acts 15. 28.

7. Go away—From visible fellowship. "I am with you all the days" remains true. The Father to whom he goes is ever infinitely near. He means that his spiritual presence is better for them than his bodily: it becomes a more intimate part of the man. The disciples would not have learnt independence and initiative: they would have always waited for express commands. The substitution of the spiritual Representative brought the needful self-reliance. the true self is only complete when God is interfused deeply.

8. Convict—The "world"—which in John nearly always means the world as it is, in rebellion—fights against the true view of all these great subjects. The implied disciples will reduce it to helpless silence: it cannot "withstand the wisdom and the Spirit by which" they speak (Acts 6. 10).

9. Sin, as normally in the New Testament, is the failure to accept a positive duty, not the mere doing of something wrong. With us omission is treated lightly as against commission: and that is why we have failed so grievously in our practical doctrine of sin. The work of God—for all those to whom the Gospel has come—is to believe on the Sent of God (John 6. 29). For this saving faith carries with it inseparably the fulfilment of all God's law.

10. The world condemned Jesus as a blasphemer and "unrighteous"; one recalls Plato's great demonstration that if ever an ideally righteous man appeared he would be counted as perfectly unrighteous and martyred as such. His disappearance from human eyes, and enthronement at God's right hand—evidenced by the resurrection, and the mighty works of the Spirit in his disciples, finally "justified" him.

11. Judged—As usual, of a condemnatory judgment. The "world" has a "ruler" of its own choosing: compare Luke 4. 6.

12. There have been many bad guesses as to the field in which these truths lie. Surely it must be mainly in the meeting of his death, which they could not bear until the incredible was a supreme fact.

13. Paul's interpretation of Calvary is the greatest of all instances; see Gal. 1. 12. From himself, for each Person in the Godhead speaks for the Triune.

14. Glorify—Interpret, reveal, when used of God or Christ, who only need knowing to be glorious.

Poultry

Pointers on Marketing.

Most of the market poultry sold is marketed in about one-sixth of the year, that is, in the autumn. As a result prices suddenly fall when farmers are about ready to sell. The congestion means that part of it must be put into cold storage, and produce once stored does not bring so high a price as the fresh quality. This means lowered prices for the farmer.

The remedy lies with the producer. He should distribute his produce over more of the twelve months than he does. To do this requires different methods of handling his poultry than he has practised in the past. For instance, instead of keeping the spring chicks all summer, some of them might be marketed throughout the season as broilers. Broilers bring two or three times as much per pound in May and early June as they would bring as roasters in the fall.

Broilers are chickens weighing under 2½ pounds. The best way to feed broilers is to give a palatable mash in a clean yard, mix the mash with milk if possible, give some green food and keep everything clean and the chicks free from lice.

When convenient, bleeding and dry plucking are advised before selling, though, if the weather is warm and local killing facilities not good, it may pay to ship alive.

Hens that have completed their second laying winter and have passed through the breeding season, should be marketed as soon as the breeding season is over rather than be kept until the fall.

Hens in June or July bring from 50 to 100 per cent. more than they do in October because they are then the only roasters on the market.

Green ducks, that is, ducks that have just completed their first coat of feathers, should be marketed early rather than be kept until fall. The Experimental Farm at Ottawa reports that 65 young ducks sold at 10½ weeks of age brought on the local market about 200 per cent. more than it cost to feed them, or in other words they cost for feed $20 and at 10½ weeks of age they brought $60. Similar ducks that were sold in the fall did not pay for the cost of feed.

Market in June.

All roosters, old hens, early broilers, green ducks.

During the first week in June, kill off, dispose of or remove from the flock, the male birds after the breeding season. Their presence in the flock after this date causes a loss of a million dollars a year to Canadian farmers through the sale of partially incubated and bad eggs in the produce which is marketed. All old hens should also be marketed at this date.

Cuts Labor in Half

Do you first disinfect, and then go over all surfaces again with whitewash in order to keep your stables, dairies and poultry houses bright, cheerful and free of lice, mites, fly eggs and the germs of roup, white diarrhea, cholera, glanders, etc.?

Such a method is a waste of time, money and labor. Use Carbola instead—it does the two things at the same time. It is a disinfectant that dries out white—not dark and colorless—and gives much better results.

CARBOLA

Carbola is a mineral pigment combined with a germicide twenty times stronger than pure carbolic acid. Comes in powder form, ready to use as soon as mixed with water. Applied with brush or sprayer. Will not clog sprayer. Will not flake, blister or peel off nor smell by standing. No disagreeable odor. Absolutely non-poisonous.

Horse Sense

Foot punctures, caused by treading upon sharp objects, result in lameness, and, in many cases, the nail or other object is visible when the foot is lifted.

Remove foreign body, pare well down to the sensitive part, fill the opening with 1 part iodiform to 6 parts boracic acid and keep so until lameness disappears, then get shod with a leather shoe as for corn.

Plan for a variety of horse feeds. Barley is an excellent grain for a horse; also peas. These, of course, should be crushed before feeding.

If the breeding mare is inclined to have too little milk, feed her for a month or six weeks before foaling, with this end in view. Give her clover-hay, wheat bran, oats and carrots. Be sure that she has exercise in the open air every day. She should spend the warm part of every day in a sheltered yard.

Light work will not injure her, but comparatively few men have sufficient judgment to work a valuable breeding mare with safety.

Don't give the breeding mare corn. A properly fitted collar will not rub any part of the shoulder. Collars should fit snugly on top and on the sides.

Bedtime Stories

The Story of Rumble and Grumble.

Rumble and Grumble were the sons of the Stubbletail Bears, who occupied a comfortable cave in the Yellowstone Reservation. Rumble was stronger on voice than on his legs, and Grumble was stronger on his legs than on his voice, but, anyway, they got along most amicably and loved each other as only bear brothers can.

One day Rumble and Grumble slipped away from their parents, who were industriously picking berries, and started off by themselves. "We will be perfectly safe," said Rumble, "for, if anything happens, I have only to use my powerful voice and you your powerful legs, and everything will be all right. "Quite so!" growled Grumble. They were rather well-spoken young bears, as you will notice from their speech, coming in contact with tourists, as they did!

The sun was hot and the trail taken by the two little bear cubs very rough and stony. It was not long before Rumble said his legs were going back on him, which is another way of saying he was tired. Grumble said never mind, that his voice was still hearty, and while they were discussing it a twist in the trail showed them a little mountain burro, fast asleep, with his head and tail drooping down. "Why should you not ride, as the two-legged visitors do, dear brother?" suggested Grumble, wiggling his ears gently. "I will lead this foolish beast and we can thus get upon our journey!"

Rumble swung bashfully to and fro, then at Grumble's suggestion climbed into a tree and dropped plump upon the burro's back. Open flew the donkey's eyes, up flew his ears. The two brothers, seeing that a crisis was at hand, did that which each did best; that is to say, Rumble used his voice and Grumble his legs. The roar of the little cub so discomfited the burro that he also used his legs, and as Grumble was quite near, it ended disastrously for him. Over the edge of the precipice he bowled, bump! bump! bump! And if he had not caught in the crotch of a tree jutting out about half way to the bottom—well, he would have been nothing but a little bearskin rug, I am afraid.

Rumble was faring no better. The burro was still using his legs, sheet-legging down the trail at such a rate that poor Rumble was shaken almost to a jelly. Kerbump! kerflump! he pounded up and down upon the worn old saddle, clinging for dear life and with the senses quite jolted out of him. But suddenly he remembered, and, opening his mouth, screamed and growled and roared for all he was worth. One particularly shrill screech so alarmed the burro that he stopped with a suddenness that sent Rumble flying over his head. He landed with an unpleasant thud, and the burro, giving him one outraged white-eyed look of terror, ran clear out of the story.

For all I know, Rumble stayed there till rescued by his doting parents or by Grumble, whose legs would surely help him out of his difficulty. I only know that they were somehow restored to their family, because I saw them playing roly-poly-slide-down-the-hill in front of Mrs. John Stubbletail's cave the other morning.

The Dairy

Don't sacrifice any heifer calf, from a first-class dairy cow.

Cottonseed-meal is a valuable feed in connection with pasture. It is a good cream and butter feed, and the fertilizing values can be passed on to the land.

Give the cows a good feeding of hay before turning into the fresh pasture.

This will prevent the excessive scouring that results from a too liberal supply of fresh grass.

The cows should be left in the pasture only a few hours the first day.

For several days they should be left on green feed only a half day.

Put the cows on the low ground where the coarse grass springs up and grows rankly at the start. If this grass is left uncropped it becomes tough and will not be eaten at all.

Calves can be raised perfectly on skimmed milk.

Pumpkins made excellent autumn feed for dairy cows, and the labor required in production is quite limited in proportion to the value of the crop.

SECOND CON ELDERSLIE

Mrs Curzon, of Clinton, is spending a few weeks visiting at the home of her brother, Mr R McGill.

Alex Campbell had the misfortune to lose a valuable cow last week.

Russell, eldest son of Mr and Mrs J McCulloch, has enlisted in the 32nd Battery.

Arthur Lillico, law student of Toronto, spent last week visiting his parents here, and has gone up to New Ontario as a fire ranger for the summer months.

Mr and Mrs H Ferris and family of Bervie spent Sunday at the home of W J Allen.

Messrs W Barnfather, D McBeath, R McGill and Geo Hope have all invested in cars.

The farmers in this locality have almost all finished seeding. What about an extra garden patch? Let us each do our bit.

Mr and Mrs M Thompson and children visited Mr and Mrs W Young on Sunday.

On Saturday last JimWalks' horse took fright at something on the road as he was driving to town and ran away. Fortunately Jim was not hurt but the buggy was badly smashed up.

Mrs J. McCulloch and Mr A McCulloch, of Saugeen, were Sunday visitors on this con.

On Friday evening, May 11th, a large number of friends and neighbors gathered at the home of Mr and Mrs D McGill to bid them adieu before they retired from farming on this con. and also to present them with a small memento. Mr W Young acted as chairman and called on Miss M Keith who read a nicely worded address. Mr McGill was presented with a russet leather morris chair and Mrs McGill with a leather rocker and mantle clock. The remainder of the evening was occupied with a short program consisting of music and addresses by some of those present. A dainty lunch was served by the ladies, and dancing was engaged in by most of the young people and an enjoyable time was spent by all. Mr and Mrs McGill have been respected citizens of this con for over 40 years, and they have moved to Chesley to enjoy a well earned rest. They will both be much missed in this community, but their many friends here hope they may long be spared to enjoy retired life.

ELORA ROAD NORTH

Mr John Brown lost a valuable mare and foal last week.

Mr J S Campbell has returned from the west, bringing a carload of cattle with him.

Robinson's ditching machine has been working on farms along this road.

Last Friday's windstorm blew over the windmill at Winch's school house.

We are sorry to hear that Mrs Geo Daniels is not well at present.

Mr John Walker has purchased an auto.

GLAMIS

Mr and Mrs Peacock and two daughters, of Mexford, spent a few days here with her parents, Mr and Mrs Neil McFarlane.

Miss Edith Howson, of Clifford, is home for a few days visiting her sisters, the Misses Howson.

Miss Ray, of Lindsay, who was visiting her nephew, W H Graham, returned to her home on Saturday morning.

Mr Kidd, of Toronto, is visiting his brother here.

A little daughter came to the home of Mr and Mrs Jas Ferris on Monday, the 14th.

Miss Norah McNally is home from Toronto.

Word came of the wounding of Tom McCormick who enlisted in the west and went overseas with an Edmonton battalion.

Mr J K McLennan had his barn raising on Wednesday, and everything came off alright.

Miss Eliza Colwell is visiting her sister, Mrs David Robertson.

Pte Wilbur McNally is home again from London.

Pte Clyde McKeeman went back to Toronto last week.

Mr and Mrs Tufford, Mrs (Rev) Laing and Mrs Davidson motored up from Beamsville on Saturday to W J McKeeman's, Miss Jennie McKeeman returning with them on Monday afternoon.

We are sorry to report the serious illness of Mr McIntosh.

Mr Joe Wrightson, of Glamis, and Mr Jim McKinnon, of the 6th of Bruce, have undertaken the contract of fixing the spire on the Formosa Catholic church which was blown down a year ago.

Mr and Mrs Beacock, Mrs Loney and Mrs Burrows, of Wiarton, motored up to W H Graham's on Sunday, returning in the evening.

Mr Jim Gilchrist, of Kincardine, spent Sunday at his home here.

Three auto loads went down to Inverhuron on Sunday afternoon.

Children Cry
FOR FLETCHER'S
CASTORIA

TWELFTH CON BRUCE

There was something of a hurricane of wind swept these parts on Saturday last, which was quite exciting for a little while. It blew down some fences, etc, but there wasn't a great deal of damage done. We had a grand shower of rain after it, which made everything look fresh and green.

Messrs Ed and Eli Barnes spent Sunday under the parental roof.

Mr and Mrs D A Campbell were down from Dornoch visiting at her home here.

We extend much sympathy to Mr and Mrs Colin McGillivray and family in their sad bereavement caused by the death of their soldier son and brother.

Rev Mr and Mrs Little were visiting on this line this week.

Mr and Mrs Wm Barrie from Lovat were calling on this line this week.

GRESHAM

(Intended for last week)

The Sabbath School was reopened, last year's staff in charge.

Mr Andrew McArthur has purchased a new car.

Mr and Mrs Jas A McKinnon motored to Southampton last week.

We congratulate John G Brown on his success at the Easter Exams.

We hope to see Mr Ernie Vance continue his services on this route as mail carrier as he gives the very best of satisfaction.

Mrs Irwin of Paisley visited at Mr Joseph Irwin's for a few days lately.

Mrs Thomas Fullerton of Bradley visited at Mr Alex Woods' last week.

PINKERTON

Mr R Donnelly purchased a new Overland touring car last week from Mr George Gilchrist.

Rev Mr and Mrs Gale went to Toronto on Friday to attend the graduation of their son, Ewart Gale. Mr Jas Gale occupied the pulpit on Sunday.

Mr Albert Pinkerton is remodelling his store and it is his intention to brick it.

Mr R L Garland, of the G T R staff, Palmerston, spent Sunday at his home here.

TURNER'S

Mr Jas Hyde and daughter, of St Helen's, spent a few days at Archie Pollock's.

Mrs Wm Karcher, who has been quite ill, is recovering slowly.

The Red Cross Society of school section No 5 intend having a garden party at Col Cameron's early in June.

CASTORIA
For Infants and Children
In Use For Over 30 Years
Always bears the Signature of Chas. H. Fletcher

WALKERTON

Mrs Stauffer returned last week from spending the winter with her son, Millard Stauffer, in Toronto.

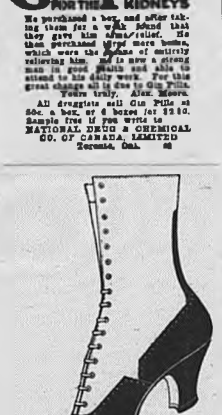
Harry Stewart, an aged inmate who was committed to the House of Refuge here from Arran, absconded from Bruce's free foodery on Wednesday of last week, and like the previous deserter from the plant, boarded the train for Eden Grove, where he was recaptured by Keeper Wiles the following day and brought back to the gratis grubbery. It is said that a genial old gent, who was in the Refuge for a spell from the Grove, on departing invited all the gray beards to his home, and hence all the recent absconders have been found making tracks to his orchard.

While Mr Robt Irwin, the local horse magnate, was autoing up a steep hill about two and half miles south west of Formosa about four o'clock on Tuesday afternoon in his brother Hank's large Studebaker car, and with which he was not familiar, his bus stalled near the top of the hill, and as it started to career backwards down the grade, Mr Irwin frantically jabbed on the emergency brake, which flew to pieces with the suddenness of the jar, and left him and the car to dive to the bottom like an aeroplane. As a thriller it was the real thing, and Mr Irwin was just beginning to think that life was fading away when the car ran off the road and stalled against a huge rock at the bottom. Striking his left side against the wheel in going overboard, he sustained three broken ribs and a bad shaking up, which, however, was a fortunate escape from an accident that seemed to be shaping from the start for a corner-alsquest. Although the car appeared also to be heading for the scrap heap, it came through the ordeal with only slight damages. As a wild ride Tuesday's ordinance outclasses anything yet seen on the moving picture screen.

That anybody's life should be saved by a knife, except on an operating table, is an rare a happening that we almost feel like asking that a certain knife be placed in the museum. It seems that the bullet that got Lance Jas McCallum, an ex-Brant boy, on the casualty list at Vimy Ridge, struck the service knife in his belt, and was scattered and deflected to his intestines, making a wound that while painful was not fatal. Had the knife not intervened and acted as a buffer to the missile Pte McCallum would now be under the sod in France instead of on a "blighty" cot in England; and as adversity is said to make strange bed-fellows, he opened his eyes in the hospital to find himself resting alongside of Sergt George Kingsbury of Walkerton, who was recovering in the next bed from a slight wound in the hip. Needless to say the two fell to hob-nobbing on events in Walkerton and Brant, and what they forgot to recall isn't worth going to about to town.

Never since Haman was hanged from his gallows has the irony of fate been greater exemplified than in the case of Richard Thomas Jones of Bruce township, who after drawing stone to build the Walkerton jail over forty years ago, found himself committed to the punishment plant on Monday last as a vagrant. In crossing the threshold of the local bastile the aged prisoner confided to the Chief that when drawing stones as a young man he little expected they would be sheltering him in his old age. But it is this uncertainty of life that makes the drama interesting, and causes one to wonder whether he will go out like Lazarus picking up crumbs or be down looking up the Dives and clamoring for a drink. Like many others, however, the old man didn't go but in Walkerton but was rather heading for the House of Refuge when he struck town. Not being able to enter without papers from his home town, Walkerton authorities took the stranger in on Saturday and banqueted him at the town's expense, but finding that it was likely to be a continuous performance, as it would take some time to get new clothes and a proper document for his committal, Chief Ferguson had the aged indigent remanded to the jail on Monday until such time as his triumphal entry into the House of Refuge can be staged. It was in this way that the Bruce veteran got looking at the stones from the inside that he formerly drew for the jail.—Herald and Times.

NOW A STRONG MAN



My father had been troubled with Rheumatism for a number of years. He was advised by a friend to try

GinPills
FOR THE KIDNEYS

He purchased a box, and after taking them for a week found that they gave him great relief. He then purchased three more boxes, which were the means of entirely relieving him. He is now a strong man in good health and able to attend to his daily work. For this great change we owe to Gin Pills.

Yours truly, Alex. Moore.

All druggists sell Gin Pills at 50c. a box, or 6 boxes for $2.50. Sample free if you write to NATIONAL DRUG & CHEMICAL CO. OF CANADA, LIMITED Toronto, Ont.

Save the Price of a New Car

Keep your old auto—don't trade it off for a "song" just because it doesn't look as fresh as a new machine. What it needs is a coat or two of

Lowe Brothers Auto-Carriage Gloss Paint

Auto-Carriage Gloss Paint makes a year-before-last car look like the latest model in beauty of finish. The paint dries firm and hard, leaving a rich, lustrous finish. It requires no varnish for finishing—Auto-Carriage Gloss finishes the job complete. Easy to apply.

It is also a fine finish for carriages, buggies, sleighs wagons, iron fences—in fact, for almost every surface where heat-proof, cold-proof, protective paint is needed.

Auto-Carriage Gloss is made in nine colors and a clear varnish. Sold ready to use. Let us show you how little it will cost to make your old automobile look bright and new.

Willys-Overland Motor Cars

Where Right Made Might

Light Four $975

Subject to change without notice

Overland

TRADE MARK REG.

Overland success is so eclipsing that one might take it as a matter of course.

But make it have a personal application to you,

—because the cost of any car is too much money to be carelessly spent.

There need be no confusion in selecting the sound *value* at the same *price*—make comparisons and see if Willys-Overland does not spell the answer with mathematical correctness.

Do not miss the significance of the overwhelming production that makes it possible for us to give *better* cars at *lower* prices.

More than 400,000 owners have been guided to Willys-Overland by their desire for beauty, comfort and luxury in *addition* to utility.

Due to its gigantic facilities the Willys-Overland industry effects millions in economies; has never found it necessary to skimp or rob a car of value in order to compete; but is able to give surplus value throughout the entire car for *far* less money.

Might may not make right, but *right* has made Overland *might*.

The Overland Light Four from the standpoint of mechanical excellence, easy riding comfort, roominess and beauty is incomparably a better car than can be had in any other make at anything like so low a price.

Come in and see the Willys-Overland Motor Cars—the Light Four and the most comprehensive line of cars ever built by any one producer.

Y M C A Canvass in Bruce Tp

A meeting convened by Mr Johnson, reeve of Bruce took place on May 22nd, in the township hall, Underwood, at which arrangements were made for the canvassing of the concessions of Bruce from the 6th to the Saugeen townline, the others having already been canvassed for contributions for the work of the Y M C A in France. The following collectors were appointed with power to add to their number, and they are urged, if at all possible, to do the work on Friday, June 1st. 6th con—Jas Johnson and Walter McKay; 8th con—J B Struthers and Alex MacKenzie; 10th con—Albert Nuttall and ex reeve Archie McLean; 12th con—George Ribey and Alex McGillivray; Townline—John McGillivray and Jas Brunton. Receive the collectors well, and give generous help to this worthy work.

—Mrs J Hyde is up from Toronto on a visit.

—Miss Janet Petrie visited Listowel friends over Sunday.

—Mrs Storrie was visiting her daughter at Newton for a few days.

—Pte Chris Tarker is home from London on leave for a couple of weeks.

—Pte L Gilpin and wife of Toronto, were visitors at Mr J A McNeill's, Lockerby, for a few days.

—Dr Houston went to Toronto on Tuesday to attend the annual convention of medical officers of health for Ontario.

—Mr Wm McKinnon, who has been working in Toronto, was up visiting at his home, 10th Elderslie, for a few days.

—The annual meeting of the W C T U will be held in Putnam's Hall, Friday June 1st at 3 p m. A full attendance is urgently requested.

—Pte George Muir, recently killed in action, was a brother of Mrs Mac McArthur, of Paisley, and a nephew of Muir Bros, of con 2, Saugeen.

—Melrose Watson, who has been very ill with pleurisy at Niagara Falls, N. Y., has so far recovered that he was allowed to be brought home on Friday last.

—Mr and Mrs Waterton and little son from Hamilton, spent the week end at the home of her cousin, Mrs J Allen. Mrs Waterton is a daughter of Mr Jas Stewart.

—Mrs P C Ryan received word on Sunday that her brother, Pte J Sutherland, who went overseas about six weeks ago, had been killed in England. Mr and Mrs Ryan motored to Bradford on Monday to visit her mother.

—The following is the May shipment from the Paisley Women's Patriotic League to Red Cross headquarters: 89 pairs socks, 10 flannel shirts, 3 suits pyjamas, 3 doz pillow cases, 3 doz huckaback towels, 4½ doz Turkish towels.

—A union prayer meeting will be held in St Andrew's church, Saugeen, on Friday evening, June 1st, at which special intercessions will be offered for our soldiers and the cause they are fighting for. A collection will be taken to go to the Red Cross of S S No 5.

—Ladies are requested to save all old worn sheets, handkerchiefs and other cotton articles for Red Cross purposes, and leave at Council Chamber on Saturday afternoon. This class of goods is greatly needed at the field hospitals in France. Do not cut up into bandages.

Soldier Badly Gassed

Mr and Mrs Thos Bryce received advice last Wednesday that their son, Pte W W Bryce, was seriously ill in an hospital in France, having been badly gassed.

Snow for Queen's Birthday

We are told that it is just forty years since the 24th of May was as white with snow as on Thursday last. As a freak of weather it beats a green Christmas.

Letters from the Front

The Advocate is always anxious to publish interesting letters from the front by local people, and all letters placed in our care for this purpose will be taken due care of and returned to the owners.

Killed in France

Mrs Jas Stewart, of Carman Man., who has been here for several months, received word on Saturday that her only son, Pte David Stewart, had been killed in France. The deceased enlisted at Carman, went to England in November last, and had been at the front for four weeks. He was 20 years of age. Mrs Stewart came down to Paisley last fall to wait upon her sister, the late Mrs Gordon, in her last illness.

"The Young Village Doctor"

Town Hall, Paisley, Friday evening, June 1st. Doors open at 7.30. Programme at 8 sharp. Given by the Dramatic club of S S No 14, Bruce. As the entertainers give their services free, and the whole proceeds are to be handed over to the Paisley Women's Patriotic League to be used for providing socks and other comforts for the soldiers, there should be a full house. Admission—Adults 25c, Children 15c, no reserved seats.

First Tp. S. S. Convention

The first organized Sunday School convention for Elderslie Tp will be held in the Presbyterian church, Gillies Hill, on Monday, June 11th, at 2 p m, the evening session at 7.30 p m. The superintendent and secretary of each S S in the township are regularly appointed delegates and may vote on any question. Friends of the S S are requested to bring lunches. In addition to local speakers those who will take part in the convention are Rev W W Prudham of Wiarton, Sec'y of North Bruce S S Association, and Rev D H Wing, Rural Supt of Ontario S S Association. J R Cass, reeve of Elderslie, is convener, and will be chairman of the convention.

THE EARL'S SECRET

Or, a Martyr to Circumstances.

CHAPTER XXXI.—(Cont'd)

"No; why should you?" said Violet, rising and taking her former seat. "I will see him here, John."

The footman returned and ushered in an ordinary-looking gentleman in black. There was another one with him, who came forward with outstretched hand.

"Mr. Thaxton!" said Violet. "Why did you not say it was you?"

"I feared," said Mr. Thaxton, "that you might think I had come on business, and would refuse to see me."

"You wrong me," said Violet.

"This," said Mr. Thaxton, "is a very greatly respected friend of mine. I have brought him to assist me in making a statement which it is necessary you should hear."

Violet bowed to Mr. Dockett—for the gentleman in black was he—and, with a vague look of expectation, sat down.

Mrs. Mildmay had shaken hands with Mr. Thaxton, and invited them to be seated.

"Miss Mildmay," said Mr. Thaxton, "did I not feel sure that you are as strong of heart as you are true, I should approach the task before me with dread. As it is, I do so with reluctance."

"Stay!" said Violet, growing pale. "Answer me one question, and answer it truly. Is the business you have come about in any way connected with my marriage?"

"It is," said Mr. Thaxton. "and with something which I know weighs heavily on you, though the reality has passed long since."

Violet grew paler still.

"Mr. Thaxton," she said, "I am no weak-minded schoolgirl. I have suffered much, and still may, and can bear more than you think. Be plain with me, I entreat you. You have come to speak to me of that dreadful time long past but ever present in my mind."

"I have come to speak to you of Penruddle," said Mr. Thaxton.

Violet repressed a shudder, and closed her eyes for a moment.

The three watchers knew that she was putting up a prayer for strength.

"You have come to tell me that you have discovered something in connection with that terrible, cruel time. Have you found the——"

"We have found the man who was guilty of that crime," said Mr. Thaxton.

Violet shuddered, but sighed.

"It is dreadful," she said, faintly. "And I had hoped—forgive me— —

"Speak plainly on your part," said the lawyer.

"I had hoped that you might have found some trace of him who was wrongfully, cruelly accused of that crime. The noble soul whom I loved and helped to slay!"

And she clasped her hands.

"I have found more than that," said Mr. Thaxton.

Violet rose with wild eyes.

"Tell me!" she cried. "You have found him?"

"Hush!" said Mr. Thaxton. "You promised to be strong!"

Violet sank back and covered her face with her hands.

Mr. Thaxton bent over to her and took her hand.

"A great part of my task is done," he said. "I come to prepare you for a great and terrible trial, perhaps of sorrow, perhaps of joy. Tell me, are you strong enough to bear it? Are you strong enough to see the guilty punished, though that guilty were one whom you held dear? Are you strong enough to witness what in your eyes, unprepared, might seem a miracle? Are you strong enough for a great and fearful, a sudden and tremendous joy?"

There was a moment's pause.

"I am!" said Violet, and once more she looked up with her deep, beautiful eyes.

"Then," said Mr. Thaxton, pulling out his watch, "your trial is near at hand. To-night and within ten minutes you expect Mr. and Mrs. Dodson and Mr. Howard Murpoint?"

Violet inclined her head.

"You may also expect Mr. and Mrs. Lennox Fairfax."

"Bertie and Ethel?" said Violet.

Mr. Thaxton nodded.

"They have returned at my wish and suddenly," he said.

At that moment there was a loud knock at the door.

"There are some of the guests," he said, rising. "My friend and I will conceal ourselves behind that curtained recess. You trust all to me; and you promise to be strong?"

"I trust all to you, and I will be strong!" said Violet.

The two men quickly drew the curtain aside and concealed themselves in the recess.

Scarcely had they done so when Howard Murpoint and the Dodsons entered.

He came up to Violet and kissed her hand with his subtle courtliness and murmured some soft greeting, then he shook hands with Mrs. Mildmay, he said:

"I met our dear friends and managed that we should all come together."

Mrs. Mildmay was about to touch the bell, when at a gesture from Violet she paused and said:

"Shall we have a cup of tea by moonlight? See, it is rising rapidly."

"Delightful!" said the captain. "A charming idea. I can unfold our delicious plans in a congenial light. My dear Violet, I think I have sketched out a really agreeable tour. We shall run through Italy, see everything of any importance, and then come back by——"

At that moment, and as he rose to cross over to Violet, who sat pale and silent, nerving herself for the shock not what catastrophe, the curtain drew aside and Mr. Dockett stepped out.

Howard Murpoint turned, with his teacup in his hand, and frowned. The sudden entrance had startled him.

Mr. Dockett came across the room softly and, with a slight bow to the rest, touched the captain on the shoulder.

"Captain Howard Murpoint, I arrest you upon a charge of conspiracy."

The captain turned pale for a moment, then looked round with a rather displeased laugh.

"Is this a piece of premeditated fun?" he said. If so, don't let me spoil it. What shall I say? Make a confession?"

"Ay, make a confession," said Mr. Dockett. "Here's a man who will help you."

And as he said the words Mr. Giles stepped from behind the curtain.

"Don't move, please," said Mr. Dockett to the company in general and to the captain in particular. "There are half a dozen men downstairs, and every outlet from the house is watched. Now, Mr. Giles, what do you know of the charge?"

"I hold a warrant here," said Mr. Giles, "for the arrest of Captain Howard Murpoint on several charges, involving conspiracy and forgery. It is no use, captain, the game has been a good one, but it is up. To-morrow the bubble will burst, and all your little dodges will be known. To-morrow the city would tear you to pieces if they had you——"

"Stop!" said the consummate villain. "Something has gone wrong in the city, no doubt. There is some mistake, my good fellow. You only do your duty, no doubt. I had better come with you, I suppose? Is that all?

What the Doctor Orders.

Often the doctor will say, "Give the baby barley water." Easily said, thinks the mother, but how does one make it? Or, worse still, she doesn't think at all and hurries home to cook up something that is far from the healthful thing the doctor intended. Here are a few recipes for foods frequently used in caring for the children.

Barley Water.—Two tablespoonfuls of pearl barley, one quart of water. Boil continuously for six hours; as the water boils away, add more, keeping the quantity one quart. Strain through coarse muslin. It is well to soak the barley before cooking it.

Barley Water with Prepared Flour.—One tablespoonful of prepared barley flour, twelve ounces (one and one-half cupfuls) of water. Boil twenty minutes.

Oatmeal Water.—One tablespoonful of oatmeal blended with one tablespoonful of cold water. Add speck of salts. Stir in one quart of boiling water. Boil three hours, adding water as it boils away. Strain through fine sieve or cheese-cloth. After the sixth month, either barley or oatmeal water may be used in preparing the infant's food, instead of plain water. Barley water is to be used when there is looseness of the bowels, and the oatmeal when the tendency is toward constipation.

Barley Gruel.—Blend two tablespoonfuls of barley flour with a little cold milk, and stir into one quart of scalded milk. Cook in double boiler two hours. Add a little salt and sugar. Strain.

Oatmeal Gruel.—To three cupfuls of boiling water add one-half cupful of coarse oatmeal and one-half teaspoonful of salt. Cook five hours in double boiler. Dilute with hot milk, and strain.

Farina Gruel.—One tablespoonful of farina, one pint of water, one teaspoonful of sugar, one-half teaspoonful of salt. Put into one pint of boiling water the salt and farina; cook for twenty minutes; strain, and add sufficient milk to obtain the desired consistency.

Rice Water.—Wash two tablespoonfuls of rice. Add one pint of cold water and a little salt. Cook one hour. Dilute with boiling water, and strain.

Toast Water.—Toast sufficient bread to make, when broken into small pieces, two cupfuls. Add to this one

Plain Tapioca.—Add to one cupful of scalded milk, in double boiler, one one-half tablespoonfuls of granulated tapioca, two teaspoonfuls of sugar, a little salt, and a dash of nutmeg. Cook for fifteen minutes.

Plain Bread Pudding.—Scald one pint of boiling water, and let stand one hour. Strain through cheese-cloth. Serve hot or cold.

Flaxseed Tea.—Wash carefully two tablespoonfuls of whole flaxseed. Add four cupfuls of cold water (one quart). Cook slowly one hour. Add a little lemon-juice and sugar. Dilute with hot water, if necessary, and strain.

Albuminized Milk.—Beat up the white of an egg till light; add a good-sized pinch of salt, four ounces of fresh sterilized milk, and sugar if desired.

Beef-Juice.—Chop and broil slightly lean meat from the round. Squeeze by means of small hand-press or lemon-squeezer into a warm cup. Salt and serve immediately. One pound of round steak usually yields from two to three ounces of juice.

Beef Tea.—Cut in small pieces one pound of round steak from which all fat has been removed; cover with one pint of cold water; let soak one-half hour; put into a preserve-jar, and cover closely. The jar is placed in another vessel containing cold water. Heat this slowly. Cook for two or three hours, strain and season.

Value of Cheese in Your Diet.

Canadian women have long regarded cheese merely as an accessory to the diet, and not as a staple supplying real food value. In fact, most women believe cheese, when used in large quantities is indigestible and harmful.

Experts of the Department of Agriculture have found that cheese is seldom a cause of physiological disturbances, and may easily be used as the chief source of nitrogeneous food.

When cheese is served as a substitute for meat or other staple—and this has been done very successfully—housekeepers should regulate carefully the other part of the same menu as they now select vegetables according to the meat they intend to have, as green peas with lamb. With cheese crisp, fresh vegetables, as lettuce, celery and water cress, should be used, with or without dressing. Fruits, plain or in salad form, are also very good.

It is not generally known that cheese has nearly twice as much protein, weight for weight, as beef, and that its food value is more than twice as great. It contains 26 per cent. more protein than the same weight of porterhouse steak as purchased, and nearly twice as much fat.

Biscuits.

Things to remember in biscuit making:

Select the best flour.

Have flour thoroughly sifted.

Have liquid chilled.

Have shortening just soft enough to rub in with tips of fingers.

After adding liquid, handle as little and as lightly as possible.

Baking Powder Biscuits.—2 cups flour, 2 teaspoons baking powder, 1 teaspoon salt, 1 cup milk and water (half each), 1 tablespoon butter, 1 tablespoon lard.

Sift the flour, salt and baking powder together, twice. Cream butter and lard together, and add to the dry ingredients, using the tips of fingers. Then add the liquid, mixing with a knife until you have a very soft dough. Place on a mixing board and pat out lightly until three-quarters of an inch thick. Cut out and bake in a hot oven for 15 minutes. This will make 2 dozen biscuits.

Coal Oil Helps.

When washing a ceiling, preparatory to rewhitewashing, painting or kalsomining, brush over first with common flour starch. Wash off before starch has had time to dry thoroughly, and all soil will come off with starch.

Also a disinfectant ready at hand and cheap is plain kerosene. As a germ killer for kitchen drains, sick-room floors, as a gargle diluted with water, as a quick destroyer of bacteria on a raw cut, kerosene is over useful.

Coarse Medium or Fine Grain

City Eye Specialists Tell How To Strengthen Eyesight 50% In a Week's Time In Many Instances

A Free Prescription You Can Have Filled and Use at Home.

Boston, Mass.—Victims of eye strain and other eye weaknesses, and those who wear glasses, will be glad to know that Doctors and Eye Specialists now agree there is real hope and help for them. Many whose eyes were failing say they have had their eyes restored and many who once wore glasses say they have thrown them away. One man says, after using it: "I can almost think I can see to read at night now. I can read everything without my glasses, and my eyes do not hurt any more. At night they would pain dreadfully. Now they feel fine all the time. It was like a miracle to me." A lady who used it says: "The atmosphere seemed hazy with or without glasses, but after using this prescription for fifteen days everything seemed clear. I can read any print without glasses." Another who used it says: "I was bothered with eye strain, caused by overworked, tired eyes which induced fierce headaches. I have worn glasses for several years, both for distance and work, and without them I could not read my own name on an envelope or the typewriting on the machine before me. I can do both now, and have discarded my long distance glasses altogether. I can count the flattering leaves on the trees across the street now, which for several years have looked like a dim green blur to me. I cannot express my joy at what it has done for me."

It is believed that thousands who wear glasses can now discard them, at a reasonable time, and multitudes more will be able to strengthen their eyes so as to be spared the trouble and expense of ever getting glasses.

Dr. Beck, an eye specialist of nearly twenty years practice, says: "A patient came to me who was suffering from Blepharitis Marginalis with all the concomitant symptoms, as morning agglutination of the lids, chronic conjunctivitis and ophthalmia. Her eyes were not congested had the dull, fused expression common to such cases, having run out of her medicine, I suggested Bon-Opto. She used this treatment and not only overcame her distressing conditions, but almost amazing as it may seem, so strengthened her eyesight that she was able to dispense with her distance glasses and her headache and neuralgia left her. In this instance I should say her eyesight was improved 100%. I have since watched the efficacy of the treatment in a number of cases and have seen the eyesight improve from 25 to 75 per cent in a remarkably short time, I can say it works more quickly than any other remedy I have prescribed for the eyes."

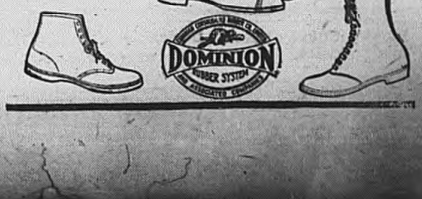
Dr. Smith, an oculist of wide attainments, says: "I have interested in my practice a number of serious ophthalmic diseases which I relieved with, and report ultimate recovery in both acute and chronic cases. Mr. B. came to my office suffering with an infected eye. The condition was so serious that an operation for evisceration seemed imperative. Before resorting to the operative treatment I prescribed Bon-Opto and in 24 hours the secretion had lessened, inflammatory symptoms began to subside, and in seven days the eye was cured and retained its normal vision. Another case of extreme convergent strabismus (cross eyes) escaped the surgeon's knife by the timely use of your collyrium. The tightened external muscles yielded to the soothing and anodyne effects of Bon-Opto. I always instil Bon-Opto after removal of foreign bodies and apply it locally to all burns, ulcers and spots on the eyeball or the lids for its therapeutic effect. By cleansing the eye of corpuscles and acting as a tonic for the eyeball itself the vision is rendered more acute, hence the number of cases of discarded glasses."

Dr. Conner says: "My eyes were in bad condition owing to the severe strain arising from protracted microscopical research work. Bon-Opto used according to directions rendered a surprising service. I found my eyes remarkably strengthened, so much so I have put aside my glasses without discomfort. Many of my colleagues have also used it and we are agreed as to the results. In a few days, under my observation, the eyes of an asthematic case were so improved that glasses have been discarded by the patient."

Eye troubles of many descriptions may be successfully benefited by the use of Bon-Opto and if you want to strengthen your eyes, go to any drug store and get a bottle of Bon-Opto tablets. Drop one Bon-Opto tablet in a spoonful of glass of water and let it dissolve. With this liquid bathe the eyes two or three times daily. You should notice your eyes clear up perceptibly right from the start, and inflammation, redness and pain will disappear. If your eyes bother you even a little it is your duty to take steps to save them now before it is too late. Many hopelessly blind might have saved their sight if they had cared for their eyes in time.

Note: A city physician is when the above article was submitted, said: "Yes, Bon-Opto is a remarkable eye remedy. Its constituents ingredients are well known to ordinary eye specialists and widely prescribed by them. I have used it very largely in my own practice on patients whose eyes were strained through overwork or mild glaucoma. I can highly recommend it in case of sore, watery, aching, smarting, itching, burning eyes, red lids, blurred vision or for eyes strained from exposure to smoke, dust or wind. It is one of the very few preparations I feel should be kept on hand for regular use in almost every family." Bon-Opto is not a patent medicine or secret remedy. It is an ethical proparation, the formula being printed on the package. Druggists guarantee it to strengthen eyesight 50 per cent in one week's time in many instances, or refund the money. It is dispensed by all good druggists, including general stores; also by G. Tamblyn and T. Eaton & Co., Toronto.

This Summer wear



FLEET FOOT

and Save Money

With leather prices still high, you may have several pairs of attractive Fleet Foot Summer Shoes for what one good pair of leather boots cost.

Fleet Foot line is so complete, that there are many styles for work and play—for sports and outings—for men, women and children.

Ask your dealer to show you the full line of Fleet Foot Shoes—and save money this summer. 205

Farm Crop Queries

Conducted by Professor Henry G. Bell.

Henry G. Bell.

The object of this department is to place at the service of our farm readers the advice of an acknowledged authority on all subjects pertaining to soils and crops.

Address all questions to Professor Henry G. Bell, in care of The Wilson Publishing Company, Limited, Toronto, and answers will appear in this column in the order in which they are received. As space is limited it is advisable where immediate reply is necessary that a stamped and addressed envelope be enclosed with the question, when one answer will be mailed direct.

Question—M. A. C.:—My seeding with grain last year was a failure. It did not catch. Would you recommend manuring and plowing the stubble for potatoes this year? Would it do for beans where potatoes grew last year? It was a big growth of clover, also manured, plowed under and potatoes planted. I want to reserve an old meadow to plow under for corn this year and will also have to plow last year's potato and corn ground for oats this year?

Answer:—The land where your seeding failed, if plowed up and then carefully manured, should make good potato ground this year. I would advise in addition to the manure about 400 pounds of fertilizer carrying 2 to 3% ammonia, 8 to 12% available phosphoric acid and 1 to 2% potash. Scatter this down the drill rows when you are planting the potatoes. A good method of application is to drop the seed pieces of potatoes and cover them lightly with soil, and then dust the fertilizer along over the hill and drills and finish the covering. This addition of available plantfood will give the crop a strong, vigorous start.

This land would do well for beans, also.

Question—R. E.:—I have a piece of land that has been run for years without clover or manure. This land is quite sandy and contains practically no humus. Now, if I apply 12 good loads of manure to the acre, which would be the most profitable crop for me to raise, corn or potatoes? I raised corn on similar land last year that went 60 cranes to the acre, with manure. Would this ground hold moisture sufficient to grow a good crop of potatoes?

Answer:—If you have potato seed, by all means potatoes would be the most profitable crop for you to grow on the land in question. I would recommend adding fertilizer to the manure, as per answer to M. A. C. Under normal conditions you should not have any trouble from lack of moisture. If you have to buy potato seed, at present prices it may be more profitable to grow corn, but this you will have to decide from your own local conditions. If you need it to corn, I would advise adding about 200 pounds of fertilizer to the acre, spreading it broadcast and working it into the ground before you plant the corn. It should carry from 2 to 3% ammonia and 8 to 10% phosphoric acid.

Question—W. A. C.:—I would like to get your opinion in regards to planting beans in hills, planted 28 inches each way. Do you think the yield would be as good as if they were drilled? They could be worked both ways and kept much cleaner and less seed would do. The seed is so high in price this year it would be quite a saving in the cost of the crop.

Answer:—I am very much in favor of planting beans in the hill, especially on land that is likely to be weedy or where disease has been prevalent. As a rule, the yield will be almost as high as if they were drilled and frequently better as disease is not so likely to spread from one plant to another. I would suggest the seed be tested to learn what percentage will germinate, and since seed is so high-priced, that the drill be also tested to see if it plants the quantity of seed desired. I would also put on about 200 to 300 pounds of fertilizer to the acre. The fertilizer may be put on broadcast and worked into the ground before the beans are planted, or it may be put on as the beans are planted if care is taken to see that the fertilizer does not come in close contact with the beans in the soil.

Question—R. M.:—I have about sixteen acres of wheat that is badly killed in the low places, and I don't wish to plow the wheat up on account of expectations of a high price next year. Do you think it would be advisable to drag up these low places and sow to Spring wheat? Could it all be harvested together? If so please tell me where seed could be procured and how and when it should be sown. If spring wheat is not advisable how would either buckwheat or beans be?

Answer:—If it is not already too late when you read this answer and you can secure the seed, I would advise the sowing of spring wheat where the winter wheat has killed out. It is almost impossible to tell whether the spring wheat and winter wheat could be harvested together or not. This would depend entirely on the weather and whether the two wheats ripen at the same time. In fact, I should expect they do not to ripen together. You should sow the wheat at once. All that is necessary to do would be to harrow or disk up the ground and drill in the wheat. Perhaps you will be able to secure spring wheat seed in your community or from some of the operator men. Unless you are able to get it close at hand it will be too late to sow it. In such case, either buckwheat or beans will make a splendid crop. In fact, I would prefer the planting of beans as they can be put in any time up to the last of June, just so they have time enough to ripen off before frost. In this case the ground should be thoroughly disked or harrowed up and worked down, after which the beans may be planted in rows 21 or 28 inches apart. A grain drill with part of the grain tubes stopped up offers the best means of planting the beans. When planted this way some fertilizer can also be applied. The best way probably is to stop up the fertilizer tubes directly over the row containing the beans but allowing the fertilizer to run down the tubes on each side of the one dropping the beans.

Question—J. B. H.:—Isn't it considered poor policy to plant corn in ground that grew sugar beets last year, if only a light crop? There are two fields which are desired for corn and beans. One is sod and the other grew beets last year, soil about the same. Both corn and beans require rich ground, which one will be best to follow beets?

Answer:—Regarding beans and corn following sugar beets, the U. S. Department of Agriculture studied 115 farms and found that, following sugar beets, the yield of corn was increased by 12 bushels to the acre and beans 5 bushels. This would indicate that either corn or beans could be planted in the ground that was in sugar beets. From these figures we ought not to judge that sugar beets make the soil rich in fertility but rather because they are cultivated during the summer, the soil is put in better tilth for the growing of the following crops. I would recommend that the sod ground be put to corn and that beans be put in the sugar beet land as beans do not do well on freshly turned sod or where too much fresh manure or organic matter is added to the soil. If about 300 pounds of fertilizer analyzing high in phosphoric acid are used on the corn land and probably 200 to 250 on the bean field, good crops should be secured this year.

FOOD SHORTAGE SUGGESTIONS

The Food Value of Buckwheat is High. As It Is Both a Flesh Producer and a Heat and Energy Producer.

By Henry G. Bell, Agronomist.

Buckwheat pancakes may form a welcome substitute for breakfast wheat cereal and bread toast, while wheat ranges around the $2.60 a bushel mark.

Buckwheat characteristics strongly recommend this crop for cereal production.

Buckwheat is a dry grain which can be stored. After wheat, corn and rye, buckwheat contains a maximum of food in a minimum of volume.

Buckwheat is strong in both flesh producer and in energy and heat producer. It compares with wheat as follows:

Crop.	Percent. Water	Percent. Protein (Flesh Producer).	Percent. Carbo-Hydrates. (Heat and Energy Producers).	Fats	Fibre	Ash
Buckwheat	14	9.0	58.7	1.5	15.0	1.8
Wheat	14.4	13.0	66.4	1.5	3.0	1.7

Buckwheat yields from 10 to 40 bushels per acre.

Buckwheat requires from 3 to 5 bushels of seed to the acre.

Buckwheat suits poor, light, dry land. It produces larger yields where additional fertility is supplied, 200 pounds per acre of fertilizer supplying one per cent. ammonia, 8 to 10 per cent phosphoric acid, gives good results. This should be drilled in when the buckwheat is sown, or broadcasted and worked into the seedbed by disking and harrowing. You can increase the effectiveness of high-priced farm labor by fertilizing the buckwheat. A yield of 20 to 30 bushels per acre uses the labor much more profitably than a yield of 10 bushels per acre.

Finally, buckwheat should be sown later than corn and the small grains. It is therefore an excellent crop for "filling in" where other crops fail.

Buckwheat is quoted in Chicago at $3.20 per bushel.

Buckwheat Strong Points.

Strong food in compact volume. Food suited to storage, therefore, valuable for export. Thrives on comparatively poor soil. Makes quick and reasonably large returns. May be planted later than other crops; hence can be used to fill in "where other crops fail." Buckwheat matures in less than 100 days.

The Sunday School

INTERNATIONAL LESSON
JUNE 3.

Lesson X.—Jesus Betrayed and Denied
—John 18. 1-18. Golden
Text—Isa. 53. 6.

Verse 1. Brook—The term implies a ravine that was dry except to the rains. In Old Testament name Kidron has been turned into a Greek word, as if it meant "Cedars Brook." A garden—An orchard in "a place" (Mark 14. 32) called Gethsemane, the scene of the agony, which John does not record (The New Century Bible).

2. Probably Judas went first to the house of the supper, and then went straight for Gethsemane. Jesus often resorted thither—This is one of the instances of John's exact knowledge of the incidents which attended the Jerusalem life of our Lord. All the Evangelists narrate the coming of Judas. John only remembers that Jesus was not hurried by it, it may be, to a friend or disciple, where Jesus was in the habit of going with his disciples, and that Judas therefore knew the place and knew that he would probably find them there (The Handy Commentary).

3. The magnitude of the preparation made to overpower resistance was due to the fear that the Galileans would rally to him. Cohort (margin)—Presumably the Jewish leaders had asked Pilate to put a company of his soldiers at their disposal, to arrest a dangerous character whom they would, of course, bring to him for trial. They would be under their own chiliarch (verse 12), but Judas was guide. Note how eager the Jewish coalition was, each section sending its own servants.

5. We have not sufficient information to tell whether the traitor's kiss comes in this narrative is manifestly independent, and the eye-witness who writes here does not seem to have seen that incident, which was reported by Peter through his pupil Mark.

6. This is told to bring out the absolute voluntariness of his surrender. "Once before, the majesty of his words had overwhelmed those who had come to arrest him (John 7. 46); and it would have been so now, had not he willed to be taken" (The Cambridge Bible).

8. This gives us the other side of the record that they all forsook him and fled, which Mark places after his words, "But let the scriptures be fulfilled."

9. The Evangelist sees the Master purposed to keep his disciples out of temptation, that he might deliver them from evil and keep them for his work. We must assume that he made them understand it was his will that they should hide from a very real danger; nothing less, surely, will explain their absence from Calvary. The one who, with the best of motives, ran into temptation unbidden, gained nothing but bitter experience from doing so. First he endangered himself and his comrades by hewing at Malchus's head. Then, to preserve his concealment, he three times disowned his Master. Better have "forsaken him and fled"—as Mark put it, who had himself probably done the same (Mark 14. 52). Of these—See John 17. 12. The verb is changed to the active; there it is "not one of them was lost."

10. Having a sword—See Luke 22. 38. The earlier Gospels do not name the aggressor, nor the officious slave who thought to please his master by a special show of zeal. Peter fortunately escaped doing more damage. As it was, he came very near being detected (verse 26) and suffering for it. The Jewish leaders were contemptuously indifferent to the disciples: if they could smite the shepherd, the flock would be finally scattered! Danger to them came rather from the mob that followed him.

11. Only Luke knows that Jesus healed Malchus. He got the detail—as the present writer believes—from Paul, who was there and in the thick of it. He heard and quoted those last terrible words about "the authority of darkness" (Luke 22. 53; Col. 1. 13). The cup—John has not reported the Master's earlier use of this phrase (Mark 14. 36).

15. The other disciple was the author (John 21. 24). He was known unto the high priest: the word is that of Luke 23. 49, and implies more than mere casual acquaintance. That he was an eye-witness is much more important than that he should be an apostle. Court—The quadrangle round which the house was built.

17. The maid—Compare Rhoda in Acts 12. 13. Thou also—She therefore knew that John was one. "In the original the question is put in a form that suggests a negative answer, 'Surely thou art not'" (The New Century Bible). I am not—Peter probably thought he would not be allowed to stay to "see the end" (Matt. 26. 58); it was a typical example of doing evil that good might come.

The Dairy

Give each calf a chance to drink water at least twice each day.

What the cream separator has done for farmers in the way of improved and labor-saving methods of creaming milk, the milk machine will do in milking cows, which is one of the most troublesome jobs on a dairy farm.

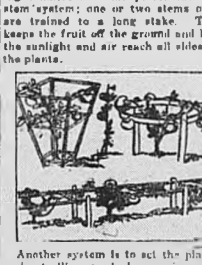
W. H. Johnstone of Moose Jaw, Sask., who uses a three-unit milking machine, says that two men can run machine, weigh milk and strip twenty cows per hour. He used the machine on thirty cows the first morning.

A test of the whole herd does not give the needful information; this matter of cow-testing is a strict question of individual capacity.

Sixty patrons of two creameries in Prince Edward Island averaged 884 pounds of fat per herd, after two years of cow-testing these sixty herds averaged 955 pounds of fat; this is a gain of seventy-one pounds of fat per herd, or eight per cent.

When we consider that a five-dollar calf may grow into a hundred-dollar cow, it seems preposterous to send it to the butcher.

Too many farmers do not realize the feeding value of skim milk. They think that because the fat has been removed a much larger quantity of milk should be fed. As a result, the calves are often overfed.



Fish Pond For The Farm.

Why shouldn't a farmer raise fish as well as chickens? Given proper fresh water supply and reasonable space for a pond, an astonishing quantity may be had in two or three years.

Tomato Culture.

Tomato seed sown in boxes in the house in March will produce plants that will fruit the same season. Plants ready to be set out can be purchased from seedsmen. In buying plants select strong, sturdy plants, avoiding the tall drawn specimens that are frequently offered. Where tall, spindly plants of tomatoes must be used pinch off the top. This will check the upright growth temporarily and give the plants an opportunity of becoming stronger. It also causes them to branch.

There are several systems for growing tomatoes. Some prefer the one stem system; one or two stems only are trained to a long stake. This keeps the fruit off the ground and lets the sunlight and air reach all sides of the plants.

Another system is to set the plants under trellises made by running narrow strips of wood along stakes about two and a half feet above the surface of the ground. Two strips are run about two feet apart, braced with cross sections very two feet to form a rigid frame or trellis. The tomato plants are set out under the middle of this framework and trained up through the centre, the frame supporting the plants when they are laden with fruit.

Another method is to make a trellis the shape of a funnel, setting this over each plant. A barrel hoop on supports is another form of the same plan.

When grown on a large scale field culture is the system practiced. The plants are set out in long, straight rows, cultivated—by horse, and the vines are given no support. This system may be used also in small gardens.

Beans a Valuable Crop.

Beans have a two-fold value. They rank among the valuable foods, containing a higher percentage of protein than wheat or oats, and even meat. Beans are also of value from a soil cultural aspect, as they belong to a most important class of agricultural plants termed legumes, which are capable of taking up indirectly the free nitrogen of the air and storing it in tubercles on the root system of the plants in a available form of plant food for future crops.

The last week of May or the first week in June is usually the most suitable time for planting, although the time of planting may vary slightly according to district and season, but should not be delayed after the soil has become warm and dry.

Some of the best yielding varieties of field beans are Pearce's Improved Type Scholield Pea, Medium or Navy, Common White Pea and white Wonder. These varieties require from 112 to 115 days in which to reach the proper stage of maturity for harvesting.

After planting, but before the plants appear, which will usually be from three to six days, depending largely upon the weather, it is advisable to harrow the soil lightly with a slant-tooth harrow or even a light smoothing harrow. This operation will break the crust, destroy weeds, help warm the soil and stimulate rapid germination of the seed and growth of the plants. As soon as possible after the beans are up, and can be seen in the row, the single and two-row cultivators should be used. It should be the aim of every grower to keep the soil stirred on the surface. Thus each rain and in time to prevent the forming of a crust the soil should be stirred by means of the cultivator. The work of cultivation also should be kept well in hand early in the season so that little cultivation need be given after the blossoming stage of growth has been reached.

If you are looking for speed you are most apt to find it in horses of the color we call "bay."

If on account of the scarcity of potatoes it becomes necessary to utilize culls for planting, every potato grower should keep in mind the years to come—by growing a special breeding plot from select seed. No great harm is likely to result in planting culls in fields where the crop is to be harvested strictly for market purpose. In sorting out the culls for general planting, the best tubers may be selected for planting a seed breeding plot from which the 1918 seed potatoes may be secured next fall.

Poultry

Market in June.

All roosters, old hens, early broilers, green ducks.

During the first week in June, kill off, dispose of or remove from the flock, the male birds after the breeding season. Their presence in the flock after this date causes a loss of a million dollars a year to Canadian farmers through the sale of partially incubated and bad eggs in the produce which is marketed. All old hens should also be marketed at this date.

The proper way to carry a fowl is to place it under the arm, the head pointing to the rear, and the feet held firmly by the hand. In this way the bird can be carried for miles without the least discomfort to it or the person carrying it.

In former years, the common practise was to carry poultry by the legs, head hanging downward. This was a bad mode and one that never was used by regular poultrymen. When the head is hanging downward there is nothing to prevent a rush of blood to it, and it is the belief that many cases of vertigo can be traced to such acts of carelessness.

But still more cruel is lifting the body by their wings. Should the fowl struggle when thus handled, it is a very easy matter to snap the cords of the wings and thus permanently injure the bird.

Poultry roughly handled lose confidence in their attendant, and loss of confidence in the hennery often has a bad effect upon the egg crop. Besides, any method that points the least bit toward cruelty should not be permitted. Gentleness is a virtue that even hens appreciate.

The mash for the chicks may consist of equal parts of bran, middlings and cornmeal, and half part of beef scrap, but the composition is more or less dependent on the feeds that are most available.

Pullets that are stunted by poor feeding during the first few weeks of their lives will prove a decided disappointment from the standpoint of their egg production.

The most effective method for body lice on hens is the application of a dilution of either mercurial ointment or blue ointment. Mercurial ointment contains fifty per cent. of metallic mercury. Blue ointment is a mixture consisting of sixty-seven per cent. of mercurial ointment and of thirty-three per cent. of vaseline and, therefore, contains thirty-three and one-third per rent. of mercury.

Your Problems

Conducted by Mrs Helen Law

Mothers and daughters of all ages are cordially invited to write to this department. Initials only will be published with each question and its answer as a means of identification, but full name and address must be given in each letter. Write on one side of paper only. Answers will be mailed direct if stamped and addressed envelope is enclosed.

Address all correspondence for this department to Mrs. Helen Law, 239 Woodbine Ave., Toronto.

"Reader":—1. Eggs should be preserved in water glass during March, April, May and June, when they are cheapest. 2. Protect the young cucumber plants from the striped beetle by covering them with wire netting. Spray with Bordeaux-arsenate of lead as soon as the plants appear; again at the appearance of the third leaf and a third time before the plants begin to form runners. See that the spray strikes under the leaves as well as on top. For the cabbage worm, dust with tobacco dust, pyrethrum, hellebore or spray with arsenate of lead or powder with dry arsenate.

"Enquirer":—Balfour is pronounced Bal—as in balance—foor. It is very hard to convey the exact pronunciation of Joffre by phonetics, but the J is soft and the re is hardly sounded at all; it is almost as though it was written Joff, with the ffs a mere breath. Viviani is pronounced Vee-e-an-e.

J. D. V.:—The following are the dates at which the several nations entered the European War:

1914, July 28, Austria and Serbia; August 1, Germany and Russia; August 3, France; August 4, Belgium and Great Britain; August 8, Montenegro; August 23, Japan; November 5, Turkey.

1915, May 23, Italy; June 3, San Marino; October 14, Bulgaria.

1916, March 8, Portugal; August 28, Rumania.

1917, April 6, United States of America; April 7, Cuba.

A. J. L.:—1. In the partly shaded location you describe, you should be able to grow lettuce early or late cabbage, cauliflower, or spinach. Do not try beans, eggplants, corn, tomatoes. 2. Dahlia roots need warm soil and warm weather, so it is not safe to plant them at this time.

"School Girl":—The cause of the so-called "blackheads" is the clogging of the pores with dust and grease, which hardens and pits the face with tiny black specks. The first step is to thoroughly cleanse the skin. Every night wash thoroughly with warm water and a good soap. Dry skin carefully, apply to the spots an ointment made of 1 ounce soap liniment and 1 ounce ether well mixed, and allow it to remain on during the night. Wash off in the morning with warm water and rinse with cold. Continue this treatment until the blackheads have disappeared. To contract the pores wipe the face with a little alcohol or eau de cologne. Frequently pimples appear with the blackheads, and when this is the case make an ointment of the following ingredients, 2 grams beta naphtol, 20 grams sulphur precipitate, 20 grams potash soap. Mix thoroughly and apply to the pimples at night. This preparation may be used at the same time as the blackhead ointment. Do not be discouraged if you see no improvement in your complexion as the weeks slip by. It sometimes requires months to get rid of pimples and blackheads.

"Perplexed":—1. A felon is an infection of the tissue around the finger nail. The constant application of a wet dressing, equal parts of alcohol and water, may check it. If it progresses a surgeon should be consulted, as the infection may cause great trouble. 2. Worry can check the secretion of gastric juices and also impair the normal motion of the stomach. 3. Greens and green vegetables are the best source of iron for blood building. 4. The eyes should have a rest from reading and from all kinds of fine work. Out-of-door recreation, such as gardening and almost any form of out-door employment will be found beneficial.

"Housewife":—Onions and water will remove the smell of paint from a room. Slice several onions, put them in a pail of water and stand the pail in the closed room over night.

W. A.:—Probably the reason baby cries when you lift him is that you hurt him by not lifting him properly. In lifting a baby, grasp the clothing just below the feet with your right hand, slip the left hand under the baby from below upward until the head is reached, supporting with the hand and lifting the child on the left arm.

Bedtime Stories

A Question of "I's"

"Pink is the proper color," the little rabbit politely informed Araminta Jane. They were having a most delightful afternoon tea, Dorothy Anne, who had been feeding them dainties—bits of cake, goosetes and crackers—had quite suddenly decided to see whether any of her flowers were up and had left the white rabbit and the china doll together under a large tree in the orchard.

"I am sure blue is the proper color," Araminta contradicted, still very politely.

That was how it started! Both were sure they were right and soon they made such a noise that a little squirrel came to see what the trouble was. "Brown!" he maintained stoutly when they told him of the argument. A crow hopping after a fat worm, stopped long enough to caw, "Black." And he was upheld by the raven, who happened along soon after.

"I'll go and ask the owl," offered the squirrel after they had argued themselves hoarse without coming to any agreement.

"Surely I know, for she picked me out herself from brown and black-eyed dolls," Araminta sobbed. "Surely she must know that blue eyes are the best!"

Back scampered the little squirrel. He says it's a question of "I's," he announced breathlessly.

"Silly, isn't that what we all know. We mean the proper color for eyes."

Just then back from the garden danced Dorothy Anne and Elizabeth and Ruthie, her little friends. "Oh, look at Dottie's new doll. Aren't her eyes the most beautiful blue!" exclaimed Ruth, picking up Araminta and dancing up and down with her.

"But look at the cutie rabbit with its cunning pink eyes," Elizabeth said, "Dorothy, what color do you think eyes ought to be?"

Dorothy looked carefully at the big brown eyes of both her little friends. "I—I," she started to say.

The little squirrel, who had been waiting to hear the answer, suddenly chuckled to himself. "Now I know what the Owl meant," he whispered to the rabbit as he scampered past him.

Do you?

The Paisley Advocate

PAISLEY, MAY 30th, 1917

—As was anticipated, Quebec is putting up a kick on conscription, regardless of party politics. The protesting leaders declare they will not accept a conscript law without a referendum vote being taken upon it or the Government goes to the country.

—The German-Canadian Union of Saskatchewan are apparently endeavouring to influence school matters in that province so as to get a foothold for teaching the German language therein, and also promote other German "interests." A circular was recently issued, printed in German, the published translation of which has set the English speaking people to thinking the Teutons are deliberately planning things that should not be approved in Canada.

—The competitive lines of railway in Canada have produced one of the most stupendous examples of economic waste that the world has seen, and the competitive policies of our political parties is at this moment producing one of the most shameful examples of waste in politics' aims and efforts that could possibly be imagined. Consolidation is the remedy advised by experts in the case of our railways. It doesn't even require experts to see that a condition of statesmen is what is required to handle all the business of our Dominion in this great crisis that is upon us. What has been done in the British Parliament should be possible in the Parliament of Canada. This is a get-together time, even for politicians Partizanship should be thrown aside.

—This is still a tolerably free country, and one well worth fighting for. Since conscription has been mooted however, the liberty of part of our male population has been curtailed in one respect, at least. A regulation was issued by order-in-council last week, making it illegal, under heavy penalty for any male resident between the ages of 18 and 45 years to leave Canada for any purpose without the written permission of a Canadian immigration inspector or other person authorized to grant such permission. The officer must be satisfied by a sworn declaration that the intended departure is not with the object of avoiding liability to be called upon to render military or other service which might conduce towards the success of His Majesty and his Allies in the present prevailing war.

—Now that we are likely to have conscription of men there should also be conscription of wealth. There are too many Canadians smugly piling up riches during the war, while other men are doing the fighting and taking all the risks at $1.10 per day. The greed for money is a feature of our civilization system that should be eliminated, especially in war time. The lust for money is no more commendable than is the Prussian lust for power that has caused this world war. Society should be so re-organized that it would not be possible for to grow wealthy while others are poor. Autocratic rule is doomed, and the power of wealth should not be allowed to take its place. The buccaneers of olden times would at least risk their lives for the rich prizes they sought to possess, but the profiteers of to-day face no dangers and seek to corral all the bullion in sight. The fortunes that are being made in Canada might fairly be levied upon if for no other purpose than to furnish a more liberal pension rate for disabled soldiers and their dependents.

The Military Hospital Commission have issued a bulletin from Ottawa giving information as to the returned men now entering agriculture through the door of re-education, which will be of interest to all who are concerned either in the restoration of our disabled soldiers or in the development of our greatest national industry. It is stated that "while Private Citizen Smithand Private Citizen Brown are discussing and wondering 'whether the returned soldier will go into farming,' Private Soldier Smith and Private Soldier Brown are—doing it.

"Not till the able-bodied men return can we tell how many soldiers are likely to take up land and farm it. The chances are that the number will be large, if the men are convinced that the schemes for helping them will be so developed and worked as to offer a clear hope of success.

A census is now being taken among Canadian soldiers overseas, and on this it should be possible to base an estimate of the number agriculturally inclined. The card issued for the purpose by the National Service Commission includes spaces to be filled up with each man's name, age, unit and rank, regimental number, P. O. address before enlistment, and Province."

Among the questions asked each soldier are these: "Do you desire take advantage of any available scheme of assisted agricultural settlement?" "If so, what Province do you prefer to settle in?" "And would you, if necessary to gain experience, work for prevailing wages on a farm after your return, providing your dependents were in the meanwhile given the same support as they now receive?"

"To-day, the records of the Military Hospitals Commission show that 75 men have had their applications granted for agricultural training, besides several passed by the Disabled Soldiers' Training Boards and awaiting the Commission's approval. . . A considerable number are specializing in farm mechanics. . . . When a man is found unable, owing to any effect of his service, to take up his former occupation, he may claim the privileges of the Government's Re Education Scheme. That is, he is entitled to receive free training for a new occupation, along with free maintenance for himself and his family while the training lasts, and for a month longer."

Provision is made for training men at centres in the different provinces, and at Winnipeg men will be taught to use and repair farm machinery of all kinds, including tractors. In Ontario the prison farm of 850 acres at Guelph has been taken over. This property is fully equipped for giving the most thorough agricultural training, and a great proportion of it is already under cultivation. There is a large green-house for gardening under glass, a model dairy barn, up-to-date machinery, and live stock of all kinds complete the equipment for animal husbandry.

Units Preparing for Their Convention

Things are warming up for the Liberal convention at Tara on the 7th of June. Some new developments are showing. Mr Campbell of Hepworth is being opposed by Mr John McAuley of Wiarton, whose friends are working hard for him.

The centre of the riding is to be heard from this time with a vengeance. Messrs McCannel and Mewhinney, both ex-wardens, have so far been the serious ones in the centre of the riding, but The Times learns that Warden Izzard is a contestant for the candidacy.

In conversation with Mr Mewhinney of Bruce, The Times was informed that he was in the field. "I have been urged by my friends to let my name go before the convention, and I shall. I want the people to make the choice and I shall be satisfied with whatever choice they make. This is my attitude. I am not exercising myself before the convention. These matters should be left to the people," said Mr Mewhinney.

Ex Warden Alex McCannel was called up by phone and asked if reports were true that he would seek the convention "Yes they are," said Mr McCannel. "Is it not time that the agricultural interests should have some particular plans for the convention? Much talk is being heard that a farmer should be willing to contest the seat and if I am acceptable to the convention I am prepared to sacrifice to canvass the riding."—Times

Editor ADVOCATE.

DEAR SIR,—Coming home from the big city of Toronto after a week's sojourn in the midst of civil and military life, one feels it a rest to get back to ordinary business again.

To be privileged to listen to the eloquent, forceful and masterly addresses of Rev W A Cameron on trench life and the activities of the Y M C A among the soldier lads, two of which I heard; and to be privileged to hear the Right Honorable A J Balfour reply to the addresses of welcome from Ontario and Toronto, which I could hear distinctly from my vantage point; and to have the privelege of attending a banquet to which the dentists of Ontario and their wives were invited and responded to the number of three hundred and fifty; together with the excellent lectures given us on dental subjects, not to mention the stimulating pleasure of meeting old friends, is enough to make one dizzy almost to meditate upon. However, I believe I will survive and be enabled to do even better work than I have done in the past, but of this more anon.

Mr Cameron's message was most encouraging to those who have sons or relatives or friends in the great fight for freedom. The work of the Y M C A is beyond praise. It is a pity its work is not better known. Sir Sam Hughes, whom I also heard as an after luncheon dessert, also gives it unstinted praise.

Not wishing to make this too long I shall close for this time.

A H ALLEN

About Boys at the Front

Bandsman L R Putnam, who transferred to an infantry battalion and has been at the front for over two months, in a letter to his parents here, tells of some of the activities of the troops. He says that at the time of writing there are more aeroplanes soaring above him than he can count, and they seem to be challenging the enemy air machines to fight, but the latter do not seem inclined to scrap. He says Emerson Pearce is looking fine, but Ingold Bain is in hospital.—Pte Norva Kyle, who went with the 61st from Winnipeg, is willing to a friend here, says he is the only one left of seven bank boys who enlisted at the same time as himself. The other six have been either killed or wounded.—Pte Vic Sansom has become a veteran of the trenches, having put in a whole year on the front without missing a trip to the fighting line. Drinking trench water and eating bully beef for that length of time had its effects upon him, however, and he is now in hospital in England.

BORN

COOK—At Toronto, on May 23rd, to Mr and Mrs W W Cook, (nee Miss Lily Reed) twin girls.

DIED

MUSSELMAN—In Bruce Tp, on May 30th, Harvey William, only child of Mr and Mrs Menzo Musselman.

MCPAUL—At Owen Sound, on May 22nd, William J McPaul, formerly of Arran Tp., aged 89 years.

MONKMAN—In Arran Tp., on May 17th Charles Gilbert Monkman, aged 72 years, 7 months and 11 days.

MISERABLE FROM STOMACH TROUBLE

Felt Wretched Until He Started To Take "Fruit-a-tives"

101 CHAMPLAIN ST., MONTREAL.

"For two years, I was a miserable sufferer from *Rheumatism and Stomach Trouble.* I had frequent *Dizzy Spells,* and when I took food, felt wretched and sleepy. I suffered from Rheumatism dreadfully, with pains in my back and joints, and my hands swollen.

A friend advised "Fruit-a-tives" and from the outset, they did me good. *After the first box, I felt I was getting well* and I can truthfully say that "Fruit-a-tives" is the only medicine that helped me". LOUIS LABRIE.

50c. a box, 6 for $2.50, trial size, 25c. At all dealers or sent postpaid by Fruit-a-tives Limited, Ottawa.

LOCAL AND DISTRICT NEWS

Entitled to Alimony!

A farmer's wife who sued her husband for alimony at the High Court Sessions here last week testified in court that she did all the housework and sewing, milked the cows and separated the cream before her husband got up in the morning, and sometimes cleaned the stables, fed the cattle, harrowed, disced, drove the binder, held up one end of a crosscut saw, and helped load up the logs. For a reward she got cuffs and blows. This recalls the stone age. When the women start lawmaking they will certainly fix that kind of a husband.—Telescope.

Death of Mr John McFaul

The death occurred on Tuesday last, of Mr John McFaul in his 89th year. The deceased has been in failing health for the past five or six months, gradually sinking until he passed peacefully away. He was born in County Antrim, Ireland, in 1828 and came to this country with his parents when he was about six years of age. They settled in the township of Cavan and later moved to Arran township, where he and his wife resided until about 15 years ago, when they moved to Owen Sound. The deceased was married in 1853 to Miss Sara McFadden who died in Owen Sound about nine years ago. Since that time the deceased has made his home with his son, Mr A W McFaul. Besides his son, there are three daughters to mourn the loss of a loving father: Mrs James Park, of Tara; Mrs R C Scarrow and Miss Carrie McFaul, of Owen Sound. The deceased was a consistent member of the First Methodist Church and the funeral services yesterday were conducted by the Rev Wallace Stewart of that church. The funeral was held from the residence of his son, 912 2nd Ave. W to Greenwood Cemetery and was quite largely attended.—Sun.

The Late Mrs. McTaggart

The late Mrs McTaggart, whose maiden name was Isabella Biggar, came with her people to this country about 60 years ago. Her father was engaged doing engineer work in different parts of Europe before settling in Bruce. She was a sister of the late Col Biggar, M P P. Two of the family, James in Texas, and Margaret in Port Elgin, survive her. Fifty years ago she was married to John McTaggart and resided on the McTaggart farm continuously since then. Her husband predeceased her some ten years ago. To them were born five sons and two daughters. Home ties were very dear to her and the respect and prosperity which have attended all her large family is evidence of careful and loving training while under the home roof. The funeral took place on Friday to Port Elgin cemetery, a large number from the surrounding districts attending the service at the house, which was conducted by Rev Mr Mann, Port Elgin. Deceased had reached the age of 77 years, and had been in precarious health for some time. The old farm home which held the kind mother was always a source of attraction to the boys who had gone from it, and made homes of their own in distant parts. All of the family except Rev Alex of Calgary, were able to be present to take part in the last sad rites: Donald, from Calgary; John, from Edmonton; James, from Moosejaw; Mrs A Miller, Saugeen; Margaret and Walter, at home.—Times.

From George Purdy in France

DEAR FOLKS—Just a few lines to let you know I am still in the land of the living, and also to thank you for the parcel of eats which arrived a few days ago. It arrived at just the right time, as we had just come out of the line and were real hungry. We had a wet and hard trip. The parcel from the church also arrived in good shape. Please thank them for me, also Mrs R J Skinner for the socks. They are fine and just my size. Oh, by the way, until further notice address my mail to 70th Prisoner of War Co'y, 1st Army, B E F. Now, don't think I am one of the prisoners, because I am not. We have a mob of Germans here and I am one of the corporals of the guard or escort, or whatever they call us. I guess I didn't tell you that I had been promoted to be a full corporal some time ago. I suppose by this time you have read of the advance the Canadians were in. We captured our town alright, but we had no real fun, as any Germans we ran across were either prisoners or else had their hands up. They have been teaching us bayonet fighting for quite a time now, but we don't get much chance to use it. However, it may come in handy yet. I came through the advance in great shape. I had charge of No 1 section of our platoon and didn't lose a man with the exception of one who lay down about half way over. He told the stretcher bearer and me that his heart had stopped, but I think myself that it was just his feet. Thank goodness, we don't get many like him. I haven't heard from Gow for quite a while now, so don't know how he made out in the push, but expect he would have plenty of work to do as we have all kinds of ammunition now. I hope you are all enjoying good health, and that I will hear from you before a great while.

April 26th YOUR SON, GEORGE

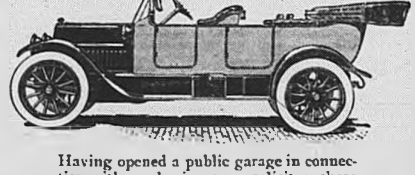
"HAD ALMOST GIVEN UP."

Sarnia, Ont.—"About 27 years ago I was taken very bad, my blood, too, was in bad shape. I got so I had to go to bed and I was there for over three months. I could not eat and suffered untold agony. I had three of the best doctors I could get but it just seemed nothing was going to help me. I had almost given up. I thought I would never be any better and was willing to give up and die rather than suffer as I was. A neighbor of mine told me of Dr. Pierce's wonderful remedies and I decided to use them. My husband bought me six bottles of 'Favorite Prescription.' I had not taken it long until I felt better. In less than six weeks I was out of bed, and in less than six months I was cured and have been well ever since. Do all my own work. I have raised three daughters, two are married and have children. They have used it and they are healthy, so are their children. I am sure it was all on account of my having taken the medicine.



"I keep all of Dr. Pierce's medicines in the house. Have 'Favorite Prescription,' 'Golden Medical Discovery' and 'Smart-Weed'—anything prepared by Dr. Pierce is good. I also have a copy of the People's Common Sense Medical Adviser, which I have had 20 years; it has been very valuable to me."—Mrs. J. Way, 232 Ontario St., Sarnia, Ont.

If you are a sufferer, if your daughter, mother, sister need help, get Dr. Pierce's Favorite Prescription in liquid or tablet form from any medicine dealer to-day. Then address Dr. Pierce, Invalids' Hotel, Buffalo, N. Y., and get confidential medical advice entirely free.

A most valuable book in any home is Dr. Pierce's Common Sense Medical Adviser. A splendid 1008-page volume, with engravings and colored plates. A copy will be sent to anyone sending fifty cents in stamps, to pay the cost of wrapping and mailing *only*, to Dr. Pierce, Buffalo, N. Y.

Dr. Pierce's Pleasant Pellets are the original little liver pills, first put up nearly 50 years ago.

Viviana's Impassioned Address to Canadians.

In last week's Advocate we quoted a few paragraphs from the address made by the ex-Premier of France in the House of Commons at Ottawa. In this issue we give our readers the whole oration:

As has been said by your Speaker, Mr. Rainville, in his eloquent address, we could not possibly have passed so close to your country without having an ardent wish to visit it and to pay our respects to its citizens, with whose history our own is so intimately connected.

Hardly had we reached Canada than we, the members of the French delegation, were the object of the most enthusiastic welcome. And as a crowning success, gentlemen, you were so kind as to confer on my fellow-citizens and myself the supreme honor of a reception within the precincts of this House, and there could be no greater boon, no higher honor, no greater joy, than this provisional adoption into your community.

You may rest assured than our fellow citizens in far away France, when they are apprised to-morrow or the day after, of the honor which has been conferred upon us, will have towards you a high feeling of gratitude.

You have just requested us, Mr. Speaker, not to forget the reception now tendered to us, and through us, to France; allow me, Sir, to thank you. That debt of gratitude which we owe to your great country, and which the great historical events in which we have participated in common, can only have the effect to increase, that debt impressed us particularly on that day when we saw passing through the streets of Paris your admirable Canadian soldiers proudly bearing on their helmets the Maple Leaf forever[g]. At that tragic hour we realized that your motto of former days: "I remember"—was no vain formula, no mere catchword.

Yes, you have remembered, and indeed it is something that strikes one with admiration to witness how this feeling of gratitude, as a rule a personal feeling lying in the depths of the human heart and considerate, diffuses itself throughout democracies and becomes a collective feeling which makes for the greatness of the nation as a whole. I remember and we have proof that you have also remembered. First of all, your generosity towards France is unfathomable. Of course, I could not but omit important facts and be perhaps unfair were I to attempt an enumeration of your generous deeds, and of all that you have done for France: field hospitals without number; the hospital at St. Cloud, in which you have reserved 1200 beds for French patients, and other hospitals everywhere established, with a staff of Canadian nurses and medical superintendents.

I need not point especially to the supreme sacrifice, to which you have just given a pious thought in recalling that some members of this House have fallen at the front in this holy cause; that some are held prisoners in Germany, that you gentlemen of the Parliament of Canada have given fifty of your sons who, without hesitation have gone over to resist in the name of truth and justice the most formidable avalanche which barbarism has ever let loose on the civilized world. (Applause).

Yes, Sir, your Canadians have fought along with English and French troops, without paying any heed to racial differences. Under the flags of all the Allies they have all shown a similar courage. It must not be forgotten that in the month of February of 1915, at Ypres, in the north of France, near the Belgian frontier, in a country devastated by floods, after the terrific assault of the German soldiers by means of asphixiating gases—Germany, the country that has caused silence to swerve from its true ends, and, instead of pouring its benefits upon mankind, has visited humanity with manifold evils and crimes—that same German had to meet your Canadian soldiers. On that terrific day your sons, rising in their might, saved the situation. (Cheering.)

And throughout many battles, throughout numerous and recent victories, the soldiers of Canada stood up heroically against the foe. Even at this moment we have before our eyes your boys, so alert, so athletic, so brave, the first to storm, victoriously carrying their flag to those heights of Vimy which were reputed to be impregnable. (Cheering.)

Hail to all these soldiers; let us bow our heads reverently before those who fight, those who suffer and those who have laid down their lives for their country. They had a clear perception of what their sacrifice meant; when they left this country they were well aware that it was not only Great Britain that they were called upon to defend, that it was not only France that they were going to protect against the invaders; their clear vision upturned towards Heaven, detected the higher object; they were well aware that it was the sacred cause of humanity, of democracy, and of justice that they were defending. (Cheering.)

Still laboring under the impression left by such glorious and recent events we have come here to pay you a visit. Your enthusiastic welcome only serves to increase the bitterness of my regrets, as I reflect on its inevitable brevity, but I am confident that you will be all the more ready to appreciate that depth of feeling should not be measured by the length of a visit, but rather by the persistence of the feelings which are thereby instilled in the heart and in the mind. Such assurances of our feelings which I bring to you, I would much have liked, after visiting your beautiful Capital, to carry to other cities; it would have afforded me great pleasure to have visited Toronto, Quebec, Montreal, but our time is limited, and I beg that you may excuse the shortness of our stay, thinking only of the sincerity of the feelings expressed in our message to you.

It would have been a great satisfaction to me to travel at leisure over this admirable country, thinking and dreaming over past events in your history which, at many points, is intermingled with our own national history.

In coming to this country I desire to pay a tribute to Great Britain, that land of freedom, whose sons, wherever they go, bring with them emancipation and liberty; under every sky her mission is not to reduce men to slavery, but to awaken consciences and arouse determinations. I should have assured Great Britain, our noble ally of our gratitude for having rallied to a man to the rescue of France in this her supreme hour, because forsooth British statesmen had been parties to a treaty guaranteeing Belgian neutrality; because England's pledge was not to be denied; because a nation's honor has not two codes, nor a double morality, and because every country should take up arms and fight with all its might to redeem her promise.

I desire also to recall the memory of our ancestors, those Frenchmen who came to this country in olden times and who seem to have brought to this soil all the elegance of manners and the beauty of France and Normandie. I am happy to note in their actions the ancient and strong qualities which are the reputed, and proud characteristics of our race. To them I owe my thanks for having maintained in all its purity and perfection that French language which is to be heard to-day throughout the whole world, which you, Mr. Speaker, speak with so much eloquence, and which is easily recognized by its clearness, its fundamental quality, partaking at once of the limpidity of a stream and the resistance of a metal. (Applause).

It would have been a pleasure to me had I time to note on the bronze fence of your country lads the familiar traits of their brothers, our French peasants; and how acknowledgement to the virtues which they share in common; that, similarity to the daily task, steadfastness, and everything which contributes to the strength, the value, and the fame of a nation.

My time is limited, and I must beg your pardon for abbreviating my remarks. However, I would not be doing justice to the utterances which fell a moment ago from the mouth of your Speaker if, at this very moment, and from this time, from this high situation you have assigned to me, though a stranger among you, I did not, following in the footsteps of the speaker who preceded me, attempt through time and space to solve the serious problems brought on us by the war, including the very carrying out of that war.

In the first place, what was the origin of that war? Who is responsible for having started it? You mentioned it in your speech, Mr. Speaker, that bloody war was let loose on us by the whim of an absolute ruler, a ruler whose will is the only law, who governs heedless of parliament or ministerial responsibilities. It was let loose by the pride and madness of a whole people. It was let loose to destroy the free democracies and peace-loving peoples of the world.

Who among the people of the earth were more attached to universal peace than Great Britain and France? France had been vanquished in 1871 [illegible] and is no longer an humiliation to us to recall that defeat, since in the meantime we have retrieved ourselves and find ourselves once more in a position to face our enemies. (Prolonged applause). Such was our fitting for peace that while with fearful eyes we looked over the war-ridden boundary, while we peered over the border at our provinces of Alsace and Lorraine, and while we carried in our breast a bleeding wound which could not be healed, yet so as not to trouble the world's peace, though not forgetful of the past, we did not move. Such was our attitude.

When, as regards Great Britain, which German slanders charged with having brought on the war, she had not even thought of establishing military conscription; she had not provided a fighting machine, taking which war becomes impossible; she was thinking of universal peace only, and of providing work for and insuring the freedom of nations.

Both these nations were attacked. France, Great Britain and also Russia. It was a challenge sent out to the whole civilized world, and then it was a question, not as to whether we were going to fight for the acquisition of territory, not as to whether we should recover sections of provinces, but as to whether free men would be allowed to enjoy the warmth and light of liberty. (Applause).

Such is the great struggle which is going on between triumphant autocracy, which already we have struck down on the battlefield; such is the great struggle between triumphant autocracy, bent on ruling over the world, and democracy, whose sole aim is to regenerate it. Such is the great struggle between absolute rulers, who consider as mere possessions the peoples over whom they rule, who aim at laying hands on men's bodies, and democracy, whose object is to elevate the mind, the conscience and the soul.

And notice what wonderful changes have taken place in Great Britain and France. Some time previous to the war those two nations had come closer to one another and had concluded, many years ago, the Entente cordiale. This reference to the Entente cordiale concluded between France and Great Britain reminds me necessarily of your former governor, Lord Lansdowne, whom I had the honor to meet in London some years ago, one of the keenest and shrewdest thinkers in Great Britain, and who, no doubt, because he had long lived among you and because he had come to know France through knowing Canada, came back to Great Britain with a desire to establish l'entente cordiale and bring the two countries closer together.

Here I am bound to pay my respects to the memory of King Edward VII., who was the enthusiastic artisan of the bringing together of those two great democratic and free nations, because his clear insight into conditions generally had satisfied him that such a result was practical and in order. Neither can I proceed any further without paying homage to his successor on the throne, who with a strong hand in that tragic moment of history brought about the practical results implied in the entente cordiale as formerly concluded.

What an admirable example was set to us by those two countries. Great Britain had remained aloof from conscription; she had applied her whole activity to forwarding industry, trade, and building up her navy. And when the hour of danger came, when she felt that a few thousand men would not be sufficient to resist the onslaught; when she realized that the war would be won not through the bravery of her soldiers, but that munitions, guns, and munition factories would be indispensable; then as by a miracle at the call of the Government, not only in Great Britain but in Ireland and throughout its possessions and colonies—for the British colonies to Germany's great surprise rallied to their mother country in the hour of danger—not only munition factories and guns and projectiles, but thousands and thousands of men, five hundred thousand, one million, one million and a half British soldiers, including your own Canadian boys, stood up and entered the fray alongside their French comrades. Such is the admirable spectacle which Great Britain presents to the wondering eyes and consciences of the world.

I am quite aware that German calumnies must have reached this country, it is even likely that they have found their way to your minds and hearts; we do not feel humiliated because before the war you may have thought, on the faith of what was so often repeated, that France was a lost country, corrupt, dissolute, frivolous, catering solely to its pleasures, and so much rent by political dissensions that when the great struggle would come, Germany would be facing not men, but a divided army, easy to scatter. Well, you have been witnesses of what France is capable; that wonderful France, standing undefeated because her sons keep up both with the traditions of the past and the traditions of the Revolution. You have seen what her genius can effect, the same genius that has emancipated a large section of humanity. We had arms; we had an army. But what could our army do, with only 40,000,000 of inhabitants to draw from, in a struggle against the Germans, who for the last 45 years have been perfecting their war machine in order to hurl it against our country. We gave way at first, both British and French; we gave way before the storm; we were not in sufficient numbers, but we righted ourselves after the battle of the Marne. (Long applause).

How has that been possible? It is because the world's estimate of France was not true.

There are political parties in France; every free democracy is made up of parties who struggle for supremacy, who hold different tenets, who do not monotonously copy each other's gestures and statements. What counts, after all, is that at the supreme hour all parties unite in a common sacrifice on the altar of their country; what does count is that every citizen should remember that before belonging to any political party he owes allegiance to his country; no political divisions would be possible. (Applause).

Well, what country could have done better than France to bring about this great sacred alliance? Exclusively I shall remember as the greatest honor that was mine in all my career, that eventful 4th of August, when I entered into the French House of Representatives with the declaration of war that had been communicated to me, as President of the French Cabinet, by Mr. de Schoen on the previous day. My colleague, the Marquis de Chambrun, as member of the French Parliament, will also recall the occurrence. There were all the members standing, quivering with emotion, all the galleries filled with wives and mothers who were going to send their husbands or their sons; everybody standing; no more political parties; no more groups; none but Frenchmen reconciled in their devotion to their country. And as days, all parties rallied to the same flag and put on the same uniform. Catholics no more; free-thinkers no more; Socialists no more; Radicals no more; Opportunists no more, but all children of the one France. All Frenchmen, leaving aside their old disputes, came to the common conclusion that there was no necessity to arouse political differences; that before fighting between ourselves it was first of all necessary to keep under our feet a free soil, an undivided France. As one man we shouldered our guns, and it is that wonderful unity, that sacred unity, that has given us and will give us victory.

I join with you, Mr. Speaker, in hailing this victory. It should by all means break forth to the full knowledge of humanity; indeed, if this great effort of ours should not be crowned by victory, then I must say there never was waged a war so disastrous to the nations of the world. In former days nations have suffered grievously through defeat; but such wars were struggles between armies, and differences were settled through a treaty of peace; while in this war we are the spectators of a struggle between conflicting types of minds and aims. At present, I repeat, what is at stake is not territorial aggrandisement—it is more than that — it is the freedom of the world. (Applause).

You Canadians who listen to me, you freemen who sit in this Parliament, pray mark my words. I realize that you are farther away than we are from the battlefields; the roar of guns does not reach your ears; you do not see the return of large numbers of wounded men; but mentally speaking, you are just as close as we are to the fray. Confronting one another we have autocracy and democracy, and should, perchance, the freemen fail to win the war, democracy and universal justice would be defeated at the same time. It was in the cause of justice that at all epochs we drew the sword; it was in the cause of justice that Great Britain and France, together with their noble Allies, entered the war; it is to enable the children of men to enjoy after the war the advantages of a well assured and prolonged peace that we are fighting.

Mothers who now listen to me, it is for your children's freedom, it is to prevent the recurrence of any wars and to secure the peace of the world, that a whole generation is now giving its blood, and making to-day the supreme sacrifice.

Let a pious thought accompany those who go to the front. All laudatory epithets have been exhausted; there is nothing left to say in their praise, but that some have given their life for a sacred cause and the others are fighting for the liberty of all mankind. As they fight for justice, for truth, for right, their fame and their courage must ever be an immortal example to all men.

Shoes Must "Make Good"

The same as men.

There is a competition among shoes—or rather the manufacturers — that is pretty good for you people.

It shoes you and your family with the best shoes in the world without it costing you a cent more than it has to.

Of course you expect us retailers to gather these shoes that are the winners in this war of competition, and that is what this store is constantly doing.

Our claim is that every time you have a shoe need you ought in justice to yourself let us supply it.

Our stock exemplifies all the prevalent shoe newness. It contains the latest shoe thought of the leading manufacturers.

THE SENTRY OF THE SEAS

A TORPEDO-BOAT DESTROYER ON THE LOOK-OUT.

An Intimate Glimpse of Real Life on a British Destroyer Patrolling the Coasts.

She was a torpedo-boat destroyer—long, lean, low, and black. That is, she was black where the salt of the sea had not bitten deep enough to turn her paint a neutral color, or where patches of red rust did not show. Fairly battered by wind and weather, she was now getting a worse battering than ever, says a writer in London Answers.

The elements strove to turn her back into harbor; mines and other submerged dangers sought to end her existence; but still she pressed on, carrying out her monotonous work faithfully and well.

On her bridge, clad in his oldest clothes, hidden under a thick, duffle suit, with an ear-protecting hood—this, in turn, being hidden under an oil-skin which utterly refused to keep out the wet any longer, because of its soddenness—was her commanding officer, a mere boy-lieutenant, aged not more than twenty-five. His second in command was a sub-lieutenant, who had as yet to make the acquaintance of a razor.

The Men to Trust.

At the wheel was the coxswain—a bearded, trustworthy, weather-hardened petty officer. He knew his boat—knew every whim and trick. Years of practice in the fat times of peace had taught him exactly what she might be expected to do under certain conditions, when she must be bullied, and when persuaded. He had brought her from under the bows of big, speeding cruisers, when their knifelike stems had threatened certain bisection; had slammed her under the lee of a waterlogged, wallowing oilship in the heart of a gale, and held her alongside till the oilship's crew could leap to the destroyer's deck and safety.

Then, also on the bridge, was the signalman—a mighty man of knowledge, specialized in his own particular job, and taking tips from nobody. Never was a signal in that flotilla that he didn't see and know the meaning of. The International Code—that conversational medium between ships of all nationalities—was at his fingers' ends.

Water, Water Everywhere.

On deck, at his station, was the watch on duty. At gun and torpedo-tube they clung and swung and crouched, each peering into the night. Every gun was loaded; the pressure of a trigger would belch forth death and steel. Every torpedo-tube was swung outboard, and the torpedo-heads peered forth over the dark waters as intently as any of the crew.

Like all other destroyers, she refused to ride the waves. Even at twenty knots an hour she sliced through them, so that her deck was eternally wet. Ever a few inches of sea-water surged along them, swirling and curling round the seamen's feet, and occasionally, when the destroyer bowed her proud head to the ocean, a wave bigger than the rest swept along, tearing at the lashings which secured fittings to their places, grabbing at knees and ankles, seeking to drag down to its ever-hungry depths some sacrificial victim. At these times men passed the bight of a rope around their waists and the nearest solid thing, gun-crews clung tenaciously to elevating and training wheels, tube-crews hugged their weapons with a closeness that was almost amorous. Then, as the danger passed, a snigger of jeering passed after it.

An Eye for Everything.

"Another milestone! Ain't we lickin' 'em up?"

The gunner, a seasoned warrant-officer, who had worked his way upward from boyhood—passed along the decks as opportunity offered, clinging to a three-inch-thick grass-hawser, stretched between bridge and after-gun support, to act as a lifeline.

His job was to keep an eye on everything; to see that all was eternally ready in case of the need for sudden action. On him devolved the responsibility for opening fire as soon as any dark shadows came out of the surrounding blackness, for the rule of the night at sea in these strenuous times is "Fire first; ask questions afterwards!" But, often enough, there is no afterwards in which to put queries. Also, by means of their own, fellow-destroyers avert the possibility of being fired into by friends, so all is well in that direction.

In the stokeholds, grimy man, clad in the blackest of attire, work in a dim atmosphere that occasionally glows redly as a furnace-door is flung open, in order to feed an ever-crying fire—for this is none of your oil-boats, who eat fuel through a pipe and a disintegrating spray, but one of the older type, which burns black diamonds, and whose every ounce of steam is the result of giant labors. And as they work they balance themselves uncannily, for a chance roll might send a man reeling against the black boiler faces, and before he could actually realize what had happened his arm might be half roasted.

Ballads of the Sea.

On the mess deck, battened down, and with the white-painted walls exuding sweat in streams, the watch below make the best of their four hours off duty. They know they cannot sleep, and the work they put in as they try to keep their prone position, in spite of the boat's motion, is far harder than that of those at gun or tube.

One man has dug out a battered old melodeon, a second has unearthed a mouth-organ, from which at least a full octave is missing, and these weird instruments lead the choruses of the happy sailor-men. Music-hall songs, plantation ditties, ballads of the old, old sea and its ships, "Keep the Home Fires Burning"—this last with a touch of mockery at the expense of the extinguished mess deck. And then, as the newer things are exhausted, they fall back upon the favorite hymns known and beloved of all sailormen. And, though the end of each verse may be punctuated by a hollow groan of the straining hull, as she surges amid the welter of waters, there is little or no irreverence.

Waiting for "The Day."

Night after night, month after month, destroyers patrol the coasts, waiting and watching for the enemy who may take it into his head to try a "Russian thrust"—a dashing raid upon our defences. Night after night they keep their vigil, without a light, or sound or sight, to break the monotony of the black, bleak hours. Then, at long last, there comes one midnight the loom of a long, low shape, like themselves—a shape which hurries and makes no signal. Follows, then, instant activity. Gun-flashes tear the blackness to shreds, searchlight beams stab and turn it to the broadest day. And, if fate is kind, another enemy craft is removed from the list of its navy.

For ourselves, a battered funnel, half a dozen holes in deck and bulkhead, three inches of print in the newspapers, and a couple of weeks in dockyard hands, during which time the crew enjoy once more "the blessings of the land and the fruits of their labor."

Then—sea again! Patrol night after night, watching and waiting for the dawning of "The Day," praying that it may not long tarry.

The Tact of a Child.

The story comes from London of a little girl who met at tea an officer who had lost a leg as the result of an artillery duel. Presently she went to nursery and got her Noah's Ark. In the presence of the guest she broke off one of the legs of each animal. When asked for an explanation, she answered, "Oh, well, legs are such useless things! All of my animals have one too many!" A child who evinces such delicate courtesy will almost assuredly grow to maturity a member of society universally beloved and welcome for the gift of thoughtful consideration for others. Her imaginative sympathy will prompt her to become "the sweet presence of a good diffused." Her life will be a ministration without sanctimonious pose, and she will make friends without an effort because it is her nature to be kind.

Basuto Chief's Loyalty.

The British High Commissioner for South Africa reports that the Paramount Chief of Basutoland has forwarded to him the sum of £40,000 as a gift from the Paramount Chief and the Basuto nation to the King for the purposes of the war. The gift has been warmly acknowledged on behalf of his Majesty, who has approved of the money being used for purchasing a number of aeroplanes.

A DAY WITH MR. LLOYD GEORGE

GREAT BRITAIN'S HARD-WORKING PREMIER.

Sketch of a Typical Day in Life of the Man on Whom Depends Britain's Welfare.

Mr. Lloyd George will probably go down to history as the hardest-working premier who has ever represented the British nation.

Living for the most part on his nervous energy, he is able for five of the seven days in the week to sustain a fifteen-hours' working day, practically every minute of which is devoted to the business of the State, meal times included, and throughout which he labors at the utmost pressure, a high-powered human engine.

His day begins well before breakfast. At half-past seven the long, black despatch box is by his side, and he is immersed in reports from the various Government departments. Pencil notes, initialled "L. G.," indicate his decisions, for he believes, wherever possible, in settling questions straight away.

Business at Breakfast.

Shortly before nine o'clock the despatch box is passed on to his secretaries, who proceed to act on the pencilled instructions.

Breakfast is served at 8.45 a.m.—a very light meal, consisting of porridge or eggs, bread-and-butter, and tea. Mr. Lloyd George eats sparingly, and never exceeds the one cup of tea.

A frequent complaint is that he fails to take any interest in his food. This is easily explained. There is always to each meal—breakfast not excepted—a number of important visitors, either Ministerial colleagues or outside experts, to be consulted, who are encouraged to transact their business just as if they were meeting him under more conventional circumstances.

A Huge Post-Bag.

The conversation at breakfast may be important enough to prolong the meal until ten o'clock. If so, the Premier lights his first cigar, or perhaps smokes a mixture of tobacco in his favorite old briar.

By ten o'clock he is in the Cabinet Room, that fine chamber, with a sturdy mahogany table, overlooking the garden of 10 Downing Street. His lady secretary, the beautiful Miss Stevenson, and her six assistants of the same sex, have previously gutted the morning postbag of from 700 to 1,000 letters, and the letters and telegrams, which his chief secretaries have selected for his personal and immediate attention, are awaiting him.

The Premier is occupied with his correspondence until eleven o'clock, when there is either a Cabinet meeting or, as of late, a meeting of the Imperial War Council. But frequently he interrupts the work of going through his letters to see Ministers or Government officials whose business is urgent.

His system of answering letters is to cur-mark them with instructions, or very rapidly to dictate the gist of the replies.

Not a Moment Lost.

Having a knack of bringing visitors at once to the point, he is not long in disposing of them, and they go away pleasantly impressed by his hustling, decisive manner.

Mr. Lloyd George remains in the Council Chamber until 2 p.m., when the proceedings for that particular morning terminate. In order that the full agenda may be dealt with, the amount of time that can be devoted to each point is strictly apportioned, with the result that usually from twelve to fifteen separate decisions are made at a sitting.

While the Cabinet or Imperial War Council is sitting a continuous stream of Ministers, secretaries, under-secretaries, heads of departments, and Government officials passes in and out of the room, the reason being that as each question is reached the Premier insists on the experts being called in for consultation.

Lunch, resolving itself into a little fish, or a meat entree, and a milk-pudding, is served at 2.10 p.m. At this frugal repast he is joined by Cabinet colleagues from the morning meeting, and any point that has not been cleared up is further discussed and generally satisfactorily settled by the time coffee is reached.

At 2.45 p.m. Mr Lloyd George is back in the Cabinet Room, to deal with telegrams and urgent messages that have arrived in the interval. Important visitors are also seen.

At 3.30 p.m. the afternoon Cabinet Meeting takes place, and until 7.30 p.m., when it breaks up, there is the same procession of officials and experts in and out of the room. For their convenience a waiting room next to the Cabinet Chamber, with an inviting fire, has been specially improvized, and here, until they are wanted, they may read the morning papers or make whatever notes they think will be useful.

Early to Bed.

Distinguished foreigners, diplomats, etc., find 7.30 p.m. a good time to catch the Premier, there being an hour to spare before dinner. This hour he uses to the greatest advantage, reserving it for highly-placed callers, ambassadors, and officers of high rank home from the various theatres of war, who can supplement his knowledge of those particular campaigns by first-hand information.

Dinner is a simple three-course meal, consisting of soup, cutlets, and pudding. In reality, it is an important function, for here the Premier often transacts a great deal of vital business.

At 9.30 p.m. Members of Parliament or ministerial colleagues whom he has not seen during the day, look in, and between attending to the contents of the long, black despatch box he is at their disposal until 10.30 p.m., when his day's work is done and he retires to bed.

If he has a speech of international importance to deliver, it must be prepared in this crowded fifteen-hours' day. Where he may rely largely on his gift of extempore oratory his preparation does not exceed the dictation of the headings, and those speeches are best where the spontaneous action of his mind is allowed full scope.

Week-End Rest.

From Saturday afternoon till Monday morning Mr. Lloyd George rests quietly at his country retreat, Walton Heath. He is ready to meet any emergency; but, unless the telephone has urgent news for him, one or other of his secretaries being on duty at Downing Street throughout the week-end, he likes to take things easily for these thirty-six hours, in order to be in fit condition for the strenuous week ahead.

The secret of Mr. Lloyd George's success in dealing with the volume of work that accumulates each day is method. Having a good eye for proportions, he can recognize instinctively the things that are vital. On these he fastens, and never leaves them until they are completely settled.

SALT TREATMENT A SUCCESS.

Wounds Heal More Quickly By the Constant Irritation.

The successful salt-solution treatment of wounds was described by Sir Almroth Wright, its discoverer, at the royal institution the other day, his experiments being illustrated by photographs thrown on a screen.

In certain hospitals in France, said Sir Almroth, soldiers come in within an hour or two of being wounded, and by keeping the wounds constantly irritated they heal within a couple of weeks. The great problem of healing deep wounds is not to kill the microbes, for they multiply again, but to induce the white corpuscles to creep out of the blood-vessels and attack the infecting microbes.

In other words, the problem is to convert dead into living spaces, and to induce the white corpuscles to come out of the blood vessels. After the surgeon has removed all dead tissue the wound is irrigated with weak salt solution and the white corpuscles are caused to come out and destroy the microbes.

German Wear Paper Boots.

From a reliable source comes the information that the Germans are going very short of many necessaries for the supply of their armies, notably leather, which is so scarce that German soldiers have been for long now wearing boots made of a compressed paper substitute. In the Turkish army the leather shortage is such that it has put many divisions right out of the field. In coal and iron ore, however, things are not bad. The Boche has developed extraordinarily large resources in Austria and Poland, which were neglected before Hindenburg took things in hand.

FRENCH WOMEN WIN THE VOTE.

Their Work in War Has Broken Down Prejudice and Converted Parliament.

France is to be the first nation in the Old World to grant suffrage to its women. Female electors twenty-eight or more years of age have a voice in municipal elections in cities of the first and second class on or before July 15 of this year.

This is a stupendous reform, both from the European and Latin perspective, writes a correspondent from France. It has positively assured through a substantial majority in both the Chamber of Deputies and the Senate and is to be granted in gratitude and recognition of the devotion and sacrifice of the women of the nation to the cause of France during the war. The bill will come up for discussion and vote with its approval and favorable consideration of the French Commission for Universal Suffrage, comprising forty members of both houses of Parliament, who have given it their joint official and individual personal approval.

"For about ten years," says Madame Schlumberger, President of the French Union for Suffrage for Women, "eighty active groups of Suffrage for Women Societies have existed in France, to which women in all walks of life were attached. We have worked quietly and persistently within our own land, so much so that little has been heard of our efforts beyond our frontiers. We were working upon lines that we felt would end in success, but we realized that success was far off. Now, through the war, it is coming to us in a modified form. We welcome it in the gratitude it expresses, as well as in partial justice to a just cause.

"We suffragettes of France stand, of course, for everything that suffragists the world over stand for. We want to abolish social evils and particularly the great evil of alcohol, which will bear its first genuine note of doom with the first day the women of France exercise the right of the ballot."

PROTECTION OF N.B. FORESTS

Imperative Need of Adequate Fire Protection.

The thorough survey of Crown lands undertaken by the New Brunswick Government has already revealed very important facts. The progress report recently submitted calls attention to the fact that while one-third of the total stand consists of hardwood species, including maple, beech and birch, yet these species form only 1.5 per cent. of the annual cut of the province. This indicates clearly the opportunity and the need for the development of industries to utilize this class of material. Those hardwoods are eminently suitable for the manufacture of flooring, chairs, turnery, etc. There is also a large amount of poplar suitable for the manufacture of pulp.

It is estimated roughly on the basis of present information, that on the entire Crown land area fires have, during the past 40 years, caused a loss of stumpage that would now be worth $14,280,000, with a potential manufactured value of some $80,000,000. These figures indicate the enormous losses that result from repeated forest fires. The results thus far secured from the investigation amply prove the wisdom of the New Brunswick Government in starting and continuing this study, which will furnish a scientific basis for the administration of Crown lands for many years to come.

As elsewhere throughout the forest sections of Canada, the immediate imperative need is for adequate protection against fire. The New Brunswick Government now has this whole matter under consideration, and it is to be assumed that modern and up-to-date methods will be put into effect, following the progressive lead taken in some of the other provinces.

A New War Honor.

A new order is shortly to be instituted, named the order of the British Empire, for special services rendered in connection with the war. Awards will be made to women as well as to men, and will be distributed throughout the Empire.

There will be a number of classes in the order, beginning with grand commander, the next to be knight or lady commander, and in one class awards will be made to men and women who do specially good work in munition factories and similar undertakings. A first list of awards will shortly be published.

AN ARMY AVIATOR'S LUCK.

Miraculous Good Fortune Alone Saved His Life.

Many an aviator among the nations owes his life to miraculous good fortune, like the British air man whose escape is described in Tales of the Flying Services by Mr. C. G. Grey.

An officer went out on a bombing expedition and met a German machine. In order to save weight he had left his small arms behind him, but he thought it was a pity to pass by a good target, and so he decided to drop a bomb on him. But dropping a bomb on a swiftly moving mark is not the same as firing at a fixed point. So he missed the German. Unfortunately for him he also exposed himself to the fire of the enemy, and received a rifle bullet in the thigh.

To be strictly accurate, the bullet struck his trousers pocket, hit a five-franc piece, broke itself and the coin, and distributed the assorted pieces of metal about the lower part of his body.

Feeling that he was badly hit, the pilot shut off his engine and dived for the ground from a height of about six thousand feet. When he was a thousand feet from the ground he espied some aeroplanes in a field, and, not knowing whether he was over German or French territory, he made up his mind to land among the aeroplanes, certain that if they did happen to be German machines, he would be well treated by the flying corps.

Two hundred feet aboveground he completely lost consciousness, but in some curious subconscious way he made a perfect landing—right alongside a British motor ambulance. So well did he land that for some minutes no one troubled about him. When they did go to look they found a badly wounded officer in a state of collapse.

He was promptly put into the ambulance and sent off to the hospital. There it was found that the bullet had cut a large artery and that the pilot would have bled to death in a few minutes if the bullet had not also cut a muscle, which had sprung back and wrapped itself like a piece of elastic round the artery and formed, as it were, an automatic tourniquet.

AN ENTHUSIASTIC WORKER.

Prince Henry's Ambitions Lie in the Direction of Army and Air Service.

Recently a number of people were watching a very busy and animated scene. It was near Didcot Junction in England, where some hundreds of Eton boys had turned out to help the Army Ordnance Corps. They pushed trolleys, hauled wagons, and loaded trucks with an eager zest which any man of military age might envy.

One of the most enthusiastic workers was a slight, fair-haired, fresh-complexioned lad, who was always to the fore in any job going.

"Why, the laddie's cut his finger!" suddenly exclaimed an elderly farmer's wife who was looking on. "It's a bad cut, too, see how it's bleeding. I wonder if he'd let me bind it up for him to keep it free of dirt?"

"I shouldn't bother if I were you, ma'am," interrupted an Eton boy, who was standing near. "It's Prince Henry, the King's son, you know, and he simply hates being fussed."

"That the King's son!" said the farmer's wife in amazement. "Why, he's working harder than the lot of them put together. Hear me, dear me, but I'm going to offer to bind his finger all the same."

But before she could reach him the lad in the grey trousers, sweater, and house-cap had joined fifty other lads on a hauling job, and, with a handkerchief roughly tied round the injured hand, was busy tugging away at a thick rope with the rest.

It is Prince Henry's one regret that he is not yet old enough to join the army like his brother, the Prince of Wales.

Prince Henry was 17 on March 31. He is a member of the Eton College Officers' Training Corps, and last August spent a week in camp at Tadworth with a battalion over 400 strong.

Besides that of seeing service on the battlefield he has one other great ambition, that of being an airman.

British Admiralty chemists have perfected a device for generating in a few minutes sufficient smoke to mask a vessel for hours. All vessels are being fitted up with the device as a means of escape from submarines.

The Doings of the Duffs.

Hard to Drop Meat?

All depends on what you eat as a substitute. It is a good time to study "food value." You may be eating the wrong foods, the foods that cost most and give the least nutriment. **Shredded Wheat Biscuit** contains more real, body-building nutriment, pound for pound, than meat, eggs or potatoes and costs much less. Two of these Biscuits with milk and a little fruit make a nourishing meal at a cost of a few cents. Make Shredded Wheat your "meat." A satisfying breakfast on which to start the day's work. It is ready-cooked and ready-to-eat. Made in Canada.

Seasonable Modes

Every well-regulated wardrobe will contain at least one coat dress of heavy linen this summer. The very smart model illustrated is made in one-piece style. It has large pockets, a belt and sailor collar made of a contrasting shade of linen. Buttons and stitching perform the duties of trimming. McCall Pattern No. 7799, Ladies' Coat Dress; round or instep length. In 5 sizes; 34 to 42 bust. Price, 20 cents.

Cool white organdy edged with lace fashions this dainty Empire frock. The soft, gathered bertha in front makes this design doubly attractive, and the short puffed sleeves are so quaint and pretty. McCall Pattern No. 7706, Child's Empire Dress; straight gathered skirt. In 4 sizes; 1 to 6 years. Price, 15 cents.

These patterns may be obtained from your local McCall dealer or from The McCall Co., 70 Bond St., Toronto, Dept. W.

CHEATING THE U-BOATS.

New Idea Which May Overcome the Submarine Menace.

America, according to all accounts, is showing the Allies the true way out of the U-boat peril. It is not a method which gives sudden and immediate relief, but it is likely to be of vast utility if the war lasts twelve months longer and more. It is one of those far-sighted plans which take Time by the forelock—plans which have served the Hun in good stead in the past, and will serve well in the future.

It is an application of the old saying about not having all your eggs in one basket. This is the age of huge ships, and in peace times big ships are cheaper in every way than small ones. But a well-aimed torpedo sinks a fifteen-thousand-tonner as easily as it sinks a trawler, and a tremendous cargo is got rid of at one blow.

Now the idea is to have fifteen ships of one thousand tons, instead of one of fifteen thousand. Even a U-boat can't be in fifteen places at one and the same time, and if five of these boats are sunk, ten get through with their invaluable loads of corn and leather and timber and sugar.

These small boats, being standardized and built on speedy lines, will go far to counter the menace in the near future, for just as Britons proved that munition-ma[illegible] can be speeded up beyond a p[illegible]t even unimaginable before the war, [illegible] can ship-building, if the problem is only tackled with that determination which is a British characteristic.

ST. VITUS DANCE

Even the Most Severe Cases Can be Cured by Dr. Williams' Pink Pills.

Is your child fidgety, restless or irritable? Are the hands shaky or the arms jerky? Does the face twitch? Do the legs tremble or drag? These are signs of St. Vitus Dance, a nervous disease which is confined chiefly to young children, but which often affects highly-strung women, and sometimes men. St. Vitus Dance is caused by disordered nerves, due to poor blood, and is always cured by the use of Dr. Williams Pink Pills, which fill the veins with new, rich, red blood, strengthening the nerves, and thus drawing out the disease. Here is proof:—Mrs. John A. Cumming, Lower Caledonia, N.S., says:—"When my daughter Myrtle was about nine years of age she became afflicted with St. Vitus Dance. The trouble ultimately became so bad that she could not hold anything in her hands, and had to be fed like a child. She could not even walk across the floor without help. She was treated for some time by a physician, but did not show any improvement. One day a neighbor said she had read of a case of St. Vitus Dance cured by Dr. Williams' Pink Pills, and we decided to give this medicine a trial. By the time the third box was used there was some improvement in her condition, and we continued giving her the pill[illegible] for about a month longer when she [illegible] entirely cured, and has not since had the least return of the trouble.

Dr. Williams' Pink Pills can be obtained from any dealer in medicine or by mail at 50 cents a box or six boxes for $2.50 from The Dr. Williams' Medicine Co., Brockville, Ont.

IS IT SOCIALISM?

By Chas. M. Bice, Denver, Colo.

The European conflict, with is far-reaching consequences, has forced mankind into strange and weird situations, and compelled the adoption of policies to meet the situation which are strangely Utopian and dreamed of only by such visionary wind-jammers as Debs, Bellamy and their like.

Undoubtedly, a double emergency exists in the United States, if not throughout the world, and to meet it extreme measures must be adopted.

War of unheard of proportions is harrying a continent, and it is fast reaching out to embrace every nation under the sun. Millions of men heretofore engaged in the productions of the soil are now, and for nearly three years have been, doing nothing towards production, but everything within their power, aided by the science of destruction, to make the land barren. Then, as if all nature were in full accord with the plan of destruction, meteorological conditions have prevailed that have reduced production in all cereal exporting countries far below the normal average.

* * * *

We must meet this conspiracy of ambitious man and Mother Nature, and about the only weapon we have is to follow Europe in stimulating and conserving life's necessities.

The U. S. proposes to fix a maximum price for most of the foods and clothing materials, and the first step in this direction is to cut out the speculator and the middleman, and arrest all combinations formed to unduly raise the prices of necessities. Thus the federal government will assume control of all food receptacles, such as storage houses, warehouses, etc., and see to it that these are not used to create famine prices as they are at present.

The government is to go still further, and instruct, supervise and direct the farmer regarding what he shall and shall not plant during this emergency. Railroads will be required to haul foodstuffs in preference to other freights to prevent market manipulations.

* * * *

The government also proposes to decree just how much of the necessities of life shall go into the manufacture of luxuries so that the brewer and distiller will be placed on short rations, if not entirely obliterated, as they should be. In short, it would seem as if the individual is about to be eliminated in the interests of the State, and that we are entering into the philosophical Socialists' heaven.

Indeed, it is confidently predicted that before this month ends the government will be in absolute control of all the essentials of life and their distribution. What more can the most ardent Socialist ask? Of course it may not be necessary to exercise the authority conferred on officials by Congress, at least to an extreme degree, but the authority will be there to put a stop to man's greed and tyranny if needed.

In this it will be noticed that Federal authorities are but taking a leaf from the books of France and Great Britain, and it is not improbable that all the allied nations will join in the purchase and distribution of foodstuffs, as well as in war essentials, so that the prices will be nearly the same in all entente countries.

* * * *

At present the United States is the grand almoner and cannot afford to set the prices for itself and leave its associates to bargain for themselves. For all this the people as a whole will be truly grateful and thankful, for they would much prefer to trust themselves to a paternalistic government than to the greed and avarice of individuals and corporate monopolies, whose lust for gain is not penetrated by a single ray of pity.

We know what they are doing in central Europe, and why the enemy has been able to hold out so long, for the government from the very start of the war conserved her essentials in about the same way as the U. S. have begun to do. We must fight the devil with his own fire.

Fly Poisons Attract Both Flies and Babies

To the last three years the press has reported 101 fly poisonings ... (fine print illegible)

The one safe, sure, non-poisonous, efficient fly catcher is

which catches the fly and embalms it and all the deadly germs it carries in a thick coating of varnish.

ECONOMY WITH GOOD LIVING

is excellently attained by adding to the daily menu a ration of

Grape-Nuts

Goodness—Energy—Ease of Digestion—Excellent Flavor—are all found in this truly remarkable wheat and barley food.

THE FIGHTING GOUGHS

Army Leaders Adding Lustre To Names Already Famous.

Fighting runs in families, like red hair, and the records of the British Army are full of names which recur again and again, each generation adding fresh lustre to some name which is bright on the pages of history.

Lieutenant-General Sir Hubert de la Poer Gough owns such a name. There was a Gough in the Peninsula with Wellington, and when the gallant Sikhs—now our best friends and brothers-in-arms—were our enemies, it was a Gough who overthrew them. That was the present general's grandfather, the first Lord Gough.

But, in addition to this, his own father won the V.C. in the Indian Mutiny, and was with the gallant Roberts in Afghanistan. No wonder, then, that fighting is in his blood, and that he shares with Allenby the reputation of being the most dashing cavalry leader in the British Army! He played a great part in the Battle of the Somme, and he has come again into the limelight of war in the great Battle of Arras.

There is no greater mistake than to suppose that the Huns have all the generals. They have a talent for making all their geese into swans, of calling barbarism "kultur," and "frightfulness" military necessity. But even the terrible Hindenburg may prove—in Bismarck's famous phrase—to be "a lath painted to look like iron," and the much-advertised "Hindenburg Line" no more real than the Equator.

He Knows Just Why He Admires Them

Dodd's Kidney Pills Cured Mrs. Mercredi.

She Had Been Ill Two Years and Could Find No Cure. That's Why Her Husband Is Enthusiastic Over Dodd's Kidney Pills.

Fort Smith, Alberta. May 21st (Special)—Among all the thousands of Canadians who praise Dodd's Kidney Pills for the good they have done there is no more fervent admirer of the great kidney remedy than Isidore Mercredi, of this place.

"Yes, it always gives me pleasure to say a good word for Dodd's Kidney Pills," Mr. Mercredi says. "My wife was sick for two years. We could not find anything to restore her to health. Then we found a pamphlet telling of several persons who had been cured by Dodd's Kidney Pills.

"My wife used just two boxes of them and she is perfectly well, to the great surprise of all our neighbors. They can tell you the same thing. I cannot recommend Dodd's Kidney Pills enough."

Dodd's Kidney Pills are the greatest of all remedies for weak, suffering women. They cure the kidneys. The kidneys are the root of nine tenths of women's ills. Moreover, cured kidneys mean pure clear blood all over the body. That means good health everywhere.

AGED OFFICE BOYS

Old Boys Making Good as Messengers and Office Boys.

Enter the aged office boy. Grey-haired telegraph messengers have for years been a common sight in the city, but not until recently, when the shortage of office and errand boys became acute, have business houses, both big and small, harried by the lack of the youngsters, resorted to the employment of elderly men in their stead.

The head of one of the biggest printing and publishing houses in New York is now depending almost entirely upon elderly men for work in and out of the office previously done by boys.

He advertised for active, elderly men to act as messengers, etc. Fifty applications were received in the first mail, well and neatly written, proof of the ability and common sense of the applicant. The first three were engaged, and that firm will never go back to boys. These men are paid more money, it is true, but it is also a fact that they perform their duties much more effectively; their understanding, naturally, is better, and they are more reliable.

Looked at from a humanitarian point of view, it is giving employment to men of 50 and 60—men who have been thrown into the discard.

Minard's Liniment used by Physicians.

Deadly Enemies.

While the spring drive against flies is being directed, why not include their allies, the mosquitoes? It is known that they are in sympathy with the murderous attacks of the flies, so why not destroy their bases before they have opportunity to mobilize? Otherwise we are in constant danger of a night attack in which there are sure to be many casualties.

Minard's Liniment Lumberman's Friend.

Farming and love-making are the two essential industries of the earth. —Harry Lauder.

WEAPONS OF WARFARE.

War Material Furnished By The Fishes of the Sea.

Even the fishes of the sea are called on to supply war material.

In Polynesia spears are pointed and elaborately edged with the teeth of sharks. Such a weapon makes a frightful wound, tearing the flesh to tatters.

Another instrument of frightfulness in the South Sea archipelagoes is a dagger similarly equipped with shark's teeth.

Warriors of the Marshall Islands sometimes wear battle helmets made of the skin of the porcupine fish, which is very thick and spiky. It is cured in such fashion as to preserve the shape of the fish, and, while affording protection against a blow from a club, lends an extra touch of ferocity to the fighting man's aspect.

BABY'S OWN TABLETS OF GREAT VALUE

Mrs. J. A. Lagace, Ste. Perpetue, Que., writes:—"Baby's Own Tablets have been of great value to me and I would strongly recommend them to other mothers." Thousands of other mothers say the same thing. They have become convinced through actual use of the Tablets that nothing can equal them in regulating the bowels and stomach; driving out constipation and indigestion; breaking up colds and simple fevers; expelling worms and curing colic. The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

THE SUPREME SACRIFICE

London Boy Whose Unselfish Act Led to His Death.

How a soldier sacrificed his leave for another man—and subsequently his life—was related by the Bishop of Chelmsford recently.

The bishop's story concerned a Bethnal Green lad, brought up in an indifferent home, who after being fourteen or fifteen months at the front, wrote to his parents, who were very fond of him, saying that he was expecting leave.

About the time he should have arrived home another letter came from the lad, saying:—"Mother, I found a man just close by me who was sad. I said to him, 'What's the matter, Bill?' He said he had just heard that his little girl was ill, and he could not get leave to go home and see her.

"Mother, I know it will be a great disappointment to you, but I went to my officer and asked him whether Bill could not have leave instead of me. So I am staying behind."

A few days later the mother received a telegram saying that her lad had been killed while staying behind. That, said the bishop, was a magnificent and noble sacrifice.

Ask for Minard's and take no other.

What He Wanted.

The wounded soldier walked slowly along the street, his arm hanging in a sling.

Everybody stopped to look after him, and more than one woman gave him a friendly smile as he passed.

But it was left to a small boy to speak to him. The youngster suddenly spotted the hero, dashed across the road, and planted himself right in his path.

The soldier stopped to hear what the boy would say. At last it came:—

"Please, sir, have you got any iron crosses?"

Had ship's anchor fall on my knee and leg, and knee swelled up and for six days I could not move it or get help. I then started to use MINARD'S LINIMENT and two bottles cured me.

PROSPER FERGUSON.

Kind Neighbors.

"Good morning! I came to tune your piano."

"Piano? But I didn't send for you."

"No, ma'am, but the neighbors said I ought to call."

146-150 Bay Street, Toronto, Ont.

YES! MAGICALLY! CORNS LIFT OUT WITH FINGERS

You say to the drug store man, "Give me a small bottle of freezone." This will cost very little but will positively remove every hard or soft corn or callus from one's feet.

A few drops of this new ether compound applied directly upon a tender, aching corn relieves the soreness instantly, and soon the entire corn or callus, root and all, dries up and can be lifted off with the fingers.

This new way to rid one's feet of corns was introduced by a Cincinnati man, who says that freezone dries in a moment, and simply shrivels up the corn or callus without irritating the surrounding skin.

Don't let father die of infection or lockjaw from whittling at his corns, but clip this out and make him try it.

If your druggist hasn't any freezone tell him to order a small bottle from his wholesale drug house for you.

PINKERTON

"The Young Village Doctor," —popular play—Town Hall, Paisley, Friday evening.

Mr Jas Gale returned to Alma on Monday after a week's visit at his home here.

Mr Geo Scott's sawing machine is busy in this vicinity.

A number of small boys enjoyed their first swim on Sunday. They report a rather cool reception.

Senator Donnelly returned home on Friday from Ottawa.

Mr and Miss Gibson of Kingarf spent Sunday at Mr Jack Bell's.

GLAMIS

See "The Young Village Doctor" —Friday evening, Town Hall, Paisley.

Mrs J Stricker, of Oil City, spent a night at the home of her uncle's Joseph Cunningham.

Pte Alex McPhail of Toronto spent a short time here among his friends.

Mrs Shier of Algoma spent a few days with Mrs Gunn.

Mrs Woodstock who spent the winter with friends, returned to her home on Saturday.

Mr and Mrs Avery, Mr David and Miss Robertson of Armow Sundayed at D Robertson's.

Mrs R F Harrison of Calgary is visiting her parents Mr and Mrs J C McIntyre.

Mr Ryan, of Owen Sound, is spending a few days at Captain Pete McKinnon's

Miss Mary Webb and her friend Mr Fiddes Sundayed at her home.

Mr Alex McSween and young son are visiting Mrs McDougald on the fourth.

Mr Dan McLean on the 10th made a business trip to Toronto on Tuesday.

A number of our young men went down to the lake on Monday night for suckers.

Born—To Mr and Mrs Jack McLean, 2nd con Bruce, a son.

GRESHAM

(Inadvertently left last week)

"The Young Village Doctor."

We are sorry to report that Mrs McKenzie, 10th con, is at present in poor health. We hope to hear of her speedy recovery soon.

Mr Frank McLennan of Glamis visited at Young's and the 10th con on Sunday.

Quite a number from our vicinity attended the funeral of the late John McLeod, 10th con. Bruce, at Port Elgin on Sunday. We extend our sympathy to the family.

Mr Dave Anness visited at his cousin's on the 12th con lately.

Mr Wm Parker was in Walkerton Saturday.

Mr J G Brown has accepted a position in Harriston and left for that town last week.

Mr Allen McKinnon, Sr, is visiting his daughter, Mrs Begg, Port Elgin, at present.

THE LESSER SERVICE

Going so far as to compel men to serve the State, the Government need not be timid about making money serve the State. Nor need it be timid about taking control of food, so that nobody can make a dollar by speculating in it. We do not want to reproduce the condition described by Hood:

"O God, that bread should be so dear,
And flesh and blood so cheap."

Flesh and blood are the most precious things we have. The moment they are conscripted, the conscription of property, wealth, income, profits, becomes insignificant. The only question is what the country needs, and what is the simplest and most effective way of getting it. He who gives a million dollars gives less than a son. In fact, the two are not to be compared at all. In religion there is something known as taking a vow of poverty. If a whole nation took a vow of poverty and kept it, it would be far less than the sacrifice that is being made by the sons of the nation in France.

WALKERTON

A citizen who wrote to Dr Shearer of Toronto, head of the Belgian Relief Commission of Canada, regarding Rev Dr Miniflie, who was soliciting aid for the Belgians through this community, received word this week that Dr Miniflie had not been connected with Belgian Relief work since March last. Owing no doubt to his recent sad bereavement and trouble, which, it is thought, has somewhat affected his mind, Dr Miniflie neglected to pay one or two bills here, including a hospital account for $68, which the Commission forwarded cheques this week to cover.

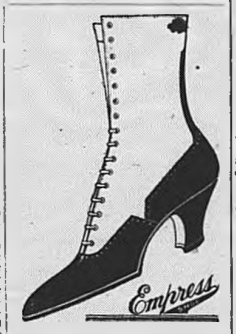
Messrs Hank and Robert Irwin, the horse Napoleons of Bruce, have issued a writ against the C P R for damages for the killing and maiming of a number of horses which they shipped from Walkerton to the west last February. It seems that the cars containing these horses were standing on a side track about 14 miles west of Schreiber, when the neglect of the railway men to change the switch swung a fast going freight train off the main line into the siding and caused a head-on collision that resulted in the death of 24 of the horses, the maiming of five others and the injuring of many more.

Archibald Thos Jones, the indigent who blew into Walkerton for shelter in the House of Refuge here, and who was boarded at the town's expense and later confined to the county jail until the reeve of the township of Bruce, of which he claims to be a resident, could provide him clothes and a passport to the Refuge, turns out now to be a nobody's darling, so far as that township is concerned, as the reeve can find no trace where any such man has belonged to the Bruce township fold. The result is no passport or clothes are forthcoming, and as it is suspected that the visitor is simply a knight of the road whose earthly home is wherever he hangs his hat, it is likely he will be given his choice of getting out of Bruce by the nearest possible route or taking three months in the county cells for vagrancy.—Herald and Times.

We were not a bit surprised to learn from his own lips on Monday night that Mr Rowland, who has been developing a "Billy Sunday" style on the recruiting platform, has at last broken into the pulpit. Mr Rowland confided to his hearers that a few Sundays ago he and Dune McKerracher and Frank Rennie had held forth of a Sunday evening from the pulpit of a Presbyterian church of a neighboring town. Mr Rowland probably took for his text something about making two onions grow where one had been before, a subject which would easily draw tears to the eyes of the congregation. Bro McKerracher and Bro Rennie would no doubt deal with the beauty of brotherly love. Speaking from the platform Monday night, Mr Rowland went further and gave some pointed advice to the local clergy regarding their pulpit work. He advocated that the local pastors desist for the moment in their efforts to steer pilgrims towards the pearly gates and preach "Grow beans, more potatoes and then some!" or words to that effect. Mr Rowland took off his hat to Premier Borden for announcing conscription and certainly struck a responsive cord when he declared emphatically that there should be not only conscription of manhood, but a conscription of wealth and that a food dictator should be appointed.—Telescope.

Swede turnip growers are urged this spring to endeavor to secure and transplant a few sound roots to produce seed for themselves and neighbors. Owing to abnormal conditions now prevailing there will likely be very little swede seed for planting in the spring of 1918 unless our Canadian swede turnip growers make provision for their own supplies by growing the seed themselves. Canadian supplies of swede and most other field root and garden seeds formerly came from Europe but this source is now practically cut off. The prospects for home grown seed have been reduced by the present price of swede turnips for food purposes, as it would now take nearly two hundred dollars' worth of full grown swede turnips to transplant an acre for seed purposes. This factor has had the unfortunate effect of reducing one area in the eastern provinces that would otherwise have been planted for the production of swede seeds. —Seed Branch, Ottawa.

The Late C. Gilbert Monkman



On May 17th at his late residence, lot 15, con 1, Arran, the angel of death relieved Mr Charles Gilbert Monkman of his sufferings and called him to the home from which there is no return. The deceased was the son of Mr James Monkman and Catherine Jameson Monkman, for so many years known in Arran Tp and surrounding country, and was born in Albion Tp, Peel Co. Ont, in October, 1844. In March, 1867, the Monkman family, when the deceased was in his 13th year, removed to Arran, where he has since resided. In October, 1871, he was married at the Methodist parsonage at Invermay to Mary, eldest daughter of Mr Jesse Poole, another of the pioneers of the Mount Hope district of Arran and Elderslie. Mr and Mrs Monkman had nine children, seven of whom survive with the widow, namely: Isaiah, Arran; Katie (Mrs Wylie), Sask; Phoebe (Mrs Wm Dix), Arran; Wesley, Sask; and Cyrus, Mary and Sarah (Mrs Marshall) at home. The deceased had been a member of Mt Hope Methodist church for over 50 years and was secretary-treasurer of SS No 4 Arran, for many years. He suffered greatly from rheumatism for several years and died from the effects of a paralytic stroke on May 17th. He was buried in Mount Hope church cemetery on May 19th. This church had been his religious home for about 60 years. He is also survived by one sister and six brothers.—Leader.

CASTORIA
For Infants and Children
In Use For Over 30 Years
Always bears the Signature of Chas. H. Fletcher

—Chatham has a municipal purchasing board, organized to fight the high cost of living. A carload of potatoes was sold at $3.65 per bag, five tons of flour at $8.10 a cwt, and 500 pounds of butter was sold to citizens at 37 cents per pound. This method of contending with the h. c. o. l. should be worth while trying in many towns.

In the matter of the estate of John McKenzie, late of the Township of Bruce, in the County of Bruce, Farmer, deceased.

NOTICE is hereby given pursuant to section 56 of chapter 121, R.S.O. 1914, and amending acts, that all creditors and others having claims or demands against the estate of the said John McKenzie, who died on or about the 5th day of October, 1917, are required to send by post, prepaid, or to deliver to the undersigned administratrix of the estate and property of the said deceased, on or before the 11th day of June, 1917, their names and addresses and full particulars of their claims, duly verified, and the nature of the securities, if any, held by them.

And further take notice that after the 11th day of June, 1917, the said administratrix will proceed to distribute the assets of the said deceased among the parties entitled thereto, having regard only to the claims of which she shall then have received notice, and that she will not be liable for the said assets or any part thereof, to any person or persons of whose claim she will not then have received notice

D. FORRESTER,
Solicitor for said Administratrix
JANE HARBON McKENZIE,

Willys-Overland
Motor Cars
Light Four Country Club (four-seater) $1110
f.o.b. point of shipment
Price subject to change without notice
The Peak of Motor Car Fashions
This new Overland Country Club Light Four is a distinctive and smart car in the low-priced car class.
The rich, gray body, with black fenders and trimmings is set off to pleasing advantage by red wire wheels that give just the right flash of brilliant color.
The two comfortable front seats move forward or back independently, and a spacious aisle between gives free passage to a roomy seat for two passengers in the rear.
For riding comfort, the Overland Country Club is a revelation. Long, cantilever rear springs give it the riding ease of a much heavier, bigger car.
It has ample power—and it is economical of gasoline.
An easy car to handle, and completely equipped.
An unusual demand for this model makes it necessary to place orders at once to secure spring delivery.

—Mrs Robb, of Swan Lake, Man. is visiting at the home of her mother, Mrs R C Barss.

—Miss Euphemia McKinnon, of Toronto, is visiting her sister, Mrs Neil McArthur, Water Street.

—Mr Neil Cameron, of St John, N B, is here on a visit to his sisters, the Misses Cameron, Queen St north.

—There was no service in the Methodist church on Sunday, Rev Mr Crighton being away to Conference.

—Mrs A Blue went to Hamilton on Tuesday to attend the funeral of her daughter-in-law, Mrs Robt Barclay.

—Mr Geo Campbell, of Bruce Mines, is visiting at the home of his brother, Mr J S Campbell, Elora Road north.

—Mr Ed Majore, of con A, Elderslie, is building a new barn. The raising was held on Tuesday of last week, when the frame work was put up with the assistance of about a hundred men.

—Mr and Mrs Wilmer Gibson are down from the west on a trip, and have been visiting at the home of his parents, Mr and Mrs Fred Gibson, Willscroft. Miss A Gibson was also up from Toronto for a few days.

—Mr Warren McGill, of Gillies Hill, has returned from the west. He went to Lanyburn, Sask., this spring, but became so afflicted with rheumatism that he had to give up the idea of remaining there. His father-in-law, Wm Peaton, is also busy.

—Mr Alex Fraser and Miss Fraser announce the engagement of their niece, Miss Lucille Fraser, to Mr Archibald Pilkie, eldest son of Mrs Marion Pilkie and the late Archibald Pilkie, of Mount Forest, the marriage to take place quietly on June 12th

—Mr Jas Ferguson, of Ingersoll, has bought Mr Morris Relihan's farm together with all the stock and effects, and is having a sale on June 13th, which is fully advertised by bills. Mr Ferguson is known to many in this section, having sold many car loads of cows and young cattle to the farmers hereabouts. He will use the farm for grazing purposes.

—The list of King's birthday honours, is interesting to at least one Paisley resident. Sir Joseph Flavelle, Bart, and Brig-general F O W Loomis, D S O, C M G, are cousins of Mrs Thomas Muir, while Sir John Aird, another new knight, is father-in-law of Mrs Muir's sister, Mrs John Aird, who, as Miss Lilian Mundell, visited Paisley often and is well known to many here.

Veterinary Officer, 160th

Capt Wm Walks, who recently went overseas with the C A V C has been appointed veterinary officer to the 160th Bruce Batt. at widey Camp.

Died in the West

The remains of the late John Porter, who died at Olds, Alta., on Tuesday will be brought east for burial. The funeral service will be held in Knox church on Saturday at 12.30 o'clock noon. Interment will be made in Tara cemetery.

Prize-Winning Graduates

THE EARL'S SECRET

Or, a Martyr to Circumstances.

CHAPTER XXXI.—(Cont'd.)

"No," said Mr. Dockett, "not all—not nearly. Captain Murpoint. There is a charge of forging a codicil to the will of the late John Mildmay, whereby you having fraudulently gained the guardianship of Miss Mildmay and possession of the estate and the moneys of the same."

The captain's face twitched and worked, and he sank into a seat.

"Let us hear this farce through," he said. "I know who is at the bottom of it. Forgery indeed! Because Lord Lackland is beggared and ruined and I have helped him toward it he must trump up this ridiculous charge. It is preposterous! My dear Violet——"

He was about to continue, but Violet rose and shrank toward the curtain, and Mr. Dockett stepped in between her and the scoundrel.

"You cannot believe this—this idiot!" he exclaimed.

"Silence!" said Mr. Dockett. "I put a question to you, Captain Murpoint. Will you give in, and make a clear confession of all, or shall I carry the matter through?"

"For, mark me, this young lady shall know all whether I tell her or you do!"

"Tell her what you like!" said the captain, pleasantly. "I have nothing to confess! Now, what is the next charge?"

"The murder of James Starling, whom you are accused of stabbing and throwing over the cliff at Penruddie!"

The captain rose, white and desperate.

"You cannot prove it!" he said. "Where is your witness?"

"Here," said Mr. Dockett, and he beckoned toward the recess.

Out stepped Job, very pale, but very determined.

"I am a witness, captain," he said. "I see you in the master's room, and I see you going up the cliffs. It's all over, captain, for Jamie Sanderson found the knife—your knife—and this gentleman has got it clear and straight."

"It's a false, vile, concocted plot!" hissed the captain. "James Starling died by the hand of Leicester Dodson! I saw him do it! If he didn't do the murder, where is he? Why doesn't he come back like a man and prove his innocence? Not he! He's snug away somewhere, and he doesn't come back!"

"He does, and he is here!" said a voice, and the curtain was swept away by a strong hand—Leicester's own—as he stepped into the room and caught Violet in his arms.

"Leicester!" she cried, with a voice, whose tones baffle all description. "Leicester! I have been asleep—dreaming. Oh, horrible dream! Wake me, Leicester, my darling, wake me!"

There was a rush and confusion as she fainted. The door opened, and Ethel and Bertie rushed in.

Then there was such a handshaking and kissing, and such terrible excitement, that for the moment the cause of all the terrible crimes and trouble was forgotten.

He saw the moment, and slipped something small and composed of glass from his pocket.

Scarcely had he done so when Mr. Dockett and Giles had seized his arms.

He struggled for a moment, then as the group round Leicester and Violet, sobbing and crying and laughing and talking, turned to confront him, he suddenly stood still, and the old daring smile flitted across his livid face.

"You are mad, all of you!" he said. "You think because your idiot is back and the secret is out that you have done for me forever. But you are wrong. I know something of law. I am rich, and I will set you at defiance! You talk of robberies, of smuggling, of forgery, of murder! Bah! where is the motive for it all? Convict me of forgery upon the evidence of one man? You cannot! Convict me of murder upon such evidence as you hold? Impossible! I laugh at you! I am Captain Howard Murpoint, a respectable officer in her majesty's service! Why should I kill my servant, James Starling? Beware! Lay me by the heels, and I can and will give evidence sufficiently strong to hang that idiot!"

And he pointed to Leicester, from whom all sense but that of gratitude for the possession of his darling seemed to have passed.

"I can hang him, and I will, for I dare you to show why I should murder my servant, James Starling!"

At that moment the door opened and a short, little man in a costermonger's cap entered.

It was Stumpy.

Very quickly he pushed his way through the throng until he was close besides the captain, then he grasped his arm suddenly, and, ripping up the sleeve with a knife, pointed with a grin to a red mark.

The thing had been done so suddenly that the detectives even were taken by surprise.

But the captain understood it, and his face underwent a fearful change.

"Who are you?" he breathed, hoarsely.

Then, as he recognized his companion in crime, he shrieked:

"Hold him! hold him! He's an escaped convict! I know him! I can swear to him! I've worked in the same gang! Hah! hah! I've tricked you all at last!"

And, as Mr. Dockett suddenly released his arm, he dashed something in his mouth and fell upon the floor.

There was a slight noise of breaking glass, the blood trickled from some small cuts at his lips, then a cry arose from Mr. Dockett, who had knelt beside him and was staring at his arm.

"It's the general! Stumpy was right! Here's the mark upon his arm! No. 1081 He's done us after all! Stand back! Give him air! Ah! he's dead—poisoned!"

And as he spoke he wiped the remains of the broken phial from the bleeding lips.

(To be continued.)

About the House

A Mother's Short Cuts.

"How do you manage to have so much time for your children outside of all the home things you do for them?" questioned one mother of a neighbor.

"By taking short cuts through my work," was the laughing answer, "and trying to be ready for play in its own time."

"What do you mean by short cuts? Clothes can't be half-mended, dishes can't be half washed, bread can't be slack-baked."

"No, that would be cutting work short instead of cutting across it. I have several simple devices now for cutting across some of my duties. For example, part of the time I wear glasses and part of the time I do not need them. I used to waste many valuable moments in looking for them when changing from one task to another. At last I made a rule that in each room I must have one special place to lay them down and never allow myself to put them anywhere else. This habit has become settled and my glasses are never mislaid.

"Another time and labor-saving arrangement," went on the hostess, "is to hang in very room a small cushion on which are five or six needles, each threaded with a different color or weight of silk or cotton so that any moment I can run up a rip, sew on a button, mend a hole in a stocking, catch the sides of a rent together, or tack up a torn hem. You may not believe it but these stitches in time save more than nine in the future.

"When I wash the dishes, I do not use wiping towels but put them upon a rack and scald with plenty of water. They dry themselves in pure air and sunshine and I have no dishtowels to wash.

"On each floor of the house I keep one large scrap-basket into which I empty the contents of all the smaller baskets which I attend to, without extra steps, as I go from room to room.

"I also gather up odds and ends of time by tucking away in a bag or a basket in each of my haunts, a piece of embroidery, knitting or sewing so that when I have a leisure half-hour I do not need to hunt up materials or patterns. This sort of employment fits in well with reading aloud, attending to the children's piano practice, helping them with their lessons, listening to confidences or joining in games."

"Well," acknowledged the visiting mother as she rose to bid her friend good-by, "I see how I can try some short cuts! Perhaps my youngsters will appreciate a little more mother."

Macaroni Dishes.

To boil macaroni properly have a large pot of saucepan two thirds full of water on the fire, put a level tablespoonful of salt into it for every quart of water, to which, if desired, may be added half tablespoonful of butter, which gives a better flavor, and when it is boiling fast, thrown into it the macaroni, wiped with a clean dry cloth, but not washed. Let it boil until it yields easily to pressure between the fingers; then drain it in a colander and rinse it thoroughly in cold water. In which it should remain until you are ready to finish it according to any given recipe.

The same recipe may be used in cooking macaroni, spaghetti or ready-cuts.

If the macaroni or spaghetti, etc., is to be re-cooked with other ingredients or baked, it need not be cooked quite so tender.

White Sauce:—Heat in saucepan to boiling point 1 cup milk; add 2 tablespoons butter and 1 of flour; stir until thick and smooth. Season with salt and pepper.

Tomato Sauce:—Cut 7 or 8 tomatoes or use a can of tomatoes, cook on a slow fire with ¼ ounce of butter, 1 onion, celery, season with salt and pepper. Cook slowly for an hour, add a little flour, cook 5 minutes more. Drain in a colander, then some meat extract may be added to give more flavor, and keep hot until ready to use with macaroni, spaghetti or ready-cuts.

Macaroni Soup:—Boil some milk macaroni as directed, till it is tender. Drain it off, and serve it cut up into three inch pieces in some clear broth.

Milk Macaroni and Cheese:—1-2 package macaroni. 1½ cup of thin white sauce, ½ cup of stale bread crumbs, 1 cup grated cheese, 1 tablespoonful of butter. Break the macaroni in 2 inch pieces or buy a package of Milk Ready-Cuts—which are always cut to size—and cook in boiling salted water until soft, about 20 minutes. Pour into a colander and run cold water through it. Put in a buttered pudding dish and thoroughly stir in 1 teaspoonful mustard which has been mixed with water. Add the sauce with half the cheese in it. Put crumbs into melted butter. Add remaining cheese to them and spread this mixture over that in the dish. Brown in a hot oven.

Tested Recipes.

Rice Griddle Cakes:—Turn into a mixing bowl one small cupful of cooked rice, free from lumps. Add two tablespoonfuls of melted butter, one teaspoonful of molasses, a quarter of a teaspoonful of salt, two well beaten eggs, 2 cupfuls of flour sifted with 2 teaspoonfuls of baking powder, and sufficient cold, sweet milk to form a pancake batter. Heat the mixture vigorously and fry on a hot griddle. Serve as soon as they are baked, as standing in the oven makes them soggy.

Buttermilk Cookies:—¾ cup shortening, 1 cup sugar, 1 cup buttermilk, 1 teaspoon baking soda, flour to thicken. Roll biscuits ¼-inch thick and cut.

Rice Pudding With Raisins:—¾ cup rice, ½ cup raisins, 1 cup milk, 1¼ quarts boiling water, ½ teaspoon salt, ¼ cup sugar. Stir the rice into the boiling salted water and cook until it is about half done, which will be about fifteen minutes. Drain the rice, add the milk, sugar and raisins, and place in a greased baking dish. Bake in a moderate oven for about forty-five minutes.

Can The Surplus.

Now is the time to husband your resources and to prepare for the winter by canning and preserving. Soon it will be possible to obtain sufficient fruit and vegetables.

Do not try to have just one day for canning and then proceed to work from early morn until late at night; rather do a few jars each day, so without much hardship your supply will grow rapidly.

A few points to remember before starting:

First, Use good jars, taking care that the lids are in good condition.

Second. Use only new rubbers; old ones have lost their elasticity, so fail to perform their mission.

Third. It is of the utmost importance that the proper method of canning and preserving be used if you expect your food to keep. Careless or haphazard methods will spell failure and will result not only in loss of material and jars, but also in loss of time and labor. Understand thoroughly just what you are doing and then see that each rule is carefully followed.

Officer—Do you know anything about field drilling? Private—Field drilling? Oh yes, I used to have a job in an artesian well company.

THE MINISTRY OF LOVE

Bonds of Sympathy Between Mothers of Our British Soldiers.

Much has been written and told of the great work that the women of the Motherland are doing in munition factories, in aeroplane works, in shipbuilding yards, in agriculture and in countless ways that will release men for military service. But little has been heard of another piece of work that hundreds of women in the Old Land are doing for our boys in throwing open their homes to them and looking after them when on leave.

Recently one of the first contingent boys just finished his fourth visit to one of these charming homes, and wrote his mother what "perfectly bully people they all were, and Mrs. C. just mothers us and makes a real home for us."

Letters have passed between the boy's mother and the dear old lady whose wonderful kindness has meant so much to the young Canadian. And now the mother here has received the most delightful pen-picture of her boy from his kind "mother" in England, telling all the dear, intimate things that a mother longs to know about her boy, but would never ask him to tell her. How comforting it was to the mother to learn that "you will be proud of him, for the two years in France have improved him physically, while in character he is still the nice, clean, lovable boy we first met at Christmas, 1914. I can assure you France has not harmed him the least little bit. He has sailed clear of temptations."

Another mother in the city whose boy was severely wounded for the second time and was in hospital in London, received a delightful letter from an English friend who journeyed away from the north to London just to see the young major. She spent several days there "fixing things up for him," and incidentally cabled encouraging news. In the letter she also gave interesting details, all about the Military Cross he had been presented with at Buckingham Palace, told of the nature of the wounds, gave the young officer all the Canadian news from her letters and wrote many for him to friends here. Still another dear mother wrote to a sorrowing mother here about her brave boy's death, and sent a flower from his grave in the English graveyard.

Many, many instances of loving thought and continued kindnesses could be recounted. They are bright spots in these trying days of suspense and anxiety, and we can only remember to thank God that such women are acting as guardian angels to our boys.

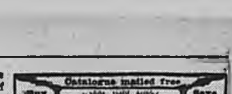
Weeds.

With the call for more production there may be a tendency to increase the acreage of high producing crops such as the root and hoe crops on the farm. In preparing for these crops this year it will be well to thoroughly bear in mind that no amount of cultivation after the crop is in can make up for a lack of cultivation before the crop is planted. If the ground is properly prepared for the seeding and planting, the battle is largely won. By thoroughly tillage of the soil before planting, thousands of tiny weeds will be killed which would otherwise cause trouble in the growing crop. By preventing the weeds from growing the crops are given a better opportunity to develop and produce the food which is required by Canadians in Canada and the Allies in Europe.

Definitions.

A philosopher is a man who can bear another's troubles with equanimity.

A philanthropist is a man who tells others where to give their money.



A pacifist is a man who permits others to fight his battles.

Teacher—"What is an abstract noun?" Pupil—"An abstract noun is something you can't see when you are looking at it."

Thomas: "Why in the world did you name your baby 'Bill'?" Burke: "Because he came on the first of the month."

Spread stable manure before ploughing or spading. Do not try spading or ploughing first, then spreading manure and endeavoring to work it in with a harrow or rake, as the result will be a troublesome mess. Writers who recommend this latter idea are book taught agriculturists who lack practical experience.

Railroad extensions in China are proposed involving an expenditure of an amount estimating at $60,000,000. The projects are entirely commercial and private. One thousand five hundred miles are to be constructed through the richest sections of China, and possibly an equal amount later.

Redpath SUGAR

2 and 5 lb. Cartons—
10, 20, 50 and 100 lb. Bags.

When you pay the price of first quality sugar, why not be sure that you get it? There is one brand in Canada which has no second quality—that's the old reliable Redpath.

"Let Redpath Sweeten it."

Made in one grade only—the highest!

Farm Crop Queries

Conducted by Professor Henry G. Bell.

Henry G. Bell.

The object of this department is to place at the service of our farm readers the advice of an acknowledged authority on all subjects pertaining to soils and crops.

Address all questions to Professor Henry G. Bell, in care of The Wilson Publishing Company, Limited, Toronto, and answers will appear in this column in the order in which they are received. As space is limited it is advisable where immediate reply is necessary that a stamped and addressed envelope be enclosed with the question, when the answer will be mailed direct.

Question—F. G.:—We have a fifteen acrenere field of clover sod manured this winter and spring. The soil is a good sandy loam. My two sons want to raise a bumper crop. Now would you advise to drill the fertilizer in with grain drill or corn planter? We intend to check it. Also how much fertilizer should we use to the acre? The land is in good shape.

Answer—In order to get a maximum yield of corn on your sandy loam soil, I would advise you to put on 400 pounds of fertilizer per acre. I would broadcast 300 pounds of this by drilling it in with a grain drill before the land is planted to corn. Sow the other 100 pounds per acre through the fertilizer attachement of the corn planter. I would advise an analysis of fertilizer running from 2 to 3% ammonia and 8 to 10% phosphoric acid; also 1% potash will help, if it is obtainable.

Question—C. O.:—I have a piece of rather light land that was in corn last year, part of it has manure applied. If the balance of the field is manured then disked and harrowed thoroughly, would it be all right to sow clover on, providing it is well limed? How much hydrated lime is needed per acre? Would it be advisable to sow buckwheat and clover? When ought the seeding to be done?

Answer—If the land is well manured and limed, then disked and harrowed thoroughly, it will make a good seed-bed for clover. If adding hydrated lime, I would use from 1,000 to 1,500 pounds per acre. I do not believe that buckwheat would be a good nurse crop for the clover. The buckwheat tends to grow very thick. It is used to smother out such weeds as quack grass. I would rather prefer oats, spring wheat or barley. Perhaps barley is the best nurse crop, since it ripens early, is shallow rooted and is removed more quickly from the ground, so that the clover has a better chance to grow. The small grain and clover should be sown as soon as the ground can be prepared in the spring. In order to help both the small grain and the clover catch, since your seeding must necessarily be late, I would advise applying from 200 to 250 pounds of fertilizer carrying 2 to 3% ammonia and 8 to 10% phosphoric acid. This will act like whole milk to the young calf. It will give the infant grain and clover plants easily digestible plantfood and will greatly assist both crops.

Question—W. M.:—What in your advise in regards to planting soy beans in ensilage corn? Does this make the silage a better feed, and would you plant them the same time as the corn? I thought perhaps if the beans were planted later it would make more moisture in the silage. Please let me know what time to plant for best results. Also my pasture runs short in latter part of July or August. I have two and one-half acres that I would like to use for this purpose. Would cowpeas and oats be a good feed if cut green and what time is best to sow them?

Answer—In many sections good results are forthcoming from seeding soy beans with corn. Theoretically, the mixture should greatly benefit the balancing of the ration, since soy beans are rich in protein and fat and corn is rich in carbo-hydrates. Many farmers get excellent results by hogging down the corn and allowing the pigs to harvest the soy beans. This balances their ration, as indicated.

The beans may be planted at the same time as the corn, if you cultivate the corn only one way, but the common practice in the middle western states is to drill the seed in at the last cultivation, or to scatter it between the rows and work it in at the time of the last cultivation. About 1½ bushels of seed per acre is required. If planted as described the beans should be well set and fairly well ripened by the time the corn is to be cut for silage.

Regarding the short pasturage, I am wondering if you are familiar with the work on pastures done by Prof. Zavitz of Ontario Agricultural College. He has obtained good results from the following mixture:

Oats	51 lbs.
Early Amber Sugar cane	30 lbs.
Common Red Clover	7 lbs.
Total	88 lbs.

He advises sowing this early in May. The oats and the Early Amber sugar cane can be drilled through the grain drill and the clover seed can be sown through the clover seed attachment of the drill. At Guelph they found this mixture ready for cattle pasture late in June. It carried more than one steer to the acre. In 1911 it was successfully used for milk cows.

If you wish to grow a crop to cut green, I would advise you to mix peas and oats,—a bushel of each. This makes a good rich green hay and gives satisfactory results. Sow this just as soon as you can prepare the ground.

Hogs

The strength of the pig when farrowed exerts possibly the greatest effect on the ultimate economy of production.

Second only to this point in importance is the influence of wisdom in the feeding and management of the sucking and the weaned pig.

More good litters are ruined—and more swine-feeders baffled and discouraged—by improper feeds and feeding and ill-advised methods at the period mentioned, then possibly during any other phase of the pig's existence.

Teach the litter to eat three weeks before weaning.

For best results milk products are practically a necessity; with middlings.

A few handfuls of dry grain scattered in the bedding insures the pigs taking exercise. Avoid overfeeding, and make exercise necessary.

Gradually increase middlings until weaning. If skim-milk is available, and two litters per year are anticipated, wean at six weeks of age; otherwise wean at eight weeks.

Rape makes excellent forage for hogs. And rape, sown on land kept under clean cultivation until July, will assist in land cleaning.

Horse Sense

The symptoms for disease of the hide-bone are, in some cases, lameness, and a hard, unyielding enlargement surrounding the heel on one or both sides of the foot.

If lameness be present, blistering tends to effect a cure; if not lame no treatment is advisable.

Use three or four horses in a team wherever possible.

The neck and shoulders of most horses are all the time changing. The collar that may be all right this year may need considerable readjusting another year.

It is difficult to find a better collar than a good curled hair collar.

Some blacksmiths seem to think they must earn their money paring off the horse's hoof. Result, thousands of poor sore-footed horses.

The Dairy

A little oil cake added to the skim milk will make an excellent substitute for fat in the calf's feed after the whole milk has been cut off.

Milk warm from the separator, with a little flaxseed jelly added to supply the extracted butterfat (at less cost), is an ideal feed for calves.

The calf feeding pails should be kept as clean as the milk pails. One feeding of stale or sour milk will often cause serious indigestion and scours.

It is better for a calf to miss a feed than to have a feeding of sour milk.

After drinking the milk a handful of ground grain should be put in a feeding box.

The pregnant heifer should receive a liberal ration containing a high per cent. of protein and ash, as these are necessary for the development of the foetus.

The best time to start feeding the heifer to produce a good milk cow is when it is young.

Sheep Notes

There have been quite serious losses in lambs in England this spring owing to unfavorable weather and lack of skilled help at lambing time.

When the sheep have become accustomed to pasture, and the grass has gotten good heart, there need be little anxiety about the flock.

Grain fed to the flock while on pasture increases the profits.

Provide a lamb creep so the lambs can be fed an extra ration of grain by themselves.

The quicker the lambs grow to marketable size the more profit and the better the meat.

Shear the sheep early. Protect them during nights in the folds, and from rains or cold winds.

The ticks will go to the lambs, which should be dipped.

Dock the lambs while they are young, as there will be less shock and less loss of blood. But not too short. Smear the wound with tar. Keep a close watch that the healing takes place at once.

A SILO ON EVERY FARM

Pays For Itself in Two Winters With Twenty-Cow Dairy—How to Get It—Where to Put It.

If there is anything a farmer is justified in going into debt for it is a silo. No implement will pay for itself so quickly as the silo. The question, Will it pay? is no longer debatable. With a dairy of twenty cows it will pay for itself in two winters' feeding. The only questions nowadays are, How can I get one? What kind shall I get? Where shall I put it, and how shall I pay for it?

Wideawake fruit farmers have found that dairying filled a unique and profitable place in their forming system. And modern dairying is not profitably possible without a silo.

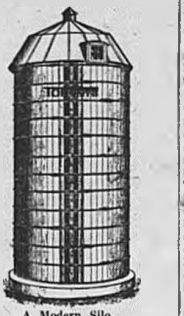
An acre of corn made into good silage has about forty per cent. greater feeding value than when fed as crib corn and dry fodder.

Cows need succulent feed during the winter months and silage furnishes it in convenient, economical form. Steers and lambs make faster and cheaper gains when silage is part of the ration.

There is a further urgent reason for erecting a silo this season—the prices of all feeds are unusually high and the saving with silage is consequently greater than ever before.

The first silos built were of the pit type, dug in the ground. It was soon found that the ensilage in these pit silos rapidly became moldy and unsuitable for feed. The silos first constructed above ground were of wood, being square in shape or eight sided; but they were not a success on account of the air pockets in the corners, which caused the silage to spoil. It was not until the round stave silos, with hoops that could be tightened or loosened as the silo swelled or shrunk, were put on the market, that silos became a practical success.

The expense of wood silos depends on the sort of wood used.



A silo ten feet in diameter is the best size for from twelve to fourteen head of cattle, as enough silage is taken out each day to keep it fresh. This is a very important point. A silo twenty feet in diameter would require a herd of from thirty-five to forty head of cattle to eat enough off each day to keep the silage fresh. A silo ten feet in diameter and thirty feet high is the best size for the small-sized herd. This will hold forty-six tons of ensilage, enough for eleven cows, each getting forty pounds a day, for 200 days, and allowing some for loss.

The absolutely essential features about a good silo are: The walls must be air and moisture proof, the inner surface must be smooth and perpendicular, the walls must be strongly reinforced, and the doors must be air-tight.

There are five kinds of silos on the market, those made of wood, solid cement, cement blocks, hollow tile and iron.

The wood silo was the first commercially introduced and has been greatly improved. In selecting a wood silo the writer would go to the expense of having the staves made in one piece. This costs a little more.

Cement silos, and silos made of hollow cement blocks have been used, but do not seem to be growing in favor. Every silo, however, no matter of what material it is constructed, should have a solid foundation of masonry or cement, preferably cement.

A Modern Silo.

Seven or eight years ago silos began to be made of hollow tile, and are steadily gaining in popularity. The manufacturers claim they will last for generations, are wind and moisture proof and fireproof.

Metal silos are being built and extensively exploited in the United States, being put up in sections all bolted together, the joints being filled up with suitable paste. The manufacturers claim the work of erecting these silos is so simple that a farmer with ordinary judgment can put them up, using the help on the farm. When the silo is complete and erected, it resists the action of heat and cold, the walls being absolutely air-tight, and the silage will keep well; but there is no doubt that the silo of this type should be kept painted, particularly inside, where it might be eaten with rust.

The Sunday School

INTERNATIONAL LESSON
JUNE 10.

Lesson XI. Jesus Crucified—John 19. 16-30. Golden Text—1 Cor. 15. 3.

Verse 16. The Evangelist lays the whole responsibility on the Jews. They have just repudiated their nationalism; the Emperor Tiberius is the only Messiah they will own! So Pilate hands over their King to them that they may enthrone him; and they accept the office! Compare Acts 2. 23.

17. Bearing the cross—This is usually harmonized with Mark 15. 21 by assuming that the Lord sank under the burden. It was observed earlier in these Text Studies that he had well-nigh worn out his body with overstrain before he came to the last great act of service, and that this probably accounts for the rapidity with which he died. John fastens attention on the first steps in the sorrowful way: the King goes forth bearing the scepter of his victory! A skull—In Latin calvaria: it was presumably named from its shape, a round bare knoll. In Hebrew, as in verse 20, means Aramaic, the common language of Judaea and (to a less complete extent) Galilee.

18. The crime for which these dacoits suffered is described by implication in Luke 23. 11. Compared with Luke 23. 19, it may be safely assumed that they were among Barabbas's followers. Having accepted the Jews' accusation that Jesus made himself a King, Pilate is obliged to make the most of it. So he orders that the King shall be between his followers in the place where Barabbas should have been. He also has the usual titulus written, which the condemned carried suspended round his neck to the place of execution. This sets forth what is the fate of those who dispute Caesar's crown.

19. Wrote . . . put—Abbreviated for "ordered to be written . . . and put."

A HOME-MADE REFRIGERATOR

Simple Device Which Makes a Good Substitute for an Ice-box, and is Easily Made by the Home Carpenter.

An Iceless Refrigerator.

Country homes without ice houses may have an iceless refrigerator as a good substitute.

This convenience comprises a simple wooden frame with a covering of canton flannel made to fit so that little air is admitted into it.

Wicks made of the same material as the cover are tacked on top of each side of the cover and extend over into the pan of water sitting on top of the frame. This water is taken up by the wicks and carried down the sides of the cover by capillary attraction, when evaporation takes place, drawing the heat from the inside and lowering the temperature. The more rapid the evaporation, the lower the temperature. The refrigerator should therefore be kept in a shady place where there is a free circulation of air. Keep the wicks in a supply of fresh water in the top pan. The whole refrigerator should stand in a larger pan which catches the drippings from the cover.

The frame may be made of pine, painted white. About 5½ yards of white canton flannel will be needed. Put the smooth side out, care being taken that the cover comes to the lower edge of the frame. The wicks are made half the length of the sides and sewed on the top edge at each side. They must extend three inches into the water. The three shelves are made of zinc. Cover the whole frame with wire screening to protect from flies.

Your Problems

Conducted by Mrs Helen Law

Mothers and daughters of all ages are cordially invited to write to this department. Initials only will be published with each question and answer as a means of identification, but full name and address must be given in each letter. Write on one side of paper only. Answers will be mailed direct if stamped and addressed envelope is enclosed.

Address all correspondence for this department to Mrs. Helen Law, 235 Woodbine Ave., Toronto.

J. L. G.:—1. It takes a submarine from three to eight minutes to submerge. The record for submerged speed, so far as known, is 12 knots. Generally ten miles an hour is the best underwater speed. 2. A forestry regiment is composed of lumbermen who cut timber and prepare for engineers for the building of bridges, railroads, trench supports, etc. 3. The River Isonso, a short Austrian stream, just across the Austro-Italian border, runs north and south along the battle-front in this sector. It empties into the Gulf of Trieste and the Adriatic Sea.

"Housekeeper":—Honey is a very valuable food. It is especially good for children who need a great deal of sugar, because of the fact that the skin surface, that is the radiating surface of the child's body, is much larger in proportion than that of the adult. This means that children's bodies lose heat rapidly, and therefore they need a great deal of sugar which produces heat and energy. Honey supplies sugar in its most digestible form, and enters into the circulation at once. Honey also contains minerals necessary for the human body, one of these being iron.

"Lucy":—1. Spread a thin film of butter over cheese that is to be put away until it will not dry or crack. 2. Lengthen the stitch on your sewing-machine to its fullest extent, and stitch the part to be shirred. Adjust your gathers by pulling the lower thread, and your gathers will be perfectly even. 3. For moths around the edge of a carpet, a hot iron is an excellent exterminator. Dampen the edge of the carpet and iron with the hot iron. If of velvet or Brussels, hold the iron close to the carpet, but do not press it down. The hot steam will kill all moths, and without the least injury to the carpet. 4. When sealing jelly, melt paraffin in an old teapot or tea steeper. It is the most satisfactory way of pouring the wax over the jelly when sealing it. No drops will be spilled upon the table.

"Mary":—To remove stains caused by handling fresh fruit, before washing rub the hands with half a lemon. Or take a stalk of rhubarb, peel and bruise and rub the hands with it.

"Botanist":—The national flowers of the allies are, so far as known: England, rose; Scotland, thistle; Ireland, shamrock, Wales, leek; Canada, maple leaf; Australia, fern; France, lily; Japan, chrysanthemum; Italy, lily. There is no floral national emblem accepted by the other allies, Russia, Belgium, Serbia, Rumania, Montenegro, Portugal, United States and Cuba.

S. B.:—To make Hollandaise sauce for fish put 2 tablespoonfuls of butter and 4 tablespoonfuls of vinegar in a saucepan, bring to a boil, add yolk of one egg, cook till thick, remove and season with ½ teaspoonful salt and a dash of pepper.

A course in Domestic Science will shortly commence in the Household Department. If you clip out the lessons as they appear and paste in a scrap-book, you will have the complete series for future reference.

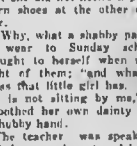
of the charge, and Luke practically follows him. The other two add the name. John being fullest of all. The name and place of origin may well have been omitted in the Greek and Latin versions: strangers were not supposed to be concerned with his identity, but only with the crime for which he suffered.

20. The local language, the official, and the language of universal intercourse in the Roman world, are combined to proclaim his royalty. One recalls the mingling of Jew, Roman, and Greek in the great apostle of the cross, who was to make the King known through the Roman empire. Few passers-by would know Latin, which was there as official: the Greek was for foreigners, and for not a few of the Galileans.

21. Pilate had succeeded in insulting the men who had forced him to do what he knew was an outrage on justice. It was the sneer of verse 15 made permanent for all to see.

22. It is not quite certain, though probable, that there are four women mentioned here. There may have been more in the company: Joanna (Luke 24. 10) is an obviously probable one. It is difficult to believe that Martha and Mary of Bethany were not there. This consideration makes it risky to assume that the three in Mark 15. 40 are the same, and that therefore his mother's sister was Salome, mother of James and John. Mary the wife of Clopas—Alphaeus (Mark 3. 18) may be the same name, so that her son, "James junior" (Mark 15. 40), was an apostle.

26. Woman—The rendering entirely fails to give the tone of the address, which often answers to Madam. Our idiom would simply drop it in such a context (as in paraphrase).



27. That Mary was gently led home at once is suggested by Mark 15. 40, where she is not named. Her Son tenderly spares her the agony of the darkest hour; and she, utterly crushed in spirit, passively obeys Him. She did not hear him cry Lama sabachthani.

28. That the scripture—of course this means that the Evangelist recognizes in the cry of physical anguish the correspondence with a Divine necessity revealed in Scripture. "In my thirst they gave me vinegar to drink" does not answer in spirit to the kindly act described in verse 29. But it is the thirst, not the "vinegar," that the Evangelist is thinking of: the quality of the liquid offered made no difference at such an hour.

29. Vinegar—Rather, sour wine; Latin, posca, the soldiers' ordinary drink. Hyssop—The branching twigs of which would hold a sponge and enable them to press it to his mouth.

30. He said—The momentary refreshment gave him strength to utter a cry of this one great word, and then to breathe the dying whisper (Luke 23. 46, margin) of Psa. 31. 5. Gave up his spirit may mean simply, "expired," but the thought of returning his spirit to God, who gave it, may be present.

Bedtime Stories

Whole Duty of Children.

A child should always say what's true
And speak when he is spoken to,
And behave mannerly at table;
At least as far as he is able.
—Robert Louis Stevenson.

Making Others Happy.

A dozen pairs of little shoes and slippers hung down almost to the floor from that infant class bench, and a dozen little maids kept them swinging back and forth all through the lesson hour. Ada Bryce was so busy gazing at her own pretty, shiny boots that she did not notice a pair of very worn shoes at the other end of the row.

"Why, what a shabby pair of shoes to wear to Sunday school!" she thought to herself when she caught sight of them; "and what a faded dress that little girl has. I am glad she is not sitting by me," and she smoothed her own dainty frills with a chubby hand.

The teacher was speaking again, and her words set Ada thinking. "Now, girls, you have answered well to-day, and I want to know who will promise to remember the lesson during the week and try to make someone happy whenever she can?"

Up went Ada's hand with the rest, and her eyes turned again to the little stranger, whose name, she had discovered, was Janey Burns. "I don't believe she is very happy," she thought; and before she knew it almost she had smiled at the little stranger, whose big, wondering eyes smiled back into her own.

As the infant class scholars trooped out for the closing exercises a little figure in a dainty dress slipped into the seat beside Janey Burns and a soft little voice whispered, "I guess I'll sit by you. You can hold my muff if you like. It's cosy to put your hands in."

As she and Lucy Miller trotted home from Sunday school together Ada whispered in Lucy's ear, "It's easy to make people happy; and isn't it funny? It makes you feel as if someone were making you happy, too."

Poultry

The shade problem is one that must be solved in the near future. The days will soon be here when the midday sun can do a lot of damage to stock exposed to it. Even in June there are days when a little shade is needed. This is probably more the case with chicks than it is with grown fowls; but, nevertheless, they all need it. Trees furnish the most cooling shade. Where trees are not available canopies should be erected, made by driving stakes in the ground and covering the top with burlap.

The chicks need plenty of nourishing food, but care must be taken that they are not overfed. If overfed they will lose their appetites and becomes stunted.

The hens out on range must be looked after. They are apt to hide their nests in some out-of-the-way place, and in consequence many eggs are lost or never found until they have lost their value. Beware of the hidden nest, and above all things never market an egg that has been found outdoors; let the cook in your own kitchen test its quality.

A more profitable side-line than turkeys for the farmer can hardly be found for those situated on grain or stock farms. Improper feeding, combined with close confinement, has been the cause of many failures in turkey raising. Given free range on the average farm the poults can generally pick up their own living. One light feed per day for the purpose of inducing them to come in at night is sufficient.

The Paisley Advocate

PAISLEY, JUNE 6th, 1917

LOCAL AND DISTRICT NEWS

Former Paisley Pastor Died

Rev John Gillis, who about thirty years ago was pastor of the St Andrew's Presbyterian congregation, in Paisley, passed away on May 1st at Souris Port, Prince Edward Island. He was 78 years of age, and is survived by his widow, two daughters and one son.

Soldiers' Letters

Readers in receipt of letters from soldiers are invited to make use of The Advocate columns to give friends the latest tidings from the boys overseas. Every soldier has scores of acquaintances interested in his welfare and anxious for news of his life in the firing line, and publication of the letters in The Advocate is the easiest means of reaching these friends. Care will be taken to avoid publication of any information coming under the ban of the censorship, and the original letters will be carefully preserved and returned.

Killed at Vimy Ridge

Pte George Harris Muir, who has been officially reported killed in action on Ap 10th, was the second son of John and the late Mrs Muir, formerly of con 2, Saugeen. He was born at Plaoo, Ill., 27 years ago. Previous to the war he was engaged in farming at Tyner, Sask. He enlisted in June, 1916, and went overseas in November of the same year. There are no particulars as yet, only a letter from a comrade, who saw him fall, presumably at Vimy Ridge. Pte Muir is survived by his father, who is now at Sydney, Montana, two sisters—Mrs Wood, of Miami, Sask (who is at present visiting here), and Mrs Mac McArthur of Paisley, and two brothers—Albert, in England with the 176th, and Arthur in Sask; also his grand mother, Mrs Wm Muir, and two uncles—Messrs Wm and Neil Muir, con 2, Saugeen.

New Commanding Officer for 160th

A cable message from overseas last week announced the Lieut-Col. Sutherland, of Woodstock, who recently left England for the third time, having twice been invalided to Canada with wounds, had been given command of the Bruce County Battalion, the 160th, which was one of the county units to retain its identity after going overseas. It is now the 1st Battalion of the 1st Brigade in the new 5th Division. Lieut-Col Sutherland is recognized as one of the ablest senior officers who has left Canada. He was one of the first Canadian officers to offer his services on the outbreak of the war. He was wounded at St Julien while serving as a company commander with the famous 1st Battalion, and after raising and taking overseas the 73rd Battalion was wounded for the second time in France while in command of another unit. He has the respect and affection of all his men at all times. He is a physician by profession, having been practising at Princeton, North Oxford, when the war broke out. He is under 40 years of age and is of Scotch descent. His great grandfather served with distinction with a Scottish regiment at the battle of Waterloo and was promoted on the battlefield by the Duke of Wellington for conspicuous bravery.

Death of Thomas McCoubrey

The death of Thomas McCoubrey, of Underwood, marks the passing of another of the pioneers of the County of Bruce Mr McCoubrey was born in Bargor, County Down, Ireland, and when but a boy emigrated with his parents and brothers to Canada settling in Galt in 1845. Shortly afterwards they settled on a farm in Plumborough Tp, where they made a small start. One year before the land in Bruce County was put on the market they took up 400 acres of land in the township of Carrick, but his father died in Plumborough before moving. The three brothers however went home in Carrick, and Mr McCoubrey could talk intelligently on Robertson's History of Bruce. In Carrick he met Miss S J McCool to whom he was married in 1865 and about 1874 moved to the township of Bruce near Baie-de-dore where with his wife and daughters he made a comfortable home. About six years ago he moved to Underwood where his death took place on Friday last. Mr McCoubrey was a highly respected citizen and a member of the Underwood Presbyterian church. He is survived by his wife and two daughters, Jane of Underwood, and Mrs Robert Robinson, 6th Line, and a son Peter, Andrew of Halcliff, Sask. Interment took place on Monday, May 28th, services being conducted in the Underwood Presbyterian church by Rev Mr McNabb. The deceased was in his 84th year.

W. M. S. Presbyterial

The third annual meeting of Bruce Presbyterial missionary society was held in Hanover, on the afternoon and evening of Thursday, May 31st. Mrs MacNab, second vice-president, was in the chair. Mrs McLean, in the name of the congregations of Hanover and Hampden, welcomed the delegates and reminded us that if we met together in a spirit of humility, harmony, hopefulness and helpfulness, our meeting would be a blessing to us. Mrs MacNab, in her address, spoke of our regret that we had lost our president, Mrs Clogg, by her removal to Clinton; of our sympathy for Miss Robertson, first vice-president, in her severe illness; and of our song that we shall no more have with us one of our most active and interested members, the late Mrs Brown of Tiverton, mother of our missionary, Miss Margaret Brown of Honan, China. Mrs MacNab expressed our thankfulness that the Society's deficit of last year—$54.00—had been wiped out. She said we should have a larger vision of the world's need, and a widening vision of what we could do if we were co-workers with Christ. Our honorary president then spoke a few words of thankfulness for the past and hope for the future, earnestly impressing upon us the truth that only in the consecration of all our abilities and powers could our work be truly successful. Reports read show that we had 19 auxiliaries and one associate society with a membership of 432. We sent $2165 to the provincial treasurer, an increase of $689 over last year. Sixteen new life members were added. One "in memoriam" and two junior certificates were granted. We have 71 home helpers who purchased $565 to our funds. There are 8 mission bands in our Presbytery. These 130 children raised $172.33. We sent 15 bales of clothing and two bales of lemit—total value $326—to help Indian and home mission work in the north-west. We take 402 copies of the Missionary Messenger. We were rejoiced to make the acquaintance and to listen to the words of Mrs Menzies and Miss Winifred Warren, missionaries from Honan. Miss Warren spoke on "The Greatness of the Need of Prayer," dividing her subject into three parts: 1st—the need of prayer for our missionaries who can be helped by our prayers to freedom to the use of a strange language, or saved from apathy in face of the appalling need; 2nd—the need of prayer for the unconverted, whose minds are dull and deadened from unceasing efforts to maintain the physical life; 3rd—the need of prayer for the native Christians who have temptations of which we know nothing. Mrs Menzies, in her address, said she was glad to come to Bruce for our county had sent four young women as missionaries to Honan—Isabel McIntosh, Ethel Cameron, Margaret Walks and Margaret Brown. Mrs Menzies said there were new women in China who were calling to their two hundred million sisters beseeching them to listen and to believe that men and women were of one nature, not "the man great, the woman vile," as they had been taught for ages. That Chinese civilization may be a christian civilization, our missionaries work and pray, for no nation rises higher than its women. Mrs Menzies' stories made us feel that we better know and understand our Honan fellow christians, and "if we know, we feel; if we feel, we pray; if we pray, we give." The last sentence was brought to us by Mrs McLaren of Port Elgin who gave us a report from the provincial meeting. Southampton is to be the next place of meeting for our Presbyterial. Mrs Wilson, our new president, gave us our closing words based on "Forgetting those things which are behind." At the evening session Mrs Menzies gave another fine address. Dr McDonald brought greetings from Presbytery, and there was special music by the choir. There were 103 delegates present, representing 12 auxiliaries. The delegates, and members of Presbytery and many friends were given dinner and supper by their hospitable hostesses, the ladies of Hanover and Hampden.

"The Young Village Doctor" on the Boards

That the people of Paisley and vicinity had heard the good reports as to the merits of this amateur play, was manifested by the full house before which it was given on Friday night last, and that the efforts of the Dramatic Club of Ripley's school were well appreciated is evidenced in the complimentary things that are heard from those who witnessed their presentation of "The Village Doctor." The hall was crowded, and everyone was kept interested in the various scenes of the play which occupied nearly two hours. The players and the parts they represented were:

Dr Young—Mr Roy Salmon
Mrs Crane—Miss Robertson
Jane Crane—Florence P Young
Miss Knowing—Mrs Wm McCulloch
Belinda Clinger—Pearl Nicholson
Lawyer Brief—Mr Wm Nicholson
Simon Grabbe—Isadore Sieffert
Mrs Simon Grabbe—Mrs Thos Howe
Solomon Wisacre—James McKenzie
Mrs Ware—Ruby Jones
Mrs Frost—Sadie Cameron
Tommy Ware—Harold Jones
Johnnie Ware—D J McKenzie
Mrs Groan—Miss Minnie Matheson
Mr Samuel Lovejoy—Mr Elmer Ribey
Dr Old—Mr Archie McLean
John Brook—Joshua Howe
Tom Brave—Orval Ribey

Synopsis of the play: The newly fledged doctor arrives in the village, and finding no office accommodation, rents a room in Widow Crane's house where he opens out his dispensary and waits for calls. Mrs Crane has a daughter who is away training for a nurse. The widow recites her troubles, past and present, to her tenant. Her references to Jane create an unfavorable impression in his mind, but when the young lady arrives home he finds her to be quite attractive, and here is where the romance of the little play is opened up. Mr Brief, the young lawyer, is the doctor's opponent in the game of hearts. Humorous skits are introduced in the first calls of some would-be patients of the doctor who have either imaginary or incurable ailments, about a youth named Lovejoy who has unmistakable symptoms of compound fracture of the heart, brought on by making love to two girls at once. The doctor lives up to the proverbial philanthropic standard of the medical profession by attending poor Widow Ware's little son without prospect of pay. Simon Crabbe says there is nothing much wrong with his wife if she only thought so. The doctor's advice to give her a rest trip was accepted with bad grace by the husband, but he later proved grateful and became a more attentive spouse. From a night call to the country the doctor was brought home a battered wreck, his horse having run away. Archie McLean, as Dr Old, went through the motions of putting on a bandage or a mustard plaster to the doctor's burns system in the same masterful manner in which he handles a telephone system. He left nurse Jane in charge of the patient, and the courting is completed during the Dr's convalescence. They get married, and the play ends with the wedding reception, at which all appear as invited guests, also Tom Brave, who has just arrived back from the war front. To Miss Young, teacher in Ripley's public school (5 years), is credited the success of the Dramatic Club in raising nearly $1000 for Red Cross purposes by giving this play in several different villages and towns. In addition to the play, there was music by the Paisley orchestra, Highland dancing by Mrs McGillivary, recitations by Mr H Stevens of Chesley, Miss Young and Miss Robertson. A vote of thanks was tendered on behalf of the Paisley audience to the W F L by Mr S Ballachey and Dr Allen, which was responded to by Mr A McLean. The proceeds amounted to $90.15.

—Mr C M Bowman, M P P, says the Telescope, made a good suggestion at an executive meeting of the Bruce Preparedness League held at Walkerton. He proposed that at the next meeting the League to be held at Chesley in June that the farmers be asked to come with suggestions as to how the city folk can best co-operate with them in further production for the coming year, with the idea of getting started right before Fall. This year there was no attempt made by the Provincial Organization at Toronto to get in touch with the farmers, the men who know the situation, and as a result a tremendous amount of effort was absolutely wasted. The city men are at any rate earnest and patriotic, and if the farmers will come forward now with their problems they will be able to get more intelligent help than heretofore.

SEVEN YEARS TORTURE

Nothing Helped Him Until He Took "FRUIT-A-TIVES"

ALBERT VARNER

Buckingham, Que., May 3rd, 1915.

For seven years, I suffered terribly from Severe *Headaches and Indigestion*. I had belching gas from the stomach, bitter stuff would come up into my mouth after eating, while at times I had nausea and vomiting, and had chronic Constipation. I went to several doctors and wrote to a specialist in Boston but without benefit. I tried many remedies but nothing did me good. *Finally, a friend advised* "Fruit-a-tives". I took this grand fruit medicine and it made me well. I am grateful to "Fruit-a-tives", and to everyone who has miserable health with Constipation and Indigestion and Bad Stomach, I say take "Fruit-a-tives", and you will get well".

ALBERT VARNER.

50c. a box, 6 for $2.50, trial size, 25c. At dealers or sent postpaid on receipt of price by Fruit-a-tives Limited, Ottawa.

—The General Assembly of the Presbyterian Church of Canada will be held in Erskine church, Montreal, commencing to-day, June 6th. There will be over 600 delegates present. The assembly of 1917 promises some stirring happenings. For the first time this body meets with a serious cleavage in its ranks. On June 5th and 6th a Presbyterian Convention will be held in the First Presbyterian church by those opposed to union.

—The Durham Cement Works is to be started up again as a rock cement mill with a capacity of 1500 tons a week. It is a well known fact that rock cement can be manufactured much cheaper than marl cement under ordinary conditions and is a better quality of cement. The new organization hopes to effect an annual saving of twenty thousand dollars by using hydro. The addition of such a large hydro customer to the Eugenia system will have the effect of materially reducing the cost of hydro in this district.

—Provincial Fire Marshall Heaton has issued a circular pointing out the excessive destructions of field crops by fire in Ontario during the past year, and makes three simple suggestions by which this simple loss can be cut down, (1), by installing lightning rods, (2), by not putting in crops till they are fully cured. Heavy clover crops not receiving proper care resulted in many barns being burnt last year by spontaneous combustion (3) by ventilating the barn so that gases caused by fermentation will be successfully carried off.

—Chesley has a new electric pump installed for keeping the fire protection tank filled. The pump is directly over the well and goes down 66 feet. It is driven by a ten horse power motor and pumps direct to the water tank. The pump is automatically controlled and starts itself when the water is 15 feet from the top and stops when the tank is full. The new system delivers 208 gallons per minute. The cost of installing the electric pump is $3,000 and the payment of it will spread over 20 years. The Railway and Municipal Board gives authority for issuing these debentures.

—Although China has not yet declared war on Germany, 60,000 troops from the Celestial republic are on their way to France to assist the Allies, according to Rev I Mellon Menzies, who recently returned from China. Rev Mr Menzies, who has been in missionary work in China for fifteen years, was in Windsor Wednesday awaiting orders to go overseas for military service in some capacity. China's troops, Mr Menzies said, may be used in railroad construction work until a declaration of war is made. The troops were thoroughly trained before embarking, and all the men volunteered their services, the former missionary said.

—John Hillhouse, Clifford's most prominent citizen, passed away on May 23rd after only half an hour's sickness. He had been around as usual through the day, and retired in his usual health, but shortly after took a slight coughing spell, and passed away before medical aid could be procured. For years Mr Hillhouse conducted a private bank and hardware business, later handing over his hardware to his son Hope, while the Royal Bank took over his banking interests. He was prominent in all things for the welfare of his home town and filled all offices in the municipal gift. He was a Presbyterian and a Liberal. He leaves a wife, one son, Hope, and three daughters, Ethelyn, at home; Mrs S M Milligan, at Hagersville, and Mrs C L Eddy, of Harriston.

—Mrs L E Bruir, of Lion's Head, having been in an American paper that a lady had asked the Governor of a State for his pen wherewith he had signed the document granting the franchise to women, and had received his pen as a souvenir of the event, so Mrs Bruir thought she would like to have Premier Hearst's pen as a souvenir of the great event in Ontario. Her wish was made known to the Prime Minister, and in due time she received his pen as a souvenir of the occasion, as well as a personal letter from him, complimenting the ladies of the north on their splendid work done in the cause. Mrs Bruir is justly proud of her pen and will keep it in remembrance of the day in which women came into possession of a right long withheld from them. Who says this world is not getting better.

I. SHOEMAKER

Jeweler and Optician

—Kincardine Review: Last week there was as much consternation in town over a report that was in circulation as there was when Premier Borden announced his conscription bill. The fake report was that the government had discontinued the sale of marriage licenses until after the war. In order to settle the minds of the bachelors who intended during the month of June entering into that state that makes life worth living for, we would say that there is no truth in the report.

—Capt. Dancey, the widely known recruiting speaker, who appeared at the big winter meeting in Paisley town hall in 1916, has been discharged from the Canadian Expeditionary Forces through orders of Brig-Gen. Hemming, of Kingston, officer commanding Military District No 3. Dancey didn't go back to the front, as he impressively announced he would do when he was in Paisley, but has been working as a recruiting agent almost ever since. For some time he has been at variance with the authorities. The nature of the charges brought against him have not been made public.

ELDERSLIE COUNCIL

Ollifee Hill, May 29th, 1917

Council met on above date as a Court of Revision. The clerk reported that there were no appeals against Assessor Walks roll for current year. Property that had changed hands since assessment had been made was placed to present owners and upon motion of Messrs Lewis and Fraser the roll as revised was adopted, and court adjourned.

Allen—Thompson—That orders be issued for the following accounts,—Carried. J C Gibson, Texas Paisley, Bld share building culvert boundary Paisley town plot, $4 75; Frank Quigley, repairing road lot 34, con B, $3 00; D McArthur, postage for clerk's office, $2 00; P J Alpaugh, cleaning ditch, 25 sideroad, con 12, $6 00.

Fraser—Thompson—That this board do now adjourn to meet again on Tuesday, July 3rd, at 1 o'clock p m, for general business.—Carried.

R C PEARCE, Clerk.

THE WESTERN FAIR

September 7th to 15th

The Prize List of London's popular Exhibition has just been issued and will be of great interest especially to intending exhibitors. In these strenuous times the pressing need seems to be greater production. The Management of the Exhibition having this in mind have this year generously added $3,000.00 to their Prize List in order to encourage the farmers and breeders to produce more and better Live Stock, Grains, Roots, etc. This amount, which has been distributed throughout the list, will certainly make it a most attractive one, as it brings the List up near the $50,000.00 point. Send to the Secretary, A M Hunt, London, Ont, for a Prize List or any information regarding the Exhibition.

—The Leader says that at their meeting on Saturday week, Arran Council decided to purchase a road grader to cost $900.

What Is Uric Acid?

THE CAUSE OF BACKACHE, RHEUMATISM, GRAVEL AND SUDDEN DEATH.

Ever since the discovery of uric acid in the blood by Scheele, in 1775, and the bad effect it had upon the body, scientists and physicians have striven to rid the tissues and the blood of this poison. Because of its overabundance in the system it causes backache, pains here and there, rheumatism, gout, gravel, neuralgia and sciatica. It was Dr. Pierce who discovered a new agent, called "Anuric," which will throw out and completely eradicate this uric acid from the system. "Anuric" has proved to be 27 times more potent than *lithia*, and consequently can be used in cases of true muscular or articular rheumatism or gout, or many other diseases which are dependent on an accumulation of uric acid within the body. Send to Dr. Pierce, of the Invalids' Hotel and Surgical Institute, Buffalo, N. Y., for a pamphlet on "Anuric," or send 10 cents for a trial package of "Anuric Tablets."

If you feel that tired, worn-out feeling, backache, neuralgia, or if your sleep is disturbed by too frequent urination, go to your best drug store and ask for Dr. Pierce's Anuric Tablets. They are put up in 50-cent packages.

Doctor Pierce's reputation is back of this medicine and you know that his "Golden Medical Discovery" for the blood and his "Favorite Prescription" for the ills of women have had a splendid reputation for the past fifty years.

Doctor Pierce's Pellets are unequaled as a Liver Pill. *One tiny Sugar-coated Pellet a Dose.* Cure Sick Headache, Bilious Headache, Dizziness, Constipation, Indigestion, Bilious Attacks, and all derangements of the Liver, Stomach and Bowels.

An Outrageous Charge and an Unjust Decision

It is reported by a Walkerton paper, says the Lucknow Sentinel, that Judge Winchester, in the County Court, last week ordered Sam Seiden, of Ripley, to pay $250 to Dr. Jane P. Sproule, of Toronto, for services in removing a button from the throat of Seiden's little daughter—a child about two years of age when the operation was performed.

This service, some of our readers will remember, was rendered by Dr. Sproule about a year ago. The child had swallowed the button and was in danger of death within a few hours. She was taken to Dr Kennedy, of Wingham, for treatment, but the instrument he had was not quite long enough to remove the button, so he advised Seiden to take the child to Dr Sproule, of Toronto whom he knew to have an instrument of the required kind and length. Seiden went to Toronto; the button was removed in a few minutes, and the life of the little girl saved by the narrow margin of only a few hours.

The next sensational feature was Dr. Sproule's bill for the few minutes work. It was $250 00—or a charge at the rate of about $50 per minute. Seiden refused to pay the account, claiming that it was exorbitant. It now appears that Dr Jane P Sproule sued for payment and that the Courts decided in favor of the unconscionable.

The general public will have no hesitation in condemning Dr. Sproule for exacting an undue charge, and Judge Winchester for rendering an unjust judgment Some professional men will take a different view. It is said that witnesses for Dr Sproule at the trial gave evidence that the operation was "very delicate and badly performed with great skill."

That may be so, but Dr Sproule can not lay claim to the credit for all her special knowledge and skill, nor for the ingenious instrument she used. The knowledge and skill were acquired in schools and colleges provided largely by the public, and the instrument. like the knowledge, is the fruit of the race intelligence, not of Dr Sproule nor any other doctor who may use them. Mr Seiden would likely have paid much more than the $250 to save his little daughter from choking to death, but he along with the rest of the community had helped to maintain the schools and colleges of the country in order that doctors might acquire the knowledge and skill necessary to perform delicate operations.

It is difficult to estimate the value of the services of a specialist to the community, but one thing is certain they are not entitled to "all the traffic will bear"—that is, in the case of the doctor, all that one may be willing to pay to save life or relieve pain.

The charge of $250 for removing the button was an outrage, and out of proportion to the rewards which others get for services.

WHY COST OF LIVING RISES

What we commonly speak of as the "rise in the cost of living," which means, of course, the increase in the price of food, clothing, household utensils and other necessaries or luxuries of life, has been going on in recent months at a rate that the world has very seldom seen. Flour has sold this year at nearly double the price of last summer. Wheat last October, at $2 07 a bushel on the Chicago market, brought the highest price since 1866, in the days of inflated paper money that followed the Civil War This year it has sold higher still. Corn usually sells at between 40 and 70 cents a bushel. Until last fall it had not sold above $1 in the United States since 1868; it has now risen far above that price.

A bale of cotton last November cost more than it had brought since 1872; its price this year is 40 per cent higher than that of August, 1914. We must go back to 1873 to find as high a price for iron as the market of the past month has offered; it was more than twice as high as the price of January, 1916. The price for copper this year has been 50 per cent higher than at any time in the quarter century that preceded 1916, and more than double the average price in any years of that period except two.

The greater part of this extraordinary rise in prices has occurred during the European war and largely as a consequence of it. The London Economist has for many years compiled a monthly "index number," which it makes up by adding together the prices at given dates, of all the important commodities. During the first five years of this century the average of those monthly numbers was 2,200. At the end of July, 1914, it was 2,565. It rose to 2,800 at the end of 1914, to 3,034 at the end of 1915, to 4,098 at the end of 1916, and to 5,073 last February. Until this war, the highest average that the monthly "index numbers" made during any of the seventy years in which the Economist has made its calculations was 3,787 in 1864.

Two questions concerning present conditions demand answers: Why should the war have had so great an influence on prices, and how will the advance hereafter be checked or forced back? The war has used up iron, steel, copper and other metals in outward of quantities for ammunition at the battle front, an abnormal demand that has competed with ordinary buying for peaceful commercial purposes. Except so far as need of those metals for replacing shattered cities, bridges, railways and ships keeps up the demand, prices for such materials will fall when peace returns.

The war has influenced the price of food less directly. Russia, which produces nearly one fifth of the world's wheat, has been cut off from the export market ever since 1914. Europe has raised no crops on the land that the armies are trampling. Submarines have sunk shiploads of wheat. On top of all came a world-wide shortage in the crop of last fall. The resultant high price for wheat threw part of the consumers back on other food stuffs, and prices for other grains and for meat went up accordingly. The rising cost of labor, partly owing to the diversion of European workmen to the armies, has also had its effect. The return of peace should cause a great readjustment in all of those directions.

BRANT COUNCIL

Minutes of Brant Council, May 28th, 1917.

The Municipal Council of Brant Township met on Monday the 28th day of May. Members all present, minutes of last meeting of council read and declared correct.

Rowand—Johnson—That the members of this council do now go into committee of the whole with the Reeve in the chair as a court of revision to determine the various appeals against the assessment roll for the current year.—Carried. The members of council then took the court of revision oath and were duly constituted a court of revision.

Johnston—Rowand—That after consideration of the appeals against the assessment roll we authorize the clerk to make the following changes with red ink in the roll, and that in all other appeals the assessment be sustained. Mrs Fowers of Cargill, reduced $1200, Wm Barry reduced $100.

Gregg—Rowand—That this council do now adjourn as a court of revision and resume general business.—Carried.

Rowand—Johnston—That the assessment roll as revised be accepted and that the same be the basis upon which the rates and levies for the current year be struck and that the assessor be paid his salary in full of $125.—Carried.

Gregg—Rowand—That a grant of $40 be made to the Vesta Red Cross Society, cheque to be issued to Miss Viola Hanmore.

Johnston—Findley—That a grant of $40 be made to the Red Cross workers of polling div. No 9, cheque to be issued to Mrs Archie Weir, treasurer.—Carried.

Johnston—Gregg—That a grant of $50 be made to the Brant Branch of the Preparedness League, cheque to be issued to Jas A Lamb, treasurer.—Carried.

Willoughby—Rowand—That a grant of $1,000 be made to the overseas branch of the Y M C A, payment to be made about the middle of November 1917.—Carried.

Rowand—Findley—That John Whitehead, Sr., be appointed a Director of the District Board of Agriculture of South Bruce.—Carried.

Johnston—Gregg—That the reeve and clerk issue orders on the treasurer for all accounts passed at this meeting of council.—Carried.

Accounts passed as follows:

Chas Parker, 127 yds gravel, 1916	$12 70
C L Lamb, repairs to plow broken on road	3 00
A J Ashley, repairs to plow broken on road	4 00
Harry Threadyle, repairs for south grader	13 90
Traill Bros., spikes by Percy McGarrity	90
Wilfred Atkinson, rep. road	3 00
Thos Kerry, rep road	3 25
D W Gregg Sr., 9 nights light of lantern	2 25
Herb Napper, rep road	4 00
J R Brown "	5 50
Wm Delgarno, rep culvert	2 00
Jas Watson, "	1 00
Wm Frook, "	5 00
R Murray, rep road 6th con bridge	42 00
Robertson & McNab, damage to cutter and fur-lined coat re Father Zettler	15 00
Louis Gateman, damage to horse in snow bank	50 00
Miss Viola Hanmore, grant to Red Cross Society	40 00
Mrs Archie Weir, grant to Red Cross Society	40 00
Jas A Lamb, grant to Preparedness League	50 00
W A Rowand, presentation to Brant soldiers	10 00
Sidney Parker, salary as Assessor	125 00
Dr Bricker, B O H meeting and Telephoning	5 50
M A McCallum, B O H meeting, telephoning and postage	5 40
W M Rowand, B O H meeting	2 30
D Willoughby, " "	2 80

Rowand—Johnston—That this council do now adjourn to meet on Monday, the 11th day of June, for the transaction of general business.—Carried.

M A McCALLUM, Tp Clerk.

—Orillia Packet: The church which can hold its own against the motor car and the motor boat must either be offering strong and unworthy counter-attractions, or blessed with more than the average spirituality, of the day. The increasing disregard of the day of rest and the steadily growing disposition to spend much-needed money in selfish pleasuring, in face of the ghastly horrors of Europe, is nothing short of shocking. If the war is to continue until the people of this continent shall be brought to their knees, the end is still a long way off.

Shoes Must "Make Good"

The same as men.

There is a competition among shoes—or rather the manufacturers — that is pretty good for you people.

It shoes you and your family with the best shoes in the world without it costing you a cent more than it has to.

Of course you expect us retailers to gather these shoes that are the winners in this war of competition, and **that is what this store is constantly doing.**

Our claim is that every time you have a shoe need you ought in justice to yourself let us supply it.

Our stock exemplifies all the prevalent shoe newness. It contains the latest shoe thought of the leading manufacturers.

Jerry on the Job

In the Upfield Home for Blinded Officers, the position of Boy-Scout Jerry Jones—small and snub-nosed gentleman of thirteen—might be described as more officious than official.

"But the bloomin' place can't get along without me!" he was wont to aver, with an air of self-righteousness which Baden Powell would certainly have censored. "Who'd cheer up the old crocks if it wasn't me? Who'd soothe 'em down when they goes a little balmy? Who'd be guide and friend and bloomin' philosopher to the whole bang crew—but yours truly?"

Such were the reflections of Upfield's willing side-de-camp.

But to-day he was worried—worried and baffled. And prolonged scratchings of his sandy head brought no adequate solution of the matter.

"It's that there Captain Travers," he sighed lugubriously. "And me tryin' every trick to make him laugh! Short of sittin' on me blind legs and beggin' like a dawg—and that's a trick he couldn't see—no stunt'll please him! Haven't I helped him with his basket-work till I fair hates the sight of wood and tring? Haven't I steered his fingers back to port on the keys of his click-machine, when they kept skidding off into the ten-things? Haven't I lent him my best whittling-knife, and let him break the blade? Haven't I—lor'—I've treated that chap like a brother!"

His observations were brought to an untimely end by the appearance of the said captain around the corner of the house.

Captain Charles Travers, D.S.O., was singularly good-looking, tall and well-built, with clean-cut features and—even in his convalescence—a commanding air.

"Is that you, Jerry, old chap?" he called out, feeling his way along the gravelled path by means of a stick.

"Right-ho, governor! Go easy now! Mind the step!"

As he drew near, one could see that the captain's fine dark eyes gazed straight ahead in the unseeing way of the totally blind. And though he smiled, it was a sad smile, and a shadow lay across his face.

"Wonderful spring morning, isn't it, Jerry? Oh, for a spin on my old motor-bike to-day!" he sighed.

"You ain't missin' much in missin' motor-bikes!" said the professional comforter. "I know a chap what was crazy over them, just as you are. Well, one fine day he was spinnin' along the country roads, happy as a lark, when he run over his old Aunt Emma, and got six months gaol for doin' the old girl in!"

No answer from the captain.

"If you're hankerin' for a motor run, sir," said Jerry, "there's a nasty-lookin' red-haired female that runs a big Rolls-Royce as wants to take you out. I seen her hangin' about the place often. She ain't no good-looker, and she ain't no good driver; but she told me as how she loves to——"

"That will do, Jerry, thanks. It's bad form to discuss a lady."

There was an aggrieved silence.

From the branches of neighboring trees the birds were twittering, and spring sounds and scents filled the air.

Slowly the captain and his little friend sauntered through the lanes. How sweet the lilacs smelt this morning! How silent the world could be—and yet how sad!

"Tell me about the fight at Loos, sir!"

Jerry was big-hearted, and could forgive a snub.

"I don't feel like talking this morning, old chap!" was the answer.

Silence again.

Then in a pleading voice:

"Isn't there any old thing I could do—to straighten things?" said Jerry.

"'Fraid not, old man! It's just the fortunes of war!"

They walked ahead in silence, Jerry with a small hand beneath the captain's elbow, guiding him imperceptibly.

Beneath that frowsy head of his, the little Boy Scout's mind was working rapidly. What was the reason of the captain's perpetual sadness? When the other blinded officers—young and strong as he was—could be gay and reconciled to circumstances, why was this man so moody and so quiet?

A sudden sound drew Jerry's attention. Something had slipped from the captain's pocket to the path. And as Jerry stooped to pick it up, the captain turned, unheeding, groped his way to an old stone bench, sat down, and lit his pipe.

"Gosh! It's a girl's photo! And some corker, too! He doesn't know he's dropped it!"

Jerry whistled softly to himself as he picked up the khaki-covered case.

A very sweet and girlish face smiled up at him. Beneath level brows a pair of very lovely eyes looked forth.

"A real winner!" was our little critic's verdict. "And what's she signed herself? 'Daisy.' Yes, she's a daisy, a peach, a pippin!"

He paused. Could this—this be the reason of the captain's discontent?

"What's the old saying?" thought the boy. "Perhaps I've found the lady! It might be his sister, though! Let's see!"

With an air of complete nonchalance he slipped the portrait in his trouser-pocket, approached the old stone bench, sat down beside the captain, and began, in a high, unmelodious voice, to hum that ancient classic:

"Daise-e-e! Daise-e-e!
Give me your answer, do!
I'm half crase-e-e!
All for the love of you!
It won't be a stylish marriage,
For I can't afford a carriage——"

The captain sprang from the seat. His voice was trembling as he spoke.

"Cut it out, you little idiot!" were the unflattering words he used.

But they were music in the ears of the artful Jerry.

For this was proof—proof positive! This was the cause of all the trouble! This the solution of unhappy days!

This was the woman—Cherchez la femme!—this the Daisy!

Late on that selfsame afternoon the officious Jerry might have been seen busy in converse with the matron of the convalescent home—she who must be obeyed—she whose task it was to read aloud to the blinded recipients the various letters of condolence and of cheer which a sympathetic world supplied.

And Jerry's object—presumptuous and apparently impertinent—was to ascertain whether or no any epistles of what he termed a "mushy-mushy" kind had been penned to a Captain Travers by any lady of the name of Daisy.

"Upon my word, young Jerry Jones," declared the matron, eyeing the youthful scout over her glasses, "and what do you want to go ferreting into the captain's love-affairs for? Do you think I'd ever tell you, even if I knew? Take it from me, you scouts beat everything for impudence!"

How it happened cannot be explained, yet true it is that, fifteen minutes later—by some strange methods of information-extracting known only to the scouts—young Jerry Jones had learnt that the captain was an orphan, that he received few letters of any sort, none of a "mushy" kind, and none at all from women!

"That settles things!" said Jerry to himself. "I'll get busy on the job immediately."

And, under cover of darkness, with a carefully wrapped packet in his pocket, a certain Boy Scout pedalled gaily along the muddy roads on an ancient bone-shaker, and only paused when he reached the local post-office and deposited in the London mail-box the said packet with its struggling inscription.

"If that doesn't set things humming then my name isn't Jerry Jones!" he remarked aloud, with a contented sigh.

* * * * *

A couple of days later, readers of a certain well-known London paper might have seen the picture of a charmingly pretty damsel set forth within its pages, headed by the all-too-familiar inscription: "Found on the Battlefield."

But this particular portrait differed from the others in that below it ran the magic words:

"Will the owner of the above please communicate with Mr. Jerry Jones of Upfield House, Winstown?"

On a wonderful spring morning, when the dew was still on the grass, a slim little girl was seen hurrying up the pathway which led to Upfield House. The sun glinted through the trees on her pretty hair and, shining on her small face, only showed up the sadness of it.

In her hand she held a folded newspaper. Her heart was beating painfully.

"Can I—can I see—a Mr. Jerry Jones—immediately?" she asked the porter at the door.

And when a small Boy Scout appeared, she repeated the agitated question.

"It's about this picture," she began breathlessly. "I'd given it to a very dear friend of mine, and he must have dropped it on the battlefield—I haven't had news of him for months. Oh, do you think this Mr. Jerry Jones can give me information? And where is Mr. Jones?"

The hall-porter looked at the small Boy Scout, and the small Boy Scout returned his stare with a haughty frown.

"Madame," said he, "if your name is Daisy, I shall tell you."

"Yes, that is my name."

"Then," said the scout, "if you walk through that shrubbery into the nearest field, you will find all the Mr. Jerry Joneses you could ever wish to see! Come! I shall show you the way!"

And, casting another frown upon the astounded porter, he marched on ahead, the lady following.

From the depths of the shrubbery there emerged a wide and pleasant meadow. How green the world was, and how beautiful! A lark, rising from a clump of bog-myrtle, soared into the blue heavens, carolling her very heart out in ecstasy.

And just then the sun lit on an old stone bench where a man was sitting. He turned at the sound of approaching footsteps, rose, and faced the newcomers.

It was then that the heart of Mr. Jerry Jones could contain itself no longer. Gone was his dignity, gone his inimitable sang-froid.

"Here she is, captain!" he shouted eagerly. "Here she is! I've brought her to you!"

Then, with a twist and a turn, the messenger of Cupid dived into the undergrowth.

* * * * *

Just what happened in the intervening half-hour no one ever knew—except the two most intimately concerned.

But certain it is that when Mr. Jerry Jones, crawling through the bushes in the snake-like fashion known only to Boy Scouts, returned to the scene of action, he discovered a picture which gave him the most intense satisfaction.

"Charles," a girl's voice was saying, with that peculiar note of softness in it which Mr. Jerry Jones described as "mushy," "Charles, as if your being blind could possibly make any difference."

"That's why I didn't write, dear," came the muffled tones of Charles. "I thought you'd have no further use for a poor crock like me."

"You silly boy!" went on the girl's voice quietly. "But everything's all right now. We can be married at once!"

"Gee whiz!" murmured the voice of Jerry from the bushes. "Some mushy pair! It only needed Jerry on the job to bring things to a happy ending."—May Christie in London Answers.

IF LOVE IS BLIND.

If Love is blind, why is it that he spies
So many wonders hid from other eyes,
Strange new delights in earth and sky
and sea
That lend the darkest day his sorcery?

If Love is deaf, why is it that he hears
Sweet harmonies unheard of other ears,
The softest whisper, and the faintest
breath,
And says the lightest word a lover
saith?

If Love is dull, why is it that he knows
The tender secrets of the bird and
rose,
The word that shall awake a sleeping
heart,
The honeyed poison needful for each
dart?

If Love can neither see nor hear, nor
know
The distant paths down which his subjects go,
If none may understand his mastery—
How is it that he holds the world in
fee?

CANADA'S SHARE IN EUROPE'S WAR

WE HAVE LESS THAN 8,000,000 PEOPLE.

Spent $600,000,000, Loaned $300,000,000 More, Employed 300,000 for Munitions, Enlisted 400,000

This article is part of a speech made by the Hon. N. W. Rowell, K.C., before the American Newspaper Publishers' Association at its recent annual meeting in New York.

I have been asked to say something to you about the part that Canada has taken in this war. On the fourth of August, 1914, Canada found herself at war with the great military power of Europe. Our Parliament and our people alone could decide the extent and nature of our participation in the struggle.

Our decision was taken without hesitation and without delay. Our Parliament truly voiced the sentiment and conviction of a united Canada when it declared that Canada was in this struggle to the limit of her ability for the preservation of democracy and human liberty, which we believed were put in jeopardy by the action of Germany.

The course then decided upon we have pursued without faltering and without regret. The German atrocities of the last two and a half years, some of the service and suffering of our men at the front and the more patient and more heroic suffering of the families of our gallant men who remained at home have only strengthened our resolution that, to the measure of our ability, Canada is in the struggle until final victory is achieved.

Canada's Contribution.

We are a small people, less than eight millions, inhabiting a territory somewhat larger than your great country. At the outbreak of the war we were busily engrossed in problems of development of settlement, of expansion—I trust not neglecting the higher moral and spiritual ideals that have so much to do with a nation's life, loving peace and hating war. And yet in the righteous cause in which we are engaged we have enlisted in our expeditionary forces for overseas service more than 400,000 men. More than 200,000 have left the shores of Canada for service in Flanders and in France.

Up to this time Canada has expended in the actual work of the war and for actual war purposes more than $600,000,000, and our war expenditure to-day is more than $1,000,000 per day. But in addition we have assisted the mother country by loans to the extent of $300,000,000 to assist her in purchasing munitions produced in Canada, and our Government has arranged with the banks for advances to the Imperial Munitions Board of $100,000,000 more.

We have in Canada at the present time more than 600 plants producing munitions for the Imperial Government, and in those plants about 300,000 are employed.

Canada's Problem.

We have already shipped from Canada munitions of a value between $400,000,000 and $500,000,000. That whole industry has been developed since the war broke out and at the very time that we were withdrawing thousands of men from our industrial ranks to fill our forces for overseas service.

We have, in addition to this, recognized the great need for food production. We realize that under conditions existing to-day the world faces the possibility of a food famine, and we are putting forth every effort within our power to increase the agricultural production this year. But the enlistment of our men, the employment in our munition industries and the demands of agriculture have made serious drafts on our available manpower, and I want to say to the credit of the women of Canada that they have come forward voluntarily and cheerfully and have replaced the men in order that they may be released for service.

To increase the agricultural production this year we are now, in my province, releasing all our high school boys, so that they may go upon the farm and do their share to increase the food supply this coming summer. The men in our cities and towns who have been raised on the farm, who know what farm work is, are volunteering all over the country to leave their calling or their business for a stated period this summer and go back to the farm, there to work to increase our food supplies for the coming year.

Canada's Thanks.

In order to increase the national efficiency and promote national thrift during the period of the war in all our provinces save two, we have closed our bars and public houses and prohibited the sale of liquor.

The results have been such that I am well within the mark when I say that the majority of those in my country who were opposed to the adoption of these measures are now warm supporters of them. Your papers or press have been most appreciative of the part Canada has taken in this war and of the courage and valor of our troops at the front, and I want, as a Canadian, to thank you for the words of appreciation your press has expressed for Canada and her part from one end of the United States to the other.

Canada's Glory.

I have had the opportunity of associating with our Canadian troops at the front, and I know it is their pride and their glory that they stood in the gap at St. Julien, in the second battle, and barred the way of Germany's march to the sea and saved the day, as the British commander-in-chief said. It is their glory that they fought that battle; it is their glory that they held an important sector of the salient. It is their glory to have taken part in the great battle of the Somme, and it is now their glory that they are given the privilege of being engaged in that long battle and defense upon the German defense at Vimy Ridge.

Our men at the front need no sympathy. They ask for none—all they ask is this, that when in fighting they fall there shall be other hands to grasp the flag that falls from their hands, and carry it on to victory, so that the cause of liberty and humanity may finally triumph.

The gallant men, the best young men of Canada, the young men from eighteen to forty, have gone to the front by thousands. They have laid down their lives; the young men of France and Britain, Belgium and Italy have done the same. They have made a glorious sacrifice.

FISH-FIGHTING.

An Absorbing National Sport in The Siamese Peninsula.

To the Siamese, fish-fighting is what cock-fighting is to the Filipino—a national sport.

The fighting fish of Siam is a tiny creature—so small that it is often kept in a tumbler of water, being fed on mosquito wrigglers. For centuries, in that country, it has been bred for purposes of combat.

It is a beautiful fish, with tail and fins relatively huge in size, and brilliantly colored. The males are the fighters. They will "tackle" one another any time at sight, always ready for a duel—their efforts being directed to disabling the adversary by biting off the fins.

When a fight is organized two of the fishes are placed in a glass bowl together. The duel promptly starts, and bets are made, as on a cock-fight. A Siamese "sport" will wager his wife or his child on such a combat, if his money resources are exhausted.

Fish-fighting in Siam is a Government monopoly. Such contests are required to pay a tax to the Government—ordinarily a percentage of the receipts. But this regulation is quite commonly evaded.

Blessing in Disguise.

If the law impels us to cut down our food allowances on account of war conditions it will be more of a blessing to humanity than a deprivation. Too much meat is consumed for the good of the Canadian people, especially by those who take no violent exercise. It is generally supposed that strength-giving food for men must consist of potatoes, bread and animal meat. Yet in India, where the men are strong—if not stronger than the English, Scotch or American—they live on vegetables alone. The Hindus are as fine a regiment of soldiers as any fighting with the allies in Europe. They are very big men, strong and long-lived. They are a living example of strength without meat.

Teacher in physiology class: "What is the office of the salivary glands?" Pupil: "The mouth."

ENGLISH COLLEGES DRAINED BY WAR

ONLY ARTS NOW STUDIED ARE THOSE OF DESTRUCTION.

Desolating Loneliness Characterizes Universities at Oxford and Cambridge.

The war seems more intensely real at England's university centers than anywhere else in the country, says a London writer. This was not so apparent in the early days of the conflict. The transformation is especially pronounced at Oxford and Cambridge, where there is a desolating loneliness of the college buildings, of the river and the playing fields.

Not only the undergraduate has gone from these seats of learning, but also the younger Don. Every one of military age, except the invalid and the cripple, has vanished. Whatever of life there is in the colleges is alien to the place.

Hospital and Cadet School.

The examination schools at Oxford have been transferred into a hospital. Part of the other buildings have been given up to training buildings for the army. Terms begin and end unheeded. The only students left are students of war; the only arts cultivated are those of destruction.

A. C. Benson, the widely known author and master of Cambridge, discussing recently the gradual transformation at the English seats of learning, said: "It was a question of instinct and feeling from the start. The high-spirited and adventurous went first, then the sedater sort; then the men of an altogether quieter type, and then those who were naturally averse to the fighting life."

Manufacture Weapons.

All the natural population of the universities and colleges has gone. What staffs are left are turning out death-dealing weapons. The staffs of nearly all the various departments of Leeds University are now doing war work of a most specialized kind. The coal, gas and fuel industries department is testing high explosives produced in Yorkshire and analyzing coal tar for toluene and benzine. The engineering department, besides other more elaborate duties, is teaching elementary machine work to intending munition workers. The textile industries department, the color chemistry department, the agricultural department are engaged by the Government to deal with army cloths, with dyes and with foodstuffs.

Outlining before Parliament the other day the work now being done at the universities, Herbert A. L. Fisher, head of educational department of the country, said: "The professor and lecturer, the research assistant and the research student have suddenly become powerful assets to the nation. Whatever university you may choose to visit you will find it to be the scene of delicate and recondite investigation, resulting here in a more deadly explosive, there in a stronger army boot, or, again, in some improvement to the fast-advancing technique of aerial navigation."

A NOVEL SYSTEM.

Method of Heating Houses in Severe Climate of Korea.

A novel heating system called ondol has been devised by the Japanese living in Korea so that they may withstand the rigorous winter climate of that peninsula. In this arrangement the whole floor serves as a stove. The floor is first made with a layer of mud, which is intersected by three or four flues which radiate from the fire-place and converge into the chimney on the other side of the room. Large slabs of stone are laid over the mud floor, the joints being made air-tight with clay. A layer of clay is then added on top of the stone, and finally the whole is covered with thick oiled paper.

The fireplace is outside of the wall, and the smoke and heat pass through the flues in the floor to the opposite side of the house. In this way the whole room is effectively warmed. It is said that no stove is needed in such a room even on exceedingly cold days.

If you have worked till your back aches, lie face down to rest, with your feet higher than your head.

The Doings of the Duffs.

PERFECT HEALTH DUE TO THE BLOOD

No Girl or Woman Need Be Constantly Ailing and Unhappy.

Nature intended every girl and every woman to be happy, attractive, active and healthy. Yet too many of them find their lives saddened by suffering—nearly always because their blood is to blame. All those unhappy girls and women with colorless cheeks, dull skins and sunken, lusterless eyes, are in this condition because they have not enough blood, red blood in their veins to keep them well and in the charm of health. They suffer from depressing weariness and periodical headaches. Dark lines form under their eyes, their heart palpitates violently after the slightest exertion, and they are often attacked with fainting spells. These are only a few of the miseries of bloodlessness. Nothing can secure girls and women from the inevitable decline that follows anaemia except a generous supply of new, rich, red blood, and nothing has ever proved so successful in creating red, good blood as Dr. Williams Pink Pills for Pale People. Thousands and thousands of girls and women owe their good health and charming complexion to the use of this medicine. Here is one example of its power to cure. Miss Dorina Bastien, St. Jerome, Que., says: "For over a year my health was gradually failing. my blood had seemed almost to have turned to water, my cheeks were pale, my lips bloodless, and the slightest exertion left me breathless. I suffered frequently from severe headaches, my appetite failed, and my friends feared I was going into consumption. I had been doctoring but did not derive any benefit, and finally I had to give up my work and return home. It was at this stage that a friend brought me a box of Dr. Williams' Pink Pills and urged me to try them. By the time the box was used I thought they were helping me, and decided to continue using the pills. I took a half dozen boxes more, when my strength had completely returned, my appetite was restored, my color returned, headaches had disappeared and I was feeling better than I had been for years. I would urge every weak and ailing girl to give Dr. Williams' Pink Pills a fair trial."

These pills are sold by all medicine dealers or may be had by mail at 50 cents a box or six boxes for $2.50 from The Dr. Williams' Medicine Co., Brockville, Ont.

WHY YOU REST ON ONE LEG.

Reason Why an Erect Position is Tiring to Human Beings.

As human beings we are supposed to stand erect, and therefore standing straight ought to be the most natural and easiest thing in the world. There are few things, however, which are as fatiguing as holding an erect position for a long time or when we are tired.

The reason which medical men have given for this is that man is recently evolved from the lower species which are not able to stand erect, and that as yet we are not fully adjusted to holding ourselves upright. Our hip bone does not fit vertically into the bones of the pelvic girdle. This does not lie directly under the spine.

The upright position is maintained only by a complex cross-strain of one set of muscles pulling forward and another set of muscles pulling backward. This demands a new adjustment with every movement. It is a tremendous muscular strain which holds the hip bone and leg joints in position and which has to meet the constant adjustment of keeping the body erect. The most natural way to relieve it is to slump a little to one side and throw the weight upon one leg. In this way the joints are placed more directly up and down and so reduce the width of the angle which is formed by the hip bone not fitting vertically into the bones of the pelvic girdle.

The fact that military men have employed this means of gaining rest when in drill is not without significance. When the order is given "At ease" or "In place—rest," the weight is shifted to one leg.

Prosperity gives us friends and adversity proves them.

Increased production per laborer may be obtained by extending the farm operations or by increasing the yield per acre—economists have held that the extensive type of agriculture is limited to that point where the interest on capital invested in equipment plus the depreciation equals the expense of employing the number of men which have been replaced by the equipment.

THOUGHTS ON MOTHER'S DAY.

By Chas. M. Bice, Denver, Colo.

"Mother's Day" is a momentous occasion here. It has always meant a day of a year of sacrifice for those gray-haired angels who seem to do nothing but sacrifice for others. It is a day of 1917 momentous for the reason that war is calling, brutal, stark, cold-blooded war, calling the boys and men of this country, calling them from the last handclasp, the last lingering touch of mother hands, the last trembling kiss of mother lips, calling them to—God only knows what!

There are mothers who have said good-bye to the sons they cherished and loved, said good-bye to them for the last time. For when many of those sons return, it will only be to find that mother has gone on, that she sits no more by the windows of nights, watching the stars, and whispering to the imaginary baby form she holds in her arms, the baby that has grown to manhood and has travelled out into the world, out from the protection of her arms, out from the soft touch of her cheek against his.

There will be mothers, white haired, with little touches of Father Time about their eyes, who will watch the lists day by day, hoping against hope, hoping, hoping—finally at last to seat herself in the old rocker, to look again at the toys he played with when he was a baby, then to fold her hands and to pray for the time when she can join him, her hero, her Little Boy Blue of the Army, who fell as he fought. You think of her to-day and wear a flower commemorative of her pure and noble life. Yes, think of your dear old mother to-day, and if she is far away write to her. If she has gone beyond the reach of letters, go now to where she sleeps and kneel beside her grave, as once you knelt beside her knee.

If she is still near you—lucky person that you are—go to her and allow your arms to steal softly about her neck and kiss her. Kiss her and brush aside the straying gray hair and whisper to her that you love her, and that she is your "bestest girl of all." And remember, that while you are grown up into manhood or womanhood, to everyone else in the world, to one person you are still that happy, smiling, cooing little being who played at her feet in the years of long ago, the most wonderful treasure of all the treasures in the world—her baby. And so, if the tears come to her eyes as she sits and holds your hands tight against her breast, if she is silent with those mother lips quivering in their worldless ecstasy, don't be ashamed if the tears should come to your own eyes, too.

And kiss the tears away and be proud and happy of the opportunity—and think of those who would give many and many a year of their life for the same privilege. And remember, as you do so, that the lane of life is long and the pathway of love has many turnings. But there is One who never falters as she treads her way along it towards the sunset. One who never wavers come what will, and that One is Mother. If she is gone, gone into that quiet haven where there are no worries, no troubles, no nights and days of anguish for the safety and comfort of those who were a part of her life, her heart, her being—if she has gone onward to the peace her quiet love has earned, are you going out today to the little mound wherein she rests, and whisper a benediction over her, a little psalm to your Maker that He keep her safe within His arms? Yes, you are, for you are a man or a woman—and today is Mother's Day!

RIVERS OUT OF THE ORDINARY.

A Stream of Ink is One of the Freaks of Nature.

A river of ink is formed in Algeria by the union of two streams, the water of one being impregnated with iron, and the other, which drains a great swamp, with gallic acid. This combination of iron and acid forms a pure ink. All rivers of Africa seek the ocean that is farthest away from their source.

In Siberia rivers flow over ice, old and solid as rock. A tributary of the Lena River has underneath the soil which forms the bed of the river a bed of pure ice over 9 ft. thick. A freak of Nature is the lost river in Kentucky. It is known as the Hidden River, because no one knows its origin, and it vanishes into a cave leading no one knows where. It flows without a ripple and is of a pale bluish color.

A singing well is one of the natural curiosities of Texas. In fine weather a sound like that of an aeolian harp is given out by the well. At times the sound is clear; then it recedes, as if far away; and then it reaches the ear very faintly. These changes take place every few minutes, and with great regularity. With an east wind blowing the water in the well gets very low, and the mysterious musical sound is faint. A strong west wind causes the water to rise and the sound to increase in volume and clearness. Before a north wind the well plays its wildest pranks. The water rises nearly to the top of the well, which is about 60 ft. deep, and gives out wild, weird noises.

Windbreaks protect the orchard from both summer and winter evaporation, and from cold. Snow lies more evenly in the protected orchard, and melts less rapidly. The blossoms are protected from severe winds, and the number of windfalls is lessened.

A Useful Design

Simple separate blouses are the order of the day, and are very smart when they have large collars and are worn with plaid skirts. These plaid skirts are made of a variety of materials from gingham to heavy silk poplin. The illustration shows a model with a draped effect which is particularly pleasing. McCall Pattern No. 7771, Ladies' Waist, in 5 sizes; 34 to 42 bust; and No. 7777, Ladies' Two-Piece Skirt, in 39 or 37-inch length, in 5 sizes, 22 to 30 waist. Price, 20 cents each.

These patterns may be obtained from your local McCall dealer, or from the McCall Co., 70 Bond St., Toronto, Dept. W.

HEALTHY CHILDREN

It is natural for little ones to be well, and with care every baby can be kept well. The main thing towards keeping little ones well is to keep their little stomach sweet and their bowels regular. Baby's Own Tablets will do this. Thousands of mothers keep the Tablets in the house, as they find them an efficient guard against illness. Concerning them Mrs Hilaire Desmarais, St. Joseph de Sorel, Que., writes: "I believe Baby's Own Tablets are the best medicine in the world for children. My baby was terribly constipated but the Tablets promptly cured him and now he is a big healthy child." The Tablets are sold by medicine dealers, or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

ENCOURAGE CULTIVATION

Campaign by Canadian Pacific Ry. to Meet Food Shortage.

In order to encourage the settlement and cultivation of vacant lands in the Western Provinces, the Canadian Pacific Railway Company, through its Colonization and Development Department, of which Mr. J. S. Dennis is the head, has undertaken an active campaign to try and induce absentee owners to cultivate their holdings.

A circular has been issued to some 8,000 absentee owners, pointing out the profits which can be made by cultivating their lands, and showing how many farmers sold their last years' crop for more than the original cost of their farms.

The Company offers the advice and assistance of its Colonization and Development Department free of charge, in supplying reliable information as to how to go about getting the land under cultivation and will send, on request, the fullest details as to routes of travel, customs regulations, and freight rates and similar.

In undertaking this campaign the Company is following its usual broad policy of Dominion-wide development, realizing that every new settler means greater production to meet the food shortage which at present threatens the world, and which Canada, with its extensive and fertile unplowed areas, can provide.

DEAF MUTES MAKE GOOD.

They are Successfully Employed in French Munition Factories.

The intensive production of munitions in France, with its enormous requirements in hand labor, has opened up a new future for the deaf and dumb who, before the war, were excluded from factory work. Now hundreds of them are making shells and parts of automobiles and aeroplanes for the army. They learn even quicker by sight than do many workmen by ear, and their attention never being divided by conversation, their output is of the best finish and equal in volume to that of the best mechanics. They are even more attentive to danger than ordinary men.

If you expect nothing all you get is so much velvet.

Keep Minard's Liniment in the house.

Whole Wheat and Milk—the two most perfect foods given to man. Dietetic experts may quarrel about everything else, but they are agreed on this. The proper combination is **Shredded Wheat Biscuit** with milk—the greatest amount of protein (the element that builds muscular tissue) for the least money. Two or three of these Biscuits with milk make a nourishing breakfast on which to start the day's work and they cost only a few cents. A boon to the housewife because they are ready-cooked and ready-to-eat. Delicious with berries or other fruits. Made in Canada.

JAPANESE ARE VEGETARIANS.

Natives of the Flowery Kingdom Consume Little Meat.

Very little meat is produced or consumed in Japan, the people depending mainly on vegetables, such as rice, fish, certain bulbs such as tiger lily and seaweed, which are very nourishing and different from anything found along our seacoast.

Peas and beans are largely cultivated in Japan, which resemble our bush beans and are very prolific, including twenty or more varieties; radishes in all sizes, including the sakurajima, which grows from half a pound to a pound. The long white radish nerine is ten to twelve inches long and very delicious.

Cucumbers include the climbing variety which has been introduced in this country; carrots of large size and fine flavor; eggplants, turnips and a pumpkin which in size and flavor rivals our best, excellent as a pie filling or cooked as we cook turnips. The udo compares favorably with asparagus.

The delicious Chinese cabbage makes an excellent table dish and is used in many ways.

In Japan vegetables in seasonable assortment are peddled in two baskets carried across the shoulders on a bamboo pole, brought fresh daily to the door for the housewife's selection.

All these vegetables can be grown in our Canadian gardens and the cultivation is the same as required for our vegetables.

The Kid Has Gone to the Colors.

The Kid has gone to the Colors
And we don't know what to say;
The Kid we have loved and cuddled
Stepped out for the Flag to-day.
We thought him a child, a baby,
With never a care at all;
But his country called him man-size—
And the Kid has heard the call.

The Kid has gone to the Colors;
It seemed but a little while
Since he drilled a schoolboy army
In a truly martial style.
But now he's a man, a soldier,
And we lend him a listening ear;
For his heart is a heart all loyal,
Unscourged by the curse of fear.

Minard's Liniment Co., Ltd.

Gents.—I have used your Minard's Liniment in my family and also in my stables for years and consider it the best medicine obtainable

Yours truly,
ALFRED ROCHAV.
Proprietor—Roxton Pond Hotel and Livery Stables.

The Secret.

The south wind told the brooklet,
As over the field he blew;
The brooklet told the rushes,
Who whispered it to the dew;
The dewdrops told the robin
(Who never could keep a thing!)—
He perched all day on a blossoming spray,
And warbled, "It's spring! It's spring!"

YES! LIFT A CORN OFF WITHOUT PAIN

Cincinnati man tells how to dry up a corn or callus so it lifts off with fingers.

You corn-pestered men and women need suffer no longer. Wear the shoes that nearly killed you before, says this Cincinnati authority, because a few drops of freezone applied directly on a tender, aching corn or callus, stops soreness at once and soon the corn or hardened callus loosens so it can be lifted off, root and all, without pain.

A small bottle of freezone costs very little at any drug store, but will positively take off every hard or soft corn or callus. This should be tried, as it is inexpensive and is said not to irritate the surrounding skin.

If your druggist hasn't any freezone tell him to get a small bottle for you from his wholesale drug house. It is the stuff and acts like a charm every time.

THE VICTORIA CROSS.

The Cross is Cast from Cannon Taken at Sebastopol.

The famous symbol of British valor is a little Maltese cross of bronze, insignificant to look at beside many a more showy medal, and intrinsically worth only a few pence, but it is the most coveted decoration of all that soldiers and sailors can aspire to. The Order of the Victoria Cross—if it can be called an order—was practically an outcome of the Crimean War; possibly the immortal charge of the Light Brigade inspired the idea. For those who have not handled a Victoria Cross it may be as well to say that it is adorned with a crown surmounted by a lion and a small scroll bearing the pregnant words, "For Valor." On the reverse of the medal is given the date or dates of the deeds of heroism for which it was awarded, the name of the recipient being inscribed at the back of the bar, to which it is attached by a V. The Cross is cast from cannon that were taken at Sebastopol. The first presentation of the V.C. took place in Hyde Park on June 26, 1857, on which occasion sixty-two men were decorated. The pinning on of the Crosses by the Queen occupied only about ten minutes, and a great review brought the proceedings to a close. Five of the Crosses won at the battle of Alma were gained in defence of the colors.

Speak Of Them In The Highest Terms

Why Mr. and Mrs. West Recommend Dodd's Kidney Pills.

They Cured Mr. West's Lumbago and Made Mrs. West Feel Like a New Person. They Are the Best Tonic.

St. James, Man., May 28th (Special)—That Dodd's Kidney Pills are living up to their great reputation in the West is twice proved by Mr. and Mrs. G. West, well known and highly respected residents of this place. Let Mrs. West tell the story of what the great Canadian kidney remedy has done for her husband and herself.

"My husband suffered from attacks of lumbago," she states, "and the doctor did him no good, but I can truthfully say that since using Dodd's Kidney Pills he is entirely free from lumbago.

"I myself took six boxes of Dodd's Kidney Pills and am just like a new person. I have gained 10 lbs. since using them and my friends compliment me on how well I look.

"I have recommended Dodd's Kidney Pills to some of my lady friends who were complaining of not feeling well, and they, like myself, speak highly of them."

Dodd's Kidney Pills cure the kidneys. Cured kidneys make pure blood That is why Dodd's Kidney Pills are the best tonic.

With The Best Intentions.

Teddy had been invited out to tea. He wanted to have the afternoon off from school, but his mother would not hear of it. As his bedtime was seven o'clock, he had rather a short visit, and as he was leaving his hostess said cordially:

"I'm so sorry you've been able to stay such a little while, dear."

Tommy remembered his mother's injunctions to be polite on all occasions, and answered sweetly: "Oh, it's quite long enough, thank you!"

Minard's Liniment Lumberman's Friend.

Tiny Rumanian Farms.

There are a million small farms in Rumania and only a few thousand large ones; but the few big landowners have more land than the many small ones. The average size of the million small farms is eight acres, while that of 4,471 large ones is 2,200 acres, says the National Geographic Magazine. In times of peace the Walachians go into Hungary by the tens of thousands to help with the sowing and reaping.

MONEY ORDERS

Send a Dominion Express Money Order. They are payable everywhere.

Importance of Farming.

Agriculture must not only be self-supporting, but, in large degree, agriculture must support our other great industries. Without agriculture, the coal and iron would be left in the earth, the forest would be left uncut, the railroads would be abandoned, the cities depopulated, and the wooded land and waterways would again be used only for hunting and fishing. Shall we not remember, for example, that the coal mine yields a single harvest—one crop—and is then forever abandoned; while the soil must yield a hundred—yes, a thousand crops, and even then it must be richer and more productive than at the beginning, if those who come after us are to continue to multiply and replenish the earth.

Rather Mixed.

Henry, aged five, had a habit of using in his conversation every big word he happened to hear, regardless of its meaning. One morning he and his older brother were trying to wash from the same basin, to Henry's detriment, and he ran into the kitchen, exclaiming: "Mamma, Charlie's metropolizing the whole laudatory."

Ask for Minard's and take no other.

Plenty Left.

"You must keep your mouth closed while in the water, Edna," said the nurse as she was giving the little one her morning bath; "if you don't you'll swallow some of it." "Well, what if I do?" queried little Edna. "There's plenty more in the pipes isn't there?"

When Your Eyes Need Care

Use Murine Eye Medicine. No Smarting—Feels Fine—Acts Quickly. Try it for Red, Weak, Sore Eyes and Granulated Eyelids. Murine is recommended by our Oculists—not a "Patent Medicine"—but used in successful Physicians' Practice for many years. Now dedicated to the Public and sold by Druggists at 50c per Bottle. Murine Eye Salve in Aseptic Tubes, 25c and 50c. Write for book of the Eye Free. Murine Eye Remedy Company, Chicago. Adv.

Manurial Value of Clover.

Chemically, physically and biologically the growth and turning under of clover improves the soil, and we have been enabled to demonstrate over and over again that a crop of clover in the rotation has a manurial effect equal to an application of farm manure of ten to fifteen tons per acre.—Frank T. Shutt, Dominion Experimental Farm.

Minard's Liniment used by Physicians.

There was much talk about the onion maggot. It is very difficult to control. It is practically impossible to trap the fly that lays the eggs. One of the best ways to fool the creature is to plant what is called a trap crop. Plant radishes, and let the maggot get in his work on them then destroy them and put in your onions.

NEWSPAPERS FOR SALE

PROFIT-MAKING NEWS AND JOB Offices for sale in good Ontario towns. The most useful and interesting of all businesses. Full information on application to Wilson Publishing Company, 73 Adelaide St., Toronto.

SECOND CON ELDERSLIE

Mrs Clarke, of Hamilton, isspending a few weeks with her sisters Mrs D Campbell and Mrs F Snaith on this con.

John McCulloch is the latest car driver on this con.

Mr and Mrs T Nicholl and family of Gillies Hill spent Sunday with friends here.

Mrs W McBeath visited at Robt. Jefkin's last week.

The prayer meeting at S S No 12 last Tuesday evening was well attended.

Messrs J B Allen and S Thompson visited Queen Hill friends recently.

Potato planting is the order of the day. One thrifty farmer in this locality has put in two acres of beans.

Mrs A Dawson who has been confined to her room for the last month with heart trouble is slightly improved.

Miss Flora Brown spent Sunday with Allenford friends.

Another of the stalwart sons of this con. has donned the khaki in the person of Clarence Manley, son of Mr and Mrs Wm Manley of lot 7, con 2.

Wm Robertson has purchased a house in Chesley and intends moving the re in the near future

PINKERTON

Scantor J J Donnelly spent Saturday and Sunday at his home.

Quite a number from here attended the play "The Village Doctor" in Paisley on Friday evening.

Mrs Jas McRae, of Paisley, spent a few days with her mother Mrs Jas Murray.

We are sorry to report the severe illness of Mr John McKee and hope for a speedy recovery.

Rev Mr and Mrs Gale attended the Presbyterial at Hanover on Thursday last.

The Sacrament of the Lord's Supper will be dispensed in the Presbyterian church next Sunday. Preparatory services will be held on Friday, conducted by Rev Mr Mann of Port Elgin at 3 30.

The Red Cross Society wishes to express sincere thanks to the ladies who collected for its aid, and also to those who contributed so generously. The amounts collected were: By Mrs Gilchrist and Mrs H Clark, $84; Mrs Mutrie and Mrs Cruickshank, $55; Mrs A Reid and Mrs W Alexander, $56 25; Mrs Gale and Mrs Pinkerton, $43 80. Total—$239 05. This money is to be used for Red Cross and general patriotic purposes.

GLAMIS

The ordinance of the Lord's Supper was observed in St Paul's church on Sunday. Rev Mr Little of Paisley preached the prepartaory sermon on Friday.

Mr Arthur Nesbit of Chesley is visiting his brother R J Nesbit.

Mr John McKinnon of the 10th and Mr Alex McFadyen of Sunderland were calling on old friends last Friday.

Mr Jack McKeeman went to Lucknow to celebrate the King's birthday.

Mrs Archie McFadyen, who has been ill for some time passed away on Wednesday and was buried in Tiverton cemetery on Friday.

Mr Jas Gilchrist spent the week end at his home.

Miss Reta McKinnon is engaged as teacher for another year.

Mr and Mrs McGillivray spent Sunday with Mrs Jos Wrightson.

Mr and Mrs Jas McLennan went to Walkerton on Tuesday to attend the Baptist Association that meets there this week.

VESTA

A social evening was spent at the home of Mr and Mrs P McCurdy on Thursday, May 31st, when about sixty friends and neighbors gathered to show their respect for Mrs P McCaw, who has left the old homestead to her boys and is going to reside in Paisley for the future. After appointing Mr McCartney as chairman, Mrs McCaw was called forward and an address was read by Miss Margaret McCaw, while the presentation of a china cabinet was made by Mrs P McCurdy and Mrs J Fraser. Mrs McCaw made a very suitable reply thanking her friends for their kindness. Mrs McCaw's many friends wish her a long and happy life in Paisley.

WALKERTON

Miss Hannah Raiahen, a well known resident of the 12th con of Brant, died in the Bruce County Hospital here on Saturday afternoon from a complication of heart trouble and dropsy. The deceased, who was about fifty years of age, had been residing with her brother, Mr Morris Raiahen, on the 12th for many years, and was held in high regard by all who knew her. The remains were interred in the North Brant R C cemetery on Monday morning last.

The Walkerton Daughters of the Empire, one of the strongest women organizations of the town, have, in keeping with an appeal from the National Council, inaugurated a big movement in Walkerton for the abstention from the use of meat and potatoes on Wednesday and Friday of each week. They also request the to refrain entirely from the use of veal and young lamb, it being held that the slaughter of calves and lambs is a most wasteful procedure from a food standpoint. The idea of the meatless and potatoless days is to conserve the country's food supply, and as there are about 40,000 women connected with the I O D E throughout Canada, and as they represent about 30,000 homes, the saving effected cannot be estimated at less than 100,000 lbs of meat weekly and an equal quantity of potatoes weekly. Besides being a great economical move, food conservation is being urged as a real patriotic duty.

Dr Malcolm McKechnie, an ex-Walkerton boy, who has been in France for the past few months with a Field Ambulance Corps, had a close call the other day on the Western front. In a letter to his father, Jailer McKechnie, the doctor says: "While in a dressing station a five point 'Dud' (a shell) approximately 6 inches in diameter and over two feet in length, came through into the room, which was of concrete reinforced with steel girders. The Dud came through it all serenely and fell beside me. The air was filled with dust and all around us were blocks of cement and plaster. The man who was standing beside me was killed and two others were wounded, but apart from getting my hair full of plaster and being shaken up I was not even scratched. I was told very few if any who have been out here for any length of time, have had a narrower escape. In our new dressing room two swallows are building a nest. It is interesting to watch them. They make a rare picture of peace amid the roar and hurricane of war."—Herald and Times.

CASTORIA

SAUGEEN COUNCIL

The Saugeen council met as a Court of Revision May 26th. After adding a few names to the roll the court instructed Assessor to secure names of women in the Township who own property and add same to the roll. Court to be adjourned to June 16th at 1 30. General business was then taken up. The Reeve and Clerk were instructed to sign plan of sub. division of 38 lots presented by W A Mitchell. A grant of $15 was made to be spent by Jos T Wallace, in drawing gravel on the blind line opposite lot 20 Con 5 at 80c per yard. Lot 19 and twenty Con 6 were transferred from Div No 24 to Div No. 23, and a road division was formed of the sub divisions of lot 38 L R with Mr Mitchell's property included and W A Mitchell appointed pathmaster. The Reeve and Councillor Atkinson will deal with the culvert on blind line and the Reeve and councillors Atkinson and Greathead arrange with Geo McKillop regravel and councillors Webster and Chappel and (if gravel can be secured at Mr Geo Grieve's. The claim of Mr Jas G Scott for damage to sheep by dogs was left over for further information. On motion of Chappell and Greathead the Reeve and Clerk were instructed to sign petition for Dominion Prohibition during the war. A number of small accounts amounting to $63.35 were ordered paid and the Assessor's salary of $75 Counsel adjourned to meet on June 16th at 1.30 as a Court of Revision and for general business. P W ELLIOT, Clerk.

GREENOCK COUNCIL

Knox's Hotel, Pinkerton, May 28.

Council met as per adjournment as a Court of Revision, all the members present, the reeve in the chair. After taking and subscribing the oath of members of said Court of Revision, appeals were disposed of as follows: Joe Cuningham, lot 27, con 8, assessment reduced: H C Wilkins, assessment on pop sustained; new mill property assessed to L Schwass was changed to John Wrightson, and assessment of $400 was struck off; assessment of part lot 30, con 8, changed from Mrs Barnes to W Neil.

The following names were added to the roll: Alex McSween, lot 8, Glenelg plan, tenant; Albert Brick, lot 4, con 9, farmer's son.

The following pathmasters were changed: T Hanley changed to Jacob Letzgus, H Lamberton changed to Geo Beater, G Beater changed to Wm Anstett.

Symon—Gilchrist—That the clerk be instructed to alter the assessment roll in accordance with the decisions of the Court and that the reeve be instructed to sign the same as the revised and corrected assessment roll of the township of Greenock for the year A D 1917, and that this court do now adjourn sine die.—Carried.

Council met at adjournment of Court of Revision. The minutes of last meeting were read and adopted. The following accounts were passed for payment: John J Cassidy, bal salary as assessor, $40, postage $3 50—$43 50; Jas Symon, rep bridge, con 3, $1; John McTeer, drawing tile and putting in, con 15, $9; Wm Taylor, drawing tile and putting in on base line, $10; A B Knox, room for council meeting, $1.

Symon—Campbell—That the foregoing accounts being found correct be paid and that the reeve sign checks for same.—Carried.

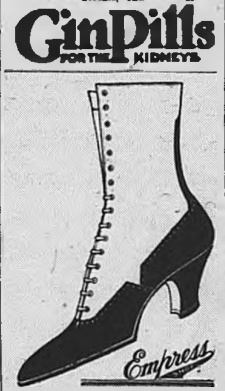
Gilchrist—Symon—That this council grant the sum of $35 to the Red Cross workers of U S S No 2 Bruce & Greenock, also the same amount to the Red Cross workers of Riverdale.—Carried.

Checks for above were issued in favor of Mabel Nelson and Grace McDonald.

Sawyer—Campbell—That this council do now adjourn to meet at Riverdale on Monday, the 25th day of June, for general business.—Carried.

THOS H PURDY, Clerk

WIFE FINDS RELIEF, TOO!



Lachute Mills, P.Q.

"I was troubled for many years with Kidney Disease, and a friend told me to take GIN PILLS. After taking a few boxes I was greatly relieved. And after taking the twelfth box I was completely left me. My wife is now using Gin Pills and finds that she has been greatly relieved of the pain over her kidneys. I can safely recommend Gin Pills to other Kidney troubles to give a fair trial to GIN PILLS."

Thomas Stephenson."

All druggists sell Gin Pills at 50c. a box, 6 boxes for $2.50. Sample free if you write to NATIONAL DRUG & CHEMICAL CO. OF CANADA, LIMITED Toronto, Ont.

CLARK FRASER, JAS LEWIS, Commissioners.

Experience

Back of this season's new Overland Big Fours and Light Sixes is a direct line of nine preceding models from which they were developed.

They directly continue the line of models that made the Overland name stand in the public mind for integrity of value.

Overland policy has steadfastly *sustained* that integrity of value in the car throughout its entire service in the hands of owners.

Over three hundred thousand of these cars are now in use and the helpful suggestions of their owners and of the more than four thousand dealer and factory-branch organizations that sold and served them, are largely responsible for the balanced greatness of this season's Big Fours and Light Sixes.

Their new beauty, their perfected easy riding qualities, their proven sturdiness and mechanical excellence, their admitted fine, fuel and oil economy make them worthy of the confidence we enjoy, that they will still further enhance Overland prestige.

They embody the wisdom of the unmatched Overland experience in building cars of this type.

They are dominant values, cars of proven dependability and sterling worth.

Let us show you these cars and demonstrate them.

A Pigeon in School

On Thursday last a bird flew through an open window into the school and when caught by the children was found to be a carrier pigeon. Based upon its legs indicated that it was a well bred and valuable bird. One of the pupils gave out that a pair of such birds had been advertised for by a Toronto man who offered a reward for their return. Later a boy discovered that the owner's name and address were stamped in ink upon the inside of the large wing feathers. Letters have been sent to the address, giving information.

—Mr Alex Rose is home from Toronto.

—County Councils in session at Chesley this week.

—Pte W S Mitchell was home from London over Sunday.

—Miss Mary Laidlaw, of Clearwater, Man, is visiting at Mr R F Boyle's.

—Dr and Mrs Bishn, of Chesley, visited at Mr Neil McDonald's, 10th Bruce, on Sunday.

—Mrs Buchanan, Inkerman St, has been visiting in Southampton for a couple of weeks.

—Mrs W C Barrie and children, of Davidson Sask., were visiting at Lorne last week.

—Miss Isabel McLennan is home from Toronto, also Miss Elizabeth from Stratford Normal.

—Miss Henderson, from British Columbia, is here visiting her sister, Mrs Geo Grant, Victoria St.

—Mr Lewis Beatty, of Toronto, was visiting for a few days at the home of his uncle, Mr John Hamilton.

—Mr H B Putnam went to Hamilton on Tuesday to attend the C O F High Court meeting in that city.

—The water tank at Walkerton G T R station collapsed on Wednesday night of last week, the foundation having sunk.

—At the Baptist Association meeting at Durham last week, Rev Mr Neilson of Paisley was elected moderator for the ensuing year.

—Rev Mr Crighton, of the Methodist church, and Rev Mr Cosens of Walkerton, a former pastor here, will exchange pulpits on Sunday next.

—Miss Bell Fletcher, of Crow's Nest, B C, was here visiting friends for a couple of days before going overseas as a trained nurse. She is a granddaughter of Mrs Fletcher, Inkerman St.

—Mr John Nelson, of the Vancouver World, and his daughter, Miss Nelson, were here visiting friends over the week end, guests at the home of his brother, R J Nelson, Greenock. Mr Nelson came east to attend the Press Association meeting in Toronto.

Teachers Resigned

Miss Glidden, assistant in Continuation work, and Miss Mitchell, of the Entrance department, handed in their resignations, which have been accepted by the School Board. Both of these ladies are capable and efficient teachers.

A Long Call

Mr and Mrs D Walks, of 2nd Elderslie, were surprised to have a flying visit last week from their son-in-law, Dr Struthers, of Honan, China. The doctor was on his way to France, having been appointed to the medical staff that is to take care of the thousands of Chinese who are being sent as laborers to augment the waning man power and allow of the last Frenchman getting into the trenches.

Special Announcement

We have arranged for a series of illustrated short stories to replace the serial now completed. The change from the long story which must be carried forward for months to a complete short story each week will, we believe, prove most popular with the Paisley Advocate readers. Each story will be found bright, well-written and intensely interesting. The first of the series, "LANARKSHIRE'S THANE," appears in this issue. Do not miss it.

Sending Parcels to Soldiers

The Women's Patriotic League are arranging to send parcels to all the Paisley boys overseas. The League will furnish the socks and pay postage. Contributions of other articles necessary to make up 3-lb parcels are asked for. Leave any of the following articles or goods at the Council Chamber on Saturday afternoon or evening, June 23rd: Gum, chocolate, toilet or shaving soap, tooth brushes and paste, shoe laces and loaf sugar, maple sugar, homemade candy, cash, writing tablets, envelopes, pens, lead pencils, cigarettes, tobacco, cards, cream cheese, nuts, sardines, dates, ground coffee, handkerchiefs, court plaster. Arrangements will be made with the young ladies from the churches to receive the donations and make up the parcels. Everybody has the opportunity of doing something for the boys. Don't wait to be asked for a contribution. Bring it along on Saturday.

CARD OF THANKS

The relatives of the late John Porter desire to express to the general public their keen appreciation of the kindness shown to them during his illness and of the sympathy that has been shown in the time of bereavement.

WALL PAPERS

At the Same Old Prices!

We are sacrificing a percentage of profit to make up for the increase in cost of goods.

We have a wide range of fascinating designs with winsome colorings, new foliage and floral tapestries and new shadow effects with ready cut borders.

P. B. MORE, Druggist

—The present agitation in Quebec against conscription reminds us of just such as determined an opposition throughout that province against the execution of the rebel, Louis Riel. Protest after protest came from Ottawa, petition after petition, politician after politician, but Sir John is reported to have said: "Riel shall hang, should every dog in Quebec bark at me," and Riel was hanged.—Wiarton Echo.

LARRIMORE'S TRUMP

By Allan Inglis.

The prison gates closed behind Larrimore. He was free. Nobody had come to meet him except the reporters, but that caused Larrimore no distress. Of course, Laura would not have come to the prison gates. She had pride, and, though he had been unjustly condemned, Laura was not going to publish her shame before the eyes of the newspaper men.

Larrimore had done no wrong. True, he had beggared a few score of women and trusting men who had put their all in his wildcat scheme, but then everybody did things like that every day in the course of business. The five years in the penitentiary that he had served had been a gross injustice. Larrimore felt no degradation. He meant to repeat his trick, but more craftily, in order to secure the funds to start things going again.

Still he was thinking, as he sat in the train, a lot of things which distressed him; and yet he could not shake them out of his mind. He had come to the metropolis twenty years before, a gawky farmer boy, to make his fortune. He had become wealthy in an incredibly short space of time, for Larrimore was quick to adapt himself to the dubious ways of finance. In ten years he was married and had a house on the avenue.

He had married the daughter of his employer. He had not loved Laura exactly, but she had thought he had. No children had come to them, and of late years Laura had seemed dissatisfied. Larrimore had lavished money upon her and had never known what ailed her. But then he had not understood her.

After his marriage he seldom went home. He made his old mother an adequate allowance, but he had not seen her for three years before he was sentenced. With his connections he could not afford to have it known that his mother was an illiterate old woman. Laura had never seen her; Larrimore had been ashamed to let her know. And when he was sentenced Laura had by his orders written to the old woman that they were going abroad to live. Larrimore had provided for his mother before his conviction. He hugged that thought to his heart. He was a pretty decent sort of a man.

Still there had been trying episodes, which, as a man of the world, he had found difficult to explain to his wife. For instance, old Mrs. Larrimore's letters. The old woman had been growing lonely. She wanted to come to town and live with her son. Of course, that was impossible, and he had told his mother so frankly. But Laura had seen one of the ill-spelled letters, and Larrimore had been ashamed.

"You see, she never could learn to spell very well," he explained to his wife. "We are of good family, but mother was always the dunce at school."

The look in his wife's eyes when he apologized for his mother had vaguely annoyed Larrimore.

After his conviction Laura had come to see him regularly each three months. Three months before his sentence expired she had told him that she thought it would be no use their living together. The house had been sold and she was living then in a boarding house. Larrimore had not answered her, because he meant to go to her as soon as he came out of prison and explain that he would be a rich man again within a year, and that he could provide her with every luxury. That would alter his wife's decision, he knew.

Nevertheless, when he got out of the train he was dissatisfied with himself. Something of conscience had begun to prick the thick skin of the man. When he called at the boarding-house he discovered, to his dismay, that his wife had gone away. A letter was handed to him, and the door closed on him. Larrimore did not mind the closing of the door; he went into the park and read the letter.

"I am leaving you for ever, Henry," his wife had written, "because I cannot live with you again. For years I have borne your callousness, but my eyes have been opened. You are the most selfish, worthless man that ever lived. I am going to the last place on earth where you will think of looking for me."

The letter was signed simply "Laura."

None of us is so bad but sooner or latter the day comes when we see ourselves in the mirror of our souls. Larrimore said afterward that it was the reading of this letter which shook down the palace of his colossal self-conceit. He sat for hours in the park, dazed with the hideous self revelation.

And then, when the meaning and purposes of his life had been revealed to him, a sudden realization of his unworthiness came home to him. The false gods that he had served stood out, abominable idols. Life had meant nothing to him at all. He had fought his way above the bodies of all who should have been dear to him. Nobody on earth had ever cared for him, or ever would.

Except—his mother.

And, like the prodigal in the parable, except that the more loving parent remained alive to him, Larrimore said:

"I will arise and go unto my mother."

He thought of the old woman whom he had neglected, whom, he had supplied with everything that was gross and failed in the gold of love. Tears blinded him. The man's selfishness fell from him like a husk.

The following morning he took the train out to the little village where his mother lived. And as he dismounted upon the platform a great terror came over him that his pilgrimage was vain, and his mother dead.

He hurried up the well remembered street. He reached the little cottage. The place was occupied. He knocked. An old woman with white hair came to the door and peered at him with her dimming eyes. And Larrimore gasped out his repentance and fell upon the floor before her.

For the better part of an hour he kneeled at her feet, sobbing out his sorrow, his shame, while the wrinkled old hand gently caressed his head. He told her everything, his sentence, his shame. He begged her for forgiveness. He wanted only to devote the rest of his life to making her happy. And with awe he realised her simple faith when she said to him:

"I think, my dear, that all these troubles have come upon you to make a man of you."

It was sweet to be in the little home again. It was sweet to turn for sympathy and understanding to the only being who had ever given either to him, who understood the nature of goodness underneath the rind of selfishness that he had accumulated in the struggle of life.

"Mother, I am going to take care of you," he said at length, "and—"

The door opened softly, and Larrimore, looking up, saw Laura standing before him. One glance at him, one incredulous look, and the two children were kneeling in other's arms at the white-headed woman's feet.

For sometimes in the game of life hearts are trumps after all.

He was thinking, as he sat in the train, a lot of things which distressed him.

About the House

To Can Peas.

Shelf fresh peas into a glass jar which has been washed clean and sterilized. See that the jar has a new rubber ring and is air tight. Fill with cold boiled water until overflowing and no air remains in the bottle. Put in a half a teaspoonful of salt. Seal down tightly, place in a washboiler, in the bottom of which something has been placed to keep the bottles from cracking, and it is well to put a little straw or something between the bottles. Fill the boiler nearly to the top of the jars with cold water and let it come to the boil, and boil steadily for three hours. When the jars are taken out and cool a little that the tops are screwed on tightly and keep in a cool place.

Fresh young carrots from the thinning of the garden may be preserved in the same way.

Pickled Onions.

Peel small white pickling onions. Put them in a jar with about a spoonful of whole pickling spice to each jar. Boil cider vinegar with a tablespoonful of brown sugar to each quart of vinegar. Let it cool and fill the jars until the onions are all covered. These do not need an air-tight jar to keep them, but the bottle must be covered or corked well.

The foregoing recipes are issued by the Woman's War Time Thrift Committee and are especially valuable. Cut out and preserve for future use.

Dependable Recipes.

Strawberry Shortcake.—Make a dough of two cups of flour, one teaspoonful of salt, four teaspoonfuls of baking powder, six tablespoonfuls of sugar. Mix dry ingredients, then rub in six tablespoonfuls of shortening and mix to a dough with three-quarters cupful of milk. Pat or roll one-half inch thick. Cut with a biscuit cutter. Place two pieces together, brush the tops with milk and then bake for fifteen minutes in hot oven. Split, butter slightly and cover with crushed strawberries.

Clear Tomato Soup.—Put into a granitware saucepan a quart of canned tomatoes; add one point of cold water, a bay leaf, a sliced onion, a sprig of parsley, a stalk of celery, a teaspoon of sugar, and salt and paprika to taste. Simmer until the tomatoes are very tender, then strain and add hot water or stock to reduce to the desired consistency. Serve with crisp toast squares.

Bread Sauce.—Put a small teacupful of grated bread crumbs into a saucepan, pour over as much milk as they will soak up in five minutes, and then add one cupful more. Turn into the upper part of a small double boiler, add one white onion cut into quarters, and pepper, salt and celery salt to taste. Cook over hot water until the onion is tender and the sauce very thick; then add two tablespoonfuls of thick cream, and press through a sieve. Stir in one tablespoonful of chopped parsley and serve at once. This is delicious with boiled fowl.

Oatmeal Macaroons.—Three tablespoonfuls of butter, cream well, then add one-half cupful of sugar, one egg unbeaten, one cupful of oatmeal, grating one lemon rind. Work to a smooth paste. Drop by teaspoonfuls on well-greased and floured tin. Bake for fifteen minutes in moderate oven.

Rye Muffins.—One and one-quarter cupfuls of boiling water, three-quarter cupful of cornmeal, scald the cornmeal and add two tablespoonfuls of shortening, three tablespoonfuls of syrup, one teaspoonful of salt, mix together, then add one egg, one cupful of rye flour, five teaspoonfuls of baking powder. Beat for three minutes, then pour into well-greased custard cups. Bake for twenty-five minutes in a moderate oven.

Salt Pork.—Cut slices of salt pork, then parboil. Rinse under cold water, dip in flour and brown in frying pan. Dish on squares of toast and cover with cream gravy.

Cream Gravy.—Drain all the fat from the pan; now measure one tablespoonful of fat and return it to pan. Add two tablespoonfuls of flour. Blend well, then pour in one cupful of milk. Stir until boiling point is reached. Cook for two minutes. Pour over pork. Garnish with finely chopped parsley.

Salad Dressing.—Mix 3 tablespoonfuls sugar, 1 tablespoonful mustard, 1 teaspoonful salt, a speck red pepper, and 1 tablespoonful flour; add two well beaten eggs and ½ cup vinegar; stir in double boiler until thick; remove from fire and add 3 tablespoonfuls butter; cool, keep in sealed glass jar; thin quantity needed with sour or sweet cream.

Japanese toymakers use tin cans largely in the making of toy soldiers.

Preserve all you can

Make the most of the season's fruit crop. Use only

Lantic Sugar

"Pure and Uncolored"

The best preserving sugar on account of its high sweetening power and "FINE" granulation

2 and 5-lb cartons 10, 20 and 100-lb sacks

Farm Crop Queries

Conducted by Professor Henry G. Bell.

Henry G. Bell.

The object of this department is to place at the service of our farm readers the advice of an acknowledged authority on all subjects pertaining to soils and crops.

Address all questions to Professor Henry G. Bell, in care of The Wilson Publishing Company, Limited, Toronto, and answers will appear in this column in the order in which they are received. As space is limited it is advisable where immediate reply is necessary that a stamped and addressed envelope be enclosed with the question, when the answer will be mailed direct.

Question—C. K.:—I have a field of about forty acres of heavy June grass sod. The land is mucky, with clay sub-soil. I would like to know if buckwheat would be of any use to subdue the June grass on this land? I have a good crop of beets on this land seven years ago. After the beets I had oats, but they grew rather too rank and lodged, thereby killing out part of the seeding which caused the June grass to take a start and it has been left in that way ever since, so that it is now almost a solid June grass sod. Now if you believe that buckwheat would grow on this land then I would like to know what kind of buckwheat to get and how much to sow per acre.

Answer:—The soil that you describe should produce a rank growth of buckwheat. The crop, however, is better suited to a clay loam. If you seed buckwheat on this soil, it should make sufficient growth to overcome the June grass, if the seed-bed is well prepared. In view of the fact that your grain lodged so badly, I would advise you to apply at least 200 pounds per acre of acid phosphate, which supplies phosphorus, the kind of plantfood that gives strength to the straw of the grain. This will give strength to the buckwheat vines and will plump the buckwheat kernels. Silver Hull buckwheat is considered a good variety and requires about five pecks of seed per acre. Another good crop to under the conditions you describe would be rape. This can be sown broadcast in rows. Rape requires about five or six pounds of seed per acre if sown broadcast, and three pounds if sown in drill.

Question—A.J.W.:—We expect to erect a silo 10x32 feet. Have six and a half acres, about half of this field is sand loam and the other half is clay loam. We plowed down a heavy June grass and timothy sod last year and it was partly covered with manure. We have covered it again this winter and want to plant it for silage. How should we drill the corn and how much seed per acre? Would it pay to use some commercial fertilizer; if so how much and what analysis would you recommend?

Answer:—In planting corn for silage, both drill and check-row systems are successfully used. The check-row system, which is really the hill system, allows of cultivating the corn both ways. If the land is not very weedy the drill system is satisfactory, drilling it in rows about 30 inches apart. In drills it requires about 10 quarts to the acre.

To make sure of the germination, you would do well to buy the seed on the ear and test the ears for germination. This can be done by taking out six kernels from each ear, two from the tip, middle and butt, numbering the ear and placing the kernels on a square of blotting paper or cloth, numbering the square the same number as the ear. Place the cloth in a pan or large plate where you can keep it damp and warm, and inside of a week the kernels should have germinated sufficiently to tell you whether the ear is strong, weak or dead. Take the medium and strong ears and shell them out together and discard the ears that show very weak or dead kernels. It would surely pay you to fertilize your corn. For this purpose I would recommend the use of 200 to 300 pounds per acre of a fertilizer analyzing 2 to 3% ammonia, 8 to 10% phosphoric acid and 1% potash. This will start your corn crop off strong and vigorous, just the same as whole milk gives a vigorous start to your calves.

Question—A. C.:—I have a five acre field which has a heavy sod about four years old which was turned down and planted to beans last year. On account of wire worms I did not plant to oats or corn this Spring. I have it plowed again and intend planting to beans, but some of my neighbors said they would take the beans. Will they? If so, is there anything I can do to prevent it? I do not find many now. Would the dry weather effect them any? The soil is a clay loam with a heavy clay bottom.

Answer:—The wire worms which effected your crops last year found a suitable home in the sod which was plowed under. You are planning correctly to plant this land to a cultivated crop this year, since through cultivation it seems possible to get rid of the wire worms. It is impossible for me to say whether the wire worms will take the beans or not this year, however, thorough tillage of the soil in preparing the seed-bed will do a great deal to drive them out, as well as the application of 200 to 400 pounds of fertilizer per acre when seeding your beans. The late Prof. Smith of New Jersey, who made a careful study of the life history of the wire worm, strongly recommends fertilizers as a means of getting rid of the wire worm. The wire worm does not like fertiliser, and beside fertilizer gives added strength to the young growing crop and hence helps it to withstand light insect attacks. For your conditions, I would advise a fertilizer analyzing 1 to 2% ammonia, 8 to 12% phosphoric acid and 1 to 2% potash. This should be worked thoroughly into the soil before you plant the beans, by scattering it on the surface of the plowed land and harrowing it in thoroughly or by drilling it in, if you have a grain drill with fertilizer distributing attachment. Cultivation and fertilizers are about the only things that you can do to combat the wire worm. I do not believe the dry weather has had very much effect on them.

Question—R. W.:—We want to use commercial fertilizer on our bean land this year and we don't know just how much is best to put on per acre to get best results out of beans. Also, which would be best, to sow fertilizer broadcast or in the hill with beans? Our land is practically clay land.

Answer:—For fertilizing beans on clay soil, I would advise the use of from 200 to 400 pounds per acre of fertilizer analyzing 2 to 3% ammonia, 8 to 10% phosphoric acid and 1 to 2% potash. This should be worked thoroughly into the soil when you are preparing the seed-bed at least a week to ten days previous to planting. It can be spread with a lime spreader or if you have a grain drill with fertilizer drilling attachment, it is well to apply it that way. The important point is to see that the fertilizer is evenly distributed and thoroughly worked into the soil. It is rich available plant-food if it is worked into the soil where it can dissolve so that the plants can make use of it. It is not best practice to drill the fertilizer in with the beans. Broadcasting has been found to give best results.

THIS IS SPRAYING TIME

Methods of Combating the Enemies of Plant Life in the Garden

As soon as potatoes are well up they should also be sprayed. The little flea beetle begins operations as soon as the pail and add cold water gradually, slowly stirring until sufficient water has been added to produce a smooth milklike liquid. Pour this mixture through a fine wire strainer into the spray tank, which has previously been filled three-fourths full of clean water.

Cucumbers and melons should be sprayed every ten days. Tomato plants should be sprayed as soon as set out and occasionally as required. Young celery plants should be sprayed in the seed bed and at intervals of ten days with a mixture of ten pounds of vitrio to fifty gallons of water.

Arsenate of lead spray should be used for codling moth, caterpillars, flea beetles, brownt ail moth, gypsy moth, cucumber beetle and currant worm and curculio. If paste is used three pounds to fifty gallons of water should be used for codling moth and curculio. For canker worms, caterpillars, cranberry insects and leaf eating insects in general use four pounds to fifty gallons of water as soon as the insects appear. Repeat on later broods if needed. Arsenate of lead is deadly to human beings and must be used with care. Fruit and vegetables that have been sprayed must be thoroughly washed before they are used.

For cabbage lice take a lump of saltpeter, the size of an egg, and put in a sprinkler of water. Sprinkle the cabbage once or twice and there will be no more lice on them.

Bordeau mixture is a fungicide and a plant stimulant also, preventing blights and rusts during the growing season.

During the growing season tomatoes, celery, asparagus, small fruits, beans, etc., will be benefited by spraying with bordeau mixture.

The Sunday School

INTERNATIONAL LESSON JUNE 24.

Lesson XIII. The Purpose of John's Gospel—Review—John 21. 15-25. Golden Text John 20. 31.

1. A social faith. Both at the beginning and end of his Gospel John makes it clear that he is not writing simply a human record. Just as the prophet backed his message with, "Thus said the Lord," so John sets forth the eternal sanction behind the life and the teaching of Jesus. Here is "the Word made flesh." Here is the everlasting truth working itself into character. Have we anything to add to that record? Is there any other body of evidence than John possessed which has come to us? Has the Spirit led us in these twenty centuries of Christian development into more truth? What John gave us has now been tested by the human conscience through twenty centuries. It has been further confirmed by the social struggle of that period. John's affirmation is increasingly the conviction of the human race. Most of its leaders turn to-day to Jesus for guidance. The development of human life is not away from his principles, but toward them. With all the cross-currents, the drifts, and the eddies in the stream of human progress, it yet moves clearly forward in the direction of his teachings. With an increasing number of people outside of the church developing a clear faith in the leadership of Jesus, it is no time for the people in the church to question the practicability of the sermon on the mount. They must develop a faith that shall triumphantly apply the principles of Jesus to the whole of life.

2. Why believe? John was not interested in developing faith for the mere sake of faith. The belief that he wanted was no mere reptition of words. He was not trying simply to secure assent to an historical Christ and stop there. For him the purpose of faith was that people might have life. Unless faith transforms life, individual and social, it is not faith at all, but a mere imitation. To-day we need a conviction of the social vitality of Jesus's teachings. We want no mere applause for his leadership, but a faith that will transform his principles into social living.

3. What kind of life? John is not talking simply about life eternal as the end of faith, but of eternal life that begins here and now. The kind of living he wants is the kind that Jesus taught and showed. In his epistles he makes it clear that it is pure and brotherly life. Those who profess to believe in God and do not love their brothers are liars. Those who do not love do not know God; they are infidels, no matter what faith they may profess. It is an axiom with John that a man who does not love his brother cannot possibly love God. This is to be no vague emotion; it is to be manifested in gifts.

4. The challenge. Is the purpose of John in his Gospel being fulfilled to-day? This is the responsibility which the Gospel puts upon those who hear it. This was Jesus' stern test. Well he knew the fatal facility of humanity to pass resolutions and then forget them. What happened to those who listened to his teachings and did them not, he set forth in the parable of the sower and of the men who built their houses on the rock and on the sand. He requires of those who believe in him that they translate his words into life; how else shall the kingdom of God come? This is his challenge: "Why call ye me Lord, Lord, and do not the things which I say?" Either we accomplish the social living that he taught, or we fail of fellowship and the end is, "Ye did it not; depart from me."

Horse Sense

Bruises of the heel will be indicated by lameness, tenderness upon pressure of the quarter of the sole, usually the inside. In severe cases where pus is forming there will be tenderness expressed when the heel is pressed.

Remove shoe, pare the sole of the quarter well down to expose the corn and allow escape of pus if there be any, apply hot poultices until soreness disappears, then get shod with a leather sole between shoe and hoof and no pressure upon the quarter of the wall.

When breeding the mares, bear in mind that it pays to have one breed in a community. The greatest progress in breeding is possible where farmers cooperate to produce the best of one breed.

Neither mare nor foal is bettered when the colt follows the cultivator. Keep the colt penned in a roomy, well-lighted and ventilated box stall. Do not keep them apart for a half day the first time.

Long-legged drafts are not what the market demands. Don't breed that characteristic into the young animals. Select a low-set sire.

Let the mare rest several weeks after foaling. Start gradually when putting her to work again.

After feeding and brushing the horses, turn them out in the pasture to rest for the night.

Disinfecting the stables with coal-tar dips will go a long way toward protecting the horses from flies. Clean the stables every day in hot weather.

Condition in a horse is manifested by keenness for work, brightness of eye and bloom of coat. A horse is capable of his greatest effort only when in condition.

Before letting the colt to the mare at mealtime, partly milk out the udder. In hot weather let the mare rest and cool off a few minutes before the colt sucks.

Colic often results from working a horse immediately after feeding. Allow plenty of time at noon.

Poultry

Damp and filth are the two prime causes of disease among poultry. Idleness is a disease breeder, busy fowls, as a rule, keeping in good health. Filthy drinking vessels breed undesirable germs about as quickly as anything, germs often hiding in the scum that is allowed to accumulate.

Keep the houses thoroughly ventilated during the month, for June has some very hot days and nights.

June is a good month for caponizing the young cockerels.

To keep in good health, a hen, in proportion to its size, requires almost seven times' the amount of fresh air that a horse needs. The horse sweats through his skin, but the fowl must get rid of the waste of the body by means of the lungs, and therefore breathes seven times as fast as heated, sweating animals.

For winter green feed there is nothing better than lawn clippings. The grass should be gathered as soon as cut, and spread out on a shed roof so both sun and air can strike it. As soon as it is thoroughly dry it should be raked in and packed in barrels for the winter. Care must be taken that it does not dry too much, or it will lose its strength and bleach out considerably. It should, however, be perfectly cured before storing away, or it may heat and spoil.

In feeding, soak the grass in lukewarm water for about twelve to eighteen hours, after which either mix the mash or squeeze out the water and feed in troughs by itself.

Sheep Notes

As long as the teeth of a sheep are strong and in good working order, it is reasonably safe to keep her.

The safety of the flock may be greatly insured by calling up the sheep every night and shutting them into a tight fold. They soon get the habit and are also more docile the year around. A flock of sheep can not be made too tame. A wild flock is of less value and makes less growth and shorter fleeces than a quiet one.

Unless you intend to keep the lambs for home use, let the bucks go the minute they are big enough. More money in them now than there will be after a while.

You are smarter than most folks if you can tell what the wool market will be six months from now. Nine times out of ten it is well to sell your clip soon after shearing.

Keep the little chaps that are thrifty and have a good, thick-set growth of wool on their backs.

If you want to see the lambs grow, give them oats to eat often.

There are less than ten per cent. of all weeds which sheep will not eat. Cattle and horses eat only about half the different weeds.

Hogs

A good pasture is a pig's paradise. If you want to get full value for your skim-milk, whey and buttermilk, let the pigs handle it for you.

The man who buys the stuff he feeds his hogs has only the feeder's profit. By growing the feed he has the grower's profit, too.

If the corn drowns out, sow some rape for the hogs. Forage helps to put the gains on hogs at the lowest cost.

Put the self-feeder where the pigs can help themselves. Let them do the work until marketing time.

Pigs may be more important than pedigrees, but it is a wise practise to look after both in a pure-bred herd. A pedigree is valuable at selling time.

Hogs do not always use mud-holes as the result of choice. It is often a last resort. A cement tank, sunk ten or twelve inches in the ground and filled with clean cool water, answers much better.

Castrate the male pigs before they are weaned, when they are about six or eight weeks old. Choose a clear dry day for the work.

All whey from cheese factories and butter milk from creameries should be pasteurized before feeding to hogs.

A mixture recommended for hog-pasture is barley and rape, the hogs to be turned on when the barley is starting to shoot. If not overdone, the barley will keep the herd going till old heads begin to ripen, then the grain and rape make a good ration until after frost arrives.

Hogs on pasture require grain for greatest profits in pork production, but a full feed is not economical when pasture is plentiful and grain high priced.

Your Problems

Conducted by Mrs Helen Law

Mothers and daughters of all ages are cordially invited to write to this department. Initials only will be published with each question and its answer as a means of identification, but full name and address must be given in each letter. Write on one side of paper only. Answers will be mailed direct if stamped and addressed envelope is enclosed.

Address all correspondence for this department to Mrs. Helen Law, 233 Weodbine Ave., Toronto.

L. T.:—For household use, the most effective and least dangerous of fly poisons is theone-to-five per cent. solution of formaldehyde. To a pint of water add three teaspoonfuls of commercial formaldehyde. It is not expensive, and can be bought at any drug store. Take one or more thin table tumblers and fill each one of them half full, or more, of the solution. Cut a piece of blotting paper into circular form, slightly smaller than an ordinary saucer. Place the blotting paper in the saucer and then invert the saucer over the tumbler; next, holding the hand on top of the tumbler and the saucer, quickly invert them. Then place a match under the edge of the tumbler. That will break the air seal and allow the fluid to percolate slowly into the blotting paper, and to keep it moist, so that the flies can drink from it. This solution attracts flies, and usually kill them within two or three minutes.

"Reader"—1. When a person remarks, "I am very glad I have met you, Miss B—," after having been introduced to you, respond by saying, "I am sure the pleasure is mutual"; or, "I am glad to know you." There is no set phrase for such occasions. 2. To remove tar, apply turpentine or kerosene, followed by soap and water. 3. Almond meal is an excellent substitute for soap for use on the face. 4. To destroy roaches, dip slices of potato in arsenic mixed with sugar. Gather up every morning and drop into boiling water, as some of the insects may still be alive. But never allow poison to lie around if there are children in the house. Paris green is another remedy, and pulverized borax is good.

"Subscriber"—1. The word "Argentine" means "silvered," and is associated with the Plata River because "plata" means "silver" in the Spanish tongue. Thus the name given to the great South American country took another form to describe the land through which the Plata flows. 2. Mercury is the planet nearest to the sun. 3. A panama hat may be cleaned by scrubbing with cornmeal and water. 4. Red-bordered towels and napkins will not fade if a little borax is put in the water to set the color. 5. It is said that the juice of an onion will remove scorch marks from silk. 6. An invitation to a church wedding need not be acknowledged unless an invitation to the breakfast or reception is included. Wedding silver, linen, and all gifts intended for the bride should be marked with the initials of the bride's maiden name.

Mrs. T.:—1. To clean a greasy carpet, mix together whiting and corn meal, heat it and sift it thickly over the carpet; then cover with gasoline and rub hard until the gasoline evaporates. Sweep clean and wipe with a damp cloth. This should only be done in the open, as the danger of fire from gasoline is very great. Be careful also in rubbing when the gasoline has been applied. If it is not possible to do the work in the open, use only the powder, allowing it to stand for several days, then remove and repeat the treatment until the grease has disappeared. 2. The red paint marks may be removed from your dark blue wool suit by rubbing the spots with alcohol.

"Lily"—1. No matter how careful one is when sewing, often an oil spot gets on a dress while making, if the machine has recently been oiled. As your fabric is silk, cover it thickly with powdered starch and leave for twenty-four hours. After the starch has been brushed off the stain will not be noticeable.

Mrs. D. P.:—1. There is nothing that will take the taste of leaks from cream or butter. The best way is not to allow the cows to graze in leaky places. It is an argument in favor of cleaning up all the weeds on the farm, isn't it? 2. A good style of dress for a two-year-old boy is dark colored knickerbockers buttoned to a white or light-blue waist with large pearl buttons. Sailor suits of white cotton with navy-blue collar, cuffs and tie are also suitable. They may be had readymade for $1.50 at the large department stores, in sizes for one and a half years and upwards. There are two styles of hair-cut for little boys; one being the close shave which the older boys favor and the other the Buster Brown or Dutch cut.

Bedtime Stories

The Daisy Month.

This is the best of all the months.
For school is ending soon;
And that is where it gets its name
"The daisy month of June"!

O—M—E—H

"O—M—E—H." Dilly said the letters over and over to herself. "O dear! I can never make you spell anything," she thought, as she looked down at the black letters on their squares of yellow cardboard. "Aunt Hannah said if I put you together right you'd make a word, but I've twisted you and turned you and you won't spell a thing! Of course if you didn't have to make a four-letter word, I could spell "hem" and 'me' and 'he,' but I can't think what you can be when I have to use all the letters!"

Dilly was bending over a beautiful, shining mahogany table in a room where all the colors were soft and rich, and where a silver-voiced clock struck the quarter hours. Aunt Hannah's room was very still, even when she was in it, and now that she was gone Dilly longed to hear some sound.

She thought of the noisy nursery at home, and how she wished she were there! But Billy had measles, and Dilly must stay at Aunt Hannah's until he was well.

O—M—E—H the letters stared up at her, and she looked back at them in bewilderment, for somehow they seemed to be speaking to her in tiny friendly voices.

The big round O spoke first, making Dilly a funny little bow. "My dear Dilly," he began, just as if he were much older than she, "I have known many little girls in my day, and I must say I never knew one with whom I would rather play than with you, Dilly, my dear. If it were possible, my friends and I would rise from our pasteboards and join you in some game, but we are hard workers, hard workers. We must always be busy in books and papers. Did you ever think how very, very many times we letters are used in a day? It is words, words, words, until there is seldom any rest for us. We should like to tell you the word you are trying to make of us, but that would be against the rules. Instead, we shall tell you some of the stories we make in books."

The big O began at once with Old Mother Hubbard, told in a new and wonderful way; then the big M followed with a delightful tale of the garden of Mary, Mary, Quite Contrary. The E had been used so often in the story of The Old Woman Who Lived in a Shoe that he knew the names of all of the old woman's children, and he repeated them so fast that Dilly laughed merrily. At the very last the H told Dilly all about the hill where Jack and Jill had their famous tumble; he had been there and had seen the well. Just as Dilly was imagining that she was looking down into its cool depths something seemed to touch her, and there was Aunt Hannah lifting Dilly's head from the table, where it had fallen when she went to sleep! Aunt Hannah's jeweled hand turned the letters about until a beautiful word lay before Dilly's wondering gaze.

"Yes, Billy is well, and you shall go to-morrow," said Aunt Hannah.

Dilly smiled, for the word Aunt Hannah had given her was H—O—M—E. What friends those letters had come to be!

The Dairy

Breed the best to the best.

Raise the calves; quit eating veal.

Type is not the real test of a cow's value. The scales and tester are better indications.

Keep all calf pails, and the utensils with which milk comes in contact, scrupulously clean. Scald them with hot water and then expose them to the sun during the day.

To make a real success at the fall shows, begin now to care for the prospective entries. It is no honor to win on an untrained, poorly fitted animal just because competition is lacking. Make your entry worthy of the red ribbon if it is the only one in its class.

One farmer says that with silage and clover and alfalfa hay he had been able to bring a large herd of dairy cows through the winter in good condition with fairly heavy production and without much grain.

Where chronic dysentery is present in a dairy herd, try washing the cows' udders with a two per cent. solution of coal-tar disinfectant before allowing the calves to suck.

Every heifer calf killed means one less cow. Without any restriction, the sale of calves and cows for meat can proceed so far that there will be a serious shortage of cattle. Already, good cows never were so scarce and high.

Any falling off in the production of live stock will be noticeable in grain farming. Without plenty of stock, soil fertility is difficult to maintain and high prices for feed-stuff coming from the soil are more likely. It is apparent that something must be done to keep the productive animals on the farm.

A seed in the ground is worth two thousand on the counter.

The Paisley Advocate

PAISLEY, JUNE 20th, 1917

THE UNITED STATES has adopted a measure which means that men who can afford to purchase and operate motor cars will be required to pay a fair share of the war tax. The schedule imposes taxes as follows: Automobiles costing $500 and less, $7 50; automobiles costing $500 to $1,000, $10; automobiles costing $1,000 to $2,000, $15; automobiles costing $2,000 to $3,000, $20; and for automobiles costing $3,000 and more $25. Motor cyclists must pay $2 50 per annum. Upon this basis Canada's 150,000 automobiles would yield $1,500,000 war taxes. The tax is to be raised ten per cent for each year the motor vehicles have been used up to five years.

—The game laws this year make it easier for Ontario people to catch fish as some restrictions were removed for the war period. Now the Organization of Resources Committee have issued a pamphlet giving recipes and other information as to cooking the different kinds of fish, from the common red-finned "mullet," or carp, which is so plentiful in our streams, to the handsome lake and brook trouts. This pamphlet says: The food value of anything depends upon its chemical make-up and its digestibility. In both respects fish stands very high. It contains both protein, the body-building compound and fat, the fuel or energizing compound, in excellent proportions, and it is more easily digested and more readily assimilated to the body needs than meat. Ontario citizens can help to win the war by eating fish, and particularly by eating the cheaper though scarcely poorer, kinds of fish. Our soldiers and kinsmen overseas need every pound of food we can send them, and the purest patriotism would suggest that we should eat the food which we cannot possibly export in preference to that which can be exported and upon which our allies rely.

—If a referendum vote is taken as to whether the people of Canada are in favor of conscription, what will be the result? The opposition already shown from various quarters is so strong as to make it quite doubtful. Quebec is solidly opposed. The labor classes in cities of other provinces are not going to accept conscription of men unless that is linked up with conscription of wealth. Throughout rural Ontario a compulsory measure is not very generally favored, and might be voted down. So also in the Maritime provinces, and even in the west the land workers will not be in favor. Farm help is short all over the Dominion, and farmers are not inclined to allow further drafts from their ranks. There is a fear that underconscription there would be no more consideration shown them than under the voluntary system and in this fear lies the greatest jeopardy to a conscriptive plan in case of a referendum vote. Unless it be made well understood that further immediate drafts would not be made from sections where voluntary enlistment has already depleted the male population, there is not much of a chance of conscription securing a sufficient support at the polls to warrant a government putting it in force. The Advocate is in favor of a proper measure of selective conscription fairly administered, but we have no hope that it will come through a referendum. Unless the politicians at Ottawa get together on the question, we venture to say, it's all off with conscription in Canada. The conscription of wealth, industrial resources, transportation facilities, etc., is also quite as urgently needed for the successful carrying out of our part in the war, and it is the foremost duty of our representatives in Parliament to see that this whole programme should be put through without getting the country in a turmoil with an election. There is no insuperable obstacle in the way to prevent a political alliance that will keep Canada in the front as a strong unit supporting the Allies who are fighting for world freedom on a lasting basis. The minor differences of party should be forgotten for at least the time that is required to end the war. Let our members of parliament show themselves to be statesmen more than politicians in this crisis. Liberals should support Sir Robert Borden's conscription bill, and the Premier's following should accept the Liberal resolution for the taxation of accumulated wealth and the organization of our resources for war. This is no time to wait for a referendum.

Senator Donnelly has purchased from Mr Joseph Lippert of Walkerton the former Burns' farm of 68 acres at Eden Grove, and will use it as a grass farm.

THE ADVOCATE will be a most welcome gift to absent ones of your family, whether in Canada or away to the fighting front in France.

A WRONG VIEW ENTIRELY

An item in the Toronto Telegram of Monday reads as follows:

At the Labor Temple to-day the following message was received from a trainman in Lindsay: "I have just switched five cars of eggs into the siding of a large cold storage plant in Lindsay." Let labor leaders investigate this and they will find that it has something to do with the high cost of living.

Now, we must protest against the tone of that paragraph. The inference there is quite clear. It is that the five carsof eggs are being shunted into the cold storage plant at Lindsay, and that after reposing there they will shunt out again at an increased cost to the consumer. In fact the brakeman who manipulated the cars thinks such a thing might tend to increase the cost of living. Bosh!

My, what a narrow minded chap that train band must be! Certain it is that the finer qualities in his anatomy have never been fully developed along proper lines, and his aesthetic tastes have never been properly tuned to keep pace with our new development.

Surely this train hand must know that eggs are very perishable and also horribly easy to bust. The cold storage men gather them up to prevent such a calamity. They place 'em where they can't bust 'em and they keep them cold enough so that they can still qualify as freshies in a market six months hence. These cold storage men simply can't stand to see eggs where they might get abused. By chasing all these eggs into the cold storage plants they also do a good turn to the housewives who otherwise might go into the cold storage business themselves. This would mean paying 30 cents or so for a crock and 15 cents for the liquid to preserve eggs. The cold storage men see the danger in this of the women dropping the crock down the cellar stairs, and thereby losing the whole investment of 45 cents.

We're beginning to lose patience with the folks who don't regard the cold storage men as philanthropists They're more than that—they're magicians. Who but a magician could take fresh eggs at 40 cents and turn 'em out storage eggs six months from now at 60 cents? Why say, we often pay money to see performances not nearly as realistic. We're thinking of starting a society called "For the Prevention and Admiration of the Cold Storage Grabbers." We're fully convinced that the ignorant public need education and instruction along these lines. —Gueph Mercury.

HEALTHIEST ONE IN THE FAMILY

No Sign Of Dropsy And Kidney Trouble Since Taking "FRUIT-A-TIVES"

HATTIE WARREN

Port Robinson, Ont., July 8th, 1915.

"We have used "Fruit-a-tives" in our house for over three years and have always found them a good medicine. *Our little girl, Hattie, was troubled with Kidney Disease.* The Doctor said she was threatened with Dropsy. Her limbs and body were all swollen and we began to think she could not live. Finally, we decided to try "Fruit-a-tives". *She began to show improvement after we had given her a few tablets.* In a short time, the swelling had all gone down and her flesh began to look more natural. Now she is the *healthiest one in the family* and has no signs of the old ailment. We can not say too much for "Fruit-a-tives" and would never be without them".

WILLIAM WARREN.

50c. a box, 6 for $2.50, trial size, 25c. At all dealers or sent postpaid on receipt of price by Fruit-a-tives Limited, Ottawa.

LOCAL AND DISTRICT NEWS

Death of a Young Girl

Florence Elizabeth, fourth daughter of Mr and Mrs Joshua Bell, had been afflicted with Bright's disease for about two years, and the disease culminated in her death on Sunday morning. Florence was a bright, promising young girl of eleven years. Her death leaves a sad break in the family circle, and she will be much mourned there, as well as by her school-mates and companions. The parents and friends have the sympathy of all in their bereavement. The funeral took place on Monday afternoon to the Paisley cemetery.

Killed by Treachery

Particulars as to the death of Pte A McGillivray have been received from officers of his battalion, the Port Garry Horse, written to his father, Mr Colin McGillivray, 13th Bruce. The deceased was on duty with a detached party at the time. He was not wounded in action, as supposed, but injured by the explosions of a German bomb which had apparently been deliberately placed in the fire-place at the billet where he was living, the bomb exploding when the heat of the fire reached it. The officers state that Pte McGillivray was a keen and active soldier and did his duty like a man. He was buried in Cemetery Ste Marie, No 1 Base.

Attend Port Elgin's Dominion Day Celebration

Again this year, Port Elgin people are planning the big celebration. The fact that this is Canada's Jubilee year has been taken into consideration, and all profits over and above expenses will go to Red Cross. We are planning for the biggest day's races ever held, also many other features, with the usual superb program of fireworks, which in themselves are worth a trip to Port Elgin. Come along to Port Elgin Dominion Day. Good hotel accommodation, also two large garages for cars. Popular prices at this celebration. Where most places charge 50c the old town on Lake Huron charges 35c. We want you all, men, women and children. Lots of music, and a good time assured.

The Late John Porter

On Monday, June 4th, a long and well-spent life came to a close in the death of John Porter, one of the oldest residents of the town of Olds. The late Mr Porter was born in Berwickshire, Scotland, in 1833, and the same year his parents came to Canada, after spending some years at Peterboro, Ontario, they moved to Bruce county and settled in the township of Elderslie. In 1857 the deceased homesteaded on the 2nd con, where one of the finest flatted log houses was built, as John prided himself on the exactness of his work with the axe. Thos McBeath and Edmund Manley are the only two remaining of eighteen who took up homesteads on the 2nd of Elderslie in the years 1855 to 1860. In 1860 Mr Porter was married to Mary Schofield, in whom he found a true, faithful loving helper. She died in 1883, and was buried at Tara, and now after thirty years the body of her faithful husband is laid to rest by her side. Mr Porter belonged to a long-lived family—one of his brothers died at the advanced age of 93 years, and an elder sister, 87 years of age, is still living. Six children remain to revere his memory: David, of Saugeen; Wesley, of Elderslie; Harvey, of Windsor; Miss H W Brown and Mrs M A Robertson, of Olds; Mrs R J Follis, of Carmangay, Alta. Mrs Wood and Mrs Wright, of Peterboro, and Mrs Gribble, of Elderslie, are sisters of deceased, and Peter Porter, of Elderslie, a brother. Ten years ago Mr Porter went west with his daughters and has been living with Mrs Brown during the closing years of his life. Possessed of a strong physical frame, sturdy and independent in thought, with a moral character of sterling worth, Mr Porter served his day and generation faithfully. An honest workman, a devoted husband and father, a faithful friend, he was true to his home, to his church and to the community in which he lived. During his illness he was ever patient and cheerful, looking forward eagerly to the rest which he had so well earned. He took a childlike interest in the observance of his 84th birthday on Sunday and was delighted with the many gifts of flowers brought to him by friends. Sunday was passed in calm, peaceful sleep. At early dawn Monday he awoke and recognized his daughter who had not left his bedside for two days and two nights, and said, "What a beautiful morning." In a few minutes he passed peacefully away. The remains were brought east for burial, being accompanied by Mr and Mrs Brown. As mentioned in last week's issue, the funeral service was held in Knox church, Paisley, and interment was made in Tara cemetery.

Acquitted of Assault

Mrs Ida May Greaves, who was sent up by Magistrate Tolton some weeks ago on a charge of assaulting her husband Ezekiel Greaves of Greenock, with intent to do grievous bodily harm, appeared before Judge Craig at the Court House here on Friday morning last. The testimony of her husband at the preliminary trial was to the effect that his wife had stabbed him in the hand with a butcher knife, while the woman declared that hubby had cut himself trying to grab the knife from her. As the pair have since separated and the wife has been awarded alimony by the court and in the latter trial it developed that the woman had been badly abused, the judge decided on Friday to acquit the accused and dismiss the case. —Herald and Times.

Costly Carelessness

A young farmer walked into a localshoe store one day recently and bought a pair of shoes for which he gave his cheque on a local Bank. The merchant was not acquainted with his customer, and when the Bank officials stated that they had no such account on their books, the merchant came to the conclusion that he had been fleeced and issued a warrant for his arrest. Chief Ferguson found the young man lived in North Brant and went out to arrest him when it was discovered that the whole trouble was due to a bit of carelessness on the part of the farmer, who had a bank account at a neighboring town and neglected to change the headline on the Walkerton cheque. However as a warrant had been issued, it was necessary for him to come to town and to square the thing away. The victim is reported to be a young man of excellent character but it is safe guessing he will not make the same mistake another time.—Telescope.

SUFFERED FROM BACKACHE RHEUMATISM, DROPSY.

Dear Mr. Editor—I wish to tell you of a recent experience I had when suffering from backache, weak back, rheumatism, dropsy, and congestion of the kidneys. I tried a new medicine called "Anuric," which has recently been discovered by Dr. Pierce, of whose medicines and Surgical Institution in Buffalo, N. Y., you have no doubt heard for years. This medicine acted upon me in a wonderful manner. I never have taken any medicine so helpful in such quick time. I do wish anyone in need of such a remedy would give it a trial.

(Signed) G. H. HERR.

NOTE: Folks in town and adjoining counties are delighted with the results they have obtained by using "ANURIC," the newest discovery of Dr. Pierce, who is head of the INVALIDS' HOTEL and SURGICAL INSTITUTE, in Buffalo, N. Y. Those who started the day with a backache, stiff legs, arms and muscles, and an aching head (worn out before the day began because they were in and out of bed half a dozen times at night) are appreciating the perfect rest, comfort and new strength they obtained from Dr. Pierce's Anuric Tablets. To prove that this is a certain uric acid solvent and conquers backache, kidney and bladder diseases and rheumatism, if you've never used the "Anuric," cut this out and send ten cents to Doctor Pierce for a large sample package. This will prove to you that "Anuric" is thirty-seven times more active than lithia in eliminating uric acid—and the most perfect kidney and bladder corrector. If you are a sufferer, go to your best druggist and ask for a 50-cent box of "Anuric." You run no risk for Dr. Pierce's good name stands behind this wonderful new discovery as it has for the past half century for his "Golden Medical Discovery" which makes the blood pure, his "Favorite Prescription" for weak women and "Pleasant Pellets" for liver ills.

How the Huns Were Exposed in the U. S.

Mr. John Rathom's Story to the Press Association

On "Editorial Night" at the Canadian Press Association meeting in Toronto last Thursday, the large audience of newspaper men and others in the Technical School auditorium were treated to one of the most fascinating recitals they have ever listened to. It was the story of how the Providence Journal uncovered the plots of the German ambassadorial schemers. The story is one of the most unique and interesting ever printed and we give the Globe's report in full:

Mr John R Rathom, in a racy, chatty manner, let the light of publicity on several of the German plots whose exposure within the last two years by his newspaper, the Providence Journal, has been the outstanding feature of American journalism as it touches the war. Preliminarily he stated that he had just received a telegram that the city of Providence, whose assessment was only $16,000,000, had that day subscribed $20,000,000 worth of the two billion dollar loan. He then said that the United States was already doing in war preparation much active work. A body of fifty of the leading business men from all over the United States were giving their services at Washington, working sixteen hours a day, to direct various departments, and he stated amid the cheers of the newspapermen, "the United States is in this war to the last dollar and the last drop of blood."

Mr Rathom explained that for years before war was thought of, the Providence Journal had had a "bug" for wireless telegraphy, and had two stations of its own on the Atlantic coast. When war broke out they conceived the idea of tapping Sayville and Nantucket, and in that way, long before any exposures were made in the Journal, they had accumulated evidence of German complicity in mischief making in the United States which would amount to a hundred times more than was already published.

Their chief difficulty was in securing the codes. "We found some of the codes (loud laughter) and we were able in a short time to place our own men in German and Austrian Consulates all over the States and even in the German Embassy itself. All this time we were piling up the evidence against the German diplomatic staff. Still we put nothing in the newspaper. We had enough material in five months to keep us going for twenty-five years.

"We have not printed one-fiftieth of what we secured, but we were very glad, when events turned, to turn the key on the safe in which it is deposited and forget the balance, because the work we tried to do has been accomplished.

"We have been aided in this work by a certain degree of fatuity, by green blubber taking the place of grey matter in the brain which the Lord has seen fit to deposit in the head of every German diplomat. We always found that if we looked long enough into any German scheme we should find a hole in it big enough for a school boy to crawl through." He then mentioned the case of Werner Horn, who tried to blow up the Vanceboro Bridge in New Brunswick, saying that the Providence Journal had information of him and of his plot long before he carried it out.

One interesting feature was that an agent for the newspaper was for several months in the Ambassador's office as assistant secretary, and his identity was not known to Bernstorff until he remained behind on the dock when the Frederick VIII left for Halifax. (Applause). Bernstorff had since written a private letter—which had, of course, been intercepted—to friends in New York saying what he thought of that individual. (Laughter.)

The substitution of a leather bag on one of the overland railways by a man in the service of the Journal enabled them to get from Dr Heinrich Albert a most valuable batch of papers which showed that Sir Roger Casement's effort to land in Ireland and to rouse the Sinn Feiners had been hatched and financed in Germany. Other exposures concerned Wolf von Igel, and Mr Rathom said that only the devotion of sixty to seventy women of Italian nationality had prevented the German ships in New York harbor, including the Vaterland, from being blown up.

For romantic detail, however, none of the adventures equalled that of the girl stenographer who had for some years been employed by the Providence Journal. She had been duly instructed and sent to the German Consulate at Washington, where developments were expected. It fell to her lot to dupe Capt von Papen. A certain box of highly valuable secret documents were being sent from that office. It was the essence of the discovery that the box should be marked.

While the girl was one day casually sitting on the box, then ready for shipment, von Papen, on watch, sat down beside her, asked if he might share her lunch, and made some sentimental advances to the girl. She coquettishly used a large red pencil to draw two hearts on the top of the box, and it was von Papen himself who drew the arrow which pierced both. It was by means of these hearts that the British authorities, when the Oscar II arrived at Falmouth, were enabled at once to pick out that box of valuable documents from over one hundred and fifty similarly consigned.

No 2 Western General Hospital
Creek St, Stockport, Eng
May 22nd, 1917

DEAR BROTHER—I suppose you have been for a long time wanting a description or my tale of the doings we started on April 9th all along the Western Front. Well, it is hard to do considering the number of formidable places that were taken that day. It is hard for you people in Canada to believe the paper reports, no doubt, as every report is painted brighter than it should be or falls down in some detail that spoils the whole report. Since being in hospital I have had time on my hands that I could do nothing else but read and you may wager that it was anything else than the report in the Daily Mail, printed in Paris, of our boys' work, so you will understand that all things you read are not correct as far as detail is concerned. The Vimy Ridge undertaking was commented on by several correspondents and was painted in many bright colors but when you come to know the ground as I did, having put a month of my first life in the trenches there, I don't think any painter or correspondent can really give the boys their due but one who took an actual part in that particular section of the show. There were other sections of the front that the Canadians faced that morning that gave them much trouble but of course none so important as that of Vimy. The people of Canada can be proud of their boys with that undying pride that must live for ages. Their name has been engraved on every hearth stone of France for the work they accomplished Easter Monday. It was here that the French lost thousands of brave men and right back of Vimy is the ruins of Souchez village that will never be forgotten, where women, little children and babies lie unburied in the streets where they were overcome with the terrible gas which was sent over by the Hun. It was also here on this ridge that a division of the British lost two lines of trenches after they relieved the French, one line which was never won back till Easter Monday. You can readily understand now what a stronghold this was and after a year and a half's preparation you can also understand what our boys had to face. This was practicitically the same all along the front on which the Canadians attacked that morning. Fritz held all the bright spots of vantage and had been in these positions for so long that when we have looked over the demolished gun positions and dugouts which were built so strong you wonder how it all was done. It starts you to think of the work you have done and the men who engineered it. How quietly things passed off that used to surprise you for you did not know at the time what you were preparing for. I often look back over the things that were said when we used to go on these all night working parties last winter and in the spring when it was either snowing or raining, and mud that would break the heart of a mule. I am glad now that we were that kind of stuff that never backed down on a job even though we did comment on it heavily. We finished it and they knew who to get when they wanted another such of its kind to be done. Never will I forget that Easter Monday as long as I live. I never want to see another like it down. You can understand what we had to go through to accomplish our task. Can you imagine mud up to your waist? Did you ever see it? Well, we had hundreds of yards of this. Then can you imagine a field with a surface like a lumpy comb, and more mud? This was what our artillery—may they never be surpassed—did to Fritz's lines. You could not actually trace his trenches as they had been levelled and lost to the face of the earth. The only way you would be able to tell there was once a trench running along there was from the ruins of a dug out destroyed by our shells or bombs. Well, I hear they have taken the Canadians back to Ypres again. All due respect to Sir Douglas Haig and his staff, but I think he is asking too much of them. There is a show to come off there but when, I don't know, and I am hoping that they will give some other troops than the Canadians a chance this time. You may not understand this, but if you noticed it is our boys that start everything. It is about time they were letting the Australians win something for themselves. Probably they thought they did wonders when they were reported to have taken Bapaume. Well, don't go away with that idea. It was the British soldiers that took Bapaume and there was not a shot fired. The Australians came up afterwards, after word had been passed down that it was evacuated. I am only telling this to show you how troops lose their just dues in reports through the papers. Now I must close. I am well to-day and hope to be soon out walking around the streets in the afternoons. Trusting you all are enjoying good health, and with love and best remembrances to all.

NORMAN

A Great English Estate at Witley

Sergt Norman Allen, of the Dental Corps, writes home from Witley Camp, under date of May 13: Your immense parcel of rocks, cheese, chocolate, potatoes and sugar arrived in splendid condition, as well as the jar of butter which you so thoughtfully sent. You apparently are aware of the fact that there is quite a shortage of sugar in this country. We get very good meals, however. We are attached to the 202nd (Edmonton) Batt sergeants' mess. Sergt Cross is over here with us now. He will be going across to France shortly with the 11th Field Ambulance in the Fifth Canadian Division. Army life seems to have agreed with him.

I was fortunate enough to obtain a special permit for myself and two other sergeants to go through Lord Farrer's estate the other day. I still have the permit and expect to make use of it again. I had obtained permission to be off parade in the afternoon, so Sergt Cross, Sergt McDonald and I took a trip through the estate. It has a high brick wall around the central section and is forbidden ground to Canadians now, owing to the wanton destructiveness of a few Englishmen in the Canadian army. It is wonderful beyond description. I should be quite content to live in the stables, as they are finished with teak wood from the tropics and gun metal brass, with floors of small inlaid Scottish tile. The harness is magnificent. The stables are built in a rectangular formation around a sort of court yard in the centre. This building includes the garage. I was not in the house, but the exterior is grand. Its site is a terraced hill facing a little lake with a surface like a mirror. This lake connects with a larger one farther up. One wing of the house is entirely glass, the central part is white stone and the other wing ends in gables with dark wooden lattice work on them. The terraces extend from the house down to the lake. I think I mentioned on the back of one of the snaps I sent you about the room below the lake with the glass domes through which one can look up into the water. Out in the lake there are some statues of men and horses. At one end the lake flows through what is called the Dolphin's Head into a small creek which is its outlet. This dolphin is a huge stone reproduction of a dolphin twenty or thirty feet in length. It was brought up from the south of England by road, hauled by a specially designed steam tractor. It is so massive that in several places the road had to be excavated to allow the dolphin to pass under bridges. The flowers, gardens, shrubbery, hothouses and walks are ideal. The poultry farm and the runs for the cattle and sheep are in keeping with the rest of the estate. The lakes are teeming with wild water fowl of many species and the fish may be seen jumping every few minutes. Pheasants roam about all over the estate, and I should not neglect to mention the deer which form an important part of the populace. The estate comprises an area of over three thousand acres and extends from Witley to Hazelmere. It is the nearest approach to Paradise I have yet seen, and would have been a suitable home for the Lotus Eaters.

Lord Pirrie did not inherit his title, but was created a baron about eight years ago for services rendered. He is an Irishman and used to live in Belfast. He is one of the White Star Line kings.

The estate was built by Whittaker Wright, a famous swindler and stock promoter who committed suicide in the dock after being sentenced to a long penal servitude.

Taking Sniper's Course

Sergt Emerson Pearce, in his last letter home, says: I am taking the sniper's course, or starting upon it. I can't say how they knew I used to shoot, but the captain told me he wanted me to take the course, and I agreed, as it gets one away from the roaring of the cannon for three or four weeks, thus giving a chap a chance to think again. I just ran across a little bit of poetry which I thought you might like, so am going to write it down:

ONLY A LETTER

You are looking tired and weary, and you
feel you can't be cheery,
And from your dirty trench you cannot
roam;
There's a sight too cheer your heart, makes
all care and pain depart—
A letter from the dear old folks at home.

Maybe from your brother, or your old,
grey-haired mother,
Or a sweetheart true who sends a welcome line;
But it sets your heart at ease, when that
message o'er the seas
Just tells you all the folks at home are
fine.

There's another rule to tell, and it does
not sound so well,
It seems to give your heart a sudden
wrench:
The mail is given out, and you find without
a doubt,
That you are the only one forgotten in
the bunch.

In your throat a lump will rise, the tears
start to your eyes,
You wonder why on earth they do not
write.
And it makes you sick and glum, and its
pity help the Hun
Who meets you in the next old bayonet
fight.

The smiling faces meet you, and the
hearty laughter greets you,
When all discuss the news from their
home town.
How it makes a man feel small, if he's
cared for not at all,
And no one cares a hang if he goes
down.

Show him you really care, and when
you've time to spare,
Just drop a line to him who bears the
brunt.
It's not a great deal to ask, and will ease
his heavy task.
There's some one waits your letters at
the front.

This is just a little causual poetry, yet
it gives you an idea how the boys enjoy
a letter over here.

HIS MOTHER

She is sitting by the window in her chair,
And the sunlight drops a blessing on her
hair.
Gently rocking to and fro,
She is singing soft and low,
The songs we learned in childhood, long
ago.

The slender hands, with shining needles
ply,
Are swift and sure; nor does she e'er forget
To weave therewith a prayer
For the soldier boy 'Somewhere,'
That God may have him in His loving
care.

And that soldier boy in far-off warring
France
Stands waiting for the order to advance,
When his mother's face shows
bright
In the horror of the fight—
"Be strong, my son, for God and for the
right!"

Oh, splendid mother of a splendid son,
A lowly task was yours but greatly done;
Your own soul shone so true
He could be so son to you,
Who failed or faltered when the bugles
blew.

Sitting knitting by the window in her
chair,
The sunlight sheds a glory on her hair.
And her features, worn and fine,
With a royal courage shine,
Radiant sympathy and tenderness divine.

—Nina Moore Jamieson

Shoes Must "Make Good"

The same as men.

There is a competition among shoes—or rather the manufacturers — that is pretty good for you people.

It shoes you and your family with the best shoes in the world without it costing you a cent more than it has to.

Of course you expect us retailers to gather these shoes that are the winners in this war of competition, and **that is what this store is constantly doing.**

Our claim is that every time you have a shoe need you ought in justice to yourself let us supply it.

Our stock exemplifies all the prevalent shoe newness. It contains the latest shoe thought of the leading manufacturers.

The AUTOMOBILE

Storage Battery Problems.

A surprising number of motorists taking out their first car haven't the slightest idea where their storage battery is located. Some are entirely unaware of the fact that they have a battery and that the operation of starter and lights—and in most cases ignition—is wholly dependent upon it and its well being.

The result is that the battery is ignored and often times harmfully abused. Not until it runs down and fails to do its work does the owner begin to investigate.

"Most battery troubles that come to our attention," says an expert, "are due to lack of knowledge of the function of the storage battery and the attention it requires.

"If every motorist could realize that a storage battery is a perishable article which is highly sensitive to abuse and neglect a great deal of inconvenience and expense would be saved. In this respect the battery is no different than any other part of the motor car.

"Just as driving over glass and nails abuses tires and running a motor without oil will burn out the bearings, so will lack of care and attention bring the storage battery to grief.

"The average car owner knows what constitutes tire and motor abuses and he avoids them. He would do well to find out what abuses his battery, what attention it requires and why—to get acquainted with it and its operation. First season motorists particularly would save themselves considerable expense and annoyance by acquainting themselves at once with their storage battery and its needs."

Wash The Car Properly.

Motorists who buy fine cars usually take pride in their appearance, particularly in preserving the fine finish of the body.

"Proper washing of the car will do more to preserve the finish and appearance than anything else," says the manager of a motor car company.

"It is just as easy to wash the car properly as not. All the mud should be thoroughly softened by a gentle stream of clear cold water, which also will wash away all the dust. Then all the grease and oil spots should be removed with a piece of waste saturated in gasoline. The care should then be rubbed gently with a clean sponge, using an abundance of clean cold water, until all mud is removed. The car should be rubbed dry with gentle strokes of the chamois, wringing it out as the water is absorbed.

"The object is to remove the dust and mud and leave the surface dry and clean with just as little scratching and rubbing on the finish as possible. Rubbing should be done in straight lines rather than in circles. To prevent water drying and spotting it is well to clean one panel at a time."

THE FUTURE OF FLYING.

Trips in Aeroplanes Will at no Distant Future Become Popular.

Mr. Orville Wright, the American expert, predicts that the aeroplane will play a great part in the new order of things that will follow the war. He believes that it will be in great demand whenever it is necessary to travel at great speed. By aeroplane it will be possible to go from New York to Chicago in eight or ten hours instead of in twenty, as at present; and to San Francisco in two days. Furthermore, it will be useful in transporting small packages and very valuable freight to remote regions that the railway cannot reach. There are thousands of such places in the West, in Alaska, in South America and in Africa. Mr. Wright thinks, too, that flying will become a popular sport, the greatest yet devised. He says: "It is far more exhilarating and delightful than the automobile for high speed, and far safer. The time is not far distant when people will take their holiday spins in their aeroplanes precisely as they do now in their automobiles. Long tours in the air will offer greater relaxation from the daily grind than long railway journeys. People need only recover from the foolish impression that it is a dangerous sport, instead of being, when adopted by rational persons, one of the safest. It is also far more comfortable. The driver of an automobile, even under the most favorable circumstances, lives at a constant nerve tension. He must keep always on the lookout for obstructions in the road, for other automobiles, and for sudden emergencies. A long drive is therefore likely to be an exhausting operation. Now, the aeroplane has a great future for sporting purposes, because this element of nerve tension is absent. The driver enjoys the proceeding as much as his passengers, and probably more. He can make mistakes, seem lapse in his attention, without any serious consequences. Winds no longer terrorize the airman. Newspaper readers will remember that, ten years ago, my brother and I carefully selected the days in which we made our flights. Some days, when there was too much wind, we would not fly at all. But we have learned how to fly, and even strong gales do not now frighten the flyer. He goes up at any time except in the very bad days. The only wind conditions that deter him now are the kind known as 'cyclonic,' when there are great twists in the atmosphere. Under these circumstances he does not fly."

Every year the farmer wonders how the pasture is going to hold out. It is a pretty safe guess that it will fall off about August. Be ready for it. Don't overload the pastures.

MILITARY PUNISHMENT.

Old Martial Laws Not Adaptable to Changed Conditions.

The changed conditions of warfare have developed situations to which old martial laws are not adaptable.

Under the old system the suspension of sentence for first offences was not obligatory, but was simply a matter of discretion on the part of the general commanding. Amendments passed by Parliament in the course of the present war make such extensions of sentence obligatory for all cases.

Nearly two-thirds of the court-martials at the front and immediately behind the front have developed from either drunkenness or fear, sometimes from both, according to Monsieur Rene de Planhol, who has had more than two years' experience as counsel for the defence of soldiers.

Cases of desertion with downright fear as the cause are occasionally reported, and very few soldiers are totally exempt from fear. Men who have fought bravely in numerous actions, Mon. de Planhol says, finally give way to what is called "nerve wear"; their moral courage is no longer sufficient to overcome physical fear, and they run away from danger. Their number, though, is small in comparison with those who forget their duty in the stupefaction of excessive drinking. Even these, considering the millions of men mobilized, are so small a percentage as to constitute no reflection on the army as a whole.

A frequent and effective means of defence invoked by counsel for accused soldiers is the citation of gallant conduct on the battlefield. It often happens that a soldier refractory to army discipline is a great fighter, and between court martials accumulates honors and decorations that it is difficult to ignore.

A much disputed point is: When has an infraction of discipline or a crime been committed "in the presence of the enemy" an aggravating circumstance under military jurisprudence? In trench warfare the old definitions of "presence of the enemy" have become obsolete; great latitude is now given for leniency on this point, and it is exercised in all but the most flagrant cases.

We all make mistakes. With so many problems in farm work there are sure to be some failures. And most of us are so thoroughly human that we hate to acknowledge our mistakes. A successful farmer says: "I have learned more from my neighbors' failures than from their successes; and I have profited most of all from my own mistakes—by studying out the causes, tracing out their effect, and avoiding their repetition."

JEAN LEMORDANT, FRENCH PATRIOT

THE WONDERFUL STORY OF HIS SELF-SACRIFICE.

Breton Artist Who Gave His Sight For France Was a Pacifist Before the War.

Jean Julien Lemordant was born in Brittany and is a true Breton type. He began his studies in painting at the School of Fine Arts of Rennes and then moved to the Beaux Arts in Paris, where he worked in Bonnat's studio. After ten years of hard work, his success as an artist was assured. Then came the war.

Lemordant was a Socialist, a passionate pacifist, a fervent anti-militarist and deeply interested in the German decorative art movement. But the conviction that right and justice were on his country's side sent him to the front. His age, then 25, placed him among the territorial formations, that is left him in the rear to work on some such job as a food convoy, but on August 7, 1914, he went straight to the Mayor of Rennes and pleaded to be allowed to leave with the active army. At the last moment, the Forty-first Infantry Regiment was found to be wanting a sergeant and Lemordant was allowed to go.

Within a fortnight he was taking part in the battle of Charleroi. During the retreat, when companies had lost their officers and everything was confusion, Lemordant, now sergeant-major, stopped a hundred men of various units, including Algerian sharpshooters, as they fled and led them forward to a sunken road from which as from a trench they checked the enemy's onrush all the afternoon. A shell exploded near him, killing two of his men and wounding him in the right shoulder, which still remains stiff as a result.

An Intrepid Soldier.

Later that evening he organized a counter attack with a handful of men which enabled a battalion to withdraw without severe losses. The next day he was made a Second Lieutenant.

The retreat to the Marne followed. The artist was wounded again during the battle but refused to be sent to a hospital. He followed the retreating Germans and was wounded a third time, at Craonne, a shell splinter lodging in the vertebral column. He kept with his regiment and during a bayonet charge in the battle of the Yser received five wounds at once—on the left arm, the top of the head, the temple, the body and the right leg. He refused to be carried off the field and, supported by a soldier, he led the charge and was struck by a bullet under the right eye, crushing his forehead bone.

He felt as if his head had burst and as if both eyes had left their sockets. For four days and nights he lay where he fell, two days unconscious and then two days fully conscious, enduring the tortures of thirst. A blow from the butt of a gun roused him from a fainting spell. It was dealt by German soldiers searching for the dead.

All was dark around him. He could hear moans and groans of the wounded and he dragged himself toward them and asked why the night was so long. He was told it was broad daylight. Then he understood.

"I had thought of everything," he has since said: "of death and terrible wounds, but not of that."

Picked up by German stretcher bearers, he was carried off and after a terrible voyage reached a hospital in Bavaria. His condition improved, his eyes, one of which had jumped from the socket and the other had been driven in by a piece of bone from his forehead, had been placed in position again and he began to see. He could even trace lines and decipher very large letters.

A Sight of Beloved France.

His Breton spirit remained unbroken. Twice he tried to escape and was placed in a fortress. A third attempt, only foiled when he had reached the frontier, caused him to be sentenced to a reprisals camp. Then, to his despair, he again lost his sight.

At the reprisals camp his blindness caused him to be placed among the severely wounded who are allowed to be exchanged. He was soon allowed to go to Switzerland, where he was nursed for some weeks.

A Great Remedy

Dr. HENDERSON'S Herb Treatment, in tablet form, will cure rheumatism, constipation, eczema, stomach trouble, kidney and liver trouble; three month's treatment with our certified guarantee, for one dollar, postpaid. Henderson Herb Co., Dept. W., 173 Spadina Ave., Toronto.

At last the moment came when he crossed the frontier back into France. He awaited the moment with a kind of religious emotion. Blind, with two ribs broken, an injured knee and fevered temples, he expected a miracle, a miracle that was to come from himself, from his own mental powers.

He asked the Red Cross nurses on the train to tell him the exact minute that he crossed the line. He set his will, his determined Breton will, to see the frontier, to see something of it, a hedge, a rail, a stone, a bunch of grass. He was led to the door of the car at the right moment and he braved every muscle, put forth all his will power. The frontier passed, he fell in a deep faint, his miracle had not come.

A war correspondent in Paris met him recently in the Guerault Galleries. The Legion of Honor and War Cross were on his breast. On the walls around him were some 300 of his works. The President of the Republic had just left him, after buying one of his pictures.

But his eyes were bandaged and the most that he can hope for is that some day he may be able to distinguish day from night. He speaks without bitterness and still has words of praise for that which he admired in German art in earlier days.

THE KAISER'S WIFE.

Why Does Not the German Empress Protest Against Brutalities?

"The Kaiserin, so far as is known, has raised no womanly, wifely, motherly voice in protest against the horrors in Belgium nor the recent greater horrors in Northern France," says Auguste Rodin, the famous French sculptor. "I am sure I express the unexpressed collective thought of the women of the allied nations when I say they must vision the silent attitude of the German Empress with loathing, in the light of that which has occurred in Belgium and evacuated territory in northern France. For this imperial wife of an imperial monster has raised no dissenting voice against the horrors I have mentioned. As a wife, as a mother, what can be her thoughts? She is represented as imbued with Christian sentiments, a devout and fervent Christian who, according to reports, prays earnestly to the Almighty in favor of her country and her people. If so, what must pass through her mind at the treatment of French wives and mothers of the Somme department by the 'soldiers' who serve her husband and whose acts of violence and vandalism are publicly proclaimed by him as 'glories to the arms of Germany'?

"As wives and guardians of the sacredness of homes, the women of the Allies must have collectively classified the German Empress in the same category all men to-day classify her imperial husband.

"How can she, mother and grandmother, have remained silent at the tearing away from their mothers and grandmothers of more than 400 young French women to serve as slaves, or for unmentionable purposes, to the uniformed officer barbarians of the German army?

"No French woman, were her husband the Emperor of all Asia, would have remained silent under like circumstance, and thus given tacit approval to the practices of her Attila-like husband and his Attila-like followers, who disgrace civilization."

THE SWEETEST WORD.

There are soft words murmured by dear, dear lips,
Far richer than any other;
But the sweetest word that the earth hath heard
Is the blessed name of "Mother."

O magical word! may it never die
From the lips that love to speak it;
Nor melt away from the trusting hearts
That even would break to keep it.

Was there ever a name that lived like this?
Will there ever be such another?
The angels have reared in heaven a shrine
To the holy name of "Mother."

BRITISH LAURELS WON BY EX-BOER

GEN. SMUTS NOW A STAUNCH IMPERIALIST.

Tragedy of Former Foe of England Foiled Germans in South Africa.

Among the Britishers of to-day who are earning the right to be classed as possessing the imperial mind, no one has come to the front more rapidly in the last half year than Gen. Jan Christian Smuts, Minister of Defence of the Union of South Africa, and at present the representative of the South African commonwealth in the imperial conference in London.

The following is a very brief epitome of the record of the man, who is now barely 47 years old, has the better part of his career ahead of him, and begins to be regarded as one of the coming figures of the empire and, indeed, of the world.

Born in Johannesburg in 1870.

Educated in South Africa and at Christ's College, Cambridge, where he made a really distinguished scholastic record and earned the highest honors.

Practised law with eminent success in South Africa.

Wrote extensively on a variety of public questions.

Entered politics as a young man, and was an unfailing supporter of the Boer cause when the South African war broke out.

Loyal British Imperialist.

Rose to distinction as one of the military figures in that struggle, and to more distinction as one of the first men to recognize, after the Boer cause had been lost, that destiny and common sense summoned the real intelligence of the Dutch States to accept the situation and to become the right kind of citizens of the British Empire.

Was one of the leading figures in framing the new scheme of government for the Union of South Africa, under which within a few years after the Boers had been conquered Great Britain turned over to them, as the citizens of a British dominion, the complete control of their own affairs.

Became in the government of President Botha of the South Africa Union the right hand of the President in the direction of domestic affairs.

Foiled German Intrigue.

At the beginning of the present war immediately took a leading part in making certain that the South African nation should not fall into the trap which the Germans thought had been set for it and revolt against its allegiance to the British Empire.

Became the Minister of National

Gen. Jan Christian Smuts.

Defence and as such directed the campaign in which the German colonies were seized by the South African forces.

Sent to London as one of South Africa's representative for the purpose of imperial consideration of imperial problems presented by the war.

Smuts is one of the men who have had time in spite of the stress of war to shadow forth an outline of the vast sequences of this era. It is a vision of what the British Empire and the reunion of the Anglo-Saxon races means to the world.

Democracy vs. Autocracy.

"This," said Gen. Smuts in one of his recent speeches, "is the battle of freemen against bondmen. Before the war it was bruited abroad that this nation had become corrupted by wealth that it was growing soft and that the day of trial would find it wanting; but when the blow fell it showed what freemen could do. It showed what a free nation could do when it was fed on the stuff of freedom. To-day it had become the financial, the moral and, in a sense, the military mainstay of the Allies.

"Looking at this nation as it stands before the world to-day," he continued, "I feel that liberty, like wisdom, is once more justified of her children. The great British commonwealth of nations overseas did not always want this bloodshed and the terror of militarism always over shadowing them. They wanted to bend all their energies and resources to the building up of their nations, and that could not be done when they had to be prepared to meet the enemy at every point. Slowly but surely America has come to realize that this struggle was the old struggle for which she had fought in former wars. This was once more George Washington against George III. In other words, the issue of freedom against slavery, of free government against military despotism.

Battle for Freedom.

"In my day and in my country," added Gen. Smuts, "I have seen freedom go under, but I have seen it rise again. I have seen that small people of mine, a beaten people, rise again and fighting for the same freedom again, but now no longer for themselves but for the whole of the rest of the world, and the record of their efforts you will find written all over Africa south of the equator."

This is the sort of appeal that Smuts and men of his mind made in South Africa at the beginning of the war. These men realize that British institutions, though indeed forced upon them unwillingly, had been really a blessing. In truth there are no more loyal British imperialists in the empire now than these men of South Africa, who fought under Kruger and Botha in the South African war. They were won in the midst of the bitterness of their defeat by the generosity which handed their country back to them and gave them a measure of freedom and of real control and opportunity that they had never enjoyed and could not have hoped for under the narrow and almost despotic reign of Kruger an his burghers.

HIS MOTHER

How proud I was when he marched away
On that first great day of school,
Though my heart was sick for his prattling play,
And the touch of his fingers cool;
I longed to keep him and hold him,
As only a mother can,
But I braced my will, and told him,
"Be mother's brave little man"

I was prouder still when he marched away
To the "job" he seized with joy,
Though I knew the success of that busy day
Meant the loss of my darling boy.
But who, with the great world calling,
May hinder creation's plan.
So I kept my tears from falling,
And murmured, "Be brave, a man!"

But proudest of all when he marched away
To the colors-call was I,
Though I knew that the lad who left so gay
Was bidding a long good-by;
But love both stirred and stilled me
As one of the fighting clan—
He smiled with a look that thrilled me,
Always and forever a man!

Stop, Look and Listen.

Every year about 5,000 boys, girls and grown folks lose their lives taking risks in crossing railroad tracks. Start a campaign to teach children the danger of taking short cuts and walking and playing on the tracks. Lives are too valuable to be thrown away. Agree now to observe these rules: Never use railroad tracks for highways and cross-cuts. Stop, look and listen at all crossings. Never steal a ride, and don't jump on and off trains while they are moving. Never go around or under the safety gates when they are down. Don't use railroad bridges and trestles for short cuts. Keep out of railroad yards and don't play or loiter about the railroad stations. It isn't brave to take risks.

Hope for the best and make the best of what you get.

The Doings of the Duffs.

When You Eat Bread you are entitled to everything in the whole wheat grain. Dr. Wiley says: "Wheat is a complete food containing all the elements necessary for human nutrition." But be sure you get the whole wheat in a digestible form. **Shredded Wheat Biscuit** is whole wheat made digestible by steam-cooking, shredding and baking—the best process ever devised for preparing the whole wheat grain for the human stomach. Two or three of these crisp little loaves of baked whole wheat with milk and berries, make a delicious nourishing meal. Made in Canada.

AIR SUPREMACY.

Allied Operations Conducted Mostly Beyond German Lines.

How the British and French are maintaining practical control of the air over the western battle front was graphically described lately by Major L. W. B. Rees of the British flying corps, who himself once routed single-handed a squadron of ten German raiders, and is one of the few Englishmen to receive both the Victoria Cross and the Military Cross.

While the Allies' operations are conducted almost entirely beyond the German lines, the Major said, the German machines now cross the Allied lines only rarely in raiding parties. The British fly on three levels with three kinds of machines. The lowest are artillery directors, who circle about in big figure eights about 6,000 feet above the enemy trenches and flash back directions to the British gunners by wireless. Above them, at 10,000 feet, are the heavy fighters with two men to a machine and able to keep the air for four hours at a speed of 110 miles per hour. At a height of 15,000 feet are the single-man light fighters, capable of 130 miles an hour and of ascending the first 10 000 feet in ten minutes.

The Germans have given up all attempts to guide their artillery by airplane and seek only to smash up the allied reconnaissance over their lines. Their machines are largely of one class, therefore, fast, heavy fighters, generally biplanes, which are continually seeking to swoop down on the British artillery observers and send them to the ground before the British fighting patrols can reach them. Recently, however, said Major Rees, the Germans have developed another light fighting machine, which by climbing to 20,000 feet seeks to overtop the British light fighters and clear them out.

British losses have been running recently as high as thirty to forty machines a day, because of the extraordinary chances taken over the enemy's lines. As a rule they go out in squadrons of six, divided into three pairs and prepared to swoop down in unison on any German machine that may come up.

Major Reese gave it as his opinion that the British had defeated the Germans in every way in the air and deprived them of invaluable reconnoissance power. The Zeppelin is now practically useless as a military weapon.

Germany's whole artillery observation is conducted by means of captive balloons. A short time ago the British and French made a combined attack at 4 p.m. and knocked down every captive balloon from the North Sea to Switzerland. Not for three days did another balloon appear in sight.

England, at the beginning of the war, the Major said, was supposed to have a squadron of twelve machines for each of the six army divisions, but as a matter of fact she had only three. The service was very chaotic, with the army and navy bidding against each other, until the whole air service was put under the Air Board, composed of a neutral President, an army and a navy official, and a member of the Munitions Board.

Keep Climbing.

Although your chance in life seems small,
Rough the path and dark,
Don't worry that you're going to fall,
But get a firmer start.

Slowly trudge on toward the goal,
Keep headed the right way,
Remember you can never win
Life's battle in a day.

Like climbing up a ladder,
Ascending step by step,
Keep your aim the highest,
Lest your mission you forget.

When at last the top is gained
Thank God the task is done;
Look back upon the steps you've climbed,
The battle nobly won.

THIN-BLOODED MEN AND WOMEN

Need the Rich, Red Blood Dr. Williams' Pink Pills Actually Make.

Thin-blooded people do not remain so from choice but from indifference, in some cases from despair. People who are pale, languid, with palpitation of the heart, some difficulty in breathing and a tendency to be easily tired are suffering from thin blood. Themoned only the resolution to take the right treatment and stick to it until cured. The remedy that can be relied upon is Dr. Williams Pink Pills for Pale People. With every dose they make new blood, and new blood means health and strength. The red cheeks, good appetite, increased weight and strength that follow the use of these pills prove their great value to thin-blooded people. Here is an example: Mrs. J. McDonald, Jr., Hay, Ont., says: "I honestly believe Dr. Williams Pink Pills saved my life. Some years ago I had anemia, and as I did not realize the seriousness of the trouble I soon became a complete wreck. I got so weak I could hardly walk. I neither ate nor slept well, and could not go up stairs without stopping to rest. At times I had an almost unbearable pain in my back and would have to remain in bed. I suffered almost constantly from a dull headache, and when sweeping if I would stoop to pick up anything I would get so dizzy that I would have to catch hold of something to keep from falling. At times my heart would beat so fast that I would have a smothering sensation. My eyes were sunken and my hands and limbs would be swollen in the mornings. I tried several kinds of medicine without benefit and my friends thought I would not recover. Then I began taking Dr. Williams' Pink Pills, and before long could see and feel that they were helping me. I gladly continued the use of the pills until I was completely cured and I cannot say enough in their praise, and I strongly recommend them to all run down girls and women."

You can get these pills through any dealer in medicine, or by mail at 50 cents a box or six boxes for $2.50 from The Dr. Williams' Medicine Co., Brockville, Ont.

HELPFUL MAXIMS.

They Point Unerringly the Pathway to True Success in Life.

Rely upon your own energies and do not wait for or depend on other people.

Cling with all your might to your own highest ideals, and do not be led astray by such vulgar aims as wealth, position, popularity.

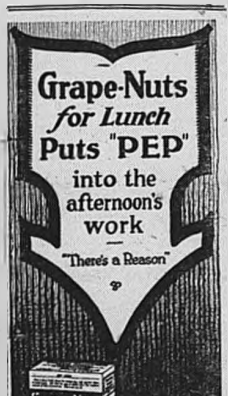
Your worth consists in what you are, not in what you have. What you are will show in what you do.

Never fret, repine, or envy. Do not make yourself unhappy by comparing your circumstances with those of more fortunate people; but make the most of the opportunities you have.

Associate with the noblest people you can find; read the best books; live with the mighty. But learn to be happy alone.

If a thousand plans fail, be not disheartened. As long as your purposes are right, you have not failed.

Examine yourself every night, and see whether you have progressed in knowledge, sympathy, and helpfulness during the day. Count every day a loss in which no progress has been made.



Let not your goodness be professional, but let it be simple, natural outcome of your character. Therefore cultivate character.

When in doubt how to act, ask yourself. What does nobility command? Be on good terms with yourself.

Give whatever countenance and help you can to every movement and institution that is working for good. Be not sectarian.

Went Him One Better.

"I love you very much, papa," said four year-old Edna, as she climbed on her father's knee. "I love you, dear, when you are a good girl," replied her father. "But, papa," said Edna, "I love you even when you ain't so good!"

A Summer Gown

Dainty and airy is a graduation frock of sheer white organdy. The surplice waist and bouffant effect of the skirt are smartly up to date. The edge of the sleeves and the surplice fronts are trimmed with a narrow pointed lace. A scarf of tulle gives additional airiness to the frock. McCall Pattern No. 7752, Misses' Dress; suitable for small women; in 4 sizes; 14 to 20 years. Price, 20 cents.

These patterns may be obtained from your local McCall dealer, or from the McCall Co., 70 Bond St., Toronto, Dept. W.

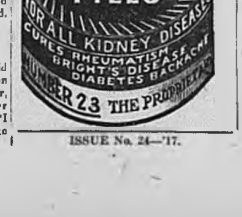
MONEY ORDERS.

DOMINION Express Money Orders are on sale in five thousand offices throughout Canada.



To Make Thin Sticks.

Boys who make thin sticks for arrows, kites, etc., as well as the mechanic, can make good use of the following suggestion: The difficulty of handling thin strips while planing them may be overcome by setting the strip in the groove of a piece of flooring, clamped in a vise. A peg or nail is driven into the groove and acts as a stop for the end of the strip.

MINARD'S LINIMENT is the only Liniment asked for at my store and the only one we keep for sale.
All the people use it.
HARLIN FULTON.
Pleasant Bay, C. B.

Getting Used To It.

The death rate from wounds in the war is less than one-half as great as it was a year ago. Dr. Jacques Bertillion medical statistician in the French army, declares that by hardship and exposure the men have become so toughened that they can now stand twice as much as they could last year. Then forty-five out of every 100 wounded died, while now less than twenty succumb.

Praise For Canadians.

Lieut.-General Sir Julian Byng, commanding the Canadian army corps, has issued an order heartily congratulating the officers and men in his command for their brilliant work, since the inauguration of the Vimy Ridge offensive, April 9th, declaring that these successes could be obtained only by troops whose courage, discipline and initiative stand pre-eminent. Between the Vimy Ridge capture and the taking of Fresnoy, says Sir Julian, eight German divisions have been met and defeated by the Canadians. Five thousand prisoners have been captured by the Canadians, 65 big guns and howitzers, as well as 220 machine guns and mortars. Sir Julian predicts a continuance of these potent successes by Canadians.

A PERFECT MEDICINE FOR LITTLE ONES

Baby's Own Tablets is the ideal medicine for little ones. They regulate the bowels and stomach; break up colds; cure constipation and indigestion; expel worms and make teething easy. They are guaranteed to be absolutely free from injurious drugs and may be given to the youngest child with perfect safety. Concerning them Mrs. T. M. Forknall, Mission City, B.C., writes: "I have used Baby's Own Tablets for my three little ones and have found them the best medicine a mother can give her children." The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams Medicine Co., Brockville, Ont.

When rugs first came to England they were not employed as floor coverings. Straw, sand or dried rushes served in that capacity. The rugs were used as handsome coverings for beds or tables. Thus arose the familiar expression "on the carpet," inferring some question laid upon the table for discussion.

Minard's Liniment used by Physicians.

"Mother" said an Irish youngster, "won't you give me my candy now?" "Whist!" exclaimed the mother, "didn't I tell ye I'd give ye none at all if ye didn't kape quiet?" "Yis, mum." "Well, the longer ye kape quiet the sooner ye'll get it."

WOMEN! IT IS MAGIC! LIFT OUT ANY CORN

Apply a few drops then lift corns or calluses off with fingers—no pain.

Just think! You can drop off any corn or callus without pain or soreness.

A Cincinnati man discovered this ether compound and named it Freezone. Any druggist will sell a tiny bottle of Freezone, like here shown, for very little cost. You apply a few drops directly upon a tender corn or callus. Instantly the soreness disappears, then shortly you will find the corn or callus so loose that you can lift it right off.

Freezone is wonderful. It dries instantly. It doesn't eat away the corn or callus, but shrivels it up without even irritating the surrounding skin.

Hard, soft or corns between the toes, as well as painful calluses, lift right off. There is no pain before or afterwards. If your druggist hasn't Freezone, tell him to order a small bottle for you from his wholesale drug house.

Praise Farms.

All the Western Canadian Provinces show large increases in the number of live stock raised in 1916 as compared with 1913, the year previous to the war. The increase in the number of sheep is one of the outstanding features of the official report. Many of the smaller farms of the West have started flocks of sheep, having found that the climate is very suitable for them, provided a certain amount of shelter be supplied during the short period when the weather might otherwise be too severe. There are numerous large flocks in the West, and the success which the owners of these have experienced has encouraged the smaller farmers to follow their example. There are 2,048,354 cattle in the three Western Provinces, 566,209 being milch cows and the remainder beef and other cattle. This shows an increase of 15 per cent. over 1913.

WOMAN NOW IN PERFECT HEALTH

What Came From Reading a Pinkham Advertisement.

Paterson, N. J.—"I thank you for the Lydia E. Pinkham remedies as they have made me well and healthy. Sometime ago I felt so rundown, had pains in my back and side, was very irregular, tired, nervous, had such bad dreams, did not feel like eating and had short breath. I read your advertisement in the newspapers and decided to try a bottle of Lydia E. Pinkham's Vegetable Compound. It worked from the first bottle, so I took a second and a third, also a bottle of Lydia E. Pinkham's Blood Purifier, and now I am just as well as any other woman. I advise every woman, single or married, who is troubled with any of the aforesaid ailments, to try your wonderful Vegetable Compound and Blood Purifier and I am sure they will help her to get rid of her troubles as they did me."—Mrs. Elsie L. Van Pelt-Sande, 36 No. York St., Paterson, N. J.

Write the Lydia E. Pinkham Medicine Co., (confidential) Lynn, Mass., if you need special advice.

Has been Canada's favorite yeast for more than forty years.

Doctors and Eye Specialists Agree That Bon-Opto Strengthens Eyesight 50% In a Week's Time In Many Instances

A Free Prescription You Can Have Filled and Use at Home.

Boston, Mass.—Victims of eye strain and other eye weaknesses, and those who wear glasses, will be glad to learn that Doctors and Eye Specialists now agree there is real hope and help for them. Many whose eyes were failing say they have had their eyes restored and can now read without glasses after they have thrown them away. One man says, after using it: "Could not see to read at all. Now I can read everything without my glasses, and my eyes do not hurt any more. At night they would pain dreadfully. Now they feel fine all the time. It was like a miracle to me." A lady who used it says: "The atmosphere seemed hazy with or without glasses, but after using this prescription for fifteen days everything seems clear. I can read even fine print without glasses." Another who used it says: "I was bothered with eye strain caused by overworked, tired eyes which induced fierce headaches. I have worn glasses for several years, both for distance and work, and without them I could not read my own name on the envelope or the typewriting on the machine before me. I can do both now, and have discarded my long distance glasses altogether. I can count the flattering praises on the trees across the street now, which for several years have looked like a dim green blur to me. I cannot express my joy at what it has done for me."

It is believed that thousands who wear glasses can now discard them in a reasonable time, and multitudes more will be able to strengthen their eyes so as to be spared the trouble and expense of ever getting glasses.

Dr. Bock, an eye specialist of nearly twenty years practice, says: "A patient came to me who was suffering from Blepharitis Marginalis with all its concomitant symptoms, as morning agglutination of the lids, chronic conjunctivitis and ophthorn. Her eyes when not congested had the dull, suffused expression common to such cases, leaving out of her medicine a friend suggested Bon-Opto. She used this treatment and not only overcame her distressing condition, but, strange and amazing as it may seem, so strengthened her eyesight that she was able to dispense with her distance glasses and now reads fine print and reads left her. In this instance I should say her eyesight was restored 100%. I have since verified the efficacy of this treatment in a number of cases and have seen the eyesight improve from 20 to 70 per cent in a remarkably short time. I can say it is the most quickly acting any other remedy I have prescribed for the eyes."

Dr. Smith, an oculist of wide experience, says: "I have treated in private practice a number of serious ophthalmic diseases, and was not able to report ultimate recovery in both acute and chronic cases. Mr. B. came to my office suffering with an infected eye. The condition was so serious that an operation for enucleation seemed imperative. Before resorting to the operative treatment I prescribed Bon-Opto and in 24 hours the condition had lessened, inflammatory symptoms began to subside, and in seven days the eye was cured and retained its normal vision. Another case of extreme convergent strabismus (cross eyes) escapes the surgeon's knife by the timely use of your collyrium. The tightened external muscles yielded to the soothing and anodyne effects of Bon-Opto. I always instil Bon-Opto after removal of foreign bodies and employ it locally to all burns, ulcers and specks on the eyeball or the lids for its therapeutic effect. By cleansing the lids of secretions and acting as a tonic for the eyeball itself the vision is rendered more acute, hence the number of cases of discarded glasses."

Dr. Conner says: "My eyes were in bad condition owing to the severe strain arising from protracted microscopical research work. Bon-Opto used according to directions relieved my distressing condition at once. I found my eyes remarkably strengthened, so much so I have put aside my glasses without discomfort. Several of my colleagues have also used it and my opinion as to its results.

In a few days, under my observation, the eyes of an astigmatic patient were completely cured and glasses have been discarded by the patient."

Eye troubles of any description may be wonderfully benefited by the use of Bon-Opto and if you want to strengthen your eyes we advise you go right and get a bottle of Bon-Opto tablets. Drop one Bon-Opto tablet in a fourth of a glass of water and let it dissolve. With this liquid bathe the eyes two or three times daily. You should notice your eyes clear up perceptibly right from the start, and inflammation and redness will quickly disappear. If your eyes bother you even a little it is your duty to take steps to save them now before it is too late. Many hopelessly blind might have saved their sight if they had cared for their eyes in time.

Note: In my answer to whom the above article was submitted, said: "Yes, Bon-Opto is a remarkable eye remedy. Its constituent ingredients are well known to eminent eye specialists and widely prescribed by them. I have used it very successfully in my own practice on patients whose eyes were strained through overwork or misfit glasses. I can highly recommend it in cases of weak watery, aching, smarting, itching, burning eyes, red lids, blurred vision or for eyes inflamed from exposure to smoke, dust or wind. It is one of the very few proprietaries I feel should be kept on hand for everyone to almost every family." Bon-Opto is not a patent medicine or secret remedy. It is an ethical preparation, the formula being printed on the package. The manufacturer guarantees it to strengthen eyesight 50 per cent in one week's time in many instances, or refund the money. It is dispensed by all good druggists, including several stores, also by J. Tambyln and T. Eaton & Co., Toronto.

GLAMIS

The Oddfellows' service was held in the Baptist church on Sunday morning. Quite a number came in from other lodges and the church was taxed to its capacity.

Mrs D Robertson gave a tea at her home on Thursday last, in aid of the Red Cross. The sum of thirteen dollars was raised.

Miss Kate McLean, of Toronto, is visiting at the home of her brother, Mr Dan McLean, on the 2nd.

Miss Lily McKenzie of Kincardine is spending a few day at Mr Neil Currie's.

Miss Norah McNally who attended Faculty in Toronto, was successful in getting her first class certificate.

Mrs John Wrightson visited her brother, Mr Agar, 10th Bruce.

Pte Alex McPhail of Toronto spent the week end with friends here.

Misses Liza and Sadie Colwell spent a few days at the home of Mrs Dave Robertson.

Miss Daisy Cronin spent a few days with her brother's family in Kincardine.

Those of Miss McKinnon's pupils who are in Paisley trying the entrance are Pearl Kirkton, Mary Deehan and Clarence McLennan.

Mrs W H Gilchrist's friends will be pleased to know that she is doing nicely and is home from the hospital.

Mr McIntosh, who has been very ill, passed away last Thursday and was buried on Saturday in Purdy's cemetery.

The Misses Tena and Lena Wittig, Mr Archie McKay, Mr and Mrs John Wittig of Underwood, Sundayed at Mr J C McIntyre's, also Mr and Mrs George Harrison and Miss Lillian of Chesley accompanied by Mr and Mrs R F Harrison of Cargill.

Mr and Mrs David Wittig spent Sunday with Mr and Mrs Kidd.

Some of our people went down to Tiverton to the memorial service preached in the Baptist church in honor of Pte Jack Giles who gave his life for his country.

Miss Helen Oliver's friends will be pleased to hear that her recital in the Carnegie Hall of Music, New York, was a success. The Saturday Evening Post of June 2nd says: "Last Friday evening Miss Helen Oliver, Glamis, Ont, played selections by Beethoven, Schumman, Chopin, Henselt. Miss Oliver's work showed her conscientious study, musical taste and well developed technique. She has made very creditable progress since her recital last year, and is a credit to her teacher, Dr Elsinheimer."

Girls Lost in the Woods

Two girls of Lions Head, Jessie Martindale and Ruth McKay, lost themselves in the woods one day recently. Search parties went out that night but they were not found until nearly noon the next day, although between 150 and 200 men were engaged in the search. The girls were none the worse for the outing

TURNERS

Mr and Mrs Geo Baker, of the fourth of Bruce spent a day with Mrs Hyde.

Mrs Baden from St Louis is visiting her sister, Mrs Schrank.

Mrs D Currie spent a few days visiting Mrs Neil Bell.

The logs that were bought here in the winter for the Knechtel Co were loaded and shipped to Walkerton.

Messrs Albert Dier and Roy Pollock spent a few days with Mr and Mrs Henry Diernear Hepworth.

Foxes are more plentiful here than for a number of years and are causing much damage in the fowl pens.

A successful raising was held at R D Pollock's on Tuesday evening when a bent was added to the barn.

Mrs A Pace spent a few days with her daughter, Mrs R Pollock.

Born—On Monday, June 11th, to Mr and Mrs John Schrank, a daughter.

ELORA ROAD NORTH

Mr and Mrs Gourlay Campbell came up from Waterford to visit at the home of his parents Mr and Mrs J S Campbell.

Mr and Mrs H R Carter and Mr and Mrs E J Cohean of Chesley spent Sunday at Mr A Ewing's.

Mr Stanley Fraser of Hepworth visited with his cousin Mr Clarence Fraser last week.

Mr Jas Edwards of Lucknow spent a few days at Mr Thos Irwin's.

Miss Maggie Bryce is moving to her new home in Paisley.

Mr and Mrs Clarence Fraser and Miss Daisy Ewing attended the Sunday School Convention at Gillies Hill.

Miss Maggie McArthur went to Durham last week to the Baptist Association.

Road work is the order of the day. This old system should have been done away with long ago

WILLOW CREEK

The Bruce Tp. S S convention at Underwood on Wednesday, June 12, which was the first that has been held for about 25 years or more, turned out to be a grand success in point of attendance as well as profitable interest to all who went. There were over 200 present in the afternoon, while in the evening there were over 300 in the church and about 100 outside.

Some of the boys and girls were over to Silver Lake on Friday last and report a good time, although the mud was a little too deep for some of the car drivers.

A number of Oddfellows from here attended the church parade at Glamis on Sunday last.

Some of the potatoes were swimming last week, and some are likely down to the lake by this time.

TWELFTH CON BRUCE

Mr Willie Waring is visiting in Toronto.

Mr and Mrs Eby of Toronto also Mr and Mrs Eby of Port Elgin Sundayed at Geo Scott's.

Mrs Alex McGillivray and two daughters from Port Elgin are back to the 12th for the summer.

Miss Jane Stoddart, Messrs Russell, Elgin, and Miss Edna Cumming were visiting friends in Derby Owen Sound and Holland for a few days last week.

Mr Tom Foster sold his nice black team and has purchased a new Overlandc ar.

Mr Harvey Neilly is cementing his cellar and Mr H Petrie his stable.

Little Loyd Neilly is visiting with his grand mother Mrs Dave Dunlop in Greenock.

TWELFTH CON BRUCE

(Intended for last week)

We have had some grand refreshing showers this past week which have made everything look fresh and green and also made better prospects for a good crop of hay.

Quite a number from this line took in the garden party at Cameron's and report a good time.

Miss Isa McGillivray who has been visiting friends in this locality returned to Toronto on Saturday.

Miss Lizzie Barrie from Toronto and sister Miss Annie were visiting on this line last week.

Miss Jane Stoddart and two little Luttrell girls Sundayed at Mr John Cumming's.

Mr Wm Kincaid's sister from London is visiting her mother on this line who is very poorly.

Messrs Alex H McGillivray, ex-reeve Alex McGillivray, Sandy McGillivray and John Cumming motored to Tara last week and attended the convention there.

Children Cry
FOR FLETCHER'S
CASTORIA

CANTIRE

Farmers are not anxious for any rain for a few days at least.

Mr and Mrs Angus Bell visited friends at Tara on Tuesday last, returning on Wednesday.

Mrs Thos Aitken and Mrs Robt Muir of Tarsberry, spent the past ten days as visitors at Messrs Neil and Donald Reid's. On Friday last Mr Aitken, Mr Muir and Mr David Fortune motored up, returning on Monday.

Mr and Mrs Dave Eason and Mrs Buchanan, of Paisley, were visitors at Mr John Eason's on Wednesday of last week.

Mr A D McKay had the misfortune to lose a valuable mare.

Misses Olive and Marguerite Hutherington, of Chesley, visited their friend, Miss Sara Eason on Saturday and Sunday last. Miss Olive is the possessor of a fine soprano voice and rendered a solo in the Gillies Hill church at the Sunday evening service.

Mr Ernest Walpole is improving his property by erecting a new wire fence along the front.

During Monday evening's thunder storm Mr Angus Bell's barn was struck by lightning at the peak. The end rafter was completely shattered, a lot of lumber ripped off the gable end and holes also were torn in the roof.

ELDERSLIE S. S. ASSOCIATION

The first annual meeting of Elderslie Sunday School Association was held in the Presbyterian church at Gillies Hill on June 11th. The Tp was well represented and the interest manifested at both sessions shows that the people realize the importance of Scriptural training. The schools coming under the jurisdiction of this Association number twenty-one, those in towns of 2,000 or less being counted as rural schools. One of the new speakers, who was evidently a stranger in these parts, remarked that this would be an ideal place for community work. The church stands for salvation, the school for education, and the Tp hall for legislation. It remained for the new member for North Bruce to add, "Thank God, there is no booze joint, or it might be damnation!" Reeve Cass, who is president of the Association, presided, and called on Rev A H Wilson to conduct devotional exercises. Rev J A Hitts of Chesley gave a short talk on the Bible School and its mission. He emphasized the importance of the rural S S, and the idea of parents bringing their children rather than sending them. Mr C P Wilkins, whose subject was "The Church," was unable to be present. His paper was read by W McDonald, M P P. The address by Rev D H Wing, Provincial Superintendent of Rural Schools, was on "Building Sunday Schools Bigger and Better." He advocated the idea of the community coming together and buying a piece of land to be used as a play ground where young and old could go for one half-day each week. He mentioned some places where this was being done. The Round Table Conference was led by Rev W W Pradham, and brought out some good ideas. The evening session was opened with a song service led by Rev Mr Schantz. Rev Mr Pradham's topic was "The Teacher's Candlestick." He portrayed the uses of the candle in the temple, and quoted that in the New Testament Christ said, "Let your light so shine," etc. The teacher, to be successful, must light the candle of knowledge, patience, perseverance, faith, sympathy, christian joy and enthusiasm. Rev Mr Wing gave an address on the Canadian standard efficiency tests for boys. The ladies of Gillies Hill served lunch in the Tp hall. The officers for the ensuing year are: President, J R Case; Vice-Pres, Stephen Winch; Sec-Treas, Donald Reid. Superintendents—Elementary grade, Mrs Mason; Secondary grade, Rev Mr Sheetz; Adults, C J Halliday; House Visitation, Rev Mr Diehl; Teachers' Training, C J Mickle; Temperance, H B Putnam; Missionary, Wm Miller. The next annual meeting will be held at Gillies Hill.

WALKERTON

The recruiting campaign engineered by the 32nd battalion has resulted in 56 enlisting for all arms of the service, and of which 11 will go as reinforcements to the 160th. Although the intention was first to train these lads in Walkerton, word was recieved last week as to the effect that such training will be done in London. No more recruiting for artillery and forestry will be done here.

While sitting on the shafts of a buggy in the driving shed at Mr J A Hogg's in Carrick, during a storm on Wednesday afternoon of last week, Leslie McConnell, a young Walkerton High School student who is doing "his bit" in the great production campaign by assisting on the farm, was stunned and knocked to the ground by a bolt of lighting, which flashed at his side. On arising the lad felt as was found to be powerless, and on consulting a doctor he learned that a heavy shot of electricity had passed through it. Although over a week has elapsed since the mishap, Leslie is still unable to use the injured limb, which he carries in a sling. As a close approach to a real tragedy, Leslie's was somewhat too near for comfort.

A sad drowning occurred on the Teuax mill race here about three o'clock Saturday afternoon, when Lawrence Graff the 13-year-old son of Mr and Mrs Adam Graff of town, met a tragic death while bathing in the part of the Saugeen. The lad, who could swim slightly, took a dive into deep water at the headgates, and after a few faint struggles under water disappeared altogether from view, it being thought that he had either taken a cramp or that the sudden plunge into the cold water had stopped the action of the heart and brought about his almost instantaneous death. When he failed to reappear at the surface again, some young friends who were with him spread the alarm, and although the gates were opened and the water lowered in the race, it was nearly half an hour before the body was recovered, Archie Fraser removing it with a pike pole near Truax's barn, a distance of nearly 300 feet from where the lad had gone down, it having been swept down stream by the strong current. Although Dr Porter, who was summoned, worked over the lad for nearly an hour, all efforts at resuscitation were of no avail. The lad having, it appears, been quite dead when taken from the stream.—Herald and Times.

BRANT COUNCIL

The Brant Council met on Monday, June 11th. Members all present and minutes of last meeting read and declared correct.

Rowand—Johnston—That this council hereby authorizes the Treasurer of this Township, Mr. Alex McLachlan, to draw from the reserve fund in the Royal Bank at Cargill the sum of $2500 from time to time as required.—Carried.

Johnston—Gregg—That a grant of $100 be given to Elmwood Village for sidewalks.—Carried.

Rowand—Johnston—That the Reeve and Clerk issue orders on the Treasurer for all accounts passed at this meeting of council.—Carried.

Accounts passed as follows: W G Hastie, refund of Elmwood school debenture payment for 3 years, $105; H Ahrens, dragging road, $3; D Willoughby, 6 council meetings $12 80, and signing debentures $2—$21 80; W A Rowand, 6 council meetings, $12 00; W Johnston, do, $10 80; D W Gregg, do, $21; J W Findlay, do $16 20, and Municipal World advice $1—$17 20; Fred Jacklin, half year's salary $50, postage stamps, etc., $2 80—$52 80; M A McCallum, half year's salary $100, postage $2—$102.

Johnston—Rowand—That this Council do now adjourn to meet on Monday, July 9th, for the transaction of general business.—Carried.

M. A. McCallum, Tp Clerk.

GRESHAM

Wedding bells are ringing on the 6th con Bruce.

Miss Edith Rose, of Toronto, accompanied by a friend, motored up and spent the week end at Mr Wm Rose's.

Much credit is due Mr Wm McMann, who growled up the 15th sideline. The council considered it would make a good race track after Mr McMann completed the job. We understand he is putting up a sign, "Drive as you please."

Mr Michael Nelson is adding a new kitchen to his residence.

Mr and Mrs Alex Woods and Morris motored to Clifford and spent Sunday there.

Miss Florence McLean of Underwood is visiting at the home of Mr Robt Brown this week.

Mr John Fletcher of the 10th con visited friends on the 8th con this week.

Mr George Nichol of Greenock is improving his farm here by building a new fence.

Mr and Mrs Geo Pace Sundayed at Mr Dave McKinnon's.

Mr Robt Parker visited friends in Brant this week.

Got a Black Eye

A tramp who said he hailed from Chesley was in town one day last week and also visited Invermay. He called at the home of Mrs Russel, whose husband, Pte Harry Russell, is with the 2nd Canadian Pioneer Battalion in France, and asked for a lunch for himself and his dog which was given him. He went away stating that he would be back in a short time. Mrs Russell was somewhat alarmed as he was a suspicious looking character, and sent for Mr George Gibboos. Presently Mr Tramp appeared on the scene again, and seeing Mr Gibbons asked him several questions regarding the war. He belittled the part Canada and Great Britain are taking in the war, and made sneering remarks which did not sound pleasing to a good Canadian. The argument became heated and the tramp, who was a burley big fellow, threatened to thrash Gibboos. Gibbons, who is small but huskey, refused to take back water and the two clinched. In the melee Gibbons landed two beautiful blows on the stranger's eye, the mark of which he will carry for a few days. The tramp evidently got all that was coming to him, and he left in a hurry, heaping curses on his victor's head. Men of his stamp should not be allowed to roam this country, but should be placed in an internment camp, where they will be under the watchful eyes of the law.—Leader.

ALGONQUIN PARK

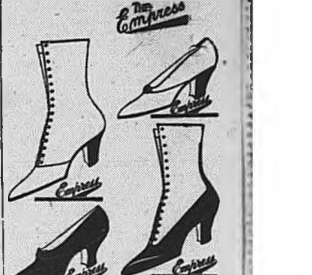
The Highway of Health and happiness

No better place could be devised for a holiday trip for tired business men and women than Algonquin Park, situate about two hundred miles north of the City of Toronto. It is an unspoiled territory of nearly two million acres, starred with beautiful lakes and intersected by winding streams. No reserve in Canada can approach it in the wealth of attractions it offers to the lovers of out-of-doors.

Away up in the Highlands of Ontario, two thousands feet above the level of the sea, the Park is a wonderful spot in which to renew the energies of a tired body or refresh a wearied spirit. Its tonic air filters through hundreds of square miles of pine, balsam and spruce; the days are unusually long with bright sunshine, while the cool evenings are a time of enchantment. The Park is a paradise for the fishermen and canoeist; the excellence of its sport draws anglers from every part of the Dominion and from every state in the Union, while the canoeist can travel for hundreds of miles in his light craft and be in a veritable kingdom of his own.

The accommodation in the Park is such that the most varied tastes can be pleased. There are hotels for those who want to be in the wilderness—yet enjoy all the comforts that good service and social companionship can bring; there are groups of log cabin camps, comfortably furnished and ideal for family parties, with central lodges containing recreation and dining rooms where you may dine and find everything ready for you on your return from the tramp; or if you have planned to camp under your own canvas you may step into a canoe at one of the little railway stations and paddle and portage to a site unmarred by the hand of man yet within easy reach of the Park outfitting stores.

Many families now go into the Park expressly for the camping, making their headquarters at the hotels long enough to get supplies and camping outfit ready for the trip. Then in canoes, and with guides or without them, they launch out into the deep woods, camping where fancy prompts.



A handsome illustrated publication telling you all about this famous park is issued by the Grand Trunk Railway and a copy can be had free on application to C K Horning, Union Station, Toronto Ont

Members of the Orange order will attend Divine service on Sunday morning, July 8th, in the Baptist church. Members meet at Putnam's hall at 10 a. m. E P Collins, M.

Torrents of Rain

The last week of June brought us a superabundance of rain. Almost daily downpours were accompanied by great electric storms. A climax was reached on Saturday night, when there was a rainfall of about 1½ inches here, while to the west of us there was a veritable deluge. A large steel bridge in Kincardine town was wrecked by the washout, also over twenty small bridges and culverts likewise destroyed along the lake shore roads. The two large streams at Paisley almost overflowed, and the Willow Creek spread out in spring fashion all over the flats, putting the potato patches out of sight. One resident had to wade out about midnight through water up to his knees to save his pigs from drowning.

—Miss Vera George is home from Dresden.

—Mr R C Bekel was home from Detroit for the holiday.

—Mr and Mrs Wm Walker left last week on a trip to the west.

—Miss Coy, of Toronto, was a visitor at Mr D Walks', Elderslie.

—Mr Jas McKerracher was up from Toronto for the holiday.

—Mrs Potter, of Gorrie, has been visiting her sister, Mrs John Metcalf, at Lovat.

—The W C T U will meet on Friday afternoon at 3.30 o'clock in Putnam's hall.

—Keep this in mind for Tuesday, July 17th, Methodist garden party at Mr Josh Bell's.

—Mr Robt Fullerton has built a summer cottage on the lake shore near Port Elgin.

—Miss Fletcher and Master Farewell Fletcher were down to Clifford for Dominion Day.

—Mr Mel McArthur was up from Toronto over Sunday. He is now employed with the Hydro Electric Com.

—Mr Thos Muir has rented a cottage at Southampton Beach, and the family have gone there for the summer.

—Garden party on Tuesday, July 17th, under auspices of Methodist Ladies' Aid, at Mr Josh Bell's residence.

—Mrs Silas Haney and daughter Miss Reta, both Bruce, are visiting friends in Woodbridge and Toronto this week.

—Mr W W Gibson of Toronto, Mr and Mrs F A Gibson of Kitchener, Miss Agnes Gibson of Guelph, and Miss Blanche Gibson of London, are visiting under the parental roof.

—Miss Elizabeth McLennan, of Paisley, successfully passed the Normal School examination, securing interim second-class certificate. John A McLean passed for the limited third-class certificate.

—Miss Pearl Seltzer, arrived home from Toronto Saturday. She was accompanied by her aunt Mrs Hagen and Maudie and Margaret. They will spend their vacation at Crescent Creek Farm.

—Mr V Leeson doesn't wish to see home grown potato seed thrown in the shade. He bought seed from Mr John Munn, and his vines are now out in bloom, with promise of a good early crop

Reston Wells of Pinkerton, a former Greenock councillor, while assisting the crew in the erection of the new water tank at the G. T. R. station here on Monday afternoon, ran a long sliver from a pine board through the index finger of his right hand, necessitating a hurried trip to the doctor's to have the wood removed.

—Feeling the need of a restful nap one afternoon last week, Mr Alex Bice, laid down to sleep, and when he awoke his wife noticed there was something wrong with him as his speech was effected and he had lost the use of his left side limbs. A doctor was summoned, and found that Mr Bice had suffered a stroke of paralysis. He has since almost wholly recovered and is around again as usual.

An Old Highlander of Bruce

Piper Dan McKinnon, the tall, grey-haired Highlander who has been agitating the air hereabouts with the shrill of the pipes during the past few days, is an old-time resident of the 10th of Bruce. About 40 years ago he was known as "Thresher Dan." His home is now at Bolton. His Celtic blood was roused to respond to the call to arms when the Huns cut loose. He had a burning desire to have a hand in fighting them, but since he couldn't do that, he is doing his best to assist in Red Cross work by piping and speechifying at entertainments. He will be at the Elderslie picnic at Gillies Hill this (Wednesday) afternoon. While in Paisley he is at the home of his nephew, Mr Dan McLean.

Dominion Day at Port Elgin

Horse racing was the chief attraction on the celebration programme at the lakeside town. The string of trotters and pacers was sufficiently long and speedy to give the spectators a good afternoon's sport watching them win the three races put on. An event of special interest to Paisley was the boys' relay race between teams from county high schools and which was won for the second time in succession by Paisley boys—Abbie Stanley, Lorne Cargill, Dave McGregor and Douglas Cottrill doing the trick, defeating quartettes from Kincardine and Port Elgin. The cup stays in the Paisley school and the four sprinters who defended it were given individual silver medals. A brilliant display of fireworks was given at night. Surplus proceeds of the day go for Red Cross.

Don't Forget the Car Out for Produce

—Lieut.-Col. W. J. Douglas, formerly commanding officer of the 32nd Regiment, is one of the Canadian officers returning from England, Col. Douglas went overseas with the 24th Battalion. He was at the front for some time, and was badly shell-shocked.

The AUTOMOBILE

How Tires Are Made.

One of the most important parts of the car, and the one which is most often neglected, is the tire.

First, consider the purpose of the tire. The steel rim on the cart wheel is chiefly for protection, as it prevents the felloe from being damaged by contact with the road. The rubber tire has another important function to perform. It protects the passengers and mechanism from shock by smoothing out the small inequalities of the road. If a steel tire meets a stone half an inch high the whole wheel must be lifted that distance in order to pass over it. This shock may be partly taken up by the springs, but some of it is always transmitted to the passengers and mechanism. The pneumatic tire does not lift the wheel passing over the small obstructions, but is dented, the rubber and air yielding enough to allow the wheel to pass on smoothly. Thus we literally "ride on air." The shock of a steel tire on a wagon meeting a small stone is not great, as the vehicle does not travel very fast, but on the automobile traveling at the usual rate it would give too hard a blow.

The present type of pneumatic tire has been evolved after years of experimenting. It consists of two tubes. The outer one, called the "shoe," or "casing," provides the necessary strength to resist the driving strains, is flexible to allow whatever bending is necessary, and is thick enough to allow for wear. The outside is composed of material which will insure traction, that is, which will stick to the road and prevent slipping. The "inner tube" merely provides an air chamber. It has not sufficient strength of its own to support the high pressure used, so must never be inflated beyond a few pounds while removed from the shoe.

When we see the casing in cross-section we realize that it is far from being the simple thing it appears to be from the outside. We find it to be built up of several layers, all firmly welded together. The part that touches the ground is called the "tread." It may be smooth, which means that it will slip readily when the road is wet, or, it may be covered with projections of various kinds which are intended to pass through the soft mud and grip the hard ground underneath. This type is called "non-skid."

Beneath the tread is a strip called the "breaker strip," supported by a layer of soft rubber called the "cushion layer." These act together to prevent puncture. The point of a tack coming through the tread must pass through the breaker strip before it can penetrate the vital part of the shoe. As the strip is tough and is supported on a yielding surface, it frequently escapes injury and so protects the layers beneath it. These layers are called the "fabric," and consist of the highest grade of close-woven canvas, made from Sea Island cotton, which has the longest staple (fibre) of any cotton in the world. This fabric is carefully inspected, and then the raw rubber, prepared for vulcanizing, is laid over it. The two are then run through rolls under several hundred pounds' pressure, forcing the rubber into every part of the fabric. Then when the shoe is vulcanized it becomes one solid mass, although made up of so many layers. The cushion layer is continued down the side to protect the fabric, and is called the "side wall." Where the shoe touches the rim the edges are shaped in such a way as to grip the rim. These are called "beads."

THE MOTHER OF STEVENSON.

Interesting Incident of the Stevenson Memorial Meeting.

Although the mother of Robert Louis Stevenson was ordinarily shy and retiring of manner, as she had been taught that all ladies should be, there was one occurrence that made her conspicuous but that greatly pleased her. Mrs. Stevenson was twenty years her son's senior, says Miss Evelyn Blantyre Simpson in Robert Louis Stevenson's Edinburgh Days, and it amused and flattered them both that once when they went out to dinner together the servant, judging him too young to be married, turned a deaf ear to the names they gave, and announced them as Mr. and Miss Stevenson.

This "young" lady outlived her literary son, and so was able to enjoy much of his fame. The Stevenson Memorial meeting was the occasion on which she became conspicuous against her will. She started for the music hall not too early, feeling secure of a seat with a "reserve ticket" in her neatly gloved hand. When some one asked if she were going on the platform, she replied emphatically in the negative. She had early Victorian ideas as to platforms being proper only for the sterner sex. She wished to sit unnoticed in the audience.

The crowd was beyond her expectations. Mrs. Stevenson arrived to find every passage blocked and a surging mass at the main entrance clamoring for admittance. She feared that she, with them, would be turned away; but, as a forlorn hope, she appealed to a policeman to get her in.

"It's nae use, it's fu'," he said. "Reserve seats ta'en an hour ago by folks that had nae tickets, and they would na gang out."

"I must get in!" cried Mrs. Stevenson. "I've a right to get in! I am Robe. Stevenson's mother."

"Ay, the best right," the policeman replied, and, turning to the crowd, he cried, "Mak' way, there! She maun get in. She's Rosbert Louis's mother."

Persons who thought themselves packed too tightly to move somehow packed closer, and let Mrs. Stevenson squeeze and wriggle past. Breathless, and, for once, with her mantle and bonnet a little awry, she was pushed on, much against her will, to the platform. There she hastened to so literal a back seat that when Lord Rosebery, at the beginning of his address, spoke the four telling words, "His mother is here," and turned to bow with courtly deference to her, he had to pause and to engage other eyes as well as his own before he found to which side Robert Louis's mother had unobtrusively withdrawn.

Mrs. Stevenson was all aglow; she was visibly overcome by the unexpectedly large crowd and its tremendous enthusiasm. For once her usual calm left her.

BARON'S TRUNK A DEATH-TRAP

Contained Explosives and Dangerous Germs.

An amazing collection of bombs, bacilli of deadly diseases and other means of death and destruction has been seized by authorities at Christiania recently as part of the baggage of Baron von Rosen, a Swedish nobleman alleged to be a German agent. The baron fled to Norway in January, after his activities aroused the Swedish authorities. He was arrested, but as he could not be convicted of violating any Norwegian law he was released with a warning to leave.

After the baron was ordered out of Norway those portions of his baggage which had not been seized in Sweden arrived in Christiania. Among the articles found were cans of explosives marked "table salt," bottles marked "mouth wash" containing cultures of dangerous bacilli, boxes of lump sugar, each lump concealing a small vial filled with bacilli of anthrax or glanders, and explosive pencils.

This latter articles has the appearance of an ordinary pencil, but if sharpened a drop of acid concealed in a tube is released and, acting on other concealed chemicals, causes an explosion sufficient to maim or perhaps kill the sharpener.

The revelations have aroused great indignation at Christiania and the authorities are severely blamed for releasing the baron.

It Lives On.

You can complete a good work, but you can never end it.

Kicking ceases to help when it becomes chronic.

FISHING BY KITE.

Some Modern Uses of One of the Oldest Toys in the World.

The kite is one of the oldest toys in the world. It appears to have had its origin in China, where for thousands of years kite flying has been the favorite amusement not only of children, but of grown persons, too. From Japan, Burma, the Malay Peninsula, and other Eastern lands kite flying has long ago made its way to all other parts of the world.

Young people of the Far East would consider it very poor sport to fly kites as plain and simple as those which Canadian boys fly. The kites are of many shapes and sizes. Most of them represent a bird, or a fish, or a dragon, or some other curious imaginary monster. The frame-work is commonly made of bamboo, and the covering is colored paper, or, in case of the best ones, silk. Often the kites have tails of great length.

The grown-up people have kite flying festivals in which all the people of the village join. On such occasions some of the kites are of great size and most elaborate. Nor are the people content with kite flying simply as a pastime. They have contests that rouse great interest — contests in which one person tries to keep his kite in the air longer than his rival can, or contests in which one person tries to make his kite bring down or destroy the kite of the other.

In our times the kite has become a very useful tool of science. Men use it to study the conditions that prevail in the air far above the earth; thus it helps them in building airships, in taking pictures, in signaling, and in life saving on the coast. The Chinese have long used kites to tow boats, and to drop their fishhooks well out to sea while they themselves stand on the shore.

ELECTRIC PLANTS FOR FARM.

Small Equipments Save Much Labor on the Farm and in Home.

One of the recognized necessities in connection with our increased agricultural production is better and more attractive conditions on the farm, and among the many suggestions the use of electricity should be considered. Electric power is a great convenience in the farm home, and saves much time to the farm help. The farm or country home situated within the area of an electric system of transmission or distribution is fortunate, but the vast majority must look to the small isolated plant.

This alternative, however, is now much more promising than a few years ago. Many factories manufacture this type of equipment, the operation of the plants has been simplified and cost has been much reduced.

These small plants may be advantageously used for many domestic purposes in addition to lighting, such as ironing, washing, toasting, pumping water, etc.; and also for the very important use of charging storage batteries.

There are a number of these small plants now on the Canadian market, ranging in size from 175 watts, and costing from $300 upward. Six different types were described in a recent electrical magazine, some using storage batteries in conjunction, and generally using a gasolene engine as a prime mover. They are usually operated at a very low voltage. These small plants are perfectly safe, so far as the handling of the electric energy is concerned.

BIRDS AT EVENING.

When the rocks fly homeward, and the gulls are following high,
And the grey feet of the silence with a silver dream are shod,
I mind me of the little wings abroad in every sky
Who seek their sleep of God.

When the dove is hidden, and the dew is white on the corn,
And the dark bee in the heather, and the shepherd with the sheep,
I mind me of the little wings in the elm-oak and the thorn
Who take of Him their sleep.

When the brier closes and the iris-flower is furled,
And over the edge of the evening the martin knows her nest,
I mind me of the little hearts abroad in all the world
Who find in Him their rest.

—Marjorie Pickthall.

A WARNING TO RUSSIA.

Figures Which Show the Menace That Threatens the New Democracy.

Monsieur Andre Chersdame has addressed to the Extreme Wing of Russian Revolutionists a very striking warning in figures, which the New Europe translates from L'Information. He points out that peace on the military basis of this moment, so far from satisfying the new democracy of Russia, would set up a new German menace on their borders in the shape of a German power whose political, economic, and military ascendancy over the eastern half of Europe would be complete. The point is driven home in the following table:—

Pan-Germanism in 1917.
Population.

1.—THE MASTERS.

German	73,000,000

2.—THE VASSALS.

Magyar	10,000,000
Bulgar	5,000,000
Turk	6,000,000
	21,000,000

3.—THE SLAVES.

French	8,000,000
Belgian	7,500,000
Alsace-Lorraine	1,500,000
Danes	200,000
Poles	22,000,000
Ruthenes	4,500,000
Czech	8,500,000
Jugoslav	12,000,000
Rumanian, Italian	5,000,000
Greek	2,000,000
Armenian	2,000,000
Levantine	2,000,000
Arab	3,000,000
	81,000,000
Total	175,000,000

THE UPSIDE-DOWN WATCH

A Successor to the Wrist Watch for Use by Soldiers.

The wrist watch, which rose so high in popularity on account of the endorsement given it by men of the army and navy, has retired to second place in the soldiers' favor. The reason for this is not that this style of watch proved to be less convenient than it promised, but that bullets and bursting shrapnel which constantly threaten the exposed men are likely to strike the arm wearing the watch and drive bits of broken glass and metal into the flesh, thus aggravating the wounds.

The watch which now holds first place is worn suspended from the belt by a loop of leather. The loop ends in a pocket into which the watch fits. The front surface of the pocket has a circular opening through which the face of the watch shows. A small strap encircles the watch and wastens it securely in place, buckling on the outside of the pocket. The watch hangs top-downward, but when the wearer raises it in his hand or glances down at it as it hangs from the belt, it is in just the proper position to be read. If it should happen to be shattered by a bullet the particles of glass or metal would be caught and held in the leather case, so that they would do no harm. Many a fighter has had to thank the watch on his wrist for stopping a bullet that might have necessitated the loss of an arm. The very fact that the upside-down watch is carried against a more vulnerable part of the body than is the wrist watch, makes it all the more valuable as a protective medium. It may be worn under the cartridge belt.

JAPAN'S CORAL BEDS.

Value Depends Greatly on the Color of the Coral.

The coral beds of Japan are worked by divers in the employ of a master diver who receives the take as it comes in, grades it, and when a sufficient quantity has been obtained, asks for bids on the lots of each grade. Representatives of the leading exporting and wholesale firms are always at hand during the season the best coral is taken, to inspect the take and proffer bids. The total annual take is about 65,000 pounds, valued at $700,000. The color of the coral has a great deal to do with the value placed upon it. The most expensive is "boke," a pale quince color. Single beads of this color, suitable for manufacture into ornamental hairpins, bring from $10 to $50 each. The next color in value is pink, followed by white light red and dark red.

BRITISH ADVANCE IN THE EAST

CRUSADERS IN KHAKI MARCHING ON JERUSALEM.

Its Capture Would Lead to the End of German Control of the Holy Land.

The steady advance of the British from the Suez north, past Gaza and along the Palestine coast, has brought them almost within striking distance of Jerusalem. The Turks' earlier intention of offering no serious resistance has been changed under Germany's urging to a determination to defend to the uttermost the Holy City. Jerusalem, which has been more often besieged, sacked and devastated than has any other city, is thus destined to become again a scene of carnage and bloodshed.

Germany has every reason to save Jerusalem from falling into the hands of the Allies. From the time of the kaiser's spectacular entrance into the Holy Land and of his alliance with Abdul Hamid he has always striven to strengthen the German grasp upon the city of David and to transform it into an Eastern stronghold of Teutonism. He has encouraged and developed public and private enterprises and industries, and at vantage points on the roads from the city to the sea he has caused the erection of German buildings that are landmarks in the neighboring country.

German Structures in the Holy City.

He has built the Church of the Redeemer near the Holy Sepulchre, and the massive German Roman Catholic Church and beautiful Kaiserin Victoria Hospital on the Mount of Olives. The advancing khaki-clad crusaders will see the lofty spires of these structures, one of which is equipped with a wireless plant, another with a searchlight that sweeps the surrounding country, long before their eyes will rest upon the slender minarets, the domes of mosques and the historic walls and towers of Jerusalem.

The strategic value of the Holy City in the present warfare is perhaps less than that of the already captured Bagdad. Its greater military importance belonged to the days when it was on the crossroads travelled by Persians, Saracens, Romans, the days when warriors of empires long past battered at its mighty walls. Still Jerusalem would be valuable fruits of victory. It would give to its captors a hold upon Bethlehem and the Jordan valley.

The Judean hills won and the sea command of the ports of Haifa and Beirout in their control, the Allies would have the key to Galilee. They would be able more easily to effect a military penetration that would place in their hands Nazareth, Mount Carmel, the Sea of Galilee and the regions to the north. This would effectually end the kaiser's control of the Holy Land; it would be a more serious blow to his schemes of expansion than the loss of a colony.

Replace the Crescent by the Cross.

It would have, too, the great sentimental value of restoring the control of the sacred places of the Holy Land to Christianity. For 673 years the Holy City of Christianity has been under the Moslem rule, and except for the attempt of Napoleon I. a century ago, no nation until the present time has made a serious military effort to break this rule or to restore it to the Christian world.

Forgotten for centuries in the rise of new empires and new civilizations, Jerusalem appears again in modern history. The fall of Constantinople and the recovery of St. Sophia would not send a greater thrill of emotional interest throughout the Christian world than would the capture of Jerusalem by the khaki-clad British soldier crusaders and the restoration of Christianity's sacred symbol to the walls of the city where it had its origin, its fullest significance.

Never keep vinegar or yeast in stone crocks or jugs; their acid attacks the glazing, which is said to be poisonous.

Light, one-inch-mesh fish netting makes an excellent covering for ripening berries that attract the birds. Scare-crows and strings usually fail; netting is sure, and not expensive for small areas.

A Great Remedy

DR. HENDERSON'S Herb Treatment (tablets), the great blood purifier, will cure rheumatism, constipation, eczema, kidney, liver, stomach and female troubles. Price $1, with guarantee or 6 boxes for $5, postpaid. Henderson Herb Co., Dept. W, 171 Spadina Ave., Toronto.

$2,500,000 IN LOST LETTERS.

Circumstances Which Contribute to the Loss of Mail Matter.

Of the thousands of letters and postcards which fail to reach their destination, it is safe to say that the Post Office is to blame in less than one in every thousand instances.

Every year thousands of missives are posted without address, while many others are never posted at all. Quite a number are found in the books of free libraries, the senders slipping them inside, and then forgetting them.

In one year in England alone $2,500,000 in the shape of cheques, money and postal-orders, bills, and banknotes were found in letters which were unaddressed, or addressed in such a careless manner that the persons for whom they were intended could not be discovered.

A funny result of insufficient addresses once occurred at Oxford. The secretary of a 'Varsity society sent out notices of a meeting to the members; but instead of writing the name of the college in full, and adding "Local," he merely wrote the college —Worcester, Exeter, Pembroke, etc. These were sent to the towns of the same name; but others, which were addressed to colleges, such as Balliol, arrived without delay.

Three or four years ago a packet of registered letters for America mysteriously disappeared, and was thought to be stolen. In fact, some underwriters had actually paid the insurance when the letters unexpectedly turned up in Yokohama, having been sent to Japan by the U.S.A. postal authorities by mistake.

Animals are sometimes responsible for the loss or delay in the delivery of letters. Lions are still a nuisance in some parts of Africa, and a few months ago the Governor of Nyasaland reported that a mail-bag had been seized and destroyed by lions. The same thing occurred in Rhodesia.

Even in England a bullock has upset the regular delivery of the mails, one charging a motor-van in Kent, and damaging it to such an extent that a horse-vehicle had to be sent for, while the animal trotted off contentedly and unhurt.

Could the dutiful daughter who sent her father a pair of spectacles addressed to "The White Cottage with Green Pallings, Yorkshire," be surprised that he did not get them? And to the uninitiated it seems a second sight would be required to translate "Mandston, Barrxarks, A comny," into "A Company, the Barracks, Maidstone."

Three Mothers.

Three mothers by your cradle stand:
One mother who has given birth,
And one of them is Motherland.
And one of them is Mother Earth;
Three mothers must you have in all,
And two are great and one is small.

Your Motherland is strong and dread;
Her shield your sure protection makes;
She spreads her law above your head,
But even while she gives she takes.
Her arm is strong, her word is true,
But she may ask your life of you.

From Mother Earth by toil you wring
Or feast or crust at her caprice.
The shelter for your journeying.
Though brief at best will be the lease.
And at the end she gives you bed
But cares not where your soul has sped.

The Mother who has borne your flesh
Through good or ill will hold you fast,
Will guide you through the world's dark mesh,
And so will save your soul at last.
Three mothers shall you have in all,
And one is great and two are small.

—McL. Wilson.

Where spraying with arsenate of lead is not feasible, asparagus slugs can be destroyed by knocking them off the plants at mid-day. The sun and hot soil will kill them before they can reach the plants again.

The Doings of the Duffs.

Farm Crop Queries

Conducted by Professor Henry G. Bell.

Henry G. Bell.

The object of this department is to place at the service of our farm readers the advice of an acknowledged authority on all subjects pertaining to soils and crops.

Address all questions to Professor Henry G. Bell, in care of The Wilson Publishing Company, Limited, Toronto, and answers will appear in this column in the order in which they are received. As space is limited it is advisable where immediate reply is necessary that a stamped and addressed envelope be enclosed with the question, when the answer will be mailed direct.

Question—V. B.:—Will you please give me a little advice about hog pasture? I had a hog lot which I manured and intend to summer fallow. It was clover last year. I have a grass pasture for the hogs now. What is the best to sow on this lot? Can I sow grass seed and have a grass pasture next year, and what kind?

Answer:—I would advise you to plow the lot in question, and carefully disk and harrow it. Then sow a mixture of grass seed somewhat as follows:

10 lbs. common red clover
8 lbs. timothy
2 lbs. alsike

Total 20 lbs. per acre.

This should be distributed evenly and harrowed in thoroughly. If the ground is rather open in texture, I would advise you to roll it and then follow with a light harrowing. In order to insure a good catch of grass, would recommend that you add 200 pounds per acre of a fertilizer carrying 2 to 3% ammonia, 8 to 10% phosphoric acid and possibly 1% potash. Distribute this evenly just after the ground is plowed, so that the disking and harrowing will work it into the soil before the grass seed is sown.

Question—E. B.:—How should orchard grass be sown and how cultivated? I have twice sown orchard grass with barley without success. What caused the failure? When is the best time to sow orchard grass, in September, or October or the Spring? How much should be sown to the acre?

Answer:—If the orchard grass seed is of first quality, from 18 to 20 pounds per acre is sufficient. Otherwise, increase the quantity up to 30 pounds per acre. Probably your difficulty in seeding orchard grass with barley is that you have used too much barley and smothered out the grass. Do not use over a bushel of barley per acre when growing this crop as a nurse crop. Furthermore, orchard grass is rather slow becoming established. The first year it looks very weak. The second year, root stalk have developed and a vigorous stand is present. It does not reach maximum growth until the third year. The best time to seed orchard grass in Ontario is in the Spring at the time the usual clover and grass mixtures are sown.

Question—A. W. B.:—I am very much troubled with cheat or cheat in my crops. Will you kindly let me know the cause and how to get rid of it?

Answer:—Cheat or cheat is one of the brome-grasses which seeds about the time the wheat ripens. The seeds are usually scattered by the cutting of the wheat. In preparing seed wheat it is difficult to separate them from the good wheat by fanning. Hence, they are spread from year to year at the time the wheat is sown. It is a comparatively easy matter to get rid of the pest by planting your crops in a rotation where wheat does not follow wheat for two or three years. Clean cultivation and plenty of good clean seed will quickly rid you of the pest.

Question—R. S.:—What is the best time to make a meadow, in the Fall or in the Spring? How much seed is required for an acre?

Answer:—As a rule, in Ontario best meadows are established in spring. Fall plow the land and leave it in rough furrow until spring. As soon as it is dry enough to work in spring, disk and harrow it to a smooth seedbed, then sow a grass and clover mixture, using either wheat, barley or oats as a nurse crop. Best results are obtained from using wheat or barley as nurse crops, since these grains ripen early and are soon removed from the ground. Do not seed the nurse crop too heavily. A bushel and a peck is usually sufficient to the acre when using as a nurse crop. For a grass mixture the following is common in Ontario:

10 lbs. common red clover
4 lbs. alsike
6 lbs. timothy

20 lbs. per acre.

Make sure of the quality of the seed by testing a couple of hundred seeds between blotters. Dampen the blotters and place them on a plate, putting the quantity of seed you are testing between them. Keep the blotters damp but not soaked, and if testing during the winter keep the test in a warm part of the house. In a week or ten days the seed will have sprouted and you can estimate the percent. of good vigorous seed. This insures the using of seed that will grow. It does not matter how well you prepare your ground, if you do not sow good vigorous seed results will not be most satisfactory.

In order to insure a good catch I would advise drilling in at seeding time about 200 pounds of fertiliser analyzing 1 to 3% ammonia and 10 to 12% available phosphoric acid at the time that you are sowing the grain and grass in spring. This available plantfood gives to the grass and clover what whole milk gives to the young growing calf. It is rich in available plantfood which will greatly assist in insuring a good catch of both clover and timothy. It will also help the grain crop.

the pure cane sugar with "FINE" granulation that dissolves instantly, giving a clear bright syrup.

WELLS AND THEIR CONSTRUCTION

Special Care Should be Exercised to Ensure a Pure and Abundant Supply of Water For Home Use.

Apart from municipal water works, our water supply is secured almost entirely from wells. Especially is this true on the farms and in the smaller villages. It is of primary importance that the well be properly constructed, that it be situated far from any source of possible pollution, and that the water be of satisfactory quality.

The safest form of well is the deep, or bored, well, carried down through

earth and rock beyond any danger of surface water and tightly and securely lined with piping. The piping is carried up to a tight-joint with a pump or other elevating means at the top. Around this well, a concrete platform should be laid of at least eight feet diameter, sloping away from the well, to prevent surplus water, or water from melting snow, working down alongside the pipe.

The shallow, or dug, well is much more common. This type is usually the most carelessly constructed and the source of much danger to health. Such a well, however, may be constructed in a manner as to be safe, in so far as the collecting and containing of the water supply is concerned. It must be understood that no well can possibly be satisfactory if the source of the water supply is polluted.

The illustration herewith shows a well which is as safe as possible. For the upper nine feet the well is watertight, the sloping platform diverts the surplus water from the well, and the top of the wall is carried above the level and provided with an absolutely tight cover.

The pump has been placed on the concrete platform, on the ground level, the pipe is embedded in the concrete and carried to the bottom of the well where the water is coldest. There is considerable advantage in not having the pump at the top of the well. Surplus water is continually spilled, and, as more or less mud, barnyard manure, etc., is carried on the boots of those using the well, this water becomes polluted and seeps through the cover.

In many summer resorts, defective wells are the cause of much sickness, and many cases of typhoid among urban residents have been traced to this source. Too much care cannot be exercised in seeing that drinking water—one of the essentials of life—is thoroughly protected.

The Sunday School

INTERNATIONAL LESSON JULY 8.

Lesson II. Ahaz, The Faithless King—2 Chron. 28. Golden Text—Heb. 11. 6.

Verses 1-4. Ahaz—Came to the throne about B. C. 735; he is said to have reigned sixteen years, that is, until about 720; but the chronology of the period is uncertain. Baalim—The native Canaanite deities. Valley . . . Hinnom—For a full description see George A. Smith, Jerusalem, I. 173 pp. ff. It was located to the south and southwest of Jerusalem. In the days of Jeremiah human sacrifice was offered there (Jer. 7. 31). Burned—As sacrifice, probably to Jehovah. Human sacrifice was not unknown in early Israel (Judg. 11. 30ff.); but efforts were made to remove it from Jehovah worship (this is the purpose of Gen. 22), and for several centuries it seems to have been a rare occurrence, until Ahaz, influenced by the practices of other nations, began to encourage it. During the closing years of the history of Judah it was more common (2 Kings 17.17; 21. 6; 23. 10; Mic. 6. 7; Jer. 7. 31; 19. 5; Ezek. 16. 20, 21). Under every green tree—The Hebrew word here used for "green" means rather "flourishing," the reference being not so much to color as to condition and size. Large fine trees . . . acquired a sacred or semi-sacred character (Gen. 18. 1; 21. 33; Judg. 6. 11); in some cases because the flourishing state of the tree was regarded as the sign of the presence of some local deity (Cambridge Bible).

5. Syria . . . Israel—The Chronicler seems to picture the invasion of Judah as two distinct expeditions. It was one united campaign (2 Kings 16. 5; Isa. 7. 1ff.). The losses given here are much greater than those suggested in the other two passages.

20-21. Tilgath-Pilneser—A corruption of Tilgath-pilneser; the fourth king of Assyria bearing this name ruled from B. C. 745 to 727. The Chronicler knew history of his people sufficiently to recognize the fact that the appeal to Assyria (verse 16) proved disastrous in the end.

22-25. Distress—Seemed to be evidence that Jehovah could not or would not help; hence he determined to try gods. Gods of Damascus—The statement here is an inference from 2 Kings 16. 10-12. Verses 24, 25 furnish the Chronicler's interpretation of 2 Kings 16. 17, 18. "He saves the sanctity of the temple by having Ahaz's idolatries outside of its precincts, as though he had abandoned altogether the worship of Jehovah. In reality Ahaz introduced innovations in the temple worship, which he seems to have assiduously cultivated. There is no reason, then, to think that the temple was closed during his reign" (Cortis).

26, 27. The close of Ahaz's reign. Book of the kings—not the canonical book of Kings, but perhaps a work based upon it. Sepulchers of the kings—According to the Chronicler Ahaz was dishonored by being excluded from the royal tombs (compare 2 Kings 15. 20).

Poultry

Market Calendar.

The culling of non-layers from the flock should be continued throughout July. The season of high production is over and at the high price of feed, it does not pay to keep hens as boarders throughout the summer.

Sell in July old hens, broilers, green ducks and old ducks.

Secrets in Securing Layers.

An egg-laying strain can not be produced by inbreeding. In order for a hen to be a good producer, she must be in good health and full of vigor. Use a male that was bred from a hen that laid 200 eggs or more in a year. Breed for high averages instead of exceptionally high individuals. A good layer usually stands high in front and her back is not on a level, or the rear higher than the front. The best producers usually have large combs, a high tail, and a prominent, large bright eye. Prefer the wedge shape, rather narrow in front but wide behind, and wide between the legs. A hen inclined to be squirrel-tailed is the best layer.

Not always the largest hen is the best layer; generally the smallest one.

The heavy laying hens are those with white legs.

A tight-feathered bird is a better layer than a loose-feathered one.

As a rule, the first pullets of a brood to begin laying make the best layers, and the first cockerels to crow usually make the best breeders for egg production.

The laying hen is usually nervous and active; she has a strong appetite, evidenced by a full crop at night; she is the last to retire at night and the first to be about in the morning; she is also late to molt in the fall; she is distinguished by width and depth of abdomen; the comb is usually large and the eye bright.

An authority says that an examination of the earlobe is considered to be almost infallible. A chalky white earlobe indicates that a bird is laying heavily, whereas a cream-colored one shows that the bird is laying moderately, has just started or has just stopped. A milk-colored earlobe shows that the hen has laid slightly or has stopped laying. A very yellow or dark earlobe indicates that the hen has not laid at all. A extremely white earlobe also may mean very low vitality. The more velvety the texture of the hen's comb the better her health, and it is almost a certain sign that she is laying heavily.

To Hold a Cookbook Open.

The most satisfactory thing with which to keep a cookbook open when in use is a sheet of glass bound with passe-partout binding and kept for this purpose. The book is opened wide, and the glass laid over the opened pages not only keeps your place but prevents the pages from becoming soiled while in use.

Protect Your Stock

Increase your profits, comply with the sanitary demands of health authorities, milk companies, etc., and at a saving of time, money and labor!

Make your stables, dairies, poultry houses and cellars, bright, cheerful and free from flies, mites and the germs of infectious diseases! Instead of using whitewash and then a disinfectant, use

CARBOLA

It disinfects and paints at the same time.

It is a finely powdered mineral pigment combined with a germicide 10 times stronger than pure carbolic acid but absolutely non-poisonous. Will not harm man, beast or fowl.

Ready to apply as soon as mixed with cold water—no waiting, straining or bother as with whitewash. Can be applied with either brush or sprayer. Comes in clear white. Will not rub off, flake or peel off. No disagreeable odor.

Sold by Dealers Everywhere.

HOWARD BROS & CO., Ltd.
Toronto, Ontario

Horse Sense

Flatulent colic may be caused by change in food, too much succulent and easily fermented food, as green clover, etc. It is indicated by uneasiness, stamping, pawing, rolling, etc., with continuous pain of varying intensity. Bloating soon occurs, more noticeable on the right side.

Drench with 2 to 3 oz. oil of turpentine in a pint of raw linseed oil, and if necessary repeat in 2 hours. Give rectal injections of warm soapy water. If pain be excessive give drench of 1½ oz. each of laudanum, sweet spirits of nitre and tincture of belladonna in a pint of water. Repeat in 2 hours if necessary.

Make the horse understand what you want him to do. Kind words and caressing touches will improve both his mind and his temper. You will never fail in this way unless you delay the beginning too long.

When he is afraid of harness, papers or machines it is not affectation—it is serious business with him. Flogging will not remove it. Convince him by talking that he is wrong and then you will cure him.

Whipping is likely to send his hot blood from his heart to his head, deluging his sensitive brain and driving him to a frenzy or blinding him with fear.

When he is old enough to set up in business for himself he should be taught the horse alphabet—the halter, bit, harness, the words that mean "come," "go on," "stop," "back" and the feeling of pleasure under the owner's hand. These should all be familiar from colthood up. Horses whose education is begun early will always develop a good character. They will never be balky, scary, nor will they be biters, kickers or have a tendency to run away.

Some horses will become frightened and will kick when given a dry-straw bedding. This probably means that at one time he was hurt with a pitchfork. He isn't wicked but nervous. Teach him that there is no danger.

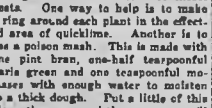
Your Problems

Conducted by Mrs Helen Law

Mothers and daughters of all ages are cordially invited to write to this department. Initials only will be published with each question and its answer as a means of identification, but full name and address must be given in each letter. Write on one side of paper only. Answers will be mailed direct if stamped and addressed envelope is enclosed.

Address all correspondence for this department to Mrs. Helen Law, 238 Woodbine Ave., Toronto.

Mrs. E. C.:—1. To preserve strawberries in the sunshine, place in a preserving kettle in layers as many pounds of sugar as of sound ripe berries, which have been hulled and washed, and when the juice is drawn out a little set it over the fire to cook; let cook twenty minutes after boiling begins. Turn the berries into earthen or agate plates, cover each with a pane of glass to fit tightly over the top and place in the sun. Let stand two days, stirring two or three times each day. At the end of this time place in sterilized jars, seal and store them without reheating. 2. To give the hair a dry shampoo take one cupful of cornmeal, warm it in the oven, add one-quarter cupful salt to it, mix well, then holding the head over a cloth or newspaper rub the meal into the scalp. Brush thoroughly.



Peggy:—1. Red Cross Societies are an outgrowth of the convention of Geneva, Switzerland, held in 1864. 2. Yes, the South Pole was discovered by Roald Amundsen, the Norwegian explorer, who reached it on December 15, 1911. Robert Falcon Scott, the English naval officer and explorer, reached the South Pole on January 18, 1912, only to find the Norwegian flag and records left by Amundsen. Scott perished on the return trip.

Mrs. S. T.:—1. Aphids or plant lice and black fly are the insects injuring your currants and gooseberries. They usually attack the new leaves and tips. Frequent spraying with some of the tobacco preparations or whale oil soap has a good effect. If the fruit is not more than half formed put in the soap or tobacco solution one tablespoonful of arsenate of lead paste or one-half tablespoonful of arsenate of lead powder or one teaspoonful of paris green to a gallon of the spray. If the fruit is well formed this is too poisonous to use and as a substitute you can use hellebore, one ounce to a gallon of water. Hellebore is a mild poison and must be bought fresh each time, as it loses its virtue on opening. In all these mix the poison in a very little water, smooth, before blending with the other solution. 2. Your garden is afflicted with cutworms. These usually work at night and are among the most malicious of insect pests. One way to help is to make a ring around each plant in the effected area of quicklime. Another is to use a poison mash. This is made with one pint bran, one-half teaspoonful paris green and one teaspoonful molasses with enough water to moisten to a thick dough. Put a little of this along the rows, and the cutworms will eat it and die. In the fall dig in a good lot of quicklime in the affected ground, after the garden crops are all in. Care should be taken to keep children and domestic animals from the poison bait.

Mother:—1. To protect the child from flies and mosquitoes, make a framework of slender strips of wood the size of the bed, and tie the four supporting uprights to the bedposts, over this frame a two-yard-wide piece of cotton mosquito netting is thrown and the edges tucked in under the mattress. Let there be plenty of fresh air in the room; it spells health. 2. The rubber diaper is decidedly harmful to baby. It acts like a heating compress, keeping the genitals in a constant state of moist heat which encourages itching, with its consequent scratching and rubbing. One of its most serious after effects is bad practices. The mother or caretaker seeking protection may carry about a rubber pad to place on their laps under the child, but under no circumstances bind up the child with rubber cloth. 3. A child's bed should not be too soft. A hair mattress or some firm sanitary cotton mattress is best. This should be covered with a protective strip of stark sheeting and the pad, over which should be spread a cotton sheet. The covering on the bed should be as light as is consistent with needed warmth. Overheating is highly injurious. A baby should have a bed to himself. 4. The best method of removing superfluous hair is to destroy each individual hair with a little electric needle. This method is called electrolysis. 5. Vitamines are the vital elements in cereal grains, milk, eggs and vegetable products. They lie very close to the outer covering in grains, cereals and many vegetables; are easily destroyed by high temperature in cooking.

O. W. C.:—1. To remove white spots from a polished surface rub with a soft cloth wet in essence of peppermint until spot disappears; then polish with flannel. This will not injure the most highly polished wood. 2. For a holder to remove boiling pots from the stove or in draining vegetables, use an ordinary canton flannel mitt with palm and thumb padded with cotton and a loop of tape sewed to the wrist for a hanger. The protection it gives the back of the hand is obvious. 3. I am told that a paste of molasses and flour will remove grass stains from colored fabrics without effecting the color. To remove grass stains from white flannel trousers, dissolve one cupful washing soda in two cupfuls water, heat the solution, make a suds of naphtha soap, immerse the stain and rub gently. Ammonia and water or alcohol are also good if the stains are fresh. 4. A faded black silk dress may be cleaned by the use of a weak solution of coffee water. Restore the lustre by careful rubbing with a soft silk handkerchief and do not wet the silk too much. 5. By all means write to your hostess within two or three days after your return home. Just write an easy chatty letter about things in general. Be sure to tell your hostess how much you enjoyed visiting her.

Bedtime Stories

"I Wish I Were."

One summer morning a fairy awoke so late that the dew was all gone from the flowers and he had to run down to the brook to get his beforebreakfast drink. And after he had had his drink he discovered that he was too late for honey, too; he could not find a speck of honey, not even one taste. You see, the fairies usually get up so early that they can eat all the honey they want long before the bees start from their hives.

But on this particular morning the lazy little fairy had slept so late that the bees had been round and eaten all the honey,—every scrap,—and that made the fairy so cross that he did not even remember that he might stir round and hunt for something else to eat.

He sat down at the foot of a tree, intending to sulk all day long; but before he had more than started sulking a robin came by.

"Good morning, Friend Fairy!" said the robin cheerfully. "Isn't this a fine day?"

"No, it's a very bad day," said the fairy crossly, "and I wish I were an apple!"

"What a funny wish for a fairy to make," said the robin, laughing. "If you change into an apple, I'll eat a hole in you."

"Then I won't be an apple," replied the fairy crossly, "for I don't want a hole eaten in me! I'll be something else."

The robin laughed and flew away just as a big toad hopped out from behind a tree.

"Good morning, Friend Fairy!" he croaked. "Isn't this a fine day?"

"No, it isn't," said the fairy crossly, "and I wish I were a spider!"

"What a funny wish!" croaked the toad. "Don't you know that spiders have to work very hard and spin a web before they can crawl on it through the air? But I hope you do change into a spider; I'm looking for spiders this very minute, and if you become one I'll gobble you up!"

"Then I won't be a spider," said the fairy, "for I certainly don't care to be gobbled up. I'll be something else."

The toad laughed and hopped away, and the fairy was left alone to sulk.

"I don't know what I want to be," he sighed fretfully. "This is such a horrid world—no dew, no honey, no nice wishes! I think I'll be a star."

"A star!" exclaimed a soft little voice by his side. "Would you be a star and leave this beautiful world—all the flowers and birds—to live up in the bare sky?"

The fairy turned and looked. There, near by, was a tiny ant tugging away at a big grain of sand.

"Do you think this is such a fine world?" asked the fairy. "I should think you would hate it. You have to work all the time."

"To be sure I do," replied the ant proudly. "That's the reason I like to live. Working is the jolliest and most interesting thing in this whole big world—didn't you know that? It's true." And the sturdy little ant picked up his burden and started away.

Left by himself, the sulking fairy began to feel very foolish and very sorry. He remembered the flower bud he ought to have opened long ago; and he thought of the sunbeams he should have helped.

"What I should be wishing for," he whispered to himself, "is work. And then I should hunt round and answer my own wish."

Slyly he slipped round the tree to open a buttercup bud he was sure he had seen there. And as the flower opened, what do you suppose that surprised fairy found? A drop of fresh, sweet honey all ready for him to eat!

As he sipped the honey and planned what to do next, a cardinal bird hopped by.

"Good cheer! Good cheer, Friend Fairy!" called the cardinal. "Isn't this a fine day?"

And the happy little fairy called back, "A fine day for working, indeed it is!"

The Paisley Advocate

PAISLEY, JULY 4th, 1917

LOCAL AND DISTRICT NEWS

Leg Crushed by Auto at Port Elgin

Mr Allen Bell, of 10th Bruce, met with a bad accident while in Port Elgin on Dominion Day. About one o'clock he was standing at an electric light post on a main street corner, when he was struck by an auto, and had his leg broken. The car was a heavy and powerful one, and he was pinned to the post until spectators moved the car back. Miss Hester of Kincardine was driving the car, and had swerved aside to avoid a collision with another which was about to turn the corner. Mr Bell was taken to the home of Mrs J McKenzie, in Port Elgin, where he is yet. The bone in his leg is badly crushed and the fracture cannot be treated until the swelling has abated.

Smart—MacArtney

A pretty wedding was solemnized on Wednesday, June 27th, at the residence of Mr R H MacArtney, Willscroft, when his daughter, Rebecca Myrtle, became the bride of John A Smart, a well known young tradesman of Paisley. Rev M Wallace, of Paisley officiated, in the presence of immediate relatives. Wedding music was played by the bride's sister, Miss Ella MacArtney. The bride, who was given in marriage by her father, wore a becoming gown in African charmeuse satin, and carried orchids and lily of the valley. Going away she wore a smart suit in navy French serge union blouse, hat and boots to match. The groom's gift to the bride was a pretty wrist watch. Mr and Mrs Smart will be at home to their friends after Aug 1st, at their residence, Victoria St north.

Troopship Well Armed

Pte Sam Babcock, who recently went overseas with the Forestry Corps, is writing to his wife and family says: "We had some nice trip, although we were expecting to be in a scrap at any time. We were escorted by four destroyers, and our troopship had eight 6 in. guns aboard. We were compelled to wear life belts all the time, and even had to eat our meals with them on. We came on the Olympic and there were eight thousand soldiers aboard. Quite a number were sick, but I was lucky, as I never missed a meal. We were six days crossing, but took a very long route. We passed a British boat on the way, and shortly after she was sunk by a torpedo. We saw one submarine, but it was too far away to fire on. The ship was broadside to it, but soon turned and kept a bead on it with their guns until it was out of sight."

Orr—Povey

A very pretty wedding was solemnized at the home of Mr. and Mrs. T. Povey, of Mets, on Friday, June 22nd, when their youngest daughter, Elizabeth Beatrice, was united in marriage to Allen Earnest Orr, youngest son of Mr. and Mrs. Robert Orr of West Garafraxa. Rev. W. J. Taylor officiated. As Mendelssohn's wedding march was beautifully rendered by Mrs. Wm. Povey, the prospective groom took his place beneath an arch of wedding bells, and the bride, who was unattended, was given away by her father. She looked charming in a gown of ivory taffeta, trimmed with georgette crepe and pearls. She carried a bridal bouquet of cream roses. Little Margaret Muir, niece of the bride, was a sweet little flower girl, carrying the ring in a tiny basket of flowers. Immediately after a wedding luncheon had received ample attention, the happy couple motored to Arthur where they took the evening train for Toronto and other points. The groom's gift to the bride was a necklace of pearls and to the pianist, a gold chain and pendant.

The bride was a niece of Messrs. R. C. and Dan Pearce, of Elderslie, and has many friends in this locality.

Logan—Nelson

At five o'clock on Wednesday evening, June 27th, a very pretty wedding took place at the home of Mr and Mrs Michael Nelson, 5th Bruce, when their eldest daughter, Mary Jane, became the wife of Mr David Logan, of Rocanville, Sask. As the hour arrived Miss Foster, a cousin of the bride, began the wedding march, and a handsome and typical young westerner took his place beneath an arch of evergreens decked with beautiful white flowers, from the top of which hung a large white bell. In a few moments Miss Jackson followed, leaning on the arm of her father. The bride was beautifully dressed in white silk trimmed with pearls and lace, and wore a bridal veil caught with orange blossoms. She carried a bouquet of white roses and maidenhair fern. The young couple were unattended and looked charming as they spoke the words which made them man and wife. Rev Mr Mc-Nabb, of Underwood, officiated. After the usual congratulations all repaired to the dining room where the tables groaned with the best that could be procured, and needless to say appetites were soon appeased. The wedding cake was very tasty and beautifully decorated. The reception in the evening was attended by a large number of neighbors and intimate friends of the bride. A most enjoyable evening was spent in dancing until the wee small hours of the morning. Many and beautiful were the presents received, the groom's gift to the bride being a beautiful gold wrist watch, to the organist a brooch and to the bride's sister. The young couple intend visiting friends in Toronto, Niagara Falls, London, Thamesville and other points before starting for their home in Rocanville, Sask. The bride's travelling suit was of navy blue with hat to match. The best wishes of all go with them.

W T C U CONVENTION

The 29th annual convention of Bruce county W. C. T. U. was held at Port Elgin with a very fair representation. The president, Mrs. Ashcroft of Howden Vale, presided. The presence of the Provincial Hon. President, Mrs. McKee, of North Bay, added much to the interest of the occasion.

Reports of the work of the year were encouraging, but special attention had been given to patriotic work and a most creditable amount contributed.

Greetings of good cheer were brought from the church organizations and Women's Institute of the town. Appreciative replies were made to these by the visiting ladies. The departments of general work were discussed very thoroughly, giving more prominence to the questions of the hour, viz: the lately acquired Franchise, its responsibilities and possibilities; the menace of the wet canteen and other temptations to the overseas soldiers; the importance of temperance education among the young people, by intelligent instruction in Scientific Temperance, etc. Mrs. McKee conducted a very instructive school of methods at one of the early sessions where other departments were taken up, among these being Railways and Fairs, Anti-Narcotics, Press and Tidings, Soldiers and Militia, each of which has its own specific value and claim to special attention. Mrs. McKee with her quarter century experience in white ribbon work was a most reliable "Court of Appeal" in vexed questions, and in her definite, concise way cleared up many problems and gave helpful suggestions for more effective work.

The evening meeting was very enjoyable. Rev. Dr. Scanlan presided. He, as well as Revs. Buckborough and Mann spoke in appreciative manner of the W. C. T. U. organization, its aims and influence.

To the kindly welcome, Mrs. Ashcroft made reply in kind, touching briefly upon the necessity of caution in exercising the franchise, guarding against the possibility of drifting into party politics instead of making intelligent deliberate decisions guided by a trained conscience. She claimed that women has only reached the threshold of her kingdom. She is the keeper of the nation, the guardian of the nation's wealth, and it is to be hoped the ballot in her hands will not only mean politics and more politics, but a means to the development of a nobler citizenship and higher standards of national life.

Mrs. McKee's address was comprehensive and interesting throughout. She claimed the need of continued effort in lines of social uplift. There should be no laxity of interest because some advance has been made. The work is not finished, but there are more weapons with which to fight the forces of evil.

Prohibitory laws should be so incorporated in the laws of the land and in the minds of youth that they cannot be repealed. The cigarette menace and the social evil were touched upon briefly.

Resolutions were as follows:—

Whereas it is fairly generally considered that the environment surrounding our soldiers in England is of a nature to degrade and demoralize the best that is in them, wherefore, resolved, that this convention of W. C. T. U. of Bruce Co. convey to the Federal Government its conviction that it is the duty of the government to protect by stringent regulations the purity of our young men and guard their health as well as morals by causing to be banished from the precincts of the camps, the influence of the "strange woman," the liquor saloons and to discourage the use of the baneful cigarette.

Resolved that we endorse the passing of a bill for the conscription of men for overseas service, believing it to be only fair and just that all classes should contribute to defend the rights and liberties of our nation.

Resolved that the thanks of the women of Ontario are due the Premier of Ontario, Sir W. Hearst, and also the leader of the Opposition, Hon. N. W. Rowell, for bringing in the bill of enfranchisement of women and carrying it without division.

The plans of the work for the ensuing year deal particularly with the urgency of active co-operation of the children and young people by forming organizations of "Ys" and Loyal Temperance Legions.

Also eternal vigilance to offset the encroachments of the liquor interests by introduction of alcohol in the form of "near-beer," etc., etc.

The election resulted as follows: Pres. Mrs. B. C. Ashcroft, Howden Vale; First Vice Pres., Mrs. P. Moore, Teeswater; 2nd Vice-Pres., Mrs. W. Halliday, Chesley; Rec. Sec., Miss H. Smellie, Chesley; Cor. Sec., Mrs. Simpson, Wiarton; "Y" and L. T. L. Secretary, Mrs. Busby, Port Elgin.

ARRAN COUNCIL

Council met on June 25th; all present. After Court of Revision general business was taken up. J W Sinclair and Wm Wolfe asked for a grant to the agricultural society, 75 dollars was granted. The Kennedy bridge matter was then taken up, tenders were opened as follows, Green & Clark, Owen Sound $7750; Hugh Frost, Hanover, $5825; David Keys, and James Cole $4932. On motion of Scarrow and Bronton Mr Cole was awarded the contract, to be completed the beginning of September. The following orders were issued.—A G Hepler, wire to fence Hall lot $9 38; P H Klug, salary as Assessor and postage $85 45; Municipal world supplies 90c; Sawyer Massey Co, Hamilton, for grader $281; Alex Wain, freight on grader $9 85; J C Tatton, acct. for culvert tiles $13 30; S Harrison, stock in water keeping road open $5 00; A. H Wark, drawing tile and putting in culvert lot 11 con 2 $6 00; E J Morrow, putting in culvert and drawing gravel $4 4 50; Chas Miller, work on con 12 $1 00; Harvey Hopper, putting in culvert and drawing tile $4 50; Thos Caton, work with grader $25; George Miller and Robt Berry, work with teams on grader $16; Robt Neil, digging stones out of road $2 00 P J Scarrow, 136 days with grader $3 00; A G Hepler, 3 months' salary $32 52; H T Potts, 3 months' salary $62 50. There were only 2 appeals at Court of Revision, which reduced the roll $600. Council adjourned until Monday, the 9th of July next.

H T POTTS, Clerk

NOTED MUSICIAN OF MONTREAL

Advises The Use Of "FRUIT-A-TIVES", The Famous Fruit Medicine.

MR. ROSENBURG
500 Cangrain St., Montreal.

April 20th, 1915.

"In my opinion, no other medicine in the world is so curative for *Constipation and Indigestion* as "Fruit-a-tives". I was a sufferer from these complaints for five years, and my sedentary occupation, Music, brought about a kind of Intestinal Paralysis—with *nasty Headaches*, belching gas, drowsiness after eating, and Pain in the Back. I tried pills and medicines of physicians, but nothing helped me. Then I was induced to try "Fruit-a-tives", and now for six months I have been entirely well. I advise any one who suffers from that horrible trouble—Chronic Constipation with the resultant indigestion, *to try "Fruit-a-tives"*, and you will be agreeably surprised at the great benefit you will receive". A. ROSENBURG.

50c. a box, 6 for $2.50, trial size, 25c. At all dealers or sent postpaid by Fruit-a-tives Limited, Ottawa.

Letters from the Soldiers

Gnr. Leslie Shaw, in a letter dated May 24th, tells the doings of that national holiday behind the British lines.

Well, this is the 24th. I wonder what the boys are doing in Canada today. We had a little sporting here this afternoon and I never laughed as much in all my life. Some of the events were very funny. The first was a pillow fight on a pole. Two fellows sat astride a greased pole about 20 feet off the ground and hammer at each other with oat sacks filled with some rags till one fellow fell off the pole. Some fell off without being hit, and the way they would duck and dodge was very funny. Then came the 100 yard dash followed by wrestling on horses. This last is rough, requiring a lot of strength and skill in horsemanship. The main thing was the bareback mule race. There were about 4h mules entered in the race and they ran them in sets of 8. Then they took the winners from each set for the final. You never saw such antics in all your life. There were mules running in all directions. There was a race course marked out, but I don't think more than three mules kept on it. There were mules' ears, men's arms and legs in the air all at the same time. I haven't laughed so hard since I came to France. I was standing beside Karl Halpenny of Midland and he said he wished there were a thousand mules in it.

June 2nd—Well, mother, I put out a washing for myself to-day, and I feel pretty proud of it. I washed four prs. of sox and a pair of drawers and I made them clean. Gee, its a hard job on the arms and hands. We don't carry wash boards with us, so we have to rub them in our hands. You would think you struck a laundry if you saw this place sometimes.

We are getting along fine with the mules. Every day some body is thrown off and we have a laugh, but no casualties have resulted as yet. They are hopeless creatures just the same.

I saw Fin Hepburn last night and Jack Hamilton, but I haven't seen any of the other fellows for some time.

Y.M.C.A. Collections, Bruce Tp.

Con 12 and 13—$5 each—C Nicholson, Geo Ribey, Miss Robertson, Miss F P Young, Alex McGillivray, Donald Robertson, Alex McLeod, W Brown, Ed Waring, J A Howe, Alex McGillivray (ex-reeve), Mrs D McGillivray, Miss N McGillivray, Thos Foster, Miss Mcclloch $3 45—Bill Barnes, $3 each—D Beaton, Wm McKittrick, Milton McKittrick, D A McGillivray, $2 each—J Nelson, Wm Airth, Wm McCulloch, Thos McLennan, Geo Collins, Heb Carr, Josh Howe, Mrs Matheson, Colin McGillivray, Mrs Hay, John Greaves, John Ribey, J Cumming, Sam Archer, Jas Archer, Peter Waring, D M Cameron, Thos Nelson. $1 each—E Hutchinson, John Dobson, Job Carr, Wm Hodge, Chas Maas, Jas Hearn, Jas Donaldson, Geo Hammond, Dos McDougall, Dan McLean, Neil McGillivray, Sandy McGillivray, J H McGillivray, Chas Kealy, Mrs C McArthur, Geo Scott, Hector McGillivray, Cottrill Morris, Harvey Neilly, C W Klassck, Mac McDonald, John Dunlop, Archie McDougall, Alex McRae, Harry Petrie, Cleo Reiter, Irwin McVittie, Ben Nicholson, Louisa Nicholson. 50c—Frank Cottrill. 20c—Jos Cottrill. Clerk's Notice of First Posting of Voters' List

Voters' Lists, 1917, Municipality of the Village of Paisley, County of Bruce

NOTICE is hereby given that I have transmitted or delivered to the persons mentioned in section 3 of the Ontario Voters' List Act, the copies required by said sections to be so transmitted or delivered of the list, made pursuant to said Act, the copies required by said sections to be so transmitted or delivered of the list, made pursuant to said Act, of all persons appearing by the last revised assessment roll of the said municipality to be entitled to vote in the said municipality at elections for members of the Legislative Assembly and at Municipal Elections; and that the said list was first posted up at my office at Paisley, on the 29th day of June, 1917, and remains posted up for inspection.

And I hereby call upon all voters to take immediate proceedings to have any errors or omissions corrected according to law.

Dated this 29th day of June, 1917.

J GIBSON, Clerk of Paisley

NEW STRENGTH FOR LAME BACK.

Letter Tells of Long-looked-for Prescription.

Dear Mr. Editor—I suffered form lame back and a constant tired, worn-out feeling. At times I was unable to stand erect and scarcely able to get around. It would usually come on at first with crick in small of my back. I took a box of Dr. Pierce's Anuric Tablets and my back commenced to get better soon after starting to take them. I did not have to walk doubled over as I did before using the "Anuric." It is the best remedy I have ever taken for what is is intended to relieve.

I hope those who are in need of such a remedy will give the "Anuric Tablets" a trial.

(Signed) A. G. DRAKE.

NOTE: Up to this time, "Anuric" has not been on sale to the public, but by the persuasion of many patients and the increased demand for this wonderful healing tablet, Doctor Pierce has finally decided to put it into the drug stores of this country within immediate reach of all sufferers.

Simply ask for Doctor Pierce's Anuric Tablets. There can be no imitation. Every package of "Anuric" is sure to be Doctor Pierce's. You will find the signature on the package just as you do on Dr. Pierce's Favorite Prescription, the ever-famous friend to ailing women, and Dr. Pierce's Golden Medical Discovery, proven by years to be the greatest general tonic. Send 50 cents to Dr. W. M. Pierce, Buffalo, N. Y., for large trial package.

At any rate don't give up hope of being cured of your malady until just a few doses of "Anuric" have proven that it will make you feel like a different person.

EDITOR—Please insert this letter in some conspicuous place in your paper.

SECOND CON. ELDERSLIE

Hurrah for wild strawberries and dry weather to pick them.

Mrs W J Allen visited Owen Sound friends last week.

D C Lillico of Toronto visited his parents here over the holiday.

The farmers in this section are feeling very anxious about the dear little morphies they put underground a few weeks ago. If the wet season continues much longer gardening will be a failure this season.

Mr and Mrs McKernacher and Miss Jean of Paisley visited their cousin Mrs A McGregor on Saturday last. They also attended the Green—McCallum wedding.

Miss Green of Shelbourne is visiting friends here for a few days.

The 2nd con S S has closed for July and August, but will re-open again in Sept.

A number from this con attended the Vesta picnic on Saturday last.

A prayer meeting will be held in Manley's school on Thursday evening.

Mr and Mrs J Robertson entertained a number of their friends one evening recently, when Miss M Keith was presented with a miscellaneous shower of useful household articles.

On the afternoon of the closing day of school Miss M Green teacher at S S No 12 for the past two years, was presented by her pupils with a beautiful mantle clock, accompanied by an address which was read by Elizabeth Allen. The presentation was made by Lieta McCulloch. The ladies of the section had also gathered for the occasion, and had provided a dainty lunch which was enjoyed by all present. The best wishes of this section follow Miss Green to her new home.

A few from this con., attended the celebration in Port on Monday.

Messrs W J Allen, Chas Allen, and Geo Addison are in Toronto for the 1st.

On Saturday afternoon June 30th at 2.30 a pretty wedding was solemnized in Geneva church when Mary Elizabeth Ashley (Miss Mary Green) of the 2nd con Elderslie became the bride of Malcom McCallum of Brant.

WALKERTON

The proposition to buy or build a Children's Shelter in Walkerton at a cost of about $4,000 to the county, is as times drags on and more light is shed on the matter, assuming the aspect of a rather extravagant scheme. It is figured that with the salary of a caretaker and the up-keep of the Shelter the affair would entail an expenditure of nearly $1500 per year. As the Society now seem to get the wards off their hands and placed in foster homes with commendable rapidity, there appears to be no very urgent need for a big expensive clearing station for Bruce such as is suggested by the Shelter. If such an institution is compulsory, according to a recent law, then the suggestion of the Huron County deputation to the Bruce County Council last week, that the two counties unite for the purpose of erecting and maintaining a shelter jointly between them would seem to be in the direction of economy and common sense. If a few more counties could be brought in, the scheme would be even more attractive and would have a tendency to lighten the burden all round. Bruce has no more need for a big separate Children's Shelter than a Jersey cow has for a second tail.

The first toll taken by the enemy from the 160th Battalion is reported in Monday's casualty list, the victim being Pte. Joseph H. Eckenswiller, of Neustadt, who for some years worked in Walkerton, and who was severely shell shocked on the Western front. After crossing to England with the the 160th, Eckenswiller was drafted to France with a construction company, with whom he was engaged when the enemy "got" him. It is a rather significant fact that the first of the Bruce Battalion to suffer at the hands of the foe should be a recruit of German lineage, a thing that should occasion some worry to the Kaiser, who predicted that everything of Teuton origan, even to the cats and dogs, would hitch up and fight for him. When the vanguard of the 160th arrives and he sees the faces of German extraction confronting him, he sure will feel that his chickens have come home to roost, and that the descendants of the men who left the Vaterland to escape Militarism have come to squelch the mailed fist and assist in the German house-cleaning.

A Walkerton tailor who has never held anything more dangerous than a tape line around the waist of harmless, dolled-up young men, found himself in a most uncomfortable position last week, when Hank Irwin, the local horse king, with whom he was talking, handed him the rope to hold on a big prancing Percheron stallion, while he went into a neighboring store. Not wishing to be impolite the clothesman took the cord and began at once to grow nervous and pale. Getting up on its hind feet in seemed to be trying to rest its front toes on the moon, while the local tailor who was yanking, kept side-stepping and pussy footing lest like Sampson he pulls the works down on himself. His lot wasn't made any lighter when the local jesters began to gather and scoff at him. Between fears and anger he was sure getting unstrung, and like Wellington praying for Blucher he was inwardly longing for Hank. But Hank behind the screens was himself, enjoying the sight too much to with it ended, and, leaving joy to be unconfined, let the dance go on. Up and down the street they performed until the tailor began to think that the sinking of the Lusitania was mild as a sensation to holding the hemp on such a horse. Just as his spirits had sank as low as an Alaskan thermometer in mid-winter, and he didn't care whether many would come to his funeral or not, Hank brought hope to his soul and joy to his life by appearing on the scene and taking the cord from his mitt. Anybody who wants to hurt a certain tailor's feelings has only to talk Percheron horse and somebody choke-up like an ostrich in a mail factory.—Herald and Times.

GREENOCK COUNCIL

Valad's Hotel, Riverside,
June 25, 1917

Council met as per adjournment, all the members present, the Reeve in the chair.

The minutes of last meeting and Court of Revision were read and adopted.

The following accounts were presented for payment and ordered paid:—The Municipal World, supplies for Clerk, $1.46; J. J. Cassidy 6 cement tile, $12.50; Jos. Lippert, 370½ yds. gravel per Young cont., Con. 6, $17.05; Jas. Freiberger, drawing tile and putting in same, s. l. 6, $4.50; Massey-Harris Co., 1 Pick Plow, $32; J. C. Gibson, Paisley town line account, $34.50; Wm. Rankin, 11½ days with two teams on grader, $57.50; Jos. Cunningham, postage for Clerk, $5.00; D. Phelan Council meetings, $30.50, Com. Work $27.70, postage $1.47, telephone 85c., $60.72; Jas. D. Campbell, Council meeting $20.50, Com. work $8.40, $29.90; Thos. Symon, Council meeting $23.70, Com. work $1.50, $25.20; Thos. Sawyer, Council meetings $22.25, Com. work $14.40, $36.70; Geo. W. Gilchrist, Council meeting $12.75, Com. work $7.00, $29.70; M. M. Schuster, half year's salary $50, Reports to D. of Ind. $2, $52; Thos. H. Purdy, half year's salary $100, express 75c., Sry reports $1.50, $103.25; Mrs. F. Valad, room for council meeting $1; Jos. Hehn 13½ days for operating grader at $2.50 per diem, $41.25; L. Stanley, board of Jos. Hehn, $13.

Communication from Laura Cunningham was read, asking for a grant to help the Glanis Red Cross Workers. —Laid over to next meeting.

Symon—Sawyer.—That this Council grant the sum of $25 to be spent on Cons. 2, 3, op. lot 25, and a sum of $20 on s. l. 25, Con. 2.—Carried.

Campbell—Symon.—That G. W. Gilchrist and T. Sawyer be a committee to have bridge built on s. l. 10, Con. 10 and also one on Con. 14, op. lot 7. —Carried.

Sawyer—Campbell.—That this Council grant the sum of $50 to be spent by T. Symon in gravelling Eyre road.—Carried.

Symon—Sawyer.—That the Clerk be instructed to advertise for tenders for the construction of the Kaake drain.—Carried.

Sawyer—Campbell.—That this Council do now adjourn to meet at Chepstow on Monday, the 30th day of August for the purpose of levying rates, to open tenders for the construction of the Kaake Drain and for general business.—Carried.

THOS. H. PURDY, Clerk.

Shoes Must "Make Good"

The same as men.

There is a competition among shoes—or rather the manufacturers — that is pretty good for you people.

It shoes you and your family with the best shoes in the world without it costing you a cent more than it has to.

Of course you expect us retailers to gather these shoes that are the winners in this war of competition, and that is what this store is constantly doing.

Our claim is that every time you have a shoe need you ought in justice to yourself let us supply it.

Our stock exemplifies all the prevalent shoe newness. It contains the latest shoe thought of the leading manufacturers.

NUMBER FORTY-TWO

By Mary Garland Knight.

When the uncle of Willis Templeton died, leaving ten thousand dollars "to this beloved nephew," the latter felt like the richest man in the world.

He did not start out on a mad spendthrift riot. That was not his natural pace. He had missed real home life since his parents died two months previously. Young Templeton quietly set out to find a wife. He was not after style, money or position. Some sweet humble little woman who could appreciate a comfortable home was his ideal.

"There seems to be none such in Eladene," he decided, after every fortune-hunting girl in the country had set her cap for him.

"Business is what you want to think of, old boy," declared his lawyer, a young man who was really loyal to his interests.

Willis considered many business propositions. Then came a wonderful chance to increase his few thousands to a million, according to Vance Trafton.

This latter was a cousin. He had been a scapegrace in his youth. Later Willis had heard he had figured as promoter and speculator. He had appeared at Eladene about a month after Willis had been pestered to death with mean, indigent and really deserving relatives. He had more or less got rid of most of them according to their deserts. When Trafton appeared it was an enjoyable relief to Willis to find someone who was not scheming to beg or borrow of him.

"I'm north closing a big deal," reported the fashionably dressed relative who bore all the earmarks of permanent prosperity. "Went to Florida ten years ago, bought one thousand acres of swamp land at two dollars an acre. We've sold it all out at twenty and I'm trying to buy a tract from a man in the city. You'd ought to see how we've made the wilderness blossom as the rose. Think of it—ninety thousand pineapples this year's crop, some of them weighing as much as nine pounds. Juicy, mellow—I want you to come back with me and see a real climate, Willis."

By degrees the wily, specious Trafton worked on Willis until the latter was actually anxious to buy an interest in the wonderful proposition. It was finally agreed that he should invest eight thousand dollars for a one-fourth share in the new land about to be opened up.

"I'll go to the city and arrange to get the deeds for the land," announced Trafton. "In the meantime I'll have a choice half dozen of our pineapples shipped to you, just to show you what magnificent fruit we raise."

In a day or two along came a crate directed to Willis. As he opened it, wrapped in tissue paper were half a dozen pineapples. Certainly they were superior and standard. More than ever in love with the proposition, the elated Willis was about to hasten to distribute the luscious fruit among his friends and possibly influence other investors to go into the enterprise, when he noticed a neat-looking card in the bottom of the crate.

Beside it lay an unstamped letter. It was simply directed to "Miss Landon." The card read "Acme Fruit Co.," and gave an address in the city. At one end was the written notation: "Packed by No. 42."

In a moment somehow the suspicions of Willis were aroused. The thing didn't look straight. Had Trafton simply gone somewhere and bought any old fruit to palm it off on an investor victim?

"It doesn't square up right," decided Willis, and straightway started for the city.

He found out where the fruit company named had its warehouse. It was a busy place devoted to the specialty of packing fine tropical fruits. Willis saw the manager. He was soon convinced that the crate of pineapples had been shipped to him on a casual order two days before.

"They came from Florida?" inquired Willis.

"Oh, no. We get all our pines from Central America," was the amazing declaration.

And who was No. 42? Ah, yes—one of their fruit packers, Miss Landon by name. Could she be seen?—for Willis had opened the letter to find that it contained an offer of marriage from one "Richard Martin."

Miss Landon was not at work. Address—yes, such and such a number on a certain street. Thither Willis proceeded. There was a streak of romance in him. An important letter with great news for Miss Landon had in some mysterious way got into the

"I'm North closing a big deal."

fruit crate and miscarried. This Miss Landon had saved him eight thousand dollars. He felt grateful towards her, interested in her.

Willis located Miss Landon's home in an upper flat of a neat little house. A good-natured old lady was in charge. She invited Willis in, saying that Miss Landon would soon be home. She had gone with her two little brothers to visit a sister who worked in a photograph gallery.

"I have been tidying up for her," explained the old lady. "Not, that her flat needs much of that, for she's the cleverest, neatest little dear ever was. She's a jewel, she is. Supports the two little ones and housekeeps. Such bread as she makes! Such dainty wholesome meals! She teaches them nights. You'd ought to hear them sing! She's saving up to buy a piano, bless her."

Certainly the refined homelike air of the delightful little flat was soothing. Willis lingered. Miss Landon arrived.

Bluntly he told her the whole story. He handed her the letter. He was sorry, as her bright gentle face grew upon him, that she had a lover.

"Oh, dear!" she cried, as she received the missive. "I've wondered where I ever lost it. It must have fallen from my pocket into the crate. I am glad to get it. A friend of my sister's, a gentleman friend, asked me to give it to her. Now I can straighten up a tangle."

Then she, Lucia Landon, as Willis soon found out her name to be, was heart free! Somehow the discovery pleased him.

"Miss Landon," he said, "you can see what finding your card in that crate means to me," and he told of how he had nearly been swindled out of his little fortune. "I owe you considerable. I feel it my duty to send you a piano for your little musicians here. It only half expresses my gratitude for your intervention at a critical juncture in my business affairs."

Lucia demurred, but Willis was determined. He sent the piano the next day. Then he went back home to have it out with his false-hearted relative. Then he found himself strangely restless.

Those little singers! How were they getting along? The city and that flat in it proved an irresistible magnet.

He found the Landons happier than ever, the flat more charming. Its dainty mistress welcomed him like the lady she was.

"She is the girl I have been looking for," he told the old lady friend of Lucia one day.

"Why don't you tell her that?" intimated the good old soul archly.

"I will," resolved Willis. He did and the result was that he gained the dearest little wife in the world.

People with a garden, and the necessary time, can greatly lessen the food cost by canning their own fruits and vegetables.

Preserving Strawberries.

Strawberries are a favorite fruit, but miss is given particular care in canning if they keep well. Wash and drain the fruit after hulling. While doing this, have cans and lids both heating in hot water. Measure the drained berries and for each quart of berries allow one cupful of white sugar. Place the sugar in an aluminum or granite kettle, and add a few spoonfuls of water to keep it from burning until it melts. When the sugar has boiled long enough to drive all air out of it, add the berries. As these boil up gently, stir them down. When they have boiled up the second time, lift off the fire and can, taking the cans from the warm water one at a time as you can; put on the lid before filling the next can, tighten the lids, turn the can upside down, and leave in that position four or five days. The berries then, when turned, will resume their proper position in the cans. I never lose strawberries when I follow this recipe.

For preserving I use only firm berries, and prepare as for canning. I measure the berries, and for each quart of berries allow a full quart of white sugar. I place this sugar in the preserving kettle with enough water to keep it from burning until the sugar melts and boils. I allow the sugar to boil, stirring it until it strings from the spoon. I take the strawberries gently from the vessel they have been drained in, and gently add them to the boiling sugar. This cools the sugar, but they soon boil up again, and I stir them down. When they have thoroughly boiled up again I consider them done and put them in the cans. You see, I make but little difference between preserving and canning, with the exception that I give more sugar to the preserves and allow it to thicken before adding the berries. It is the surest way of getting them to keep safely that I know of, and to retain their shape and color. Too many housewives cook the strawberries too long.

Sun preserves of strawberries I make this way: After preparing the berries I measure berries and sugar to equal amounts, placing the dry sugar on the berries, then set them on the back of the stove and let them cook gently until the sugar has slightly thickened. Then I spread on shallow dishes set direct in the sun, and cover with mosquito netting on frames to keep off flies and birds. One day of hot sun should thicken the syrup, leaving the berries a bright red; but if it doesn't, set them back on the stove and keep merely warm until the sun again shines.

A Little Boy and His "Pal."

Sometimes one wonders if, after all, these stories about the child who asks so many questions have not another side.

The other day coming down in the Fifth avenue bus, says a New York writer, a little fellow about eight was asking his mother the usual string of questions about everything under the sun. But to the surprise of the other passengers the usual reply, "Oh, my dear, don't ask so many questions," was not forthcoming. In this case mother was right there.

"Mother, why does a little automobile rattle more than a big one?"

The passengers smiled, but mother replied promptly:—

"Because the big car is heavier."

"Mother, look at the lady soldier. Is she goin' to war?"

"No, son; that is a Campfire Girl." Here followed a detailed account of the activities of that organization.

"Look, mom, at the officer. Does he ride on horseback?"

"No, dear; you can tell by the insignia on his sleeve that he belongs to the artillery."

By this time the passengers were gazing with much interest at the lady who could actually answer a little boy's questions. Then came a pause as the bus trundled past a downtown club where the flags of all the nations who are fighting with the Allies were fluttering.

"Name 'em, mom," commanded the boy.

And mom did—every one, from the flag of Cuba on through to England and France.

A gray haired man gazed thought-fully at the pair as they alighted at Thirty-second street, the youngster still chattering and gazing eagerly into his mother's serene face.

"I wish my kid had a pal like that," he said wistfully to a friend.

Recipes Tried and True.

Strawberry Shortcake:—4 teaspoonfuls baking powder, ½ teaspoonful salt, 2 tablespoonfuls sugar, ¼ cup butter, ¾ cup milk, 2 cups flour, 1 quart strawberries. Mix flour, baking powder, salt and sugar and sift twice. Work in butter with fingers. Add milk gradually. Put on board, divide into two parts, and roll out to fit the cake tin; using the least possible flour to roll. Put one part on tin, spread lightly with melted butter, then place other part on top. Bake 15 minutes in hot oven. When baked, the two parts will separate easily without cutting. Mash berries slightly, sweeten and place between cakes. A dozen or so whole berries may be placed on top for a decoration.

Lemon Sauce for Puddings:—Mix 1 cup sugar and 1 tablespoonful flour, add 1¼ cups boiling water, put on the fire and when it begins to boil add 1 heaping tablespoonful butter, ½ sliced lemon and pinch of salt. Cook until it has the consistency of cream. Serve either hot or cold.

Orange Sauce is made by substituting one orange for the lemon.

Chocolate sauce is made by adding 2 squares of Baker's unsweetened chocolate to the orange sauce.

FARMING IN AUSTRIA.

Tillers of the Soil Live in Central Villages, Not in Farm Houses.

In the agrarian districts of Austria, folk do not live in isolated farm houses but in some village central to the farms about. Someone, usually an aged matron, is assigned to set the house to rights and prepare the midday meal.

The others go out, gather the tools, hitch on yoke the sturdy oxen to some wagon for the day, and then ride out to the field. There, men, women and children till or sow or cultivate or reap, according to the season. At noon they stop long enough to dine; then once more they toil until dark. With nightfall all clamber aboard the open cart, and the oxen, used perhaps to draw the plow, or to do other similar work during the day, are made to draw the laborers back to the village.

Someone walks at the head of the oxen, though they know the way, as with steady, unbroken gait, for which the patient animals are noted, they soon cover the long stretch home.

The Talmud enumerates rue among the kitchen herbs and regards it as free of tithe as being a plant not cultivated in gardens. The name rue occurs only in Luke xi:42.

DIAMOND DIAMOND

Wisely obstinate is the farmer's wife who insists on quality—

and who buys only the best sugar—because

ST. LAWRENCE RED DIAMOND EXTRA GRANULATED

—admittedly without any superior—will never cause preserves to ferment—as it does not contains the organic impurities which start fermentation.

SIMPLE PRECAUTIONS.

To Succeed with your preserves, buy good fruit—it must not be over-ripe.

Buy Good Sugar—St. Lawrence Red Diamond Granulated.

Sterilize your jars thoroughly.

These precautions prevent the usual causes of failure.

WE SUGGEST

that the 100 lb. bag of St. Lawrence Red Diamond Extra Granulated, is the best for the Farmers' Home.

It ensures full weight of the best sugar and avoids frequent trips to the store.

Your dealer can supply Red Diamond in Coarse Grain, or Medium, or Fine, as you may prefer.

Good Fruit deserves Good Sugar—get the

ST. LAWRENCE RED DIAMOND EXTRA GRANULATED

Sold in many styles and sizes of Refinery Sealed packages.

Lantic Sugar

Has Nothing to Hide

Now that the Government has absolutely prohibited the use of any artificial coloring matter in sugar, we tell you again that we have

—never used Beets
—never used Ultramarine Blue
—never used Aniline Dyes
—never used Vegetable Dyes

in refining any of our sugars.

This means that every pound in the hands of your grocer is pure and uncolored.

So—why take chances? Why not insist on having Lantic—

the Sugars that have always been pure, and cost no more than any other?

Look for the Red Ball Trade-mark on every Carton and Sack.

TRAWLER DEFIED U-BOATS.

Two Submarines Reported Sunk After Encounters.

Stories not hitherto published of lively encounters between British trawlers and German submarines in the North Sea were told by Robert Lowry and others at the recent meeting of the Mission to National Seamen. One trawler, Sir Robert said, became such a terror to U-boats that four of them lay in wait and eventually destroyed it. On one occasion, this trawler armed with two light guns was attacked by a submarine. One shot went through the deck house, another smashed the wheel, "but the skipper went on steering with broken spokes." Another shot carried away the cook's galley, but the trawler's gunner hit the submarine, which then had enough of it and went under.

Another unarmed trawler saw a submarine on the North Sea and made a dash for it with the result that the U-boat quickly submerged. "It went underneath," said Sir Robert, "because it could not imagine it possible that a trawler would have the courage to attack if it were not armed."

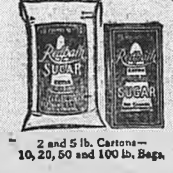
Sir Robert related how they learned of the sinking of two submarines by the bodies of the crew floating to the surface, although five or six days later a report was circulated from Germany that the boat had returned to port.

BIRDS WARN SOLDIERS.

They Are First to Distinguish Odor of Gas in the Trenches.

One of the favorite characters in the folk-lore of all nations is the kindly-disposed fish, or bird or frog, or rabbit, who heaps benefits upon the hero, coming to his rescue in moments of peril at the very nick of time.

This pretty fairy-tale is coming true at present for the heroes of the battle-front in places where trenches have been dug near a forest or orchard. For the birds overhead give warning of the approach of the noxious fumes of asphyxiating gas before it is perceptible to the senses of the soldiers.



Dr. Cabanes, writing in La Chronique Medicale, says that the birds are aroused from their slumbers before the odor of the gas has been detected in the trenches, and at once begin to make a confused clamor as they hastily take their flight to the rear, thus warning the men behind the guns to don their gas-masks and be ready for the deadly unseen foe. This circumstance is in accord with the well-known use of a canary to detect foul air in mines, and it seems probable that the superior sensitiveness of birds in this respect is due to the highly oxygenated condition of their blood, causing them to suffer from the slightest lack of oxygen.

Wood can be preserved from the ravages of insects by the injection of turpentine.

Plenty of water should be supplied for the calf from its birth, but water should never be mixed with the milk.

It is estimated that an acre of beans will produce as much food material for human consumption as five to fifteen acres of pasture.

Redpath SUGAR

2 and 5 lb. Cartons—
10, 20, 50 and 100 lb. Bags.

From "Ye Olde Sugar Loafe" of grandmother's day, to the sparkling "Extra Granulated" in your own cut-glass bowl, Redpath Sugar has appeared three times daily, for over half a century, on thousands of Canadian tables.

"Let Redpath Sweeten it."

GOVERNMENT CONTROL OF RAILWAYS

INTERESTING STATISTICS OF VARIOUS COUNTRIES.

Comparing Freight Rates and Wages Paid on Government Owned and Private Owned Roads.

W. M. Acworth, the British representative on the International Board of Inquiry into the Canadian railway situation, in speaking of the English railways said recently:

"Now, I am no foe of government railways. On the contrary, I believe that in countries with a population less self-reliant than our own, such a policy is necessary. In a country with a bureaucracy as well-trained and as well-organized as that of Prussia, it may even be desirable. But a careful study of the evidence has convinced me that in the long run state control ends in keeping down the best to the level of the worst, and that taking them all for all, the private railway companies of England and the United States have served the public better than the government railways of the continent, or of our Australian colonies, and are likely to serve it better in the future."

The employees in 1913 on the railways of Germany numbered 786,466 and were paid on the average $408.97 per year, thirty-eight per cent. of the gross earnings. In German, all classes of freight considered, one and a third cents, or 13 mills, were collected for each ton of goods moved one mile.

In Canada during the fiscal year ended June 30, 1915—the figure are used, because they were those compiled from official records by the Bureau of Railway News and Statistics, Chicago—the employees numbered 124,142 who received on the average $727 per year, more than forty-five per cent of the gross earnings. Yet in Canada the railways collected only 7.51 mills, or about three-quarters of a cent for each ton of freight moved one mile. The rate charged in the United States for similar service in 1915 was 7.380 mills, or about 1-8 of a mill less per ton than in Canada.

Conditions in Australia.

In Australasia, where are established the only democracies constitutionally comparable with Canada, the railway situation is exceedingly complicated and the conditions—revenues collected and wages paid—vary in each division of the island continent.

In New South Wales in 1914-15 the state received 1.90 cents or nearly 20 mills for each ton or freight moved one mile (and in addition there are terminal receipts per ton of 23 1-3 cents) and paid each employee on the average of $741.

In South Australia in 1914-15 the employees were paid an average of $412.95 per year, 2.12 cents or more than 20 mills were charged for moving each ton of freight one mile.

In Western Australia in 1914-15 the average wages paid were $790.30 per year, in Queensland $650, but no figures are available showing the average amount collected per ton of freight per mile.

The wages paid on the Australasian systems vary, as will be noted. The average for the six divisions is $654.76 compared with the $727, the average paid in wages in Canada in 1915.

In Canada the enterprise of the railways has broken up the country into farms. In Australia there are ranches many thousands of square miles in extent, and the exports of wheat tell the story of the failure of the Australian railways to stimulate general farming activities.

For Building Up Quickly

probably the very best food you can select is **Grape-Nuts.**

It contains the mineral salts and energy values—all the nutriment of whole wheat and barley—digests easily and quickly, and the flavor is delicious.

LITTLE WORRIES IN THE HOME

These Bring the Wrinkles and Pallid Faces That Make Women Look Prematurely Old.

Almost every woman at the head of a home meets daily many little worries in her household affairs. The care of her little ones, the work about the house all contribute to these worries. Most of them may be too small to notice an hour afterwards, but they constitute a constant strain that affects the blood and the nerves and make women look prematurely old. The affect of these little worries may be noticed in sick or nervous headaches, fickle appetite, tiredness after slight exertion, and the coming of wrinkles which every woman dreads. To those thus afflicted Dr. Williams' Pink Pills offer a speedy cure; a restoration of color to the cheeks, brightness to the eye, a hearty appetite and a sense of freedom from weariness. Among the many thousands of Canadian women who have found new health and strength through these pills is Mrs. G. Strasser, Acton, West, Ont., who says:—"I am the mother of three children and after each birth I became terribly run down, I had weak, thin blood, always felt tired, and unable to do my household work. After the birth of my third child I seemed to be worse, and was very badly run down. I found the greatest benefit from the Pills and soon gained my old time strength. Indeed after taking them I felt as well as in my girlhood, and could take pleasure in my work. I also used Baby's Own Tablets for my little ones and have found them a splendid medicine for childhood ailments."

Dr. Williams' Pink Pills are sold by all dealers in medicine, or you can procure them by mail at 50 cents a box or six boxes for $2.50 from The Dr. Williams' Medicine Co., Brockville, Ont.

RUSSIA'S SPIRITUAL GIFTS.

What Western Civilization May Learn From Russia.

There is an attitude of expectancy, a sense of wonder, in the Russian mind. He believes in God with a working belief, and looks for signs of His activity in the world; and just as to the expectant shepherds watching by their flocks angels appeared, so to the humble, believing Russian peasant come great certainties of God, says an English writer. We do not expect, and so we do not receive. We are too sure that we know exactly what kind of a world it is in which we find ourselves, and vision dies amongst us. It is just here that our ally has a message and a mission to the world.

If, as I firmly believe, we have much to learn from Russia, we for our part have something to give Russia in exchange. Our moral earnestness is all that Russia lacks to make her glorious, just as Russia's spiritual tenderness is all we lack to make us amiable.

We must endeavor, while we open our hearts to the Russian Christ, to inspire in Russia something of our moral earnestness. We must set ourselves both to give and to receive, the one completing the other. And we can give, without offence, by developing our commercial relations with Russia and manifesting in all these relations a scrupulous fairness and an unswerving honesty.

With England shifting her emphasis to love, and Russia taking into her emphasis on love England's insistence upon moral rectitude, there will grow up at either end of Europe a power for righteousness such as the world has not yet seen.

Hopeful Dorothy.

"What's your name, little girl?"

"Dorothy."

"But what's your last name?"

"I don't know what it will be. I'm not married yet."

Use all the cereal foods possible. Their protein is quite as valuable as animal food protein, and cheaper.

Minard's Liniment Cures Colds, Etc.

SATISFIED MOTHERS

No other medicine gives as great satisfaction to mothers as does Baby's Own Tablets. These Tablets are equally good for the newborn babe or the growing child. They are absolutely free from injurious drugs and cannot possibly do harm—always good. Concerning them Mrs. Jos. Morneau, St. Pamphile, Que., writes: "I have used Baby's Own Tablets and am well satisfied with them and would use no other medicine for my little ones." The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Reclaiming Waste Paper.

A process, known as the Jasperson de-inking process, by which the printing ink is removed, has been developed for the reclamation of printed papers. This will permit of old newspapers, magazines, etc., being utilized for the making of newsprint. Previously, this material could be used only for the making of the rougher grades of paper, where the ink content was not a drawback. The application of this process should be a further incentive to the saving of waste paper.

Substitute for Potatoes

Small dried peas called "carlins," or maple peas, are now being eaten as substitutes for potatoes in the north of England. They are cooked like marrowfat peas, soaked overnight and boiled for twenty-five minutes the next day. In early times "carlins" were eaten very generally on Carlin or Passion Sunday. They are light brown color outside and cream colored under the skin and sell for from eight to twelve cents a pound, much less than beans and peas.

MONEY ORDER

SEND a Dominion Express Money Order. Five dollars costs three cents.

How About Frying 'Em?

The aged Admiral was well known for his powers of exaggeration. At supper one night he was describing a thrilling voyage.

"While cruising in the Mediterranean," he said, "we passed an island which was red with lobsters.

"But," said one of the politely incredulous guests, "lobsters are not red until boiled."

"Of course not," said the undaunted Admiral, "but this was a volcanic island with boiling springs!"

Minard's Liniment Cures Distemper.

Her First Journey.

Margaret, 5 years old, was traveling for the first time. She sat as if entranced by the view from the car window.

Her father, noticing the rapt expression on her face as the train sped along, said:

"What do you think of it, Margaret?"

She replied: "Oh, father! It is just like a picture book, only you don't have to turn the pages."

Minard's Liniment Co., Limited.

Dear Sirs,—This fall I got thrown on a fence and hurt my chest very bad, so I could not work and it hurt me to breathe. I tried all kinds of Liniments and they did me no good. One bottle of MINARD'S LINIMENT, warmed on flannels and applied on my breast, cured me completely.

A New Excuse

Teacher—And why are you so late, Frankie?

Frankie—If you please, teacher, it is mother's washing day. She lost the lid of the boiler, so I have been sittin' on the top to keep the steam in.

Minard's Liniment Cures Garget in Cows

Experiments in the use of lalang grass for paper pulp have been successfully carried out in Australia. There are millions of tons of lalang grass growing in Queensland. It produces three crops a year, and is considered a curse to the country. It resembles esparto grass and, when dried, yields as high as 60 per cent. of first-class paper-making pulp.

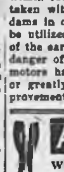
WITH THE FINGERS!
SAYS CORNS LIFT OUT
WITHOUT ANY PAIN

Sore corns, hard corns, soft corns or any kind of a corn can shortly be lifted right out with the fingers if you will apply on the corn a few drops of freezone, says a Cincinnati authority.



At little cost one can get a small bottle of freezone at any drug store, which will positively rid one's feet of every corn or callus without pain or soreness or the danger of infection.

This new drug is an ether compound, and dries the moment it is applied and does not inflame or even irritate the surrounding tissue. Just think! You can lift off your corns and calluses now without a bit of pain or soreness. If your druggist hasn't freezone he can easily get a small bottle for you from his wholesale drug house.

EARTHQUAKES IN JAPAN.

Frequent Earth Tremors Interfere With Development of Waterpower.

It is well known that Japan has a great number of waterfalls which would be of material value in the development of the country. But the reason these valuable sources of power are not being developed is because of the dangers of earthquakes, which are constantly confronting the people of that country. More than once within recent years have steps been taken with the view of constructing dams in order that these falls might be utilized when some demonstration of the earth has given warning of the danger of such a step, and the promoters have been forced to abandon or greatly modify the proposed improvement.

CRISIS OF WOMAN'S LIFE

Change Safely Passed by Taking Lydia E. Pinkham's Vegetable Compound.

Wagoner, Okla.—"I never get tired of praising Lydia E. Pinkham's Vegetable Compound because during Change of Life I was in bed two years and had two operations, but all the doctors and operations did me no good, and I would have been in my grave today had it not been for Lydia E. Pinkham's Vegetable Compound which brought me out of it all right, so I am now well and do all my housework, besides working in my garden. Several of my neighbors have got well by taking Lydia E. Pinkham's Vegetable Compound."—Mrs. VIOLA FINICAL, Wagoner, Okla.

Such warning symptoms as sense of suffocation, hot flashes, headaches, backaches, dread of impending evil, timidity, sounds in the ears, palpitation of the heart, sparks before the eyes, irregularities, constipation, variable appetite, weakness and dizziness should be heeded by middle-aged women. Lydia E. Pinkham's Vegetable Compound has carried many women safely through the crisis.

GLAMIS

Mr and Mrs Peacock and two daughters motored from Meaford on Friday and spent a few days with the latter's parents, Mr and Mrs N McFarlane, returning on Monday accompanied by the latter.

Mr T A Pickard and family spent a few days with the Misses Howson and other friends. They left this week for the west, where they expect to make their home in future.

Miss Lilly McKinnon of Brantford is home for holidays.

Pte Torrance McLennan, of the the 160th Bruce Batt., had the distinction of being one of the ten chosen to go to London on July 1st to fill places in the honor guard to the King.

Miss Margaret McLennan, of Detroit, who was home for two weeks, returned on Saturday.

Miss Nora McNally is engaged as teacher in the 10th school.

Teachers home for the holidays: Misses Nettie Gunn, Mary Webb, Minnie McNally, Mabel Kirkton.

Miss Margaret Campbell of Harriston is home for a visit.

Mr and Mrs Burgess, of Cabri, Sask., arrived on Saturday night and will spend some time at the home of the latter's parents, Mr and Mrs Jos Cunningham.

Another of our citizens was taken from our midst on Friday. Mrs W J Graham had been a sufferer for some time and her death was not unexpected. She leaves a husband and one son Charlie to mourn the loss of a faithful wife and mother, but they sorrow not as those who have no hope. She was ready and willing to depart and be with Christ, which is far better. She was laid to rest in Stark Vale cemetery on Monday afternoon. Those from a distance who attended the funeral were: Mrs Atkins of Toronto, Mrs Loney, Mrs Robinson, Mr and Mrs Beacock of Wiarton.

Miss Florence McLennan, on retiring from her school duties on Friday last was taken by surprise when her pupils presented her with a gift and the following address:

U S S No 10, Bruce & Greenock.

DEAR TEACHER—We learn with a deep feeling of regret that you are about to leave our midst, but we cannot see you go without showing our esteem for you in some way. You have always taken a deep interest in our school studies, and we have always found you a great help when we were in trouble. In order to show you our appreciation of your kindness to us, we ask you to accept of this necklace as a small token of our affection and gratitude, and may it bring to your mind in the future recollections of the pleasant hours you have spent during your career as teacher in this school. We also hope that after you leave us you may share the enjoyment of vigorous health, in order that you might render such service to the public as you have during the past year. Signed on behalf of the school—Hazel Vance, Edna Vance, Greeta McKay, Emma Ross.

Mr McCauley was presented with a fountain pen and the following address from his pupils on Friday:

DEAR TEACHER—Learning with regret of your intention to leave us, we embrace this opportunity of conveying to you the feeling of warm personal regard we bear to you and the sorrow we feel on account of your departure soon to take place. As pupils we have valued your friendship and personal presence in our midst, and it is a matter of deep regret to us that the pleasant intercourse which we have enjoyed is so soon to be interrupted. Your kind and genial manner and courteous department, your many excellent gifts and graces, have endeared you to us all. Allow us to assure you, however, that in leaving us you carry with you our best wishes and our prayers for your future happiness and prosperity. We unite in the wish that your coming years may be laden with health and happiness, and that your every good effort may meet with well merited success. Remembering the past, our gratitude will not allow us to let you depart from among us without some memorial of the days spent here, and as a small token of our respect we ask your acceptance of this fountain pen, not on account of its intrinsic value, but of the hearty sentiment with which it is accompanied. Signed on behalf of the school—Mary Smith, Gwendoline Colwell, Tommy Gilchrist, John McLean.

TWELFTH CON BRUCE

Mrs McDermid and her daughter from Toronto are visiting at Mr Alex McGillivray's

We are sorry to report that Mrs Alex McGillivray is under the doctor's care with an attack of appendicitis.

Mrs Millan has returned home after a month's visit in Harriston.

Mr Ed Barnes is spending a week's holidays at his home here.

Mr and Mrs Geo Scott and family took in the picnic at Goble's Grove on Saturday last.

Mrs Colin McGillivray and Miss Essie have been under the weather with German measles for a few days.

Mr and Mrs Alex McRae have gone to visit their sons in the west for a couple of months.

They are improving part of our line by grading it up nicely. Mr Alex McLeod is pathmaster.

(Intended for last week)

Misses Nellie McGillivray, Esther McGillivray and Hattie Barnes attended the Sunday School Convention at Underwood as delegates from No 15.

Mr Ell Barnes, jr., Sundayed at his home here.

Mr and Mrs Thomas Foster motored to Teeswater on Sunday to visit friends there.

Mr George McGillivray is employed for a few days with Mr Dan McGillivray.

Mr Eldon McGillivray Sundayed at his home here.

Mr Harry Petrie has purchased a car.

Children Cry
FOR FLETCHER'S
CASTORIA

PINKERTON

Mr and Mrs H Pitcher, Mr and Mrs C Pitcher and Mr E Smith of Toronto motored up to Mr Adam Reid's on Sunday.

School closed on Friday last for the summer holidays. Miss Florence Diehl of Paisley has been re-engaged as teacher.

Extensive grading has been done on the roads in the vicinity of Pinkerton and parts of this is now being gravelled.

Mr R L Garland of Palmerston spent Sunday at his home here.

Mr Walter Birrell spent a few days at his home.

Mrs Geo Chick is visiting friends in Toronto.

SALEM

A very successful garden party was held on the lawn of Mr Geo Hall, Thursday evening June 28th under the auspices of the Ladies' Aid of Salem Presbyterian Church. In spite of the somewhat unpromising condition of the weather, a large crowd assembled and all report a good time. After tea an excellent programme was provided. Addresses were delivered by Revs. Hilts, Little and Harris, Wm McDonald, M P P., and Mr D D McKinnon of Bolton, Ont, formerly of Bruce. Mr H Stevens of Chesley favored the audience with two recitations in the Scotch dialect. An exhibition of club-swinging was given by Jean Cameron, Pearl McKinnon and Florence Lewis, in which these young ladies displayed considerable skill. Music was furnished by Hopper Bros, Ellengowan, the Paisley Chorus, Miss Alma Fraser, Salem Choir, and Salem male quartette, in addition to a violin duet by Messrs Walter Dudgeon and John Buchanan, accompanied by Miss Ethel Dudgeon. The musical feature of the evening was the bagpipe music furnished by Mr D D McKinnon. Mr McKinnon knows how to handle the pipes, and a Bruce Co audience knows how to appreciate them. The members of the Ladies' Aid extend a vote of thanks to all who took part in the program. An interesting feature of the evening was the sale of the autograph quilt by Auctioneer Cass. The ladies worked the quilt and then donated it for Red Cross purposes for which they sold tickets amounting to $55.30. Reeve Brown of Chesley held the "lucky" ticket and he put the quilt up for auction, the proceeds to go to the Red Cross. In this way an additional $78 was realized. The following bids were made: J A McDermid $10, Jas Cameron $12, Geo McKay $8, Peter Alpaugh $6, Jas Lewis $5, Wm Lewis $5, John Lewis $5, John Sweiger $3, L S McClure $3, Wm Brown $3, C Sparrow $3, John Buchanan $3, Calvin Crawford $2, J Sparrow $2, Wm McDonald, M P P, $2, Mr Wright $2, Jas Park $2, Wm McKay $1, H Davis $1, Wm Harris $1, Jos McCallum $1, Wm Elder $1. The ladies are highly gratified with the result of their labor as they have a donation of $133.30 to send to the Red Cross.

Bruce Tp. Board of Health

Underwood, June 30, 1917

Bruce Tp Board of Health met in the tp hall on the evening of above date, members all present. Minutes of last meeting read, adopted and signed.

The inspectors appointed to visit and inspect the different schools in the township, also slaughter houses, &c. filed reports showing that all buildings had been inspected, the majority being in fair sanitary condition. In three cases the closets were found in very poor condition. The secretary was instructed to notify the trustee boards in these sections to have new closets built or the old ones put in good shape by Aug 10th, or else the B of Health would have to take action and have this done.

After dealing with some routine work the board adjourned to meet on the call of the chairman.

J G MacKay, Sec'y

GRESHAM

A very pretty wedding was solemnized at the home of Mr. and Mrs. John McKinnon, 6th Bruce, on June 27th, when their daughter Grace was married to Mr. Andrew M. Sturgeon of Kincardine Tp, in the presence of a company of the immediate relatives and connections of the contracting parties, numbering about sixty. Rev A MacNab, M.A., tied the mystic knot. The bride is one of our most popular young ladies. She looked lovely gowned in white silk, and carried a boquet of carnations as, leaning on the arm of her father, she very modestly walked to the beautifully decorated arch where the handsome bridegroom awaited her. The wedding march was played by Miss Sturgeon, neice of the groom. After the trying ordeal was over and congratulations extended, the guests were invited into the spacious dining room, where a dainty wedding supper was prepared by the hostess, Mrs McKinnon, who was beautifully gowned in black mousseline silk, and, with her husband, did everything in their power for the comfort of their guests, which contributed much to the enjoyment of the evening. The bride's dress was a rich blue faille silk trimmed with lace, in which she looked very sweet and charming. The guests present were from Toronto, Paisley, Underwood, Detroit, Kingarf, Aberdour, Kincardine, Gresham, and the home relatives and friends. There was one particular guest who came up from Toronto, Mr. Archie McKinnon, a cousin of the bride, a returned soldier who was wounded in France. He was indeed a guest of honor. The presents were numerous, costly and useful, among these being three substantial checks. The groom's gift to the bride was a handsomely designed gold brooch, and to the organist a gold scarf pin. The happy couple will take up their residence at the groom's farm near Bervie, where the bride will be at home to her many friends after the 15th inst. Congratulations.

(Intended for last week)

Mr F Ross, 10th con., received a cablegram from their daughter Jessie that she and all the party had arrived safely in England. Miss Ross is one of the head nurses in a corps that went overseas recently.

Rev Mr Robertson, of Tiverton, preached at preparatory services here and at Underwood.

Mrs McLean, of Detroit, is visiting her brother, Mr John McKinnon, 6th con,

Mr and Mrs Wm Young visited his brother and sister in Kincardine for a few days lately.

Mrs Knapp, of Elderslie, visited friends here last week.

TENTH CON. BRUCE

Sunday morning's electric storm was the worst seen here for some time. Rain fell in torrents, and all low lying land was under water for a couple of days. Corn and roots showed the effects worst in this section. Grain and hay are doing extra well.

Mr Alex McGillivray with his wood cutting outfit is making the rounds in this neighborhood.

School has closed for the summer holidays, and boys and girls are looking forward to two months of real amusement.

Miss Mildred Parker, of Cargill, is spending a few days with her cousin, Miss Reta McDonald.

Mr and Mrs Augus Atkinson and family of Wingham are spending a few days at Mr A McDonald's.

Quite a number from here took in the sports at Port Elgin on Dominion Day.

Mr W H Brown has been nursing a very sore hand for the past week.

Mr Cecil McDonald took in the Cargill picnic on Thursday last.

The Bell Telephone Co. of Canada

The Jubilee of Confederation 1867-1917

YOU will want to know much about the beginnings and history of Confederation at this time of national celebration

As a good Canadian, as a citizen, as one desiring to be well informed about matters of deep concern and interest, you have your desire and need for knowledge supplied in

MACLEAN'S MAGAZINE FOR JULY

This magazine gives you the finest and most interesting survey of Confederation you will find in any periodical. You will find there

Portraits of the Fathers of Confederation — the statesmen who launched Canada on her career of brilliant destiny.
The Story of Confederation—why it was necessary, and how it came about.
The Taking over of the Northwest Territories from the Hudson's Bay Company—a stirring story told by Agnes C Laut.
The Story of the C.P.R.—told by C N Macintosh, a man who knew intimately the men who initiated, built and developed the Canadian Pacific Railway — the cord of Confederation.
The Industrial and Business Development of the past 50 years—by W. A. Craick. A wonderful story of progress.
Conditions before Confederation Contrasted with those of To-day—by Frank Yeigh. An enjoyable study of contrasts.
Statements from the Premiers of Canada's Provinces interpreting the meaning of Confederation and defining the outlook in their respective provinces.
A story—"The Draft," by A C Allenson, dealing with the part that certain courageous and adventuresome Canadians took in the American Civil War just before Confederation.
A Frontispiece—A Dramatic Moment—by C W Jefferys, a brilliant Canadian artist. The scene is depicted when Sir John A Macdonald and the Hon George Brown stood in the House—one on one side, the other on the other side, of a centre line, so tense was the feeling between the two men and the parties they represented.
A Fine Cover Design—symbolic of Confederation, in three colors, specially drawn for July MACLEAN'S by J E H Macdonald.

Beyond these special Confederation features of the July MACLEAN'S will be the customary provision of fine short stories, and the departments which make MACLEAN'S MAGAZINE so enjoyable and valuable to good Canadians everywhere. Get the July MACLEAN'S, double size.

Brief but Complimentary

"Find enclosed $1.50 to apply on my subscription to The Paisley ADVOCATE—the best old paper on earth. With kind regards and best wishes for yourself and dear old Paisley. LACHIE MUNN, Dewdney, B C.

Dam Washed Out

Fisher's mill dam suffered by the recent heavy water pressure in the stream, the structure being washed out and undermined at the south side. The mills, of course, are put out of business until repairs are made. The work will cost $500 or $600.

Silver Wedding

Mr and Mrs T F Pearce, celebrated the 25th anniversary of their marriage on Friday evening last, marking the occasion by inviting a company of friends and acquaintances to spend the evening at their home on Victoria St south. The guests had a very pleasant time, and when the company broke up, the hearty wish was expressed by all, that Mr and Mrs Pearce may live to celebrate their golden wedding. They were recipients of many appropriate gifts.

Heavy Rains Continue

Rain, rain, and more rain. Last June was perhaps one of the wettest months ever experienced here in the season, but July so far has surpassed it. The intermittent thunder showers have become a continuous downpour, and to-day (10th) there is more water on the land and in the streams than was ever seen before in this midsummer month. The rolling clay hills will produce big crops of grain with this plentitude of moisture, while on the flat lands and low places the growing things are turning yellow and slowly drowning out. Hay is a heavy stand again this year, and with favorable weather will give a big crop, but a continuation of the rainfall for any length of time will ruin it. A lot of the potatoes and roots are on the rich flats, and will suffer greatly. Good warm, dry weather, however, would still give this section a really fine yield of almost everything.

Lockerby Patriotic Society

A meeting was held in Lockerby school on June 26th to arrange for a Patriotic Society. The following officers were appointed: Pres. Miss Alice Brown; Vice-pres, Mrs Rich Daniels; Sec'y, Miss Belle Mitchell; Treas, Miss Christena Darroch. The following are the ones who subscribed funds for carrying on the work: John Hammond $5, Job Turner $5, Victor Tanner $5, Alex Mitchell $5, John Lowes $5, Wm Hagedorn $2, Geo Thompson $5, Will Brown $2, Donald Darroch $5, R C Pearce $5, Rich Daniels $5, Robt Burns $5, J A McNeill $5, Miss Jean McKerracher $3, Robt Currie $3, Russell Brown $3, Melville Elves $3, W T Thompson $2 50, Geo Last $2, J J Thompson $2, Mrs Henry Grant $1, Michael Manser 25c. The Lockerby quilt kindly donated by Mrs Richard Daniels and Miss Alice Brown, for which tickets were sold, realized the sum of $24 60. Mr W H Cooke, of Chesley, was the lucky ticket holder.

The AUTOMOBILE

What An Auto Engine Is.

The essential parts of the motor are few and easily learned. Every one has heard of an engine having, four, six, or more cylinders. The cylinder is the important part of the engine. Inside it are the moving parts which give power. The more cylinders employed the smoother the engine is supposed to run. The moving parts inside are first the piston, then the wrist pin passing through it. This serves as a hinge for the connecting rod which transmits the power to the crank shaft running the length of the engine and receiving power from all the cylinders.

The purpose of the piston is fourfold: First, to draw in the fresh mixture on the suction stroke; second, to compress it on the compression stroke; third, to receive the force of the explosion on the power stroke and transmit it to the crank shaft, and fourth, to push out the burned gases on the exhaust stroke. The wrist pin serves as a hinge and the connecting rod passes the power along, transmitting it to the crank shaft and causing same to revolve. The action is almost identical with that of the foot on a bicycle pedal. The leg moves up and down in a reciprocating manner and causes the pedal to revolve. In the same way the connecting rod and crank shaft change reciprocating motion into motion of revolution.

The four strokes of the engine, just mentioned, however, cannot fully be understood until the valves are explained. There are two of these to each cylinder, one to let in the fresh gas, called the "inlet valve," and the other to let out the burned gas, called the "exhaust valve." They are held tightly closed by springs and are only opened when occasion requires. To do this a cam shaft is necessary. It is a long shaft, running the length of the motor, with as many cams as there are valves. A cam is a projection on the side of a shaft, smooth in outline, which revolves with the shaft and so opens the valves. It does not touch the valve directly, however, as there is a small part called a "valve lifter" which reaches from cam to valve stem. This gives a more direct push to the valve, gives a broad surface for wear, and has an adjustment which enables one to secure best results in operation.

The necessary connection with the crank shaft is provided by the "two-to-one gears," or "half-time gears," as they are sometimes called. The gear on the cam shaft has twice as many teeth as the gear on the crank shaft. Since this arrangement drives the cam shaft at half the speed of the crank shaft, it will be readily seen why they are called "half-time gears."

Now that we have arranged for the operation of the valves, it will be easy to understand what follows. The piston goes down with the inlet valve open. This sucks in the fresh gas and is called the suction stroke. Having filled the cylinder with explosive mixture, the piston now rises, forcing the gas into the top of the cylinder, the "combustion chamber." As both valves are tightly closed, the gas cannot escape but is compressed in the top of the cylinder. So this is called the compression stroke. Now comes the electric spark, setting fire to the compressed gas, which burns, expanding as it does so. The pressure developed by the expanding gas drives the piston down, setting crank shaft and flywheel in motion, thus producing power. This is the power stroke. Both valves remain tightly closed until the piston nears the end of the power stroke, when the exhaust valve opens to let out the burned gases. As the piston returns upward it drives out the burned gases effecting the exhaust stroke. This is followed again by the inlet stroke, and the series of operations is repeated so long as the engine runs.

CATHERINE BRESHKOVSKAYA

Scene at the Trial in 1910 of the "Little Grandmother of the Revolution."

I was present in the grim court in the Litsinyi Prospect in Petrograd in the spring of 1910, writes a correspond ent to the Manchester Guardian, when sentence was pronounced on Catherine Breshkovskaya. I shall never forget the stoicism of this wonderful old lady. The judges, representative of the various social orders, each dressed in the uniform or costume pertaining to his class, filed into their places on the bench. Mme. Breshkovskaya and her fellow prisoner, M. Tchaikovsky, stood when the president rose to read the sentence. The stillness was unearthly.

After a brief resume of the case the president announced the acquittal of M. Tchaikovsky. Turning to Mme. Breshkovskaya, he said that, as she had pleaded guilty to and even gorified in her membership in the Central Revolutionary Committee, there was nothing to do except to pass sentence of banishment. Throughout the reading of the sentence the dignified old lady looked straight at the president and only momentarily lowered her eyelids when the decree of banishment was pronounced.

A well-known press correspondent and I were permitted to talk to her for a few minutes. She was plainly gowned in black, with a cameo brooch at the throat. Her hair was quite white, but she had a pink complexion that a debutante might have envied. She smiled most sweetly and, speaking perfect English, but pronouncing each word separately and distinctly, said:

"I am so glad to greet you, and to speak English with you. It is many years since I have spoken your language. I am so happy because you have come and spoken to me."

In reply to our expressions of sympathy, she remarked:

"Do not let this trouble you. I have been through it all before."

The guard intervened, but just before she was led away Mme. Breshkovskaya leaned over the edge of the dock, kissed each of us on the forehead and cheerfully wished us "Good-by!" Friends in England and America sent her gifts of money and clothing to her faraway place of banishment, but she gave the money to her fellow exiles, and all she would accept of the clothing was a set of woolen garments.

THE OLD SUN-DIAL.

In a sweet old English garden,
'Midst the lilies tall and fair,
Crimson cloves and damask roses
Breathing fragrance in the air,
You will find a moss-grown sun-dial,
And with patient care may trace
Wisdom in the Latin motto
Quaintly carven on its face.
On the lichen-covered marble
Where the ivy tendrils twine,
"I will number not the hours
When the sun forgets to shine."

To our hearts we take this wisdom,
Garnered in the days of old,
We will keep no recollection
Of the moments grey and cold.
But will treasure in remembrance
All the happy, halcyon days,
When the way of life was sparkling,
And its sun was all ablaze.
Golden light of love shall linger
In its glory all divine,
We will number not the hours
When the sun forgets to shine.

—Charles H. Mansfield.

REMEMBRANCE.

I plucked a primrose sweet this morn;
I rested on a grassy mound,
And marked the land, from heaven
crown'd
With flow'rs of gold. I heard no
sound
In that dear haven I had found,
Save on the wind, a huntsman's horn.

I gazed into dear eyes this morn;
Clear eyes of blue that vainly tried,
Through burning tears their fear to
hide;
Sweet trembling lips to cheer me lied
A fragile form clung to my side,
And pray'rs went out for Peace Day's
dawn!

For ere to-morrow's sun is born,
I go to France, to blood-red skies,
To hear no sound save hell-beast
cries,
Perchance to gaze in glassy eyes,
Perchance to sever love's sweet ties
And I plucked a primrose sweet this
morn!

—Leon Pollock.

Tell your pleasant experiences but keep your troubles to yourself.

HOW TO BEAT THE U-BOAT PIRATES!

SUMMARY BY EXPERT OF SOME CONBATIVE MEASURES

The Navies of the World Are Battling With the Sternest Menace in Britain's History.

There is no infallible remedy against the submarine at the moment, but there is just as much reason to believe that we shall ultimately master the U-boat as there was that we should master the Zeppelin, writes an English authority. And we know now that the high-flying, swift-travelling aeroplane is more than a match for the gasbag.

The submarine will be conquered not by one means, but by a variety of means, cleverly co-ordinated. The problem, while it calls for new inventions, also demands the intensification of existing anti-submarine measures.

Hussars of the Sea.

What are the ways in which the submarine can be fought? There is, to begin with, the simple expedient of destroying its frail carcase with shell-fire. The armed merchantman that gets its shot in first stands a good chance of sinking its U-boat assailant. That is why the properly-armed ship with expert gunners has ten lives compared to the one life of the unarmed ship.

The U-boat positively loathes the armed trawler, and with good cause, for our trawlers have sent many of the accursed to their doom, either with well-directed fire, or by crashing into them. But more than the armed trawler, the submarine hates the thirty-knot destroyer, at the sight of which she at once prepares to submerge, and, happily for us, often too late. There are any number of instances where U-boats have been cut in two by violent collision with the Hussars of the ocean, and it can be imagined what it must be like for a U-boat commander to see the sharp, ominous form of a destroyer racing towards him, its track marked by a ribbon of white foam.

Duels in the Deep.

Catching the U-boat in nets is a source which worked successfully in the earlier days of the war, when the submarines specialized in local waters. The advent of the ocean-going U-boat, however, has limited the possibilities of netting the pirates, since it is obvious that there are not enough nets in the world to apply to the seal anes of traffic.

The U-boat fears the mine, and it generally moves in the daylight to avoid it, resting at night below the surface of the water, on the sea-bed. Mines, nevertheless, take a substantial toll of submarines, and it may be that in a far greater extension of mines lies a much more effective U-boat menace.

The submarine can also be fought by the submarine. If when the war broke out we had had Zeppelins, they would certainly have been used to fight their kind. An Italian submarine has shown how practicable it is to oppose submarine to submarine. Each can seek the other out, and in the dramatic duel below the water victory will go to the better boat and the better crew, which, after all, is all that any sportsmanlike and fair-minded nation could wish for. We shall surely live to see not isolated encounters between U-boats and E-Boats, but actual battles, in which half a dozen units on either side may participate.

Importance of Aircraft.

Seaplanes are a splendid means of combating the submarines. They can spot the U-boat, and attack it with bombs or with charges, the tremendous violence of whose explosion must destroy any light craft in the immediate vicinity, and there is no more delicate floating craft than a submarine. The importance of aircraft in warning merchantmen of the presence of U-boats can hardly be exaggerated.

If we sum up the generally known means of fighting the U-boat, they are as follows:

(1) Sinking by shell-fire.
(2) Destruction by collision.
(3) Catching with nets.
(4) Blowing up with mines.
(5) Destroying by submarine attack.
(6) Sinking by aircraft bombs or "depth charges."

In addition, there are other devices belonging to anti-submarine organisations, such as fouling the periscopes with fatty or resinous matter, over which a veil must be drawn.

The U-boat, in presence of all these measures aiming at its destruction, seeks safety largely by avoiding, as far as possible, the protected areas, or by piercing the cordon of protective measures. It is a reasonable argument, then, that the more the scope of the anti-submarine measures is widened, the greater the menace to the pirates.

Seen in this light, the problem resolves itself into one of constructing combative means quicker than the Germans can build or replace submarines, and the greater encouragement of those restless, mechanical geniuses—"mechanical" here being used in the engineering sense—who, when called upon by Mr. Lloyd George at the time he was organizing the Ministry of Munitions, helped us first to cope with, and then to eclipse, the trench warfare material of the enemy.

A Wise Warning.

The U-boat, with its travel radius of three thousand miles, must ever have some successes; but the number of them can be reduced in time as scarcely to affect the issue. If a dozen Zeppelins come over England to-day, one or two may still hope to escape; the fact that heavy losses, however, are practically inevitable makes the game hardly worth the candle. When the day in which far more U-boats are sunk than can be built arrives, that day sees the German submarine properly countered, and in the belief of competent judges it is not so distant as some people imagine.

We are told that in default of a sovereign remedy against the U-boats, our best and only plan is to reduce the demands on available shipping by cutting down imports to the utmost limits, and build new ships as fast as possible. This is a wise warning, but it would be folly to argue from it that it implies any cessation in the efforts to fight the submarines.

The Unwearying Hunt.

The U-boats must be hunted with an ever-increasing number of patrols, destroyers, seaplanes, and submarines; there must be hundreds of seaplanes to spot them and bomb them, and many more minefields to make their movements in the lanes of traffic far more precarious.

The genius of Allied inventors might, in the course of their experiments, devise more effective means of betraying the presence of U-boats, and, with their location, a more effective means of securing their destruction.

What man builds, man can destroy. In essence, the problem of the U-boat is no greater than the problem of the Zeppelin, which we have successfully countered. It is a question of tireless study—concentration—just as air ascendancy is a question of increasing improvement and experimentation. Given a multiplication, even of existing anti-submarine measures, and, with confidence, it can be said that the U-boat menace loses nine-tenths of its gravity.

The destruction of U-boat lairs, needless to say, enters into the problem; but that is rather a matter of Grand Fleet strategy.

THE BEGINNING OF THE TANKS.

Had Their First Trial in the Bogs of Lincolnshire.

It was the Foster prairie-engine for agricultural purposes, with its huge travelling wheels, that was the germ of the Tank. A plan was submitted to the authorities by Messrs. W. Foster & Co., a Lincolnshire firm, and in time, after much labor and discussion, two uncouth monsters took shape. These were tried on Lincolnshire bogland first, then, at dead of night, over a slippery hillside, a trench, a shell-crater, and barbed wire.

Finally, there was an official test "somewhere in England." Secretly, the tanks were taken to the trial ground. Over a piece of ground which had been made to resemble the worst part of the war zone they were driven, and the keen, critical eyes of British and French military experts watched the two tanks clear trenches, crush down parapets, ignore barbed wire, and negotiate a big, muddy puddle.

Numbers of tanks were then built with admirable speed and secrecy, and the crews trained. Then one day there came a report, dated September 15th, from Sir Douglas Haig, that "we used a new type of heavy-armored car, which has been of great assistance." The tank had made its debut.

CONTROL OF SEAS IS CHIEF FACTOR

PEACE WILL COME WHEN SUB-MARINE IS CURBED.

Concentration Which Produced Effective Army Must be Applied to Combat Sub Warfare.

Three years of the war have served two purposes:

First, to push all reasonable prospect of a decision further ahead than it seemed at the beginning; and,

Second, to turn the whole situation topsyturvy.

At the beginning Britain's navy was the dominating maritime factor. Germany's army was all powerful on land, says a London writer.

To-day the British navy has lost control of the seas, and the Germany army has lost control on land.

In this reversal of form, however, decision has not been brought closer. The German army is not supreme; but also it is not beaten.

The British navy is not ruling the seas; but the German navy has by no means won the struggle for maritime control.

If it has taken three years to revise the understanding of what a modern war is without bringing decision in sight, how long may it be expected to take to organize and win a decision under the new conditions that are just beginning to be understood?

Submarines a Big Factor.

It is only since the unrestricted submarine campaign reached its present stage of continuing and increasing effectiveness that the public at large has been brought to realize the probability of a long war.

The German submarines are inflicting more damage upon the Allies through the destruction of shipping than the allied armies in France are inflicting on the Germans through the gradual destruction of the German positions and the slow recovery of occupied territory. There is good reason to believe that the Allies' superiority in artillery and other equipment makes it possible for them to conduct offensive fighting with less loss than the Germans are compelled to sustain on the defensive. That has been, indeed, the rule of this war, reversing the rule of former great contests, because this is so greatly a war of machinery. The Allies are establishing a distinct superiority in machinery.

But the great outstanding development to this data is the fact that there is no such thing any longer as control of the sea. The Germans cannot sail their merchant shipping on the seas and the British cannot protect and support their merchant marine. The sea is no longer the safe highway for either side.

The British fleet can blockade Germany to the extent of driving German ships off the ocean, but cannot shut up the German naval bases so tightly as to prevent the submarines coming and going. If the German fleet would come out and fight a real naval supremacy presently might be established by the Allies, because if the fleet were once substantially destroyed it would be possible for the allied naval Powers to attack the German naval bases. But those bases are so powerfully defended by mines, by submarines and by land fortifications that a direct attack on them even by the greatly superior British fleet would involve too great chances. To make that attempt and lose would be to forfeit the last claim to control of the sea.

Britain Recognises Situation.

Unless the submarine can be definitely subjugated it must be accepted as having completely revolutionized the whole art of naval war. There will be no such thing as a free ocean highway in the future. There can be no reasonable guarantee of security in war time under the rules that Germany has made in this war and so long as the submarine continues as effective as it now is. The effects of this development will be far reaching and more important than can yet be realized.

The British Empire depends for its stability on the maintenance of supremacy at sea, and if that supremacy is definitely lost the empire cannot permanently be held together. Englishmen realise, and the most far seeing of them admit all this. But to them it means not that the empire is to be abandoned, not that the sea as the world's highway is to be surrendered, but merely that the war must somehow or other be kept going long enough to get time and opportunity to devise means of coping with the submarine.

Attention Focussed on Sea.

The most encouraging feature of the situation is that at last there is a thorough appreciation of what the problem it that must be dealt with. The campaign, in the north of France no longer is looked upon as probably marking the beginning of the war's end. The public is indulging in fascinating dreams of an early victory through success in that quarter. Attention is being given more and more to the maritime problem, while the military situation is considered in a satisfactory position.

The same energy and enterprise devoted to the submarine problem that made it possible for England to raise and equip its army of 5,000,000 men in fewer than three years will bring a solution of the submarine problem and restore something like the original relationship of powers on the sea. Tardily, but with all zeal and determination, the British Government is turning its attention to this problem of the sea. There is no thought of failure, no hesitation in any quarter in insisting that there must be only one result—the conquest of the submarine and the restoration of the right of a free sea.

THE KAISER'S INVESTMENTS.

German Emperor's Reported Foreign Holdings is a Fairy Tale.

The story of the German Emperor's investments in America and elsewhere, as given in a London Sunday paper, meets with small credence in circles most likely to know something reliable about such subjects, says an English writer. To begin with, it has long been a matter of common notoriety that the War Lord has repeatedly been in financial straits. For, large as was the income he inherited as King of Prussia—the dignity of German Emperor does not bring him in a red cent—his "out-goings" are enormous. It need be only recalled that he has between fifty and sixty chateaux to keep up, several of which he has repeatedly tried to dispose of. Also his various industrial speculations, far from being a source of income, are well known to be one of expense.

As for the millions of dollars the Emperor is stated to have invested in Hamburg-American and North German Lloyd shares, the directors of these two important concerns could tell a very different tale, namely, that they have had to pay heavily for the "booming" which he has, in many ways, given them from time to time.

Altogether these fairy tales of the foreign investments of sovereign princes are to be accepted for what they are worth—nothing at all.

The heavy horse produces the most power for feed consumed when drawing a load at the rate of two and one-half miles per hours.

Piano Firm 18 Years Older than Confederation

On July 1st Canada celebraied the semi-centennial celebration of Confederation.

Looking back over the progress accomplished in Canada during these years, the many remarkable achievements seem hardly possible.

The industries of Canada have progressed step by step as the population increased. Among the older "truly Canadian" firms is The Williams Piano Co., Ltd., of Oshawa, Ont., makers of the famous Williams New Scale Piano.

R. S. Williams came from England and established this concern in 1849—68 years ago. Canadians will feel proud to know that they have such a "truly Canadian" piano—the Williams New Scale, which they can be proud to place in their home. The Williams Piano Co. at Oshawa will be glad to send interesting points concerning the "Artist Choice" piano, free upon request.

The Doings of the Duffs.

Farm Crop Queries

Conducted by Professor Henry G. Bell.

Henry G. Bell.

The object of this department is to place at the service of our farm readers the advice of an acknowledged authority on all subjects pertaining to soils and crops.

Address all questions to Professor Henry G. Bell, in care of The Wilson Publishing Company, Limited, Toronto, and answers will appear in this column in the order in which they are received. As space is limited it is advisable where immediate reply is necessary that a stamped and addressed envelope be enclosed with the question, when the answer will be mailed direct.

Question—C. B.:—What is your opinion regarding summer-fallowing? On what does success depend?

Answer:—Summer-fallowing is an efficient practice of getting rid of troublesome weeds, if the soil is tilled sufficiently often so as to cut off the young weeds as they sprout. It also stores up moisture to a considerable extent and if the soil is fairly full of organic matter, it conserves plantfood for succeeding crops.

Success of summer-fallowing depends upon working the surface of the ground sufficiently often to prevent the escape of moisture and to prevent the growth of weeds which exhaust the moisture and plantfood of the soil. The ground should be plowed early in spring, disked and harrowed immediately after plowing, and harrowed and disked sufficiently often to keep the surface clean and open.

Question—L. J.:—Can one pasture new seeding for a while this summer and then turn the cattle out and cut a crop of clover seed? The wheat on this field was thin last year and while the clover came up evenly and made a splendid growth it was weedy in places and for that reason I do not want to cut it for hay.

Answer:—It is possible to pasture new seeding if there is sufficient clover growth, granted that the soil is not a heavy clay type. If the soil is heavy clay, pasturing with heavy stock will tend to tramp the soil together, so that the clover setting will be smothered out. I am afraid you will find the weed seeds among the clover seed a greater detriment than the weeds in the hay. They certainly reduce the value of the seed. Cutting the crop for hay will do a lot towards killing out the weeds.

The Dairy

Kindness is a cheap supplement to the ration and produces big gains in milk flow.

Keep the calf pails as clean as the milk pails.

The cow giving the richest milk does not necessarily bring the biggest cream check. It is the total amount of fat produced that counts.

When the butter granules do not form after churning a reasonable time, try putting a small amount of table salt in the churn. A little warm water has the same effect of hastening the granules. Too much warm water makes soft butter.

Heavy milkers due to calve during July should be milked once or twice a day for a couple of weeks before calving, if the udder is distended. This attention may prevent the loss of a valuable cow from milk-fever, or injury to the udder, which makes a cow almost worthless for milking.

Mommy is rather an uncertain thing to depend on to identify the calves that are taken away from their mothers and raised by hand. When the question of ownership or parentage is raised, it is much more convincing to have each calf marked with a metal tag fastened to a strap around the calf's neck. Records are half the value of a good herd.

Sheep Notes

Sheep become assets on thin, hilly land.

Don't expect to sell the increase of the flock for breeding stock until thoroughly experienced in breeding.

The smaller the flock the better the sheep will do. One sheep per acre is the limit and often that is too many.

Pretty soon the gadfly will emerge from manure piles and begin to torment the sheep. Be ready for it. Smear the sheeps' noses with tar.

Don't keep sheep and horses in the same field. Some of the sheep are almost sure to be hurt when the horses run.

Sheep detest odors in drinking water. If a tank is used for watering, clean it often.

Mix enough sulphur with the salt to give it a yellowish tinge. Keep the salt boxes filled all the time.

A long-range gun is one means of solving the dog problem and making sheep raising more profitable.

Sheep are now doing well. Wool never brought such prices.

Horse Sense

Baking-soda relieves the distress of colic by getting rid of the gas.

Poor teeth prevent a horse making full use of good feed. It may be necessary to file the teeth down in old horses, so the grain can be properly ground.

A mixture of equal parts of the tincture of iodine, turpentine and sulphuric ether, applied once a day for several days, is said to be death to splints which are forming.

As long as a horse can chew well, meal is a poor feed for him. It is eaten too fast and sticks in the horse's throat. Give the animal a chance to use his grinders. That is what they are for.

Maybe you think you can save time by feeding the horse enough in the morning to last all day. That is a good way to make a job for a horse doctor.

If the yearlings are slow to shed and seem to have little appetite, try doctoring them for worms. Mix three drams of powdered iron sulphate and three drams of gentian root. Use this dose twice a week if necessary.

Poultry

When birds drop over as if paralyzed, the trouble is heat prostration, caused by pressure on the brain.

To prevent this, provide protection from the sun and avoid overcrowding; keep bird cool and apply cold water to the head.

At this time of the year broody hens are in the majority and cause no little trouble to the attendant. While it is advisable for those who do not run incubators and brooders to set every broody during the entire summer, at the same time there will be many broodies that can not be utilized. How to rid them of the hatching fever has been the cause of many experiments by farmers and poultrymen.

It is to be regretted that some of these methods are extremely cruel and should not be allowed. In one instance noted recently a hen was tied by the leg with a piece of rope to a post; in the other instance the hen was being immersed in a pail of water. In both these cases the hens became excited, and the theory is that in this excited state they forget their broodiness. While that may be so to a certain extent, it is equally true that excitement often makes nervous, scary hens; and in the case of fat hens it is not uncommon to have them die from fright, or meet with some severe injury. A more humane treatment is to place them in separate coops without nests, or in a flock where they are kept outdoor the entire day and permitted to roost in a house only at night.

Kindness should be an order that is never violated.

Keep the summer chicks growing. Provide shade. Give the youngsters all the range possible. Exercise is the best tonic growing stock can have.

This is considered a good month for caponizing.

There is still a good market for young ducklings and soft roasting fowls.

If breeding is finished, the males are best removed from the pens until after the molting season.

July is the month in which rats, minks, 'possums and weasels do their most deadly work. Be on the lookout. When their presence is discovered dig after them; give them no quarter.

Hogs

If you believe in good roads, pave the way over which the pig must travel to become pork.

A small pen built close to the sow's pen, with a hole through which the pigs can pass and eat grain by themselves, will encourage them to eat grain much sooner.

Alfalfa is one of the best pastures for growing pigs. Sweet clover is one of the earliest pasture crops on which pigs thrive almost as well as on alfalfa. Rape is a good forage crop which is ready six weeks after planting. It can be sowed in the corn at the time of the last cultivation.

Dead pigs at farrowing time result from the sows climbing over a piece of two by four in the door of the hog house. The remedy is apparent—take out the cross piece.

A small amount of soft coal for the hogs to eat is a good thing. Too much is constipating.

Marketing a sow that can be or has been bred, is at this time comparable to killing the goose that laid the golden egg. The meat supply of the country can be increased more quickly by means of the hog route than by any other.

Pork production is cheaper with grain and green forage crops than with grain alone. Some grain is necessary for fattening hogs on pasture. Clover and alfalfa rank among the best crops for swine pasture.

GIVE THE BOY HIS OWN ROOM

The Possession of a Comfortable Room Where He Can Keep His Treasures Will Do Much to Safeguard Your Boy in the Haven of His Home.

Why is it that the boy of the house is usually sentenced (I use that last word deliberately and I believe appropriately) to the least desirable, most uninviting room in the house, not infrequently two of them being packed in together for no reason than to save trouble caring for two rooms instead of one? Not only is the boy's room rather doubtfully located and of shoebox dimensions, but it has a sorry habit of being meagerly furnished or else crowded, being used as a sort of dumping ground for the cast-off furniture from the rest of the house. Anything seems good enough for Bill because, mother reasons, he hardly knows one piece of furniture from another; has no conception of good or bad taste, nor is he appreciative of beauty. Isn't he? Perhaps he couldn't express it in so many words, but—oh, well, let's begin at the beginning.

The thing of first importance is that a chap should have a room of his own if possible. The kind of room and the location are secondary matters.

Some one has happily described one's own room as "a home within a home." It is more—a haven. The house may be seething, our loved ones may for the time misunderstand (and who so often misunderstood as the average boy?) but with closed door in our very own room we can breathe thankfully,

"I've shut my door and I am all alone,
Here in my room all fragrant with my
better self.
. . . . . .
Outside, the strife and struggle and the strain;
In here there's peace and quietude and strength,"

and come out with new poise for the living of life among others. And that is what a separate room means to a boy, too, though he would scorn to express it so poetically.

With his own room the boy will have an opportunity to express his individuality. He should be allowed to hang up posters, pictures of sports heroes, pennants and banners, and the many other tremendous trifles in which boyhood revels. Nearly every lad has a collection of colored stones, coins, butterflies, or something. This collection he should be allowed to keep in his own room, where, safe from unsympathetic fingers, he may proudly keep it upon display upon a shelf or table or in a little cabinet. It is his room, remember, and he should be allowed to keep his treasures in it, provided they are sanitary and that he keeps them in reasonable order.

Pride in a room is the best incentive to orderliness. A boy cannot be expected to take pride in a shoddy or shabby room, where the furniture is totally unsuited or is of various woods and finishes and, therefore, unrelated. Did you ever know a boy who did not love to paint? If it is not possible to have matching furniture for his room, suggest to him that he first remove the quarreling finishes from the variegated articles with some commercial paint remover and then paint it all the same color. Pride? That boy will take a tremendous pride in his room. Just think of showing "the fellows" a room full of pretty furniture painted by himself!

To make order as easy as possible, the room should never be crowded. The essential pieces of furniture are a bed, single or in couch form if the room is small, a bureau or chiffonier, two easy chairs for himself and a possible guest, a desk, and a bookcase if the youngster can be trusted not to get up and read in the middle of the night—as some have been known to do.

Rather than an ugly old carpet or a shoddy rug, place one or two small rugs upon the painted floor. If the room happens to be large he should be allowed to keep other things in it besides those mentioned, but always with the stipulation that he keep a reasonable amount of order. A room screen is fine for a fairly large room, as it can be made to partition off a corner for a study or den.

It does seem that most mothers cannot help being annoyed by their sons' tastes in "art." The treasured posters are eyesores, the worshipped field heroes are an abomination, the pennants are dust-catchers. But please, oh, please, don't throw those things away or bundle them away out of sight! They do mean so much to a boy, at least for a while. He will throw them away himself when they are outgrown. It is wise to give him really good pictures that he will like, such as Howard Pyle's colorful pirates, Remington's superb Indians and cowboys, or the inspiring picture of Sir Galahad. These are all well executed subjects after his own heart, and soon, by comparison he will see the tawdriness of his chosen prints.—R. S.

The Sunday School

INTERNATIONAL LESSON
JULY 13.

Lesson III. Hezekiah, The Faithful King—2 Chron. 30. Golden Text—Heb. 11. 6.

Verse 1-5. Invitation to the celebration of the passover. Hezekiah—Son and successor of Ahaz; the date of his accession in uncertain (2 Kings 18. 10, 13). Tentatively the years of Ahaz may be given as B. C. 735-728, those of Hezekiah B. C. 728-697. Israel—The people of the northern kingdom; Ephraim and Manasseh are representatives of the north. Passover—For the origin of this feast see last comment on this lesson. Throughout the Old Testament it appears as a festival of thanksgiving for Jehovah's goodness at the time of the exodus. Second month—The proper time was the fourteenth day of the first month, Nisan, but provision was made in the law for a celebration in the second month, by those who were unable to participate at the regular time (Num. 9. 9-12). During the first year of Hezekiah the feast could not be kept at the regular date because the temple was not ready (29. 17); moreover the priests were slow in purifying themselves. Dan to Beersheba—The limits of the undivided kingdom. Dan in the far north, Beersheba in the extreme south (1 Chron. 21. 2). Great numbers—All were under obligation to observe the feast, but according to the Chronicler only a limited number had kept the law.

6-9. The proclamation. Children of Israel—The context suggests that the author has in mind only the people of the north, whom he considers apostates (13. 5-12). Remnant—Might be interpreted as implying the fall of the northern kingdom in 722; but if the proclamation was sent in the first year of Hezekiah, and if he became king in 725, the reference can be only to the invasion of the north described in 2 Kings 15. 29; 1 Chron. 5. 26. Kings—Tiglath-pileser IV was king in 734; Shalmaneser V and Sargon were the conquerors of Samaria. Gracious—If they turn to Jehovah in repentance he will turn to them in compassion and restore the felicity of former times.

10-13. Results of proclamation. There was no general response in the north; only a few heeded the exhortation. One heart—There was an enthusiastic response in the south. Unleavened bread—The feast of passover and the feast of unleavened bread are here identified. Originally they were distinct: the passover originated as a nomadic feast celebrated in the spring, the feast of unleavened bread as an agricultural feast celebrated at the opening of the harvest. Later both became associated with the exodus.

In Orchard, Field and Garden.

If the strawberry bed is to bear fruit again next year it should be mowed and worked over soon after the fruiting season.

Any red rust on blackcap or blackberry plants? If so, dig out and burn the diseased canes, roots and all.

Too much hot sun causes picked blackberries to turn an undesirable reddish color. Hurry them into the packing-shed.

The spring-set strawberry bed needs cultivating regularly and often. Your standing sign should be: "Weeds not allowed here." Treat surplus runners the same as weeds—for weeds they are.

Some folks seem to think that a nice little fringe of growing sprouts about the base of an apple tree looks pretty. That may be their taste, but those sprouts are sucking life out of the tree. Out with them!

After a rain and before a hard crust forms, is the ideal time to harrow an orchard.

If there are any tent-caterpillars on your trees, give them a quick-singeing with a torch.

A stony side-hill, sloping toward the north, taken out of an old cow pasture, is the best orchard we ever had.

Grafts need looking after. Are they all alive and well? See that no insect pest gets after them. They are very tender and lice are especially apt to trouble them.

From time to time during the summer go over young trees to guide their growth. If too many limbs are starting from a given point, they may be thinned to the required number. If a rank limb tends to fill the center or cross other limbs, it may be removed. If the strongest limbs all grow in the same direction, thus giving a one-sided tree, they may be pinched back, thus encouraging other limbs to start on the opposite side.

After the Lima bean vines have reached the top of the poles, they ought to be pinched off to insure stronger vines and a greater yield of beans.

If weeds get the upper hand of you it is good-bye garden!

Seed-bearing stops bloom. Therefore pick pansies, sweet peas, etc., regularly and often.

Watch the sweet peas closely for aphis. Spray with soap and water or some tobacco preparation.

See that the tomatoes are staked or kept off the ground. Some of the branches may be cut away. This will give larger fruits, but not so many.

Late celery should now be set in the field. Celery needs a fresh moist soil. To this end the land should be plowed and thoroughly worked down just before setting the plants. The beds should be wet down before the plants are taken up. Shear the tops and clip off long roots. If the weather is very hot and dry, water the plants as they are set.

Your Problems

Conducted by Mrs Helen Law

Mothers and daughters of all ages are cordially invited to write to this department. Initials only will be published with each question and the answer as a means of identification, but full name and address must be given in each letter. Write on one side of paper only. Answers will be mailed direct if stamped and addressed envelope is enclosed.

Address all correspondence for this department to Mrs. Helen Law, 228 Woodbine Ave., Toronto.

May:—1. It is not good form to wear face veils in the evening. The only excuse for a veil at night is when one is motoring. 2. Since your friend has invited you to her party and asks you to bring a man with you, it would be quite proper to write to a man whom you knew well and ask him to go. Word the note thus: My Dear —: Miss — is giving a little party next Friday evening and has asked me to bring a man with me. Would you care to go? If you can, let me hear as soon as possible, and stop for me that evening at 7.45 o'clock. Very sincerely, May— . 3. To clean a straw sailor hat try the following: Dissolve one teaspoonful oxalic acid crystals in one cupful boiling water, and, after brushing the hat thoroughly to remove all dust, lay it on a flat surface and scrub with this solution, using a small brush for the purpose. Work rapidly, beginning with the crown; rinse in cold water, wipe dry and place on a flat cloth in the sun to dry. Do not let the hat become thoroughly saturated with the water.

Gardener:—Try cayenne pepper to rid cabbage heads of worms. Sprinkle the cabbage as soon as the worms appear. A remedy for cutworms and onion grubs is to mix the seed with sulphur before planting. This may be used with seed corn also.

Mrs. C. L.:—To make an endless clothesline fasten two grooved wheels wherever you want your line and stretch a wire line around the wheel. As you hang up each piece of clothing you can turn the wheel and thus make room for the next piece directly in front of you. The clothes may be taken from the line by this same convenient method, which saves many steps and is also a boon in case of rain.

E. T.:—A widow when preparing for her second marriage should drop the name of her former husband and have her household linen marked with her maiden name. Linen procured after her marriage should be marked with the name of her second husband.

Frances:—The following are suggestions for your Sunday school picnic. You can have the usual races, some of them for the younger folks, others for the older persons. Fighting for the flag is a particularly timely game for the younger boys and girls. You will need about a dozen medium-sized cotton flags of the inexpensive kind. One flag at a time is placed upright in the ground and six girls or boys start in a race to obtain it. Give them some handicap. The boys can race with potato sacks, while the girls can race blindfolded or running backward; or the boys might race crawling on their hands and knees and the girls hopping on the right foot. Another way to race is to go as partners, each holding onto the opposite ends of a clothspin. Of course, the flags captured by each are retained. Ringing the Victory Bell is another good game. Form an arch of three cross poles, rising considerably above the heads of the company. Imbed the uprights in the earth and nail the crosspiece firmly on. Then decorate the arch with red, white and blue bunting and from the top bar hang a large bell. The game consists in hitting this bell with balls which are provided, each player being given three or more throws in a round. The tape race is fun. Have as many lengths of tape as there will be players and have all the tapes about the same number of feet—ten or twelve—then provide several pairs of sharp scissors. Attach all the tapes to a fence. Four or six players may contest at once, according to the pairs of scissors available. The contestants hold the loose ends of the tapes, which they draw out taut. At the signal each player begins to split his tape up the center line with the scissors, the player arriving at the end which is tied winning the race. After each set has tried, match the winners for the final decision. This would be suitable for the older guests. Another race consists in pushing four pebbles over a prescribed course with walking sticks. All four must be rolled at once, each in turn.

X. Y. Z.:—The engagement ring is put on over the wedding ring and thus guards it. The former is removed before the ceremony, leaving the finger free. Then the bride slips back the engagement ring at her first opportunity.
